# Introduction

The Cheyenne River Swift Bird Project is an Indian-run pre-release corrections facility which serves as an alternative method of incarceration for Indian inmates from a five-state Northern Great Plains area. The concept behind the Swift Bird Project is that it benefits Indian people by offering individual Indian offenders an opportunity to define and meet their needs to expand their strengths so that they can return to their homes and communities and assume their responsibilities as traditional Indian persons.

The philosophy around which Swift Bird operates is as follows: The intent of Swift Bird is to give the residents something to hang on to-- their traditional ways. It is not to encourage the residents to return to the old ways of life, but, rather, to learn about and respect their history and tradition, and to apply these values to bring more meaning to their lives today. It is this philosophy and the resulting implication that Indian people can successfully treat Indian offenders, which resulted in the establishment of the Swift Bird Project.

The Project ~~really~~ began in 1973 when the Native American Rights Fund corrections staff began discussions with the United Sioux Tribes of South Dakota to assess the feasibility of locating an Indian-controlled corrections program somewhere in South Dakota. With financial

assistance from the Law Enforcement Assistance Administration (LEAA) and the Bureau of Indian Affairs (BIA), the "alternative correctional facility" became reality when the Cheyenne River Tribal Council enacted an ordinance that chartered the Cheyenne River Swift Bird Project as a corporation for governmental and legal purposes on September 7, 1977. Utilizing the former Swift Bird Job Corps Camp on the Eastern edge of the Cheyenne River Reservation, renovation efforts were completed in the summer of 1979.

In an effort to ascertain whether the Swift Bird Project has an impact upon the rehabilitation of Indian offenders, the Project contracted Carter-Goble-Roberts, Inc. to carry out an evaluation. Financial support for the evaluation process was provided by LEAA. The evaluation plan was designed to determine whether the alternative correctional program (Swift Bird Project) was as effective, less effective, or more effective than [traditional] correctional programs.

The basic evaluation methodology involved the establishment of a control group (Indian offenders released from the Bureau of Prisons and the five state correctional systems) and a test group (Indian offenders released through the Swift Bird Project). These released offenders were to be "tracked" by probation and/or parole officers in situations of conditional releases and/or through inquiries into various criminal justice information systems, on a periodic basis, to ascertain any involvement with the criminal justice system.

The performance of the control group was then compared to the performance of the test group. Recidivism rates (based upon differing definitions) in relation to length of time before failure were developed for each group. In addition, comparisons were made between the control group and test group in terms of job participation rates, average annualized wage rates, and the long-term discounted institutional/non-institutional costs.

The evaluation plan anticipated a four-and-one-half-year timeframe to complete the evaluation. The first phase of the four-phase effort was to be carried out during the first twelve months of the four-and-one-half-year timeframe. The specific evaluation goals for the first phase were:

- . To develop data collection forms and instruct staff in their use.
- . To develop criteria for, and establish, control groups.
- . To establish a baseline recidivism analysis of comparable Indian offenders released prior to the opening of Swift Bird.
- . To develop, and administer twice, a community attitude survey.
- . To collect data and begin testing the hypotheses stated.
- . To document progress made by the Swift Bird staff toward community accountability.
- . To ascertain the economic impact of the Project.

Of the Phase I evaluation goals, the only one that could not be carried out was the initiation of testing the hypotheses. Actual acceptance of the first residents to the Project was delayed until August 1979 and, as a result, there was an insufficient number of releasees to make analysis worthwhile.

The establishment of the baseline data and historical recidivism analysis, which was to provide a baseline of data on the flow and future expectations concerning Indian offender involvement with the criminal justice system, required the major portion of the work effort in Phase I. The analysis was carried out on Indian offenders committed from and released within the five-state catchment area of the Project. The process for identifying and collecting the data for the historical recidivism study was completed only through the cooperation of the respective corrections agencies in each state.

All Indian offenders released between January 1, 1976, and December 31, 1978, in each state and by the Bureau of Prisons (Indians who were committed from one of the five states in the Project's catchment area) were identified, and data such as age, offense characteristics, etc., ~~was~~ <sup>were</sup> obtained by means of the form shown in Exhibit 1 at the end of this introduction. In most states, it was necessary to obtain the prison number of every inmate released from the monthly drop sheets and to check the records of all inmates released during the period in order to identify the Indian offenders.

Once the Indian offenders released during the study period were identified and the data collected, approval was obtained to collect data on subsequent involvement with the criminal justice system from the respective state agencies that maintained criminal history records. As a result of the limited staff in most states, it was necessary to manually examine the criminal history record of each offender identified. From the individual's criminal history record, all information concerning any reported subsequent contact with the criminal justice system following release during the study period was recorded.

While all subsequent arrests or convictions may not have been reported by local law enforcement agencies, most states indicated a high rate of participation among the agencies required to report. The most common problem experienced in the data among all the states was the lack of disposition information unless the individual received a prison term, in which case, the disposition was reported by the various corrections agencies. The form used to collect this data is shown in Exhibit 2.

The remainder of this report is divided into four sections which present the findings of the various aspects of the Phase I evaluation effort, as follows:

- Section I - Baseline and Historical Recidivism Analysis
- Section II - Internal Evaluation
- Section III - Community Attitude Survey

In addition to this report, Volume II, Technical Appendix, contains copies of selected computer printouts that were generated during the evaluation.

The extensive data presentation throughout this report is to provide the baseline data to allow the completion of the impact evaluation of the Swift Bird Project at a later date. Because of the lack of funding sources, the evaluation of the Swift Bird Project has been stopped prior to any findings concerning the effectiveness of the Project in the rehabilitation of Indian offenders.

*prematurely  
terminated*

section

# Baseline & Historical Recidivism Analysis

This presentation of the data analysis related to the Swift Bird Project is centered solely on those past inmate clients of the six-state\* representative group initially cooperating in the effort. There are no Swift Bird clients within this analysis, as explained elsewhere in this report. Due to the experimental nature of the Swift Bird Project in providing a traditional, tribal setting for rehabilitation of Indian offenders, the orientation of the data sample frame and the analysis has been on release considerations and subsequent additional contact with the criminal justice system. The considerations on admissions into each system was immaterial inasmuch as Swift Bird was not to be (initially) a repository for inmates sentenced to the six-state group.

At the heart of this orientation is the commonly referred to "recidivism" or rate of recidivism. The fundamental measure of accomplishment of the Swift Bird Project must be the lack of a return into the criminal justice system, thereby establishing the validity and usefulness of the experimental activity. In order to adequately test the utility of the project from this point of view, the six participating states were to have had non-selected Indian offenders tracked in the same fashion as those Indian clients going through Swift Bird.

---

\*Minnesota, Montana, Nebraska, North Dakota, and South Dakota are the five actual states. The Federal Bureau of Prisons represents the sixth state.

Because the "control group" representing non-selected Indian inmates is necessarily different from the "test group" of Indian inmates selected, a base data structure was developed so as to allow for a comparison of the full Indian recidivism experience prior to Swift Bird to that with Swift Bird. This comparison was to be accomplished by using as a base, all inmate releases for the years 1976, 1977, and 1978. Due to the shifting scope of the project, only the base data is available for the analysis. In this regard, the analysis revolved around profiling of type of release along with such other ~~crosstabs~~ <sup>variables</sup> as offense, age, and sentence length and the time distribution of subsequent contact with the criminal justice system, ~~together with the comparable crosstabs.~~ These profiles form the complete focus of this analytical effort.

#### Baseline Data

Because corrections practitioners and researchers alike can and do apply ~~one of~~ many different definitions to "recidivism,"\* the raw data that was collected is presented in Exhibit I-4 printouts at the end of this section. This exhibit contains all of the relevant data elements, less the particular identifying information of inmate name and number. The data was collected via the forms described in the Introduction. The key to the printout variables is shown in Exhibit I-3.

---

\*That is, following release, it may be the time until arrest, arraignment, adjudication, probation, incarceration, or some other point in the processing of an offender (or alleged offenders).

## Analysis of Data

7. { Because this study is concerned with the evaluation of an alternative institutional setting, which is fed by the correctional agencies of the six-state group, it is, therefore, not oriented toward a comparison of the states themselves but only each state's individual experience relative to the Swift Bird clientele from that state. Consequently, although all of the data presented has been aggregated across categories (release types, offenses, ages of inmates, states, etc.), a comparison (among) the states has not been made.

*between*

The analysis developed is grouped into six partitions along the following format:

1. Offense Characteristics (crosstabbed by):
  - a. Age of Inmate at Release
  - b. Sentence Length
  - c. Time Served by Sentence Length
2. Form of Release Characteristics (crosstabbed by):
  - a. Age of Inmate at Release
  - b. Offense
  - c. Sentence Length
  - d. Percent of Sentence Served
3. Subsequent Arrest Characteristics (crosstabbed by):
  - a. Age of Inmate at Release
  - b. Original Offense
  - c. Original Sentence Length
  - d. Percent of Original Sentence Served
4. Parole Violation Characteristics (crosstabbed by):
  - a. Age of Inmate at Release
  - b. Original Offense of Inmate
  - c. Original Sentence Length
  - d. Percent of Original Sentence Served

5. Characteristics of Time Differences Between Release and Arrest (crosstabbed by):
  - a. Age of Inmate at Release
  - b. Original Offense of Inmate
  - c. Original Sentence Length
  - d. Percent of Original Sentence Served
6. Characteristics of Time Differences Between Release and Parole Violation (crosstabbed by):
  - a. Age of Inmate at Release
  - b. Original Offense of Inmate
  - c. Original Sentence Length
  - d. Percent of Original Sentence Served

All of the data is delineated by year for the years 1976, 1977, and 1978 and by state for each of the six states. Aggregations across all years for each state are also developed. Although aggregations across states were done, for reasons discussed above, they are not presented here. In displaying the analysis and to provide a backdrop for the accompanying narrative description, copies of selected crosstab results were made and are included in Volume II, Technical Appendix. For state aggregations across all years, the entire crosstab is included in the Technical Appendix for reference purposes to the narrative development.

