Abstract

This report is the first of two reports on recidivism rates of offenders released from Department of Correction facilities during 1984. Some highlights from this report are:

- The recidivism rate in 1984 was 25%. This is higher than the rates for 1983 (21%) and 1982 (23%).
- The increase in recidivism rates occurred at the same time that the number of releases increased, from 1,221 in 1982; to 1,726 in 1983; and 1,888 in 1984.
- The recidivism rate varied by security level of the institution from which the offender was released: 37% for maximum, 31% for medium, 20% for minimum, 19% for minimum/pre-release, 16% for state pre-release and 14% for contract pre-release.
- The recidivism rate for males was 24%, an increase from the 1983 figure of 20% and the rate for females was 29% an increase from last year's figure of 26%.
- Among males, the recidivism rate was 24% for those serving a Walpole sentence (compared to 18% for 1983) and 24% for those serving a Concord sentence (compared to 21% for 1983).
- The recidivism rate for offenders with no furloughs prior to release was 31% and the recidivism rate for individuals with furloughs prior to release was 12%.
- The increase in the recidivism rate from 1983 to 1984 was greatest for releases from maximum security (28% vs. 37%) and medium security (27% vs. 31%).
- Recidivists were returned for a variety of reasons: 21% for technical parole violations, 47% for a parole violation involving a new arrest, and 32% for re-incarceration on a new offense.
- Offenders released by parole had higher recidivism rates (27%) than those who were discharged (18%).

I. Introduction

This report presents a statistical description of offenders released to the street from Massachusetts correctional facilities during 1984 with corresponding recidivism rates. This report presents statistics for maximum security facilities (MCI-Cedar Junction), medium security facilities (MCI-Concord, MCI-Norfolk, MCI-Framingham, SECC and NCCI), and minimum security facilities (MCI-Plymouth, MCI-Warwick, Bay State C.C. and N.C.C.). For purposes of this report, institutions with a pre-release component are collapsed into the "pre-release" category. Statistics for state pre-release facilities (MCI-Shirley, MCI-Lancaster, Boston State PRC, South Middlesex PRC, Park Drive PRC, and Norfolk PRC), three drug rehab programs (Meridian House, Spectrum House and Boston VA Hospital), and seven contract pre-release facilities (Brooke House, Coolidge House, Coolidge II, THP, McGrath House, Charlotte House and Hillside PRC) are presented in another report (Number 303). Four institutions actually combine minimum and pre-release. In order to be consistent with past recidivism reports, MCI-Plymouth and MCI-Warwick are considered minimum, and MCI-Shirley and MCI-Lancaster are considered pre-release. A total of 1,888 offenders (1,445 males and 443 females) were released from the correctional facilities listed above. The follow-up period is one year from the date of the offender's release to the community. A recidivist is defined as any offender who returns to a state or federal correctional institution, or to a house of correction or jail during the follow-up period for 30 days or more^{*}. This includes parole violators as well as those offenders sentenced for new crimes.

^{*} Offenders serving less than thirty days are excluded from the sample. Inadvertently, 3 cases were included where the time served was less than 30 days. Inclusion of these cases does not affect the recidivism rate.

Information contained in this report includes recidivism rates with regard to release variables, nature of present offense, personal background, criminal history, furlough participation, and release follow-up variables. Each table contains two types of information: (1) statistical data describing characteristics of offenders released from each institution during 1984; and (2) the rates of recidivism cross-tabulated with each of the categories of the statistical data for these offenders.

There are two main sections in this report. Section One discusses selected variables in relation to recidivism rates. Where appropriate, comparisons are made between 1983 and 1984 rates. Section Two consists solely of statistical tables. In reading these tables, the reader should note the following: (1) the release population is divided according to the institution of release^a; (2) N represents the number of offenders who fall into the corresponding category in the table; (3) P represents the percentage of the number of offenders in a particular category to the number of offenders released from that institution (column percents); (4) R represents the number of offenders who are recidivists; and (5) RR (Recidivism Rate) represents the percentage of offenders in that category who have recidivated. For example, upon referring to the first table on pages 22 and 23, the variable "Type of Release" is presented and the following kinds of information may be obtained: (1) the total number of releases broken down by specific institution is labeled and presented horizontally across the head of the table; (2) the type of release (parole or discharge) is labeled and presented vertically; (3) of the 1,888 offenders released during 1984, 1,489 (79%) were released on parole and 399 (21%) were released on a discharge; and (4) those offenders released from Norfolk who were released on parole had a recidivism rate of 36% while those offenders released from Norfolk on a discharge had a recidivism rate of 18%.

^a When listing the institutions Walpole and Gardner, the more commonly used names of "MCI-Cedar Junction" and "NCCI" may be used in some of the tables.

The material was derived from the computerized data base developed by the Correction and Parole Management Information System (CAPMIS) and was produced on the Regent's Computer Network (RCN).

