## The Florida Statistical Analysis Center

The Florida Statistical Analysis Center (SAC) is funded in part for 1989 by a grant from the U.S. Department of Justice, Bureau of Justice Statistics. The SAC is part of the Division of Staff Services, Florida Department of Law Enforcement (FDLE). Our primary responsibility is to improve the effectiveness of policy-making, programs development and planning through the provision of data and interpretive analysis of data concerning crime, the criminal justice system and related issues.

The Florida SAC welcomes inquiries concerning any of our publications. Please feel free to contact us should you require more methodological detail, or wish to offer comment.

## Acknowledgements

The Florida SAC wishes to express its appreciation for the exceptional support which we received from Florida's law enforcement community and the Clerks of the Court, without which, this directory could not have been possible.

### APPENDICES

Appendix A: Non-Automated Agencies which responded to the survey.....	332
Appendix B: Survey Document .....	334

## INTRODUCTION

The Florida Statistical Analysis Center (SAC) first published an automated directory of law enforcement information systems in August of 1987. The directory has proven to be an effective resource for those law enforcement agencies who were considering automation, and those who were about to expand their automated capacities. Due to the rapid changes in computer technology, the SAC anticipated updating the directory every two years.

Criminal justice information systems are becoming increasingly system wide as state policy-makers seek objective data to mold legislation. For example, the Clerks of the Court have begun to submit disposition data to the Florida Department of Law Enforcement (FDLE) for its new Offender-Based Transaction Statistics (OBTS) database. The OBTS database will be used to assess the performance of Florida's adult criminal justice system. Due to the automated linkage between these two state agencies, the current directory includes the automated capacities of the Clerks of the Court in addition to those of local law enforcement.

The response rate to the 1989 survey document was excellent. One hundred percent of the Sheriff's Offices responded to the survey; the comparable percentages for Police Departments and Clerks of the Court were 83.4 percent and 77.6 percent, respectively. Breakdowns of the automated capacities of each of the responses to the survey by agency classification are detailed below.

### 1989 AUTOMATED SURVEY RESPONSES

AGENCY TYPE	AGENCIES RESPONDING	% RESPONDING	% RESPONDING AUTOMATED	% RESPONDING NON-AUTOMATED
POLICE DEPARTMENTS	266	84.7	65.3	19.4
SHERIFF'S OFFICES	66	100.0	89.4	10.6
CIRCUIT COURTS	52	77.6	73.1	4.5

A summary of the automated capacities of the FDLE (which include the Law Enforcement Data Center, the Automated Fingerprint Identification System or AFIS, and the Florida Statistical Analysis Center) follow this introduction. The directory then summarizes the automated capacities of Florida Sheriff's Offices, Police Departments, and Clerks of the Court. Two appendices conclude the directory; the first listing agencies who responded to the survey but are not as yet automated, and the second containing the survey document. The Florida SAC will continue to update the directory every two years.

## AUTOMATED FINGERPRINT IDENTIFICATION SYSTEM

The major application supported by the FDLE Data Center is the Florida Crime Information Center. FCIC consists of a telecommunications network and on-line databases which provide criminal justice agencies in Florida with information on wanted persons, missing persons, stolen vehicles and license plates, stolen guns and other personal property, and complete criminal records. FCIC serves as Florida's point of contact with the National Crime Information System (NCIC) in Washington, DC. NCIC provides information on wanted and missing persons, stolen property, and an index of criminal offenders nationwide. FCIC also serves as the state's link to the National Law Enforcement Telecommunications System (NLETS). NLETS provides interstate routing of criminal justice and administrative information to organizations like FCIC in every state. Today, FCIC is linked to 4,680 terminals statewide and handles approximately 14,000,000 messages per month. Other applications supported by the Data Center are a crime intelligence support system, an automated fingerprint identification system, a crime investigation management system, an automated criminal justice officer

training and employment records system, a crime laboratory support system, a comprehensive crime information reporting system, and a department-wide office automation network.