? ( As cited above, since state-by-state comparisons are not practical, the ordering of factors 1-6 are within each state. This sort order can be contrasted to a representation of each state within one of the six factors, which would be used to compare Swift Bird client results (test group) against each of the States' clients (control group).

MINNESOTA

*if what?*

Offense Characteristics

Age of Inmates at 1976 Release - Of the 35 observations, Auto Theft represented the greatest category at 26 percent, followed closely by Robbery at 23 percent. Burglary and Assault were bunched at 14.3 and 11.4 percent, respectively. In total, these four groups account for three quarters of the offenses at release. The age distribution was confined principally to the two groupings 25-29 years of age and 30-34, with 31.4 and 37.1 percent, respectively. The 35-39 and 40-49 age categories were uniformly represented with 14.3 and 11.4 percent, respectively.

*what does this mean to do with age at release?*

Age of Inmates at 1977 Release - The number of observations in this release year was only two more than in 1976 for a total of 37. The offense type changed substantially, however, with Robbery accounting for 21.6 percent; Burglary, 16.2 percent; Sexual Assault, 13.5 percent; and Forgery, 10.8 percent, for a total of 62.1 percent. Auto Theft dropped to 8.1 percent. The age distribution, nevertheless, still had the vast majority in the 25-29 and 30-34 age grouping (48.65 and 24.3 percent, respectively) and the 35-39 and 40-49 grouping evenly represented.

*and in graphs*

*This data could easily be presented in tables, with summary interpretations in the narrative.*

Again -  
these are  
the same  
data.

Age of Inmates at 1978 Release - Robbery and Burglary continued their dominance, accounting for 34.6 and 26.9 percent, respectively. Assault was at 15.4 for the 26 observations (down from 35 and 37 from 1976 and 1977, respectively). The age distribution was 42.3 and 26.9 percent for 25-29 and 30-34, respectively. The age groupings 35-39 and 40-49 were again equally represented.

Age of Inmates - 1976-1978 Release Composite - The three-year release aggregate shows a broader offense distribution due to the fact that some contributed more in one year than another and vice versa. The offense type leader was Robbery, at 25.5 percent, with Burglary, Auto Theft, and Assault at 18.4, 14.3, and 10.2 percent, respectively. These four types accounted for 68.4 percent of the total. The age distribution showed the bunching as was consistent in each of the years, with 40.8 percent in the 25-29 year grouping and 29.6 percent in the 30-34 year group. The distribution between 35-39 and 40-49 was approximately equal, with 10.2 and 9.2 percent, respectively. Not surprisingly, the largest observation by type and age was 11 of 98 observations for 25-29 year olds of Robbery. The next largest group was 30-34 year olds of Robbery, which contributed nine observations.

Minimum Sentence (in Months)

1976 Release - The highest frequency of minimum sentence was 60 months (40 percent) and 36 months (31.4 percent). The highest offense type,

up to 72.4 months, reflecting the offense type shift away from Auto Theft to Robbery, which averaged 109.6 months for the minimum sentence.

1978 Release - Because of greater stability in offense type between 1977 and 1978, the average minimum sentence changed only slightly, going from 72.4 months to 78.5 months. Sixty (60) months was, again, the most frequent category, at 26.9 percent.

1976-1978 Release Composite - The average minimum sentence for the three-year group was 70.5 months, 60 months being the maximum occurrence (for 34.7 percent). The offense type with maximum occurrence, Robbery (25.5 percent), had an average minimum sentence of 112.8 months, with only 24 percent occurring at 60 months.

#### Actual Service Time by Sentence Length (in Months)

1976 Release - One third of the releases served between 13 and 24 months, with 92.3 percent of the observations having sentences equally split between 36 months and 60 months.

1977 Release - The largest service time category by sentence length was for service time 37-48 months for 60-month sentences, which represents 13.5 percent of total; 55.6 percent of those released after serving 37-48 months; and 38.5 percent of 60-month sentences.

1978 Releases - The largest service time category by sentence length was for service time of 7-12 months and this accumulation was 50 percent of the releases for that component, with most of them being at 12 months.

1976-1978 Release Composite - The maximum multiple occurrences of sentence length arrayed by time served is for 37-48 months served and 60 months sentence on the minimum sentence length.

#### Release Type Characteristics

Age of Inmates - 1976-78 Release Composite - Because of the heavy usage of parole as a release mechanism (80.6 percent), there were no discernible differences due to age of inmate.

Offense Type - 1976-1978 Release Composite - Although there is a high concentration of parole as a release form, there is a disproportionate number of expiration of sentences as a release type for the offenses of Assault and Burglary. Burglary could be explained based on presumably shorter sentence length. However, Assault is not as easily explained.

Minimum Sentence (in Months) - 1976-1978 Release Composite - There is a high concentration of low sentence lengths for the expiration of sentence (36.8 percent). However, more than 41 percent of expiration of sentence have sentences over 36 months.

Percent of Service Time to Sentence Length - 1976-1978 Release Composite - The cumulative distribution on percent of sentence served by release type is as follows:

<u>Percent Served</u>	<u>Cumulative Distribution</u>	
	<u>Parole</u>	<u>Expiration of Sentence</u>
1- 9	6.50	5.26
10- 19	22.10	5.26
20- 29	33.77	5.26
30- 39	50.65	5.26
40- 49	58.40	10.53
50- 59	70.10	26.32
60- 69	81.82	52.63
70- 79	87.00	78.95
80- 89	89.60	100.00
90-100	100.00	100.00

Subsequent Arrest (Y/N)

Age of Inmates - 1976-1978 Release Composite - There was a definite bunching by age of subsequent arrest of the releases in the age groups 25-29 and 30-34, accounting for 83 percent of total. The same age categories accounted for 62.5 percent of the releases. There was a noticeable diminution of subsequent arrests in the 35-39 and 40-49 age categories, with only 11 percent of total versus the 21 percent in the release profile.

Offense Type - 1976-1978 Release Composite - Subsequent arrest by offense type was the highest for Burglary (at 28 percent of total) versus a low of seven percent for Auto Theft, among the major offense contributors which, together, contributed 32.7 percent of total releases.

Minimum Sentence (in Months) - 1976-1978 Release Composite - There was no apparent relationship between subsequent arrest and former minimum sentence lengths of releases.

Percent of Service Time to Sentence Length - 1976-1978 Release Composite - There was a heavier concentration of subsequent arrests among the low percent of time served than the higher percentages served. That is, 50 percent of subsequent arrests had served 39 percent or less, whereas the percentage of releases having served 39 percent or less was 38.5 percent.

Subsequent Parole Violation (Y/N)

Age of Inmates - 1976-1978 Release Composite - The 13.9 percent of paroles that were violated did not appear to have any relationship with age of inmate.

Offense Type - 1976-1978 Composite - Robbery, which contributed only one quarter to the parole release type, contributed 64 percent to the parole violation total with, therefore, all other offenses contributing disproportionately less.

Minimum Sentence (in Months) - 1976-1978 Release Composite - Parole  
violation by length of former sentence appeared to be widely spread,  
with no discernible relationship between the variables.

Percent of Service Time to Sentence Length - 1976-1978 Release Com-  
posite - Surprisingly, parole violations were evenly split between per-  
cent of sentence served above and beneath 50 percent, which, for parole  
releases, are concentrated at the lower end of the percentage of sen-  
tence served scale.

Time Between Release and Arrest

Age of Inmates - 1976-1978 Release Composite - Of the 18.4 percent of  
releases with a subsequent arrest, the only bunching by age and time  
between release and arrest occurred for the 30-35 year old group and a  
time difference of 0 to 1 month, in which the group contributed 75 per-  
cent to those arrested after only 0-1 month freedom and 60 percent of  
the group's total rearrest level. The largest age group for subsequent  
arrests was for the 25-29 year olds (55.55 percent of total) for which  
the time distribution was essentially flat over 21 months. The time  
categories with time delay and accumulation are shown below:

<u>Time Category (in Months)</u>	<u>Percent of Total</u>	
	<u>Amount</u>	<u>Cum.</u>
0 - 1	22.2	22.2
2	11.1	33.3
3	5.051	38.9
4 - 5	16.67	55.56
6 - 7	11.1	66.67
8	11.1	77.78
9 - 10	5.051	83.33
11 - 13	0	83.33
14 - 17	5.051	88.89
18 - 21	5.051	94.44
22 & Over	5.051	100.00

Average: 6.55 months

Offense Type - 1976-1978 Release Composite - There was no discernible relationship in time difference by offense type.

Minimum Sentence Length (in Months) - 1976-1978 Release Composite - There was no discernible relationship in time difference by minimum sentence.

Percent of Service Time to Sentence Length - 1976-1978 Release Composite - There was no discernible relationship in time difference by percent of time served of original sentence length.

Time Between Parole Release and Parole Violation

Age of Inmates - 1976-1978 Release Composite - There was no discernible relationship between age and time between parole release and parole violation. There was, however, a slight bunching toward the shorter time differences, as shown below:

<u>Time Category (in Months)</u>	<u>Percent of Total</u>	
	<u>Amount</u>	<u>Cum.</u>
0	9.09	9.09
2	18.18	27.27
3	18.18	45.45
4	9.09	54.54
6	9.09	63.63
9	9.09	72.72
12	9.09	81.81
24	9.09	90.90
28	9.09	100.00

Average: 8.45 months

Offense Type - 1976-1978 Release Composite - Burglary, with two observations, had a bunching of violations in the short time difference range, both occurring within three months. Otherwise, there was no discernible relationship between offense type and time difference.

Minimum Sentence Length (in Months) - 1976-1978 Release Composite -

There was no discernible relationship between minimum sentence and time difference between parole release and parole violation.

Percent of Service Time to Sentence Length - 1976-1978 Release Com-

posite - There was no discernible relationship between percent of service time and time difference between parole release and parole violation.

## MONTANA

### Offense Characteristics

Age of Inmates at 1976 Release - Of the 51 observations, Burglary represented the greatest category at 29.4 percent, followed closely by Assault at 25.5 percent. Robbery and Homicide were bunched at 15.7 and 9.8 percent, respectively. In total, these four groups account for 80 percent of the offenses at release. The age distribution was confined principally to the three groupings 21-24, 25-29, and 30-34 years of age, with 23.5, 27.5 and 25.5 percent, respectively. The 30-34 year group had 13.7 percent of the total, which, when added to the other three age groupings, represents 90.2 percent of the total.

