All manuscripts utilizing data made available through the Consortium should acknowledge that fact as well as identify the original collector of the data. The ICPSR Council urges all users of the ICPSR data facilities to follow some adaptation of this statement with the parentheses indicating items to be filled in appropriately or deleted by the individual user.

The data (and tabulations) utilized in this (publication) were made available (in part) by the Inter-university Consortium for Political and Social Research. The data for the NATIONAL SURVEY OF COURT ORGANIZATION: COURTS AND COURT DIVISIONS, 1971-1972 were originally collected by the U.S. Bureau of the Census for the Bureau of Justice Statistics (BJS). Neither the collector of the original data nor the Consortium bear any responsibility for the analyses or interpretations presented here.

In order to provide funding agencies with essential information about the use of archival resources and to facilitate the exchange of information about ICPSR participants' research activities, each user of the ICPSR data facilities is expected to send two copies of each completed manuscript or thesis abstract to the Consortium. Please indicate in the cover letter which data were used.

Study Description

The National Survey of Court Organization was conducted by the Bureau of the Census in late 1971 for the Bureau of Justice Statistics. The purpose of the survey was to document the existing organization of courts in the 50 states and in the District of Columbia. The study was designed to serve as a preliminary step in the establishment of a national program of judicial statistics. In order to accomplish this objective, the survey was primarily designed to identify state and local courts, major subdivisions of the courts, and the location of the court's records.

Study Design

Survey Coverage

In general, the coverage of the National Survey of Court Organization included all appellate courts, courts of general jurisdiction, special courts, and other courts of limited jurisdiction in the United States. Excluded from the survey were three courts. They consisted of the following: 1) justices of the peace and similar magistrates whose compensation is solely on a direct fee basis, 2) courts of limited and special jurisdictions located in municipalities or townships with a 1960 population of less than 1,000, and 3) agencies performing essentially administrative functions such as Workmen's Compensation Boards; Banks, Tax and Industrial Review Boards; and Land Courts.

Survey Period

This dataset reflects the organization of court systems as of January 1, 1972. The reference date used in the survey for information on judicial personnel is July 1, 1971. The time period for assigned judge-days was July 1, 1970 through June 30, 1971.

Data Collection

Data were collected primarily through a mail canvass census, with trained field representatives compiling the data for courts in the largest counties and cities. Telephone follow-up of nonrespondent appellate and general jurisdiction courts brought the response rate for this group to 99 percent. The response rate for courts of limited and

special jurisdiction was 75 percent, while the overall response rate was 82 percent. Follow-up procedures were used to clarify inadequate and inconsistent survey returns including reference to state judicial reports, organizational manuals, and state and local government directories.

Limitations

Users of this dataset should keep in mind that the size and range of activity of courts may not always be reflected by simple counts, as the organizational complexity of court systems varies considerably from one state to another and from one court to another within a state. To avoid misinterpretation, all data should be viewed in the light of each state's judicial organization.

Processing Information and File Structure

The National Survey of Court Organization data are available from the ICPSR as an OSIRIS dataset made up of two components. These components are a machine-readable dictionary for use in conjunction with the OSIRIS software package, a separate data file, and codebook/dictionary file which contains dictionary records and codebook text.

The OSIRIS data file is constructed with a single logical record of 202 bytes for each court. There are 117 variables on 18,714 courts and court divisions. Each record in the data file is identified by type of record, state, county, court system and court subdivision numbers within the governmental unit, court type, and organization codes.

The OSIRIS data file can be accessed directly through software packages or programs which do not use the OSIRIS dictionary by specifying the variable locations. These data are available for dissemination in a rectangularized or fixed record length data file or as an hierarchical or structured data file.

The data are also available from ICPSR as a card image file. The card image file contains 3 decks per court in a format based on 80 column punched cards. The data are sorted by court with all decks together in ascending order.

The study was processed according to the standard ICPSR processing procedures. The data were checked for illegal or inconsistent code values which, when found, were recoded to OSIRIS missing data values. No consistency checks were performed. Throughout the text additional comments, bracketed in "<" and ">" signs, were inserted by the study processor in the course of preparing the codebook to provide further explanatory information.

Codebook Information

The example below is a reproduction of information appearing in a machine readable codebook for a typical variable. The numbers in brackets do not appear in the codebook but are references to the descriptions which follow this example.

1. Indicates the variable and reference numbers.
A variable and a reference number are assigned to each item in the study. In this codebook which documents the archived dataset these numbers are identical. Should the data be disseminated in a different structure, new variable numbers may be assigned or created. The reference number would remain unchanged and correspond to those in this codebook.

2. Indicates the abbreviated (24 character maximum) variable label used within OSIRIS to identify each variable. An expanded version can be found in the Variable Description List.
3. Indicates the designation of missing data. In this example code values greater than or equal to 9 (MD GE 9) are missing data. Alternative statements for other variables are "MD=0 OR GE 9", "MD= 9", or "NO MISSING DATA CODES". Some analysis software packages (including the ICPSR-supported package) require that certain types of data which the user desires to be excluded from analysis be designated as "missing data" e.g., inappropriate, unascertained, unascertainable, or ambiguous data categories. Although such values are categorized as missing data, users can still use these code values in a substantive role if they so desire.
4. Indicates the sequential location and width of this variable within the record when the data are stored on magnetic tape. In this example the variable named "LEVEL OF GOVERNMENT" is one column wide and located in the 5th column within the dataset. In a fixed length record file of this data the locations will be different.
5. Indicates the full text of the variable description supplied by the original collector of the data. The numbers and letters that may appear at the beginning are question numbers from the survey forms. A question may appear on one or more of the three survey forms used and may have a different number on each. To differentiate, question numbers on the three forms are separated by slashes. Questions on form CJ-18 are given first; those on CJ-19 next; and those on form CJ-20 last. For example, "Q//1a" indicates that this question appeared only on form CJ-20 and not on either form CJ-18 or form CJ-19.
6. Indicates an additional comment or explanation appended to the variable description.
7. A variable which has a footnote associated with it is denoted by the message, "SEE NOTE(S) X", where X is the number of the footnote referenced.
8. Indicates the code values occurring in the data for this variable.
9. Indicates the meaning of the codes.