II. Section One: 1984 Recidivism Rates

Type of Return

Table I presents the distribution of types of return for recidivists. Recidivists were returned for a variety of reasons: 21% for a technical parole violation, 47% for a parole violation involving a new arrest, and 32% for re-incarceration on a new offense.

The proportions within these categories are very different for male and female offenders. For males, 25% were technical parole violators, 59% were parole violators with a new arrest and 16% were re-committed for a new offense (12% of whom were committed to a DOC facility).

For females, 12% were technical parole violators, 13% were parole violators with a new arrest, and 75% were re-incarcerated for a new offense.

Time Until Return

Table 2 presents time until return by sex of the recidivist. Of the 468 recidivists in 1984, 51% recidivated within 6 months of their release, 74% within 9 months, and 26% between 9 months to 1 year.

Females tended to recidivate in a shorter time from their release than males. For example, 26% of the females returned within 3 months, while 19% of the males returned in the same amount of time; 59% of the females returned within 6 months versus 48% of the males; 85% of the females returned within 9 months versus 69% of the males; and 15% of the females returned between 9 months to 1 year, compared to 31% of the males.

Table 1

Institution Released From

Table 3 shows the recidivism rate by institution and security level of the institution from which the inmate was released. Releases from maximum security (Cedar Junction) had the highest recidivism rate (37%). Releases from medium security had a lower recidivism rate of 31%. The recidivism rate was the lowest for releases from lower security facilities: minimum (20%), minimum/pre-release (19%), state pre-release (16%), and contract pre-release (14%).

When compared to last year's figures, one finds that the recidivism rate increased the most for releases from maximum security (28% in 1983 vs. 37% in 1984) and medium security (27% vs. 31%), while releases from the lower security facilities stayed the same or increased only slightly from last year: minimum (20% vs. 20%), minimum/pre-release (18% vs. 19%), state pre-release (14% vs. 16%) and contract pre-release (12% vs. 14%).

Grand Total	1420	468	1888	25%

Furlough Program Participation

Of those released in 1984, 642 offenders (34%) had participated in the furlough program at least once prior to their release, 604 of which were males. The remaining 66% of those released in 1984 (N = 1,246) had not participated in the furlough program. The recidivism rate was substantially lower for those who had participated in at least one furlough prior to release than it was for those who had not participated (12% vs. 31%).

The recidivism rate also varied by security level of the releasing institution. Offenders released from a maximum or medium security institution who had never been on a furlough, had the highest recidivism rate (33%), while offenders who were released from a lower security facility (minimum or pre-release) and who had been on at least one furlough had the lowest recidivism rate (9%).

Similar trends are apparent when the data are grouped by sex. The recidivism rate was the same for males and females who had not participated in the furlough program. Once again, the recidivism rate decreased as the security level of the releasing institution decreased. The rate was also lower if the offender had participated in the furlough program, although the numbers for females who had been on a furlough were very low.

Type of Release

Table 5 shows recidivism rates by type of release and security level of releasing institution. Overall, the recidivism rate was higher for those released on parole (26%) than for those who were discharged (18%). For parolees, those who were first releases (had not been paroled on their present sentence), had lower recidivism rates (24%) than those who were parole violators (38%). For offenders discharged from their sentence, the recidivism rate was slightly higher for those discharged who were first releases (19%) than for those who were parole violators (17%).

When the data were compared by security level of the releasing institution, the recidivism rate was highest for offenders paroled from maximum or medium security institutions who were parole violators (43%), followed by those who were first releases (35%). For those paroled from lower security, the recidivism rate was 24% for those who were parole violators and 16% for those who were first releases.

The recidivism rate for offenders discharged at expiration of sentence was 21% for first releases from higher security and 10% for first releases from lower security. For those who were discharged, but were parole violators, the recidivism rate was slightly lower for those released from higher security (17%) than for those released from lower security (18%).

Table 6 shows recidivism rates by type of release for males and females. The overall recidivism rates are the same as the overall recidivism rates for Table 5, i.e., offenders released by parole have higher recidivism rates than those released on expiration of sentence, and parole violators have higher recidivism rates than first releases.

Males follow this pattern much more closely than females. Males released by parole had a recidivism rate of

26% and males released by discharge had a recidivism rate of 12%. For females, those released by parole had a recidivism rate of 29% while those released by discharge had a rate of 28%.

Offender Characteristics

Table 7 shows recidivism rates for male and female offenders by selected background characteristics including race, age, present offense and prior adult incarcerations. There is an overall pattern found when the data are broken down by sex, that females have higher rates of recidivism (29%) than males (24%).

The section of the table on recidivism by race and sex shows that overall, whites have lower recidivism rates than non-whites, 23% for whites versus 29% for blacks and 30% for hispanics. This pattern generally holds true for males and females.