Age of Inmates at 1977 Release - The number of observations in this release year was only six less than in 1976 for a total of 37. The offense type changed somewhat, with Burglary still at 26.7 percent and Larceny close 20 percent. Robbery was only nine percent this year. Age became more skewed with 1977 releases than with the 1976 group, with 46.7 percent in the 21-24 age range and 22.2 percent in the 25-29 age group.

Age of Inmates at 1978 Release - Again, Burglary, Assault, and Homicide are the most represented sample of 31 (which is, in itself, a slow down) at 32.3, 19.35, and 12.9 percent, respectively. Robbery leveled

off at 9.7 percent. Age distribution shifted here, however, with 32.3 percent in the 25-29 year old group, followed by 21-24 and 30-34 year olds each contributing 22.6 percent.

Age of Inmates - 1976-1978 Release Composite - The three release aggregate shows a broader offense distribution due to the fact that some contributed more in one year than another and vice versa. The offense type leader was Burglary at 29.1 percent, with 19.7 percent for Assault and the rest scattered. Age distribution had 31.5 percent for 21-24 years olds and with 26.8 and 20.5 percent for 25-29 and 30-34 years old, respectively. The largest category between the type and the age group is 15 percent in the 21-24 years old. The age grouping 25-29 and 30-34 contribute in total but do not, significantly cluster for reporting in the way of cell size.

#### Minimum Sentence (in Months)

1976 Release - The highest frequency of minimum sentence was 60 months (19.6 percent), 36 months (17.65 percent), and 120 months (17.65 percent). The average minimum sentence was 80.9.

1977 Release - Again, 60 months was the largest occurrence of a minimum sentence among releases (35.6 percent). However, the average dropped considerably (to 66.4 months), reflecting more Larceny and fewer Assault offenses.

1978 Release - The average minimum sentence reversed again and move higher than 1976 to 89.3 months, as Larceny as an offense type contracted. The highest offense occurrence, Burglary (32.3 percent) had 40 percent at 60 months and had an average of 55.2 months.

1976-1978 Release Composite - The average minimum sentence was 78.1 months, 60 months being the maximum occurrence (for 28.4 percent). The offense type with the maximum occurrence, Burglary (29.1 percent), had one third, with a 60-month minimum sentence.

Actual Service Time by Sentence Length (in Months)

1976 Release - The maximum occurrence of sentence length, 60 months, had a length of stay profile as follows:

<u>Length of Stay (Months)</u>	<u>Percent</u>
7 - 12	50
25 - 36	30
37 - 48	20

As can be see, the modal length of stay is no greater than 20 percent of the minimum sentence length.

1977 Release - The maximum occurrence of sentence length, which was also 60 months, had a similar length of stay profile (to 1976), although extended out somewhat. The following shows this for 60-months sentence:

<u>Length of Stay (Months)</u>	<u>Percent</u>
7 - 12	56.25
13 - 24	12.50
25 - 36	12.50
37 - 48	12.50
49 - 120	6.25

1976-1978 Release Composite - The aggregation of the maximum sentence length occurrence of 60 months is as follows:

<u>Length of Stay (Months)</u>	<u>Percent</u>
7 - 12	47.2
13 - 24	16.7
25 - 36	13.9
37 - 48	13.9
49 - 120	8.3

Interestingly, the profile for the 120-month sentence has a length of stay distribution which approximately doubles the 60-month profile.

#### Release Type Characteristics

Age of Inmates - 1976-1978 Release Composite - Because of the heavy usage of parole as a release mechanism (92.91 percent), there were no discernible differences due to age of inmate.

Offense Type - 1976-1978 Release Composite - Because of the heavy usage of parole as a release mechanism (92.91 percent), there were no discernible differences due to offense of inmate.

Minimum Sentence (in Months) - 1976-1978 Release Composite - Of the seven percent of inmates who were released due to expiration of sentence, 44.4 percent were from those with sentences 12 months or less. Of those with sentences less than 12 months, none was paroled as a form of release.

Percent of Service Time to Sentence Length - 1976-1978 Release Composite - The cumulative distribution on percent of sentence served by release type is as follows:

<u>Percent Served</u>	<u>Cumulative Distribution</u>	
	<u>Parole</u>	<u>Expiration of Sentence</u>
1 - 9	1.69	0
10 - 19	42.40	14.3
20 - 24	69.50	28.6
30 - 39	78.80	28.6
40 - 49	81.35	28.6
50 - 59	83.90	42.9
60 - 69	87.30	71.4
70 - 79	93.20	85.7
80 - 89	96.60	85.7
90 - 100	100.00	100.0

This profile is consistent with service time for parole release being a substantially lower percentage than expiration of sentence. It is surprising, however, that 42.4 percent had been released prior to achieve twenty percent of minimum sentence.

Subsequent Arrest (Y/N)

Age of Inmates - 1976-1978 Release Composite - There was no apparent relationship between age and subsequent arrest for the 25 percent of releases that were subsequently arrested.

Offense Type - 1976-1978 Release Composite - Among major offense type contributors for releases, Burglary had the highest subsequent arrest rate (at 40.5 percent) and Larceny had the lowest rate (at 9.1 percent), both of which one would have expected to move together as opposed to moving in opposite directions.

Minimum Sentence (in Months) - 1976-1978 Release Composite - There was no discernible trend among subsequent arrests and former minimum sentence length.

Percent of Service Time to Sentence Length - 1976-1978 Release Composite - There was no discernible trend among subsequent releases and percent of sentence served.

Subsequent Parole Violation (Y/N)

Age of Inmates - 1976-1978 Release Composite - The 23.7 percent of paroles that were violated did not appear to have any relationships with age of inmate.

Offense of Inmates - 1976-1978 Release Composite - The former major offense types of releases did not appear to have any relationship with the parole violation of inmates.

Minimum Sentence (in Months) - 1976-1978 Release Composite - The former minimum sentences of releases did not appear to have any relationship with the parole violation of inmates.

Percent of Service Time to Sentence Length - 1976-1978 Release Composite - Of the violators, 89 percent had served less than 40 percent of their sentence, whereas 79 percent of the parole grants had served less than 40 percent of their sentence. Otherwise, there was no discernible relationship among the variables.

#### Time Between Release and Arrest

Age of Inmates - 1976-1978 Release Composite - Of the 25 percent of releases with a subsequent arrest, there was not any significant bunching by age and time between release and arrest. Although the time difference between release and arrest was mostly flat over the range (as shown below), the age group with the largest contribution to subsequent arrest (21-24 year olds, with 37.5 percent of total), had a higher number of subsequent arrest with a short time difference and fewer with a large difference, which replicates an exponential decay type of function. The time categories with time delay and accumulation are shown below:

<u>Time Category (in Months)</u>	<u>Percent of Total</u>	
	<u>Amount</u>	<u>Cum.</u>
0 - 1	6.25	6.25
2	12.5	18.75
3	9.375	28.125
4 - 5	12.5	40.625
6 - 7	9.375	50.00
9 - 10	6.25	56.25
11 - 13	15.625	71.875
14 - 17	6.25	78.125
18 - 21	3.125	81.25
22 & Over	18.75	100.00

Average: 9.98 months

Offense Type - 1976-1978 Release Composite - There was no discernible relationship in time difference by offense type. The offense type with the largest contribution to subsequent arrest (Burglary, with 46.875 percent of total) was essentially flat over the time difference range.

Minimum Sentence Length (in Months) - 1976-1978 Release Composite - There was not any discernible relationship between original offense sentence length and rearrest time difference.

Percent of Service Time to Sentence Length - 1976-1978 Release Composite - There was not any discernible relationship between original offense and percent of service time to sentence length. The percent of time served to sentence length showing the largest subsequent arrest (10-19 percent served, which accounted for 43.75 percent of total) was essentially flat over the range of subsequent arrest time differences.

Time Between Parole Release and Parole Violation

Age of Inmates - 1976-1978 Release Composite - There was no discernible relationship between age and time between parole release and parole violation. The time categories with time delay and accumulation are shown below:

<u>Time Category (in Months)</u>	<u>Percent of Total</u>	
	<u>Amount</u>	<u>Cum.</u>
1	3.57	3.57
2	3.57	7.14
3	14.29	21.43
4	7.14	28.57
5	10.71	39.29
6	10.71	50.00
7	7.14	57.14
9	3.57	60.70
11	14.29	75.00
12	3.57	78.57
14	3.57	82.14
17	7.14	89.29
20	3.57	92.86
23	3.57	96.40
30	3.57	100.00

Average: 9.14 months

Offense Type - 1976-1978 Release Composite - There was no discernible relationship between offense type and time difference between parole release and parole violation.

Minimum Sentence Length (in Months) - 1976-1978 Release Composite -

There was no discernible relationship between minimum sentence and time difference between parole release and parole violation.

Percent of Service Time to Sentence Length - 1976-1978 Release Composite - There was no discernible relationship between percent of service time and time difference between parole release and parole violation.

NEBRASKA

Offense Characteristics

Age of Inmates at 1976 Release - Of the 26 observations, Burglary represented the greatest category at 38.5 percent, followed closely by Forgery at 19.2 percent. Auto Theft, Assault, and Sexual Assault were bunched at 11.5, 7.7, and 7.7 percent, respectively. In total, the five groups account for 84.6 percent of the offenses at release. The age distribution was widely spread, with 23.1 percent in the 21-24 age category, 26.9 percent in the 25-29 age category, 15.4 percent in the 30-35 age category, 7.7 percent in the 35-39 age category, and 23.1 percent in the 40-49 age category.

