INTRODUCTION

STUDY DESCRIPTION

The NATIONAL CRIME SURVEY: VICTIM RISK SUPPLEMENT, 1983
(VRS) was sponsored by the United States Department of
Justice, Bureau of Justice Statistics with the data
collection conducted by the United States Bureau of the
Census. This supplement was a special, one-time survey
that was administered in conjunction with the larger
NATIONAL CRIME SURVEYS: NATIONAL SAMPLE. These data
were collected in February of 1984. The purpose of the
supplement was to gather data on respondents' life-
styles in order to determine if certain life-styles were
related to crime victimization.

DATA COLLECTION PROCEDURES AND SAMPLING INFORMATION

Data Collections Procedures

The NATIONAL CRIME SURVEY: VICTIM RISK SUPPLEMENT, 1983
was administered to persons age 12 and over, and data
for the Victim Risk Supplement were gathered using five
questionnaires. The first, VRS-1, was a basic screen
questionnaire designed to collect information on the
household and the individuals in that household. The
second, VRS-2, provided a report on household members
who had been victimized. The third, VRS-3, was a
supplement to the basic screen questionnaire. This
questionnaire was designed to collect information about
respondents' work, leisure activities, and crime
prevention measures used. The last two, VRS-4 and
VRS-5, were filled out after the interviewer left the
household. The purpose of VRS-4 was to gather informa-
tion about household security measures and about neigh-
borhood characteristics. VRS-5 was designed to collect
information which described respondents' behavior during
the interview.

Sampling

The data were collected over a one month period from
14,258 households. After obtaining information about
the household from a person chosen to represent the
household, the other members of the house were inter-
viewed. A total of 25,238 individuals were interviewed

of which 2,952 also filled out victimization reports.
The NCS sample was selected using a stratified multi-
stage cluster sample. Primary Sampling Units were used.
For a complete description of the NCS sample design and
data collection methods, see CRIMINAL VICTIMIZATION IN
THE UNITED STATES, 1983, Bureau of Justice Statistics,
NCJ-96459 (Washington, D.C.:   August 1985).

WEIGHTING

The NATIONAL CRIME SURVEY: VICTIM RISK SURVEY, 1983
contains weight for the three types of data. There is
a household weight, a person weight, and a criminal
incident weight. Households which were interviewed for
the first time were assigned a weight value of zero.
Because the VRS supplement was a one month sample, the
usual NCS weighting procedures to obtain estimates
cannot be used. However, each one months sample is
representative of the U.S. population.

FILE STRUCTURE

The NATIONAL CRIME SURVEY: VICTIM RISK SUPPLEMENT,
1983 is a structured file organized into a hierarchical
format which corresponds to variations in household
composition and in the occurrence of incidents of
victimization. Most commonly, hierarchical datasets
have varying record types and length with each record
being stored sequentially in the data file. The VICTIM
RISK SUPPLEMENT has different record types, however
each record type has a length of 470 columns.

In the Supplement there are three primary types of
records: household, person, and incident. The
household record contains information about the house-
hold as reported by the designated household respon-
dent. The person record contains information about each
household member age twelve years or older as reported
by that person or by a proxy, with one record for each
qualifying individual. The incident record contains
information drawn from the incident report completed
for each household or person incident mentioned during
the interview.

Data from the VRS-4 "Observation of Sample Unit"
questionnaire are contained at the end of the household
record. Data from the VRS-3 "Supplemental Individual
Information" and the VRS-5 "Observation of Respondent"
questionnaires are contained at the end of the person
record.

A typical cluster of housing units might contain four
households each with varying numbers of inhabitants
some of whom report victimizations. The records for
such a cluster might look as follows:

RECORD NUMBER	RECORD TYPE OR CONTENTS
1	Household 1
2	Person 1 of Household 1
3	Household 2
4	Person 1 of Household 2
5	Household 3
6	Person 1 of Household 3
7	Person 2 of Household 3
8	Person 3 of Household 3
9	Household 4
10	Person 1 of Household 4
11	Incident 1 for Person 1 of Household 4
12	Incident 2 for Person 1 of Household 4
13	Person 2 of Household 4

The Bureau of the Census initially issued the NCS
Victim Risk Supplement data in a file with a single
variable length record per household. At the ICPSR,
the file was organized into the household, person,
and incident levels. Using the OSIRIS IV software,
these levels were then linked together in a hierarch-
ical pattern, where the household record formed the
basic building block for the file. The person and
incident records were then linked in a subordinate way
to "root" this group.

As a link is followed down from the root, the
relationship is always one to many. In the NCS Victim
Risk Supplement data, each occurrence of a household
has a person record associated with it. In no case does
a person-level record occur with other households
subordinate to it. The same is true for the relationship
between the incident and person level data. Because of
the hierarchical nature of the NCS Victim Risk Supplemen
data, the ICPSR also has added control numbers which
uniquely identify all occurrences in all groups.