FCIC STATISTICS

## **AUTOMATED FINGERPRINT IDENTIFICATION SYSTEM (AFIS)**

FDLE is creating a statewide automated fingerprint identification network in both its (tenprint) identification process and its latent print identification process. This Automated Fingerprint Identification System is more commonly referred to as AFIS. The Department is replacing its microfilm system of fingerprint images with the storage and retrieval of fingerprint images on optical disk; and it will, in turn, provide local law enforcement agencies remote access to both the fingerprint minutiae and to the fingerprint images stored on optical disk for the purpose of tenprint and latent print identification.

AFIS is based on a relatively new technique for computer analysis of fingerprint identification points called minutiae; e.g., where ridge lines end or a single ridge splits in two parts. This process converts the unique spatial relationship of fingerprint minutiae points, ridge direction and in some cases, additional information into a grey scale representation of the fingerprint.

AFIS is designed to provide a candidate list of possible matches based on the search print using a numerical scoring system; it does not replace human identification of fingerprint images. A higher ranking reflects a greater probability that the fingerprint selected by the AFIS computer will be verified by a human fingerprint expert. In tenprint to tenprint searches with good rolled images, AFIS computers are capable of producing a candidate list with the subsequently verified individual being first on the list more than 99% of the time; provided the candidate is in the database. This high hit rate is attributable to the large number of minutiae points available on tenprint images, which typically can be 90 or more.

Latent prints have fewer minutiae points, typically in the range of 10-15. Even so, it is still possible to obtain results which rank the correct individual in the first or second position more than 70% of the time (provided the candidate is in the system). The resulting scores are, however, much closer than tenprint scores and may require examining more images in the attempt to identify the latent.

AFIS computers also provide the ability to graphically enhance fingerprint images providing a higher quality image for minutiae encoding. This process is automatic in the case of tenprints, though human editing is usually recommended to maintain a high quality database. The graphic enhancement is most useful with latents where poor quality prints are the norm. Ridge structure that is difficult to determine is dramatically enhanced by the AFIS system, enabling a more accurate minutiae plot to be entered by the latent fingerprint examiner.

### **How the System Will Function**

Incoming fingerprint cards will be first searched by name in the existing Computerized Criminal History (CCH) database. Fingerprint cards identified through the Name Search (Soundex) process will be routed to the microfilm files where fingerprint images will be retrieved by the microfilm reel and frame number. These images are then compared to the fingerprint/tenprint card

received. Those fingerprint cards identified by name search as being in the AFIS database, are then accessed at the display verification terminal and compared with the file images retrieved from the optical disc storage.

Fingerprint cards that are not tentatively identified via the Name Search process will be technically searched through AFIS. The candidate lists produced as a result of the technical search will be processed by retrieving the images at the fingerprint technician's station.

Those fingerprint cards, identified with microfilm images will be converted to the AFIS Fingerprint Identification database. Those fingerprint cards not identified through the AFIS technical search process will be assigned new SID numbers by AFIS and entered into the Fingerprint Identification database. Those fingerprint cards that are designated as "latent cognizant" will be entered into the Latent Cognizant database. During the first two years after AFIS mainframes have been installed, all retainable cards will be entered into the Latent Cognizant database. After that time, only cards designated as "latent cognizant" will be entered into the Latent Cognizant database. Fingerprint cards then continue through the process where they are used to update or add new records in the CCH file.

In addition to the tenprint identification process, the capability to remotely conduct latent searches in which there are no known suspects is also available to the FDLE crime labs. The FDLE Crime Lab Bureau will continue its manual, known-suspect latent print service in each of the six regional labs. In addition, FDLE will make available to other Florida law enforcement agencies, the capability for remotely conducting searches via tenprints of unknown persons and to conduct cold searches by remote access capability through either the crime labs or through remote access capability in local agencies.

## Databases

There are three major databases retained in AFIS - 1) Identification, 2) Latent Cognizant, and 3) Unsolved Latent. The Identification database includes minutiae of two fingers automatically read by AFIS plus the minimum amount of data necessary to identify a subject and to reference that subject (by SID number) to other FDLE databases. This database is maintained by the FDLE Crime Information Bureau (CIB) by adding, on a daily basis, images from tenprint cards received by the Bureau.