Age of Inmates at 1977 Release - The number of observations in this release year was only two more than in 1976 for a total of 28. The significant offense types remained unchanged, but were more extremely weighted toward the dominant ones. For example, Burglary accounted for 50 percent of the total, followed by Forgery at 17.9 percent. The age distribution was consistently spread as in 1976, as shown in the following profile:

<u>Age Group</u>	<u>Percent of Total</u>
21 - 24	28.6
25 - 29	20.7
30 - 34	3.6
35 - 39	21.4
40 - 49	14.3
50+	14.3

Age of Inmates at 1978 Release - The 31 observations in this year changed substantially in the offense type characteristics, with Burglary and Forgery showing equally at 23.6 percent. Assault had 16.1 percent and Traffic (DUI) had 9.6 percent. These four categories account for three quarters of the total. The age distribution continued to show a spread across categories, as follows:

<u>Age Group</u>	<u>Percent of Total</u>
21 - 24	9.7
25 - 29	16.1
30 - 34	9.7
35 - 39	35.5
40 - 49	12.9

Age of Inmates - 1976-1978 Release Composite - Because of extreme peaking in offense type characteristics in 1976 and 1977, the three-year aggregate demonstrates relatively sharp peaking, with Burglary at 36.5 percent, Forgery at 20 percent, and Assault at 10.6 percent. Conversely, the age categories being as widely distributed in each of the three years provide a very stable aggregate distribution, as follows:

<u>Age Group</u>	<u>Percent of Total</u>
20	5.9
21 - 24	22.3
25 - 29	15.3
30 - 34	18.8
35 - 39	15.3
40 - 49	16.5
50+	4.7

The largest occurrence by type and age was 12 for 21-24 year olds with a Burglary offense.

### Minimum Sentence (in Months)

1976 Release - The maximum occurrence of minimum sentence was 12 months (61.5 percent), which had 80 percent of the largest offense type, Burglary. The average minimum sentence was 20.1 months.

1977 Release - Again, 12 months was the highest frequency minimum sentence among releases (67.9 percent), and the average dropped to 15.1 months.

1978 Release - Although 12 months was still the largest occurrence of sentence length (at 51.6 percent), the average jumped to 23 months, reflecting the reduced share of 12-month minimum sentences.

1976-1978 Release Composite - The average minimum sentence was 19.5 months, 12 months being the maximum occurrence (for 60 percent). the offense type with the maximum occurrence, Burglary (36.5 percent), had one third, with a 12-month minimum sentence.

### Actual Service Time by Sentence Length (in Months)

1976 Release - Approximately 50 percent of the length of stay distribution is in the 7-12 month category, of which 66.7 percent was contributed by 12-month sentences, 25 percent by 18-month sentences, and 8.3 percent by 36-month sentences.

1977 Release - The profile for 1977 is almost identical to 1976 for the 7-12 month category and its situation.

1978 Release - Again, the 7-12 month length of stay is the maximum frequency occurrence but is made up by 89 percent of 12-month sentences and 11 percent of 18-month sentences.

1976-1978 Release Composite - From the three-year aggregate, it is possible to see that the inmates are serving approximately the same length of time as their minimum sentence length.

#### Release Type Characteristics

Age of Inmates - 1976-1978 Release Composite - With the equal splitting of releases by the two types (parole and expiration of sentence), there does not appear to be an discernible difference by age.

Offense Type - 1976-1978 Release Composite - With the spread on offense types for the releases made, there does not appear to be any discernible difference by offense.

Minimum Sentence (in Months) - 1976-1978 Release Composite - There was a heavier concentration of release type of expiration of sentence for the lower sentence lengths than there was for parole.

Percent of Service Time to Sentence Length - 1976-1978 Release Composite - The cumulative distribution as a percentage of sentence served by release type is as follows:

<u>Percent Served</u>	<u>Cumulative Distribution</u>	
	<u>Parole</u>	<u>Expiration of Sentence</u>
1 - 9	0	5.26
10 - 19	2.6	7.8
20 - 24	2.6	10.5
30 - 39	2.6	21.1
40 - 49	5.26	28.95
50 - 59	15.79	50
60 - 69	21.05	78.95
70 - 79	26.3	84.2
80 - 89	60.5	86.8
90 - 100	100.00	100.0

Clearly, this profile is not consistent with traditional precepts of parole service time and expiration of sentence service time. Therefore, there must be a difference in the definition of minimum sentence for one who is paroled versus one whose sentence expires due to service of time.

Subsequent Arrest (Y/N)

Age of Inmates - 1976-1978 Release Composite - There was no apparent relationship between age and subsequent arrest for the 25 percent of releases that were subsequently arrested.

Offense Type - 1976-1978 Release Composite - Among major offense type contributors for releases, Burglary had the lowest subsequent arrest

rate (at 19.35 percent) and Forgery had the highest rate (at 35.3 percent), both of which one would have expected to move together as opposed to going in opposite directions.

Minimum Sentence (in Months) - 1976-1978 Release Composite - There was no apparent relationship between subsequent arrest and former minimum sentence length.

Percent of Service Time to Sentence Length - 1976-1978 Release Composite - There was no apparent relationship between subsequent arrest and former percent of sentence served.

Subsequent Parole Violation (Y/N)

Age of Inmates - 1976-1978 Release Composite - The 36.8 percent of paroles that were violated did not appear to have any relationship with age of inmate.

Offense Type - 1976-1978 Release Composite - Burglary, which contributed 44.7 percent of the parole release, accounted for 42.9 percent of the violations, which indicates the lack of any offense type correlation with parole violation.

Minimum Sentence (in Months) - 1976-1978 Release Composite - The former minimum sentences of releases did not appear to have any relationship with the parole violation of inmates.

Percent of Service time to Sentence Length - 1976-1978 Release Composite - Of the parole violators, 71.4 percent had served more than 90 percent of their minimum sentence, whereas 60.5 percent of the total releases granted parole had served more than 90 percent. Otherwise, there was no discernible relationship among the variables.

Time Between Release and Arrest

Age of Inmates - 1976-1978 Release Composite - Of the 25.9 percent of releases with a subsequent arrest, there was not any significant bunching by age and time between release and arrest. This fact was true even within age categories viewed singly. The time categories with time delay and accumulation are shown below:

<u>Time Category (in Months)</u>	<u>Percent of Total</u>	
	<u>Amount</u>	<u>Cum.</u>
0 - 1	9.10	9.10
2	4.45	13.64
3	4.45	18.18
4 - 5	13.64	31.82
6 - 7	9.10	40.91
8	4.45	45.45
9 - 10	13.64	59.09
11 - 13	4.45	63.64
14 - 17	22.73	86.36
18 - 21	4.45	90.91
22 & Over	9.10	100.00

Average: 10.11 months

Offense Type - 1976-1978 Release Composite - The only significant relationship between offense type and time difference between release and subsequent arrest existed for a minor (9.1 percent of total rearrests

and 2.4 percent of total releases) offense category--Traffic (DUI). However, all of the rearrests occurred within the same time period, with less than one month difference.

Minimum Sentence (in Months) - 1976-1978 Release Composite - There was no discernible relationship between minimum sentence length and time difference between release and rearrest. The sentence length that contributed the greatest amount to the rearrest (12 months, with 63.64 percent of total) was essentially flat over the time difference range.

Percent of Service Time to Sentence Length - 1976-1978 Release Composite - There was no discernible relationship between percent of time served to time difference between release and rearrest.

Time Between Parole Release and Parole Violation

Age of Inmates - 1976-1978 Release Composite - There was a definite relationship between age and time between parole release and parole violation. The younger age groups had a longer time difference between release and violation, whereas the older group had a shorter time difference. In particular, the average time for 21 to 34 years old was 5.86 months, with the earliest occurring at four months, and the average time for over 34 years old was 3.14 months, with only one of the seven observations being greater than three months (it was 11 months and raised the average by 1.31 months). The sum of the two groups

provided for a relatively flat distribution of observations over the time difference range, as shown below:

<u>Time Category (in Months)</u>	<u>Percent of Total</u>	
	<u>Amount</u>	<u>Cum.</u>
1	7.14	7.14
2	7.14	14.29
3	14.29	28.57
4	14.29	42.86
5	7.14	64.29
6	7.14	71.43
7	14.29	85.71
8	7.14	92.86
11	7.14	100.00

Average: 4.5 months

Offense Type - 1976-1978 Release Composite - There was no discernible relationship between offense type and time difference between parole release and parole violation.

Minimum Sentence (in Months) - 1976-1978 Release Composite - For minimum sentences 18 months or under, there was a definite bunching toward the high end of the time difference scale compared to the longer minimum sentences, which clustered near the low end of the time difference scale.

Percent of Service Time to Sentence Length - 1976-1978 Release Composite - There was no discernible relationship between percent of service time and time difference between parole release and parole violation.

## NORTH DAKOTA

### Offense Characteristics

Age of Inmates at 1976 Release - Of the 36 observations, Burglary represented the greatest category at 27.8 percent, followed closely by Assault at 19.4 percent. Auto Theft and Larceny were bunched at 13.9 percent each. In total, these four groups account for exactly three quarters of the total. The age distribution is bunched, with the 21-24 year old group having 19.4 percent, 25-29 having 36.1 percent, and 30-34 having 27.8 percent.

Age of Inmates at 1977 Release - The 28 observations demonstrated sharper peaking by offense type and approximately the same age group bunching as the 1976 releases. Burglary accounted for 39.3 percent; Robbery, 14.3 percent; and Assault and Larceny, 10.7 percent each. The age groupings of 21-24, 25-29, and 30-34 accounted for 28.6, 32.4, and 17.9 percent, respectively.

Age of Inmates at 1978 Release - The 31 observations had a reversal in the offense type spread and age spread, with Larceny at 29 percent, Burglary at 16.1 percent, Robbery at 12.9 percent, and Assault and Escape at 9.7 percent each. The age distribution was as follows:

<u>Age Group</u>	<u>Percent of Total</u>
20	9.7
21 - 24	32.3
25 - 29	16.1
30 - 34	16.1
35 - 39	9.7
40 - 49	9.7

Age of Inmates - 1976-1978 Release Composite - Because of the 1978 offense and age distribution reversals, the aggregate profile showed a distribution with Burglary at 27.4 percent, Larceny at 17.5 percent, Assault at 13.7 percent, and Robbery and Auto Theft closely bunched at 9.47 and 8.42 percent, respectively. The age profile is as follows:

<u>Age Group</u>	<u>Percent of Total</u>
20	9.7
21 - 24	37.3
25 - 29	16.1
30 - 34	16.1
35 - 39	9.7
40 - 49	9.7

The largest cell size between the offense and age categories is 10 or 10.5 percent for Burglary and age group 25-29.