Definition of Terms

Definition of Court

A court system is a judicial agency established or authorized by constitutional or statutory law. A court system may consist of a single court or a group of two or more courts in the same judicial district.

A court is a geographically separate locality at which a court system holds sessions (sits) and which operates independently.

Authority for Court

A federal court is a court established under the constitution or laws of the United States and concerned primarily with the judicial administration of federal law.

A state court is a court established or authorized under the constitution or laws of a state and concerned primarily with the judicial administration of state and local government laws; viz., all courts other than federal courts.

A state is commonly divided for judicial purposes into geographic areas called judicial districts, circuits or precincts. Districts may be organized along county lines or may include two or more counties. A county may have one or more separate court locations which may be presided over by the same judge or judges.

Jurisdiction

In this survey, jurisdiction refers to subject-matter jurisdiction; i.e., the authority of courts or judicial officers over a particular class of cases. State court systems in the United States are organized in three basic

levels of jurisdiction: appellate, general, and limited. Courts at each of these levels may further be classified by the type of cases (legal jurisdiction) they hear; i.e., civil, criminal, or a mixture of civil and criminal.

Courts by Level of Jurisdiction

Courts of Appellate Jurisdiction

A court of appellate jurisdiction is a court having jurisdiction of appeal and review, with original jurisdiction conferred only in special cases. Courts of appellate jurisdiction are at the top of the judicial organizational structure. They are further grouped into courts of last resort and intermediate appellate courts.

Courts of last resort have jurisdiction over final appeals from either courts of original jurisdiction or of "state" issues. Where state law has expressly granted it, the courts of last resort have jurisdiction over final rulemaking powers and administrative authority over some or all of the courts in the state. One element of this authority is the power to assign judges from one court to another as the work load requires.

The appellate jurisdiction of courts of intermediate appeals is usually limited by law or, at the discretion of the court of last resort, to specific types of cases (e.g., civil or criminal), cases under a certain dollar value, or cases arising in specific lower courts.

Courts of Original Jurisdiction

Courts of general jurisdiction and courts of limited jurisdiction together comprise the total number of courts of original jurisdiction as distinguished from those of appellate jurisdiction.

A court of general jurisdiction is a trial court of unlimited original jurisdiction in civil and/or criminal cases and is also called a "major trial court".

In addition to hearing original actions, most of the courts of general jurisdiction hear cases on appeal from the limited courts. Such appeals may be heard on the record if one was taken in the limited court, or, as is still allowed in most states, the trial is heard anew (de novo) in the courts to which it has been appealed.

A court of limited or special jurisdiction is a trial

court whose legal jurisdiction covers only a particular class of cases; e.g., probate, juvenile, traffic, or cases where the amount in controversy is below a prescribed sum or which is subject to specific exceptions; e.g., courts limited to hearing civil cases with a maximum of \$500 in controversy or criminal cases with a maximum penalty of \$500 in fine or 6-month sentences. Certain courts with unlimited civil jurisdiction but limited criminal jurisdiction were counted in this category.

Courts by Type of Jurisdiction

Courts can be further classified by the types of cases they hear: civil and/or criminal. In the case of courts of limited jurisdiction, they may hear only a certain class of cases, such as domestic relations, juvenile, or probate matters.

Criminal jurisdiction includes jurisdiction of criminal felonies, felony preliminary hearings, misdemeanors, traffic, and municipal or county ordinance violations.

Civil jurisdiction includes both actions at law and pleadings in equity. Also included are probate (wills and estates), mental competence, guardianship, and domestic relations proceedings.

Juvenile jurisdiction refers to special jurisdiction over delinquent and neglected children (minors).

Chancery/equity courts are courts that have jurisdiction in equity, and that administer justice and decide controversies in accordance with the rules, principles, and precedents of equity, as distinguished from a court having the jurisdiction, rules, principles, and practices of the common law.

Probate courts have jurisdiction over the following civil matters: administering estates of deceased persons, minor children of deceased persons, and incompetents; administering trusts; administering the affairs or determining the guardians of orphans, mental defectives, and incompetents; and settling disputes over wills.

Types of Personnel

In addition to judges, some courts employ other judicial personnel which refers to personnel other than judges who participate in the "judging process", such as

commissioners, masters, referees, etc. These personnel usually hear only certain types of cases or carry proceedings to a certain point. Other judicial personnel do not include judges pro tem, visiting judges, or any type of reserve judge.

Support personnel refers only to court clerks, law clerks, and court administrators. Other personnel such as bailiffs, secretaries, probation staff, marshals, and court reporters are not included.

The number of authorized judgeship positions refers to the number of judges authorized by law for a court as of July 1, 1971.