The Latent Cognizant database contains minutiae for ten fingers for all "latent cognizant" subjects. During the first two years of operation, all criminal tenprints received will become part of the Latent Cognizant file. After that time, only the minutiae from subjects who have committed capital crime or crimes that have a high rate of recidivism will be entered into this database. Currently, latent cognizant crimes constitute 45% of the criminal tenprint cards received by FDLE.

The Unsolved Latent database will contain minutiae encoded by a latent examiner in the initiation of a latent search. Control of this database will rest with the FDLE crime labs. Only FDLE crime lab personnel will have the capability to register a latent to the Unsolved Latent database.

## Remote Fingerprint Access Network

In conjunction with the FDLE AFIS, remote access to both minutiae and image databases will be provided to local Florida law enforcement agencies for the purpose of searching the files. All three of the above-mentioned databases will be utilized by agencies with remote access capability. However, this access will be for verification and identification purposes only, not for additions/deletions or modifications to the database. There will be three levels of access: 1) Full Use Access (FUA), 2) Image Transceiver Station (ITS), and 3) Image Station (IS).

FDLE entered into a five-year contract with De Le Rue Printrak Corporation that allows for local agencies to purchase AFIS equipment identical to that being installed in FDLE at the same cost and with the same contractual obligations. The State of Florida plans to purchase twenty-six remote access configurations that will be placed in local agencies.

The FUA level of access will have its own local databases, matchers and encoders. After searching their own databases, the agencies which have a FUA will have the capability of searching the State's databases. In addition to the two agencies in which this currently exists, FDLE expects to install this level of capability in four additional agencies.

The ITS level of access will have the capability of encoding minutiae, conducting a search on the State's databases and retrieving images for verification. There will be up to six agencies supplied with this capability.

The IS level of access will have the capability of receiving images to eliminate or to verify candidates which are identified by SID number. There will be sixteen agencies supplied with this capability.

### Hardware

At the current time, exact model numbers of hardware are unavailable because of manufacture improvements that will be incorporated into the equipment to be installed at FDLE. However, generic types of equipment based on functions are listed below.

FDLE Central Site will house the following subsystems:

- One ORION Input Work Station
- One Criminal Identification System-One Criminal Latent Cognizant System-
- One Unsolved Latent Subsystem
- One Image Storage and Retrieval System
- One Juvenile Name Search System
- One Gateway Communications System

FDLE Crime Laboratories will house the following equipment:

- One ORION 14001-906-1 Latent Work Station

As the specific models and capacities of equipment become available, this list of equipment will be further detailed.

## **Information Concerning AFIS**

FDLE has established an AFIS unit that serves to coordinate all FDLE and State of Florida AFIS activities. Under the direction of the Law Enforcement Data Center Bureau Chief Mark Scharein, this unit performs many diverse functions including: establishing and coordinating the workflow for AFIS functions in FDLE, recommending local agencies to receive different levels of access, keeping local law enforcement agencies in the state abreast of the current status of AFIS, and writing policies and procedures for the implementation of an AFIS network. For further details concerning the Florida AFIS, please contact Senior Management Analyst Supervisor Ed Ricord at (904) 488-5833 or SUNCOM 278-5833.

**THE FLORIDA DEPARTMENT OF LAW ENFORCEMENT  
FLORIDA STATISTICAL ANALYSIS CENTER (SAC)**

The Florida SAC's primary responsibility is to improve the effectiveness of policy-making, programs development and planning through the provision of data and interpretive analysis of data concerning crime, the criminal justice system and related issues. The hardware and software listed below were acquired under a series of grants from the Department of Justice, Bureau of Justice Statistics to facilitate these goals by enabling the Florida SAC to conduct: database management, time series and cross sectional analysis, statistical modeling, graphics and the mapping of criminal justice data.