Minimum Sentence (in Months)

1976 Release - The maximum occurrence of minimum sentence was 12 months (44.4 percent), which had 40 percent of the largest occurrence offense type, Burglary (27.8 percent). The average minimum sentence was 21.5 months.

1977 Release - Again, 12 months was the highest frequency minimum sentence among releases (32.1 percent) and the average dropped accordingly to 17.6 months.

1978 Release - Although 12 months was the highest frequency occurrence of minimum sentence, at 48.4 percent, the average went up (to 25.5 months) because of greater sentences in the upper scale than in 1976 and 1977.

1976-1978 Release Composite - The average minimum sentence was 21.7 months, 12 months being the maximum occurrence (for 42.1 percent). The offense type with the maximum occurrence, Burglary (27.4 percent), had 38.5 percent with a 12-month minimum sentence.

#### Actual Service Time by Sentence Length (in Months)

1976-1978 Release Composite - The highest occurrence of sentence length was 12 months and of the length of service 7-12 months with the two highly overlapping.

#### Release Type Characteristics

Age of Inmates - 1976-1978 Release Composite - With the heavy usage of parole as a release mechanism (83.2 percent), there does not appear to be any discernible difference by age.

Offense Type - 1976-1978 Release Composite - Although expiration of sentence occurred only 16.8 percent of the time, there was a disproportionate occurrence with the offenses of Dangerous Drugs, Fraud, and

Larceny, which probably reflects shorter sentences for these offense types.

Minimum Sentence (in Months) - 1976-1978 Release Composite - There was a dominance of expiration of sentence over parole for sentence lengths under 12, with only 6.25 percent of total expiration of sentences occurring for sentences over 12 months.

Percent of Service Time to Sentence Length - 1976-1978 Release Composite - The cumulative distribution as a percentage of sentence served by release type is as follows:

<u>Percent Served</u>	<u>Cumulative Distribution</u>	
	<u>Parole</u>	<u>Expiration of Sentence</u>
1 - 9	0	0
10 - 19	2.56	0
20 - 29	3.85	0
30 - 39	12.82	0
40 - 49	25.64	0
50 - 59	47.44	0
60 - 69	73.10	7.14
70 - 79	80.77	21.43
80 - 89	89.70	35.70
90 - 100	100.00	100.00

Subsequent Arrest (Y/N)

Age of Inmates - 1976-1978 Release Composite - There was a definite bunching of subsequent arrest among the lower age groups, with the 20-29 year olds having 80 percent of the subsequent arrests but contributing only 54 percent of the releases. Subsequent arrest rate among releases was 26 percent.

Offense Type - 1976-1978 Release Composite - There was no apparent relationship among subsequent arrest and the major former offense type of releases.

Minimum Sentence (in Months) - 1976-1978 Release Composite - There was a definite bunching of arrest among the lower sentence lengths of releases, with 84 percent of arrests for former sentences at 12 months or less, whereas this same group contributed 50 percent of releases.

Percent of Service Time to Sentence Length - 1976-1978 Release Composite - There was high concentration of the arrests coming from the group of releases with the high percent of sentence served, which further reflects the fact that this group of arrests came from short-sentence inmates.

Subsequent Parole Violation (Y/N)

Age of Inmates - 1976-1978 Release Composite - The 26.6 percent of paroles that were violated had a disproportionately large number of violations from the 40-49 year old category (70 percent of the parole grants in that category) and disproportionately half of the expected number (based on parole grants) in the 21-24 year old category.

Offense Type - 1976-1978 Release Composite - There were not major shifts in parole violation by offense type versus those parole grants that were given for release by the offense type.

Minimum Sentence (in Months) - 1976-1978 Release Composite - The former minimum sentence of inmates had parole grants of 42 percent with sentences greater than 23 months, whereas violations for parole of inmate with that former sentence contributed 76 percent of total violations.

Percent of Service Time to Sentence Length - 1976-1978 Release Composite - There did not appear to be any discernible relationship between percentage of time service and parole violation of the inmate.

Time Between Release and Arrest

Age of Inmates - 1976-1978 Release Composite - Of the 25.5 percent of releases with a subsequent arrest, there was no discernible relationship between age of the offender and time difference between release and subsequent arrest. Although the modal time difference category was 0-1 month difference (contributing 20.83 percent of total), within age categories the distribution was essentially flat. The time categories with time delay and accumulation are shown below:

<u>Time Category (in Months)</u>	<u>Percent of Total</u>	
	<u>Amount</u>	<u>Cum.</u>
0 - 1	20.83	20.83
2	8.33	29.17
3	4.17	33.33
4 - 5	16.67	50.00
6 - 7	8.33	58.33
8	12.50	70.83
9 - 10	8.33	79.17
11 - 13	8.33	87.50
14 - 17	8.33	95.83
22	4.17	100.00

Average: 6.73 months

Time Between Parole Release and Parole Violation

Age of Inmates - 1976-1978 Release Composite - There was no discernible relationship between age and time difference between parole release and parole violation. There is a definite bunching in the small time differences, which might replicate an exponential delay function. The time categories with time delay and accumulation are shown below:

<u>Time Category (in Months)</u>	<u>Percent of Total</u>	
	<u>Amount</u>	<u>Cum.</u>
1	33.33	33.33
2	4.76	38.09
3	9.52	47.62
4	4.76	52.38
5	14.29	66.66
6	9.52	76.19
8	4.76	80.95
9	4.76	85.71
11	4.76	90.48
15	4.76	95.23
20	4.76	100.00

Average: 5.19 months

Offense Type - 1976-1978 Release Composite - The only discernible relationship between offense type and time difference between parole release and parole violation occurred for Robbery (three observations, or 14.29 percent of total), for which the longest time difference was four months and the average was 3.33 months.

Minimum Sentence Length (in Months) - 1976-1978 Release Composite - There was no discernible relationship between minimum sentence length and time difference between parole release and parole violation.

Percent of Service Time to Sentence Length - 1976-1978 Release Com-

posite - There was a definite relationship between percent of service time to time difference between parole release and parole violation for service times 90-100 percent having very short time differences.

SOUTH DAKOTA

Offense Characteristics

Age of Inmates at 1976 Release - Of the 55 observations, Burglary represented the greatest category at 43.6 percent, followed by Forgery at 16.4 percent. Assault and Escape were bunched at 7.3 and 9.1 percent, respectively. In total, these four groups account for 76.4 percent of the total. The age distribution is fairly uniform between 21-24 and 40-49, with the following profile:

<u>Age Group</u>	<u>Percent of Total</u>
21 - 24	18.2
25 - 29	30.9
30 - 34	16.4
35 - 39	10.9
40 - 49	14.6

Age of Inmates at 1977 Release - The 60 observations showed less bunching by offense type but a little more by age category. Burglary contributed 31.7 percent; Larceny, 16.7 percent; and Assault, 11.7 percent, with the remainder widely distributed among ten other categories. Four categories dominated, as follows:

<u>Age Group</u>	<u>Percent of Total</u>
21 - 24	28.3
25 - 29	26.7
35 - 39	13.3
40 - 49	15.0

Age of Inmates at 1978 Release - The offense type profile continued to demonstrate a heavy concentration toward Burglary, at 39.3 percent, with Larceny trailing at 14.75 percent. The remaining offense types were widely scattered. The age profile had a broader spread, as follows:

<u>Age Group</u>	<u>Percent of Total</u>
21 - 24	31.15
25 - 29	21.3
30 - 34	13.1
35 - 39	11.5
40 - 49	9.8
50 and over	6.6

Age of Inmates - 1976-1978 Release Composite - Not surprisingly, Burglary led the offense types in percentage contributed at 38.1. Larceny, at 12.5 percent, was a distant second. The age spread broadened as expected due to the pronounced, but varied, profiles from each year. The distribution is as follows:

<u>Age Group</u>	<u>Percent of Total</u>
21 - 24	26.1
25 - 29	26.1
30 - 34	11.4
35 - 39	11.9
40 - 49	13.1

The largest single category occurrence was 24 or 13.6 percent for Burglary in the 25-29 age category.

Minimum Sentence (in Months)

1976 Release - The maximum occurrence of minimum sentence was 24 months (30.9 percent), which had one third of the largest occurrence offense type, Burglary (43.6 percent). The average minimum sentence was 23.7 months.

1977 Release - Although 24 months was the highest frequency minimum sentence among releases (25 percent), the average went up to 31.6 months in the lower percentage due to a higher spread of sentence lengths.

1978 Release - The maximum frequency minimum sentence shifted to 12 months (at 21.3 percent) and the average dropped (from 1977) slightly to 29.9 months. The drop was prevented from being greater with the maximum drop from 24 months to 12 months because the second largest occurrence was at 36 months (16.4 percent) instead of 24 months (11.5 percent).

1976-1978 Release Composite - The largest frequency of occurrence was maintained at 24 months for the composite (22.2 percent). The average minimum sentence was 28.5 months. The offense type with the maximum occurrence, Burglary (38.1 percent), had one quarter with a 24-month sentence.

### Actual Service Time by Sentence Length (in Months)

1976-1978 Release Composite - The highest occurrence of sentence length was 24 months and of the length of service 13-24 months with the two highly overlapping.

### Release Type Characteristics

Age of Inmates - 1976-1978 Release Composite - Even though there was a two to one favor of release type in favor of expiration of sentence, there was no discernible difference of release form by age.

Offense Type - 1976-1978 Release Composite - Only in the case of Arson and Assault were there noticeable difference by release type, with these cited two being heavily shifted toward parole.

Minimum Sentence (in Months) - 1976-1978 Release Composite - The parole releases occurrence more frequently than expiration of sentence for sentence lengths above 30 months (beneath which, expiration of sentence prevailed).