The section on age at release and sex of offender shows that younger offenders generally have higher rates of recidivism. For males, the rate is lowest in the forty year and older age group (18%) and highest in the 21 year and younger age group (26%) and the 22-25 year age group (27%). For females, the recidivism rate is lowest in the forty year and older age category (11%) and highest in the 21 year and younger age category (35%) and the 22-25 year age category (36%).

In terms of present offense, the recidivism rate was highest in the property offense category (28%), followed by "other" offenses (27%), person offenses (24%), and drug offenses (21%). Persons committed for sex offenses had the lowest recidivism rate (16%).

For males, the overall recidivism rate was 24%. Those committed for property offenses had the highest rate of recidivism (30%) and those committed for drug offenses had the lowest rate (15%). The overall recidivism rate for

females was (29%). In all of the offense categories except for property offenses, the recidivism rates were higher for females than for males. Excluding the sex offense category, where the number of cases is too small to make any comparisons, the highest rate of recidivism for females was in the "other" offense category (32%) which includes offenses such as Prostitution, O.U.I., Disturbing the Peace, Trespassing and Contempt of Court, and the lowest was in the property offense category (25%).

The final section of Table 7 on recidivism by prior adult incarcerations and sex of offender reveals an overall recidivism rate of 17% for offenders with no prior adult incarcerations versus a 27% recidivism rate for those with one prior adult incarceration and a 35% recidivism rate for those with two or more prior adult incarcerations. This pattern holds true for males and females. For males, those with no prior adult incarcerations have a 16% recidivism rate, while those with one prior adult incarceration or those with more than one prior adult incarceration have higher rates (27% and 32%, respectively). Females with no prior incarcerations had a 20% rate, those with one prior had a 29% rate, and those with more than one prior had a 46% rate of recidivism.

I. Introduction

This report presents a statistical description of offenders released to the street from Massachusetts facilities with a pre-release component during 1984 with corresponding recidivism rates. The report presents statistics for state pre-release facilities (MCI-Shirley, MCI-Lancaster, Boston State PRC, South Middlesex PRC, Park Drive PRC, and Norfolk PRC), three drug rehab programs (Meridian House, Spectrum House and Boston VA Hospital), and seven contract pre-release facilities (Brooke House, Coolidge House, Coolidge II, THP, McGrath House, Charlotte House and Hillside). For purposes of this report, the Massachusetts Correctional Institutions are collapsed in to the "non-pre-release" category. Statistics for the maximum security facility (MCI-Cedar Junction), medium security facilities (MCI-Concord, MCI-Norfolk, MCI-Framingham, SECC and NCCI), and minimum security facilities (MCI-Plymouth, MCI-Warwick, Bay State C.C. and N.C.C.) are presented in another report (Number 302), along with a description of the recidivism data. Four institutions actually combine minimum and pre-release. In order to be consistent with past recidivism reports, MCI-Plymouth and MCI-Warwick are considered minimum, and MCI-Shirley and MCI-Lancaster are considered pre-release. A total of 1,888 offenders (1,445 males and 443 females) were released from the correctional facilities listed above. The follow-up period is one year from the date of the offender's release to the community. A recidivist is defined as any offender who returns to a state or federal correctional institution, or to a house of correction or jail during the follow-up period for 30 days or more*. This includes parole violators as well as those offenders sentenced for new crimes.

* Offenders serving less than thirty days are excluded from the sample. Inadvertently, 3 cases were included where the time served was less than 30 days. Inclusion of these cases does not affect the recidivism rate.

Information contained in this report includes recidivism rates with regard to release variables, nature of present offense, personal background, criminal history, furlough participation, and release follow-up variables. Each table contains two types of information: (1) statistical data describing characteristics of offenders released from each institution during 1984; and (2) the rates of recidivism cross-tabulated with each of the categories of the statistical data for these offenders.

This report consists solely of statistical tables. In reading these tables, the reader should note the following: (1) the release population is divided according to the institution of release^{*}; (2) N represents the number of offenders who fall into the corresponding category in the table; (3) P represents the percentage of the number of offenders in a particular category to the number of offenders released from that institution (column percents); and (4) RR (Recidivism Rate) represents the percentage of offenders in that category who have recidivated. For example, upon referring to the first table on pages 7 and 8 the variable "Type of Release" is presented and the following kinds of information may be obtained: (1) the total number of releases broken down by specific institution is labeled and presented horizontally across the head of the table; (2) the type of release (parole or discharge) is labeled and presented vertically; (3) of the 1,888 offenders released during 1984, 1,489 (79%) were released on parole and 399 (21%) were released on a discharge; and (4) those offenders released from Lancaster who were released on parole had a recidivism rate of 26% while those offenders released from Lancaster on a discharge had a recidivism rate of 21%.

The material was derived from the computerized data base developed by the Correction and Parole Management Information System (CAPMIS) and was produced on the Regent's Computer Network (RCN).

* When listing the institutions Walpole and Gardner the more commonly used names of "MCI-Cedar Junction" and "NCCI" may be used in some of the tables.