As these variables link and order the data, they are
crucial in generating the file structure, ensuring
accurate retrieval, and permitting file updating.
Each group is defined by a unique control number in
addition to the control numbers of the superordinate
group to which it is linked. Group 1, the household
level, contains control numbers which identify it: a
sample designation, a PSU number, a segment number, a
check digit, and a serial number, as well as collection
quarter information. Group 2, the person level, is, in
turn, subordinate to group 1 and so contains the
household ID and household level control numbers in
addition to a line number. Group 3, the incident
level, contains an incident number in addition to
control numbers which correspond to its superordinate
groups 1 and 2. The National Crime Surveys: Victim
Risk Supplement, 1983 is available from the ICSPR in
OSIRIS format. The OSIRIS dictionary gives the format
and other information for each variable. The diction-
ary or dictionary-codebook file is used in conjunction
with the OSIRIS software package.

The Victim Risk Supplement data collection contains
information for 725 variables. There are 14,258 house-
holds, 25,238 persons, and 2,952 incidents in the data
file. In addition, there were 25,138 responses to the
VRS-3 questionnaire, 11,000 to the VRS-4 questionnaire
and 22,990 to the VRS-5 questionnaire.

CODEBOOK INFORMATION

The example below is a reproduction of information appearing in the machine-readable codebook for a typical variable. The numbers in brackets do not appear but are references to the descriptions which follow this example.

....

```
[1] VAR 1012  [2] TENURE
[3] LOC 48   WID 1  [4] MD=8 OR GE 9
[5] GROUP 1  LEVEL 1    HOUSE GROUP
[1] REF 1012 [6] TYPE C
```

[7] Source Code 0150

[8] Tenure

[9] [Respondent's ownership or non-ownership of his/her living quarters.]

[10] [Actual number is coded.]

[11] [12]

1. Owned or being bought
2. Rented for cash
3. No cash rent

8. Residue
9. Out of universe

....

[1]   Indicates the variable and reference numbers. Usually the reference number is located immediately beneath the variable number, but in this codebook it is beneath the group number. A variable and a reference number are assigned to each item in the study. Should the data be formed into a fixed record length file, new variable numbers may be assigned or created. The reference number would remain unchanged and correspond to those in this codebook.

[2]   Indicates the abbreviated variable name (maximum of 24 characters) used in the OSIRIS system to identify the variable for the user. An expanded version of the variable name can be found in the variable description list.

[3] Indicates the sequential location and width
of this variable within the record where the
data are stored on magnetic tape. In this
example, the variable named "TENURE" is one
column wide and located in the 48th column
within the HOUSEHOLD RECORD. Other variables
will be in this same location in the person and
incident records. In a fixed length record
file of this data, the locations will be differ-
ent.

[4] Indicates designation of missing data. In this
example, code values equal to 8 or greater than
or equal to 9 are missing data (MD=8 OR GE 9).
Although these values are defined as within the
missing data categories, this does not mean that
the user should not or cannot use these code
values in a substantive role, if so desired.

[5] Indicates the group and level numbers, as
well as the name of the group where the variable
is located. Group and level numbers are used
only if the file structure is hierarchical.

[6] Indicates the type of variable - TYPE C means
that the variable is character numeric.

[7] Indicates the source code which appeared on the
original instrument in addition to the question
number.

[8] Indicates the full text of the question
supplied by the original collectors of the data.
This is the wording used in the original
questionnaire.

[9] Indicates an additional comment or explanation
appended to the variable description. Note, this
comment is not actually in the codebook but was
added for the above example.

[10] The phrase "Actual number is coded" would appear
if the variable were continuous.

[11] Indicates the code values occurring in the
data for this variable.

[12] Indicates the meaning of the codes.

ICPSR PROCESSING INFORMATION

The ICPSR has added to the data a series of ident-
ification variables within collection quarter. A
sequential household identification number was
added for each household, person, and incident
record. A sequential person identification number
was added within each household for each person
and incident record. Also, a sequential
identification variable was added for multiple
victimizations.

During ICPSR processing it was discovered that
duplicate records and miscoded identification
records existed in the data. The Bureau of Justice Statistics
edited the file. Duplicates were deleted and the
miscoded identification records were matched with
the correct records and changed accordingly.

The data were processed according to the standard
ICPSR processing procedures. The data were
checked for illegal or inconsistent code values
which, when found, were recoded to OSIRIS missing
data codes. No consistency checks were performed.
Statements bracketed in "<" and ">" signs in the
body of the codebook were added by the processors
for explanatory purposes.

the time of the incident. Beside the fact that it was
a crime, did YOU have any other reason for reporting
this incident to the police?

(If phone interview) For example, did you report
it to prevent this or a future incident, to collect
insurance or recover property, to get help, to punish
the offender, or because you had evidence that would

help catch the offender, thought it was your duty, or
was there some other reason?

Any other reason? MARK ALL THAT APPLY. VERIFY,

VAR 3349   INCIDENT WEIGHT

LOC 463   WID 8
GROUP 3   LEVEL 3   INCIDENT GROUP
REF 3349   TYPE C   3 DEC PLACE(S)

Incident Weight

Weight used to tabulate personal incident data.
This weight is equal to the victim's person weight
divided by the total number of victims in the
incident. This weight contains three implied
decimals. A value of zero was assigned to incoming
rotation panels and to the non-NCS crimes.

APPENDIX A

Industry Code

A three-digit numeric code assigned to persons using the 1970 Alphabetic Index of Industries and Occupations, based on the kind of business or industry at the location where the person works. For unemployed persons, the industry code is assigned on the basis of the last job held within 5 years.