Percent of Service Time to Sentence Length - 1976-1978 Release Composite - The cumulative distribution as a percentage of sentence served by release type is as follows:

<u>Percent Served</u>	<u>Cumulative Distribution</u>	
	<u>Parole</u>	<u>Expiration of Sentence</u>
1 - 9	3.28	0.89
10 - 19	11.48	1.77
20 - 29	29.51	5.31
30 - 39	40.98	9.70
40 - 49	52.46	10.60
50 - 59	67.20	11.50
60 - 69	88.00	14.16
70 - 79	96.72	26.55
80 - 89	96.72	92.00
90 - 100	100.00	100.00

Clearly, this profile is consistent with traditional precepts of parole service time and expiration of sentence service time. The higher order bunching with expiration of sentence is extreme.

Subsequent Arrest (Y/N)

Age of Inmates - 1976-1978 Release Composite - For the two thirds of the releases that were subsequently arrested, there was no apparent relationship with age.

Offense Type - 1976-1978 Release Composite - For the former major offense types, there was no apparent relationship between the types and subsequent arrest.

Minimum Sentence (in Months) - 1976-1978 Release Composite - There was a definite bunching of arrests among the lower sentence lengths of releases, with 50 percent of the arrests being for sentence lengths of 18

months or less, whereas this same group contributed 37 percent of releases.

Percent of Service Time to Sentence Length - 1976-1978 Release Composite - There was a slightly higher concentration of arrests coming from the group of releases with the higher percent of sentence served, which further reflects the fact that this group of arrests came from the short-sentenced inmates.

Subsequent Parole Violation (Y/N)

Age of Inmates - 1976-1978 Release Composite - The 16.1 percent of paroles that were violated were concentrated between the ages of 20 and 29 (accounting for 80 percent of total violations), whereas this same age group contributed 63 percent of the total parole grants.

Offense Type - 1976-1978 Release Composite - There was no major shifts in parole violations by offense type versus those parole grants that were given for release by the offense type. Burglary, which contributed 46.8 percent to parole release, had contributed 50 percent to parole violation.

Minimum Sentence (in Months) - 1976-1978 Release Composite - There was no discernible relationship between minimum sentence length and parole violation.

Percent of Service Time to Sentence Length - 1976-1978 Release Composite - There were higher concentrations among parole violators for higher percentages of their former sentences served than there were among the parole grants. That is, 60 percent of the violations occurred for service percentage 50 percent or more and only 46 percent of the parole grants were made from those who had served 50 percent or more of their sentence.

Time Between Release and Arrest

Age of Inmates - 1976-1978 Release Composite - Of the 63.64 percent of releases with a subsequent arrest, there was no discernible relationship between age and time difference between release and subsequent arrest. The time categories with time delay and accumulation are shown below:

<u>Time Category (in Months)</u>	<u>Percent of Total</u>	
	<u>Amount</u>	<u>Cum.</u>
0 - 1	9.82	9.82
2	7.14	16.96
3	10.71	27.68
4 - 5	8.04	35.70
6 - 7	9.82	45.54
8	4.46	50.00
9 - 10	8.04	58.00
11 - 13	9.82	67.86
14 - 17	8.04	75.90
18 - 21	11.61	87.50
22 and over	12.50	100.00

Average: 10.12 months

Offense Type - 1976-1978 Release Composite - There was no discernible relationship in time difference by offense type. The offense type that contributed the most subsequent arrests (Burglary, which had 38.4 percent of total and 38.1 percent of total releases) was essentially flat over the range of time differences.

Minimum Sentence Length (in Months) - 1976-1978 Release Composite - There was no discernible relationship in time difference by minimum sentence length.

Percent of Service Time to Sentence Length - 1976-1978 Release Composite - There was a definite relationship between percent of service time and time difference between release and rearrest. The percent of time served category with the largest contribution (80-89 percent of time served, which contributed 45.5 percent to rearrests and 42.05 percent to total releases) had a definite bunching toward the short time differences. In that category, 47.05 percent of the rearrests occurred within the first five months (with 25 percent within the first two months) and only 23.5 percent 14 months and over. No other percent served category exhibited such extreme bunching.

Time Between Parole Release and Parole Violation

Age of Inmates - 1976-1978 Release Composite - There was no discernible relationship between age and time between parole release and parole

violation. There was essentially a flat distribution across the range of time differences, as follows:

<u>Time Category (in Months)</u>	<u>Percent of Total</u>	
	<u>Amount</u>	<u>Cum.</u>
0	20.0	20.0
1	20.0	40.0
2	10.0	50.0
7	30.0	80.0
8	10.0	90.0
11	10.0	100.0

Average: 4.4 months

Offense Type - 1976-1978 Release Composite - There was no discernible relationship between offense type and time difference between parole release and parole violation.

Minimum Sentence Length (in Months) - 1976-1978 Release Composite - There was no discernible relationship between minimum sentence length and time difference between parole release and parole violation.

Percent of Service Time to Sentence Length - 1976-1978 Release Composite - There was no discernible relationship between percent of service time and time difference between parole release and parole violation.

FEDERAL BUREAU OF PRISONS

Offense Characteristics

Age of Inmates at 1976 Release - Of the 221 observations, Assault represented the greatest category at 22.6 percent, followed by Burglary and Larceny at 16.7 and 17.65 percent, respectively. In total, these three groups account for 57 percent. The age distribution was quite uniform, as follows:

<u>Age Group</u>	<u>Percent of Total</u>
21 - 24	20.4
25 - 29	26.2
30 - 34	25.3
35 - 39	11.8
40 - 49	7.2
50 and over	5.9

Age of Inmates at 1977 Release - The 221 observations showed a higher concentration of homicides than heretofore seen. The profile of significant offense types are:

<u>Type</u>	<u>Percent</u>
Assault	24.4
Burglary	11.8
Homicide	17.2
Larceny	14.9
Sexual Assault	7.7

The age distribution was, on average, a little younger than the 1976 group, but the structural relationship was unchanged.

Age of Inmates at 1978 Release - The offense type and age distribution for the 174 observations is not structurally different than the 1976 and 1977 release years.

Age of Inmates - 1976-1978 Release Composite - There was not any significant difference among the years; therefore, the composite for both type and age structure is unchanged. The large occurrence of type by age category was the 43 in Assault for age categories 25-29.

Minimum Sentence (in Months)

1976 Release - The maximum occurrence of the minimum sentence was 72 months (20.5 percent), which was accompanied by a very broad set of different sentence lengths. The average was 64.8 months.

1977 Release - Again, 72 months was the highest frequency minimum sentence among releases (20.8 percent). The average experienced a slight drop to 60.3 months.

1978 Release - The average minimum sentence went up by 50 percent to 98.4 months because of higher concentrations of longer minimum sentence (and in spite of 72 months again being the most frequent--32.3 percent--sentence length).

1976-1978 Release Composite - The largest frequency of occurrence was maintained at 72 months (23.9 percent). The average sentence was 72.6, which very closely approximates the modal value.

Actual Service Time by Sentence Length (in Months)

1976 Release - The three service time categories of 4-6 months, 7-12 months, and 13-24 months account for two thirds of the releases, with 21.0 percent, 22.3 percent, and 23.7 percent, respectively. The predominant sentence lengths for each are:

<u>Sentence Length</u>	<u>Percent Contributed</u>
<u>4-6 Months Service</u>	
6 months	27.7
12 months	23.4
<u>7-12 Months Service</u>	
12 months	30.0
24 months	12.0
36 months	14.0
72 months	14.0
<u>13-24 Months Service</u>	
24 months	32.1
36 months	15.1
72 months	26.4

1977 Release - The three service time categories 4-6 months, 7-12 months, and 13-24 months account for two thirds of the releases, with 13.6 percent, 23.1 percent, and 26.7 percent, respectively. The predominant sentence lengths for each are:

<u>Sentence Length</u>	<u>Percent Contributed</u>
<u>4-6 Months Service</u>	
6 months	46.7
12 months	16.7
<u>7-12 Months Service</u>	
12 months	25.5
18 months	13.7
72 months	11.8
<u>13-24 Months Service</u>	
36 months	22.0
72 months	32.2

1978 Release - The service time in 1978 increased among releases, with the three categories of 4-6 months, 7-12 months, and 13-24 months account for only 51.1 percent with the higher service categories of 25-26 months and 37-48 months are 18.4 percent and 14.9 percent, respectively.

1976-1978 Release Composite - The three service time categories of 4-6 months, 7-12 months, and 13-24 months in total for the three-year period accounts for 61.2 percent. The rest of the sentence length-service time process is similar to that described in 1976 or 1977 Release.

#### Release Type Characteristics

Age of Inmates - 1976-1978 Release Composite - All releases were via expiration of sentence because of the way in which release to "the states" is done first and then a parole or other release decision is made.

Offense Type - 1976-1978 Release Composite - All releases were via expiration of sentence because of the way in which release to "the states" is done first and then a parole or other release decision is made.

Minimum Sentence (in Months) - 1976-1978 Release Composite - All releases were via expiration of sentence because of the way in which release to "the states" is done first and then a parole or other release decision is made.

Percent of Service Time to Sentence Length - 1976-1978 Release Composite - All releases were via expiration of sentence because of the way in which release to "the states" is done first and then a parole or other release decision is made.

Subsequent Arrest (Y/N)

Age of Inmates - 1976-1978 Release Composite - (See general description under Percent of Service Time to Sentence Length).

Offense type - 1976-1978 Release Composite - (See general description under Percent of Service Time to Sentence Length).

Minimum Sentence (in Months) - 1976-1978 Release Composite - (See general description under Percent of Service Time to Sentence Length).

Percent of Service Time to Sentence Length - 1976-1978 Release Composite - With only 6.2 percent of all releases showing a subsequent arrest, the establishment of meaningful relationships among the crosstab categories is risky at best and impossible at worst. It was observed, however, that among major former offense types of release, Burglary, which contributed 13.4 percent of total releases, had 50 percent more arrests than the group average, whereas Assault, which contributed 22.5 percent of total releases, had 50 percent less arrests than the group average.