**SAC Hardware:**

One Compaq 386/20 Station:

- 130 megabyte hard drive
- 5.25 inch 1.2 megabyte floppy drive
- 3.5 inch 1.44 megabyte diskette drive
- 20 MHz 80387 co-processor
- VGA color graphics monitor/board
- 1 megabyte of ram
- IBM Proprinter XL (wide carriage dot matrix)
- Innovative Data Technologies 1050 Nine Track Tape Drive System  
Allows the SAC to download mainframe tapes directly onto the microcomputer system.
- 20+20 IOMEGA Bernoulli Box  
This is a storage device in which 20 megabytes of data can be stored on removable cartridges. The Bernoulli Box contains two 20 megabyte drives (configured as Drives D and E in DOS). This enhances a system with a fixed disk by adding additional storage space, which can take the place of a fixed disk in a computer system. With removable cartridges, the drive is not limited in the amount of information it can store or access.

Three IBM-AT Model 339 Stations:

- 30 megabyte hard drives
- 1.2 megabyte floppy drives (5.25 inch)
- 360 megabyte floppy drives (5.25 inch)
- monochrome monitors/cards
- EGA color monitor/card
- 640 kilobytes of ram
- 8087 math co-processors
- EXP 800 Silver Reed Printer - Letter Quality
- Hewlett Packard LaserJet Series II printer
- IBM 8 pen color plotter

**SAC Software:**

APPENDIX B  
AUTOMATED SURVEY DOCUMENT

FLORIDA DEPARTMENT OF LAW ENFORCEMENT  
FLORIDA STATISTICAL ANALYSIS CENTER  
AUTOMATED CRIMINAL JUSTICE INFORMATION SYSTEM QUESTIONNAIRE

1. Name of Agency: \_\_\_\_\_
2. Jurisdiction: \_\_\_\_\_
3. Name of Agency with fiscal and/or operating responsibility for the system: \_\_\_\_\_
4. Contact Person and Title: \_\_\_\_\_
5. What date (month/year) did your agency become automated? \_\_\_\_\_
6. Address: \_\_\_\_\_  
\_\_\_\_\_  
\_\_\_\_\_  
Telephone Number: (\_\_\_\_) \_\_\_\_\_
7. Who are the primary users of the system? (Check those that apply)  
 Law Enforcement     Courts     Corrections     State Attorney  
 Other: Please specify \_\_\_\_\_

MAINFRAME SYSTEMS (If your agency does not have a mainframe, circle NA) NA

8. Manufacturer: \_\_\_\_\_
9. Model: \_\_\_\_\_
10. Operating System: \_\_\_\_\_
11. Programming Language/Software Used: (Check those that apply)  
 APL     Assembler     BASIC     COBOL     EDL     Editor     FORTRAN  
 Mark IV     Natural Language     Neat 3     PASCAL     PL/I     RPG  
 SK2     SPSS    List Others: \_\_\_\_\_

MICROCOMPUTER SYSTEMS (If your agency does not have a micro, circle NA) NA

12. Manufacturer: \_\_\_\_\_
13. Model: \_\_\_\_\_
14. Operating System:  MS-DOS    Other (Specify): \_\_\_\_\_
15. Floppy Disk Size:  3 1/2"     5 1/4"     8"
16. Software Used: (Check those that apply)  
 BASIC     D-Base III Plus     FORTRAN     Graphics (Specify) \_\_\_\_\_  
 IPTM     Spreadsheet (Specify) \_\_\_\_\_  
 SPSS/PC+     Word Processing (Specify) \_\_\_\_\_  
List Others: \_\_\_\_\_

COMMUNICATIONS

17. Does your system(s) (Mainframe and/or micro) have data communications capabilities? Mainframe:  Yes     No    Micro:  Yes     No
18. PLEASE CHECK "FUNCTIONS PERFORMED" SHOWN ON THE REVERSE SIDE OF THIS PAGE.

Mail completed surveys to: Florida Department of Law Enforcement  
Statistical Analysis Center  
Post Office Box 1489  
Tallahassee, Florida 32302