Time Between Release and Arrest

Age of Inmates - 1976-1978 Release Composite - Of the 6.16 percent of releases with a subsequent arrest (for only those offenders, which were returned to the Federal Bureau of Prisons' custody), there was no discernible relationship between age and time difference between release and subsequent arrest. The entire spectrum of time difference between release and rearrest, however, had extreme bunching toward the higher time difference categories, as the following shows:

<u>Time Category (in Months)</u>	<u>Percent of Total</u>	
	<u>Amount</u>	<u>Cum.</u>
0 - 1	2.63	2.63
2	2.63	5.26
3	2.63	7.89
4 - 5	13.16	21.05
6 - 7	5.26	26.30
8	5.26	31.58
9 - 10	7.89	39.50
11 - 13	13.16	52.60
14 - 17	10.53	63.20
18 - 21	18.40	81.60
22 and over	18.40	100.00

Average: 12.96 months

Offense Type - 1976-1978 Release Composite - There was no discernible relationship between time difference and offense type.

Minimum Sentence Length (in Months) - 1976-1978 Release Composite - There was no discernible relationship between time difference and minimum sentence length.

Percent of Service Time to Sentence Length - 1976-1978 Release Composite - There was a definite relationship between percent of time served and time difference between release and rearrest, with the following being true:

Percent Sentence Served	Time Difference	
	Low	High
Low		Numerous Occurrences
High	Numerous Occurrences	

\* \* \* \* \*

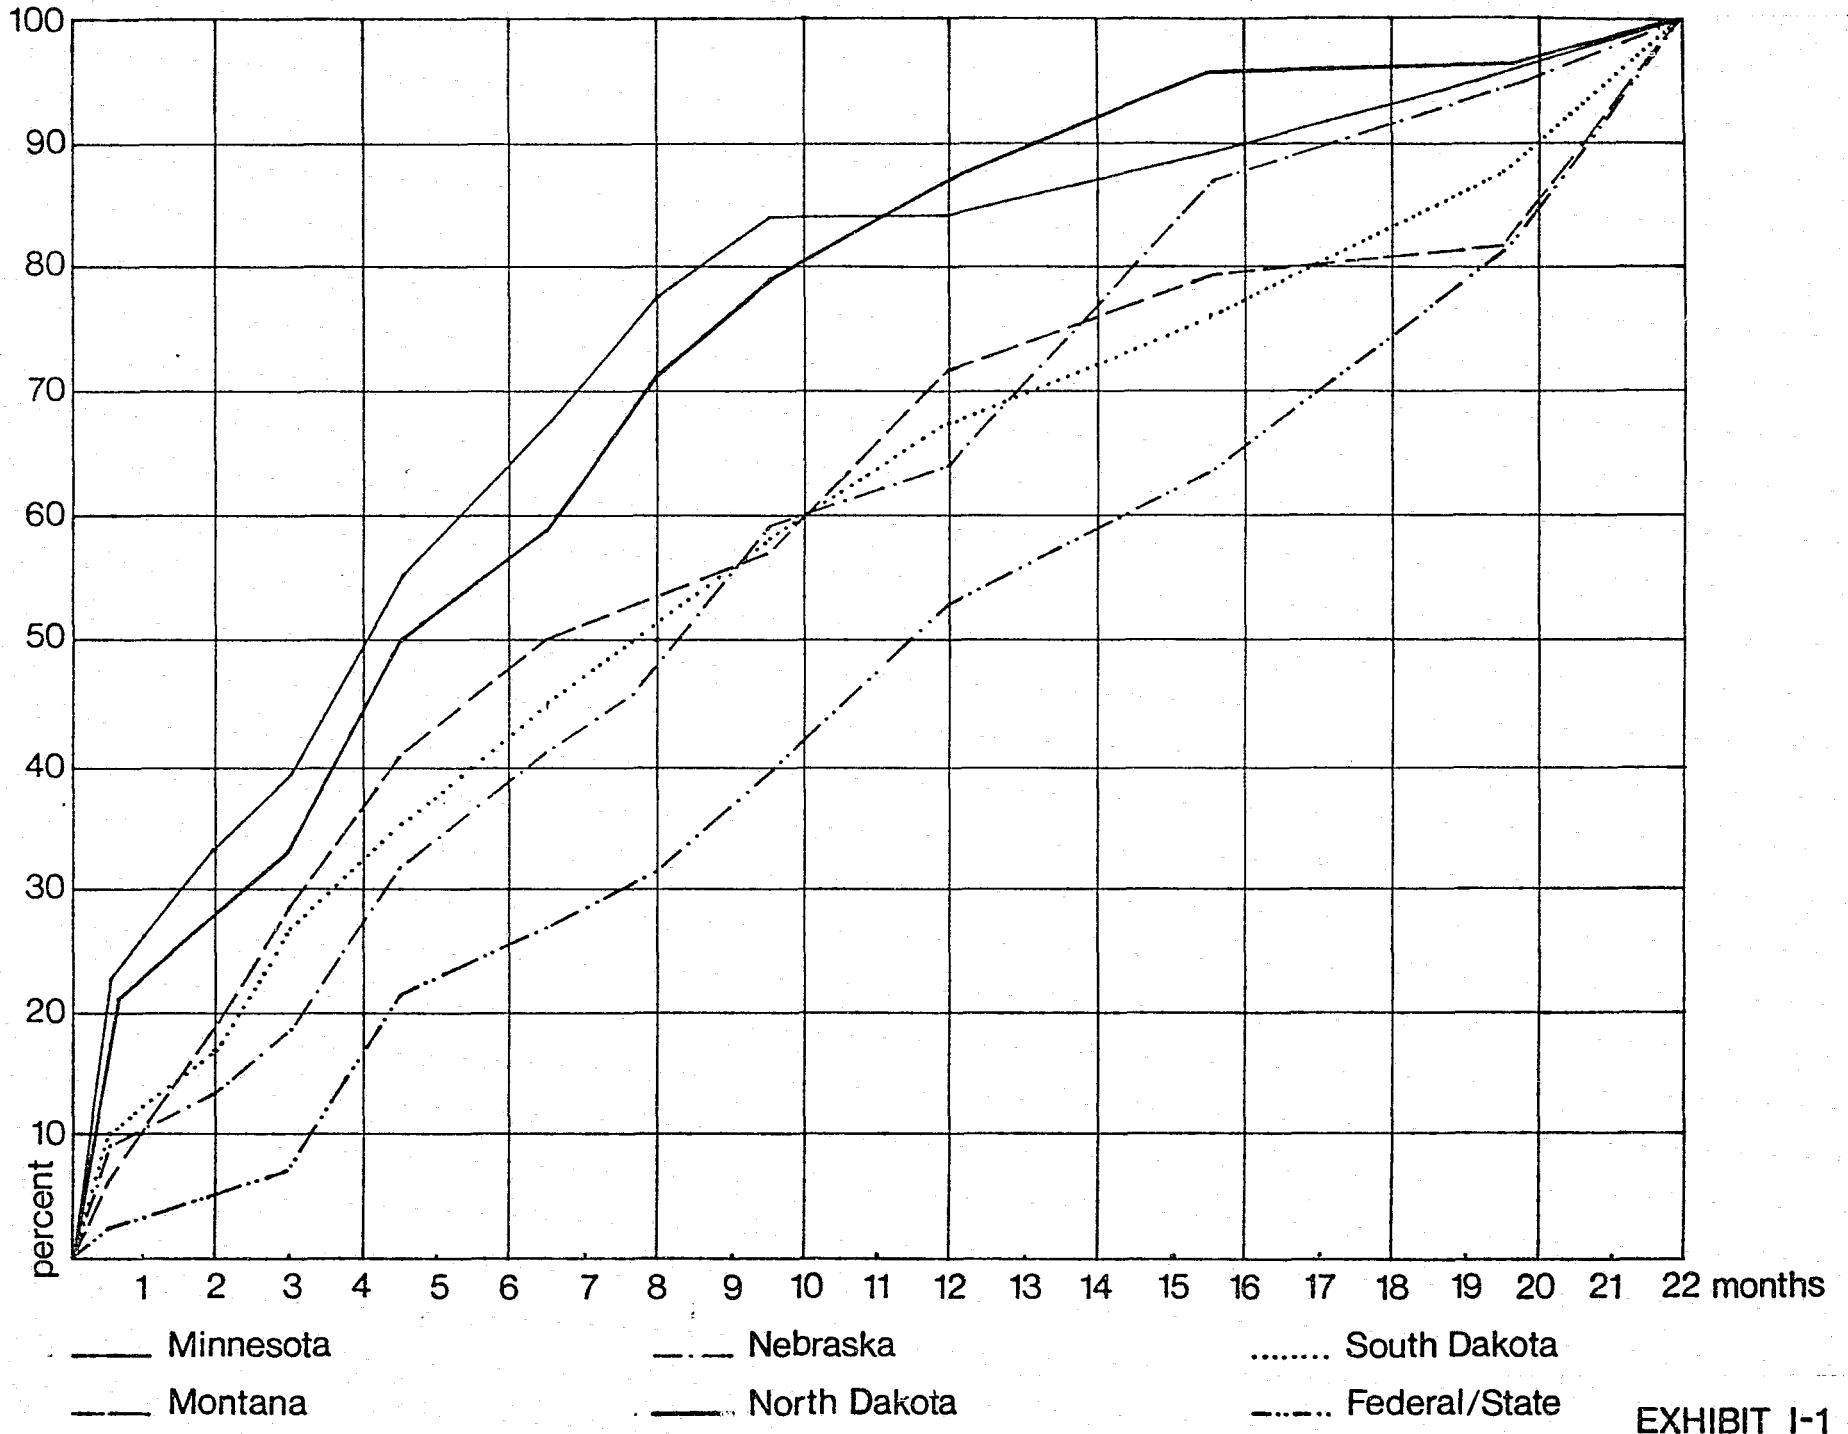

Insofar as one of the key considerations in this evaluation is the recidivism of those offenders released and the time delay prior to their recidivism, this last section is developed to review the results of the previous sections with regard to such. Some theoretical models exist that attempt to explain recidivism as a failure rate in the exponential sense with the probability of failure approaching unity with the passage of time. Implicit in this model is the fact that the number of offenders that recidivate shrinks exponentially with time and that the cumulative distribution of those that do recidivate is a function that is unity less the exponential decay function.

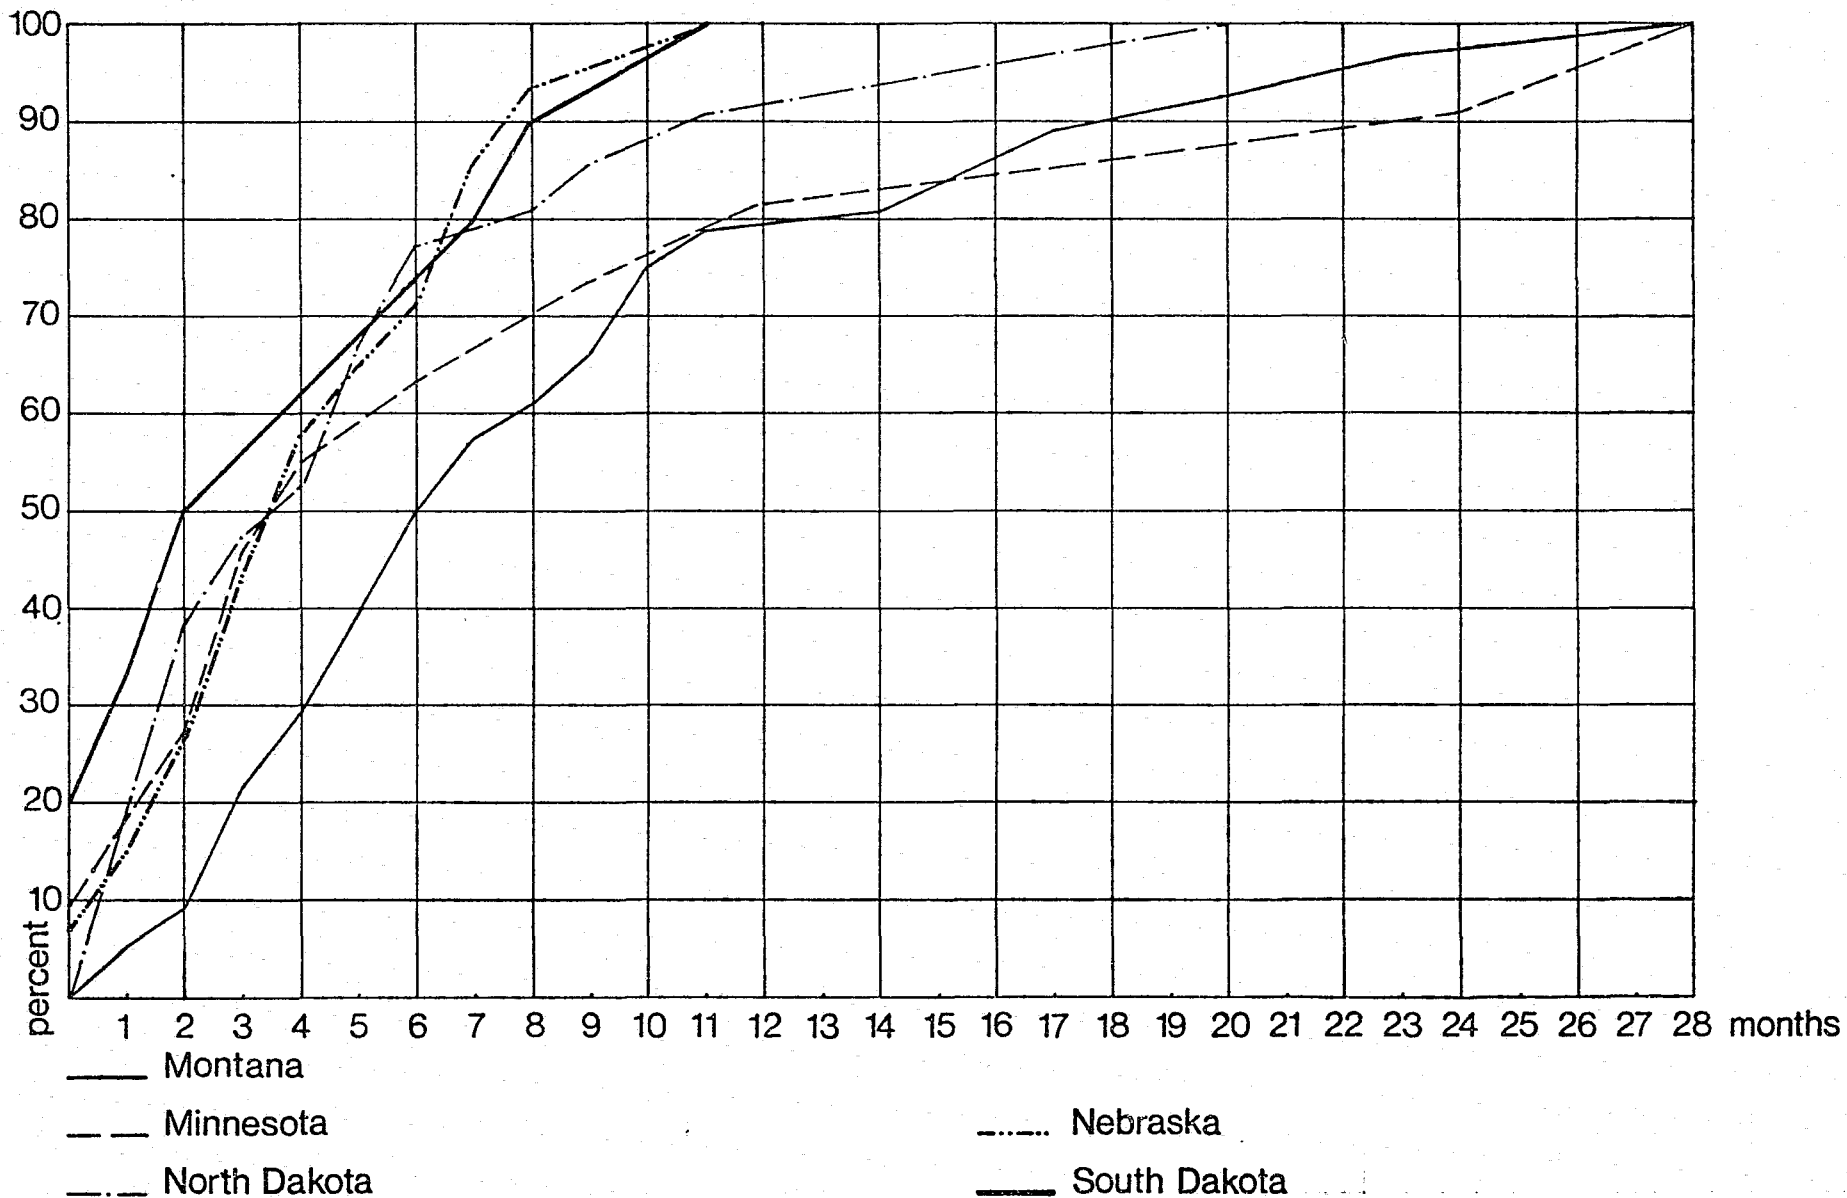

In order to test this premise, Exhibits I-1 and I-2 have been developed, which show the cumulative distribution for those failures signified by (1) subsequent arrest and (2) parole violation. As can be seen from Exhibits I-1 and I-2, the time difference between parole release and parole violation (B) for those offenders violated as compared to the time difference between release and subsequent arrest (A) shows the following:

1. (B) climbs much faster than (A);
2. The individual states's lines of (B) are bunched more closely together;
3. The lines of (B) more closely approximate the exponential saturation than does (A); and
4. The lines of (A) are quite linear in time until hitting 100 percent.

# Cumulative Distribution of Re-arrests by Time Between Release and Arrest

### Cumulative Distribution of Parole Violation by Time Between Release and Violation

COURTESY OF THE ILLINOIS DEPARTMENT OF CORRECTIONS

EXHIBIT I-3  
KEY TO PRINTOUT VARIABLES

From State Release Information Listing:

ID - State ID Number  
L\_NAME - Last Name  
F\_NAME - First Name  
MI - Middle Initial  
FBI - FBI Number  
DOB - Year of Birth  
OFF1 - NCIC Code for offense which inmate was serving time for prior to release  
OFF2 - NCIC Code for additional offenses relative to OFF1  
MINSENT - Actual Sentence to be served, not including suspended portions  
SENSTART - Sentence Start Date  
RELEASE - Date of Actual Release from state institution (physical release)  
RELSTYPE - Coded Form of Release - expiration, parole, work release, etc.  
RESIDE - County or City of residence at time of initial conviction  
PVDATE - Date of Subsequent Parole Violation after release

From State Subsequent Arrest Information Listing:

ID - Same as above  
L\_NAME - Same as above  
F\_NAME - Same as above  
MI - Same as above  
RELEASE - Same as above  
ARRESTED - Date of Subsequent Arrest for new offense after release  
CHG\_1 - Initial Charge at time of subsequent arrest  
CHG\_2 - Additional Charges at time of subsequent arrest  
PEND - Coded Field describing disposition of subsequent arrest charges: Pending, Dismissed, Fine Paid, etc. Field left blank if not not applicable or if conviction carried jail sentence.  
SUB\_OFF - Actual Offense convicted of subsequent to arrest - NCIC Code  
SUB\_SENT - Actual Sentence from subsequent conviction

From Listing of Federal Cases:

ID - Federal Bureau of Prisons Identification Number  
NAME - Committed Name  
FBI - FBI Number  
OFF1 - Same as above  
MINSENT - Same as above  
SENSTART - Same as above  
RELEASE - Date of Release from federal jurisdiction - normally back to committing state for final release  
ARRESTED - Same as above  
SUB\_OFF - Same as above  
SUB\_SENT - Same as above

(NOTE: All sentences and time-related elements are in months.)

section

# Internal Evaluation

As stated in the Introduction, the internal evaluation of the Swift Bird Project consisted mainly of assessing and documenting possible changing community attitude toward the Project (discussed in the next section) and determination of the economic impact of the Project on the community, as well as documentation of the flow of residents, use of facilities by non-residents, revenue versus expenditures, and employee data. The findings to date regarding the internal operation of the Swift Bird Project are discussed below, followed by supporting tables at the end of this section.

#### Employees

Tables 1 through 4 provide a variety of data on the Project's employees. Table 1 is a summary of the number of hirings and terminations by quarter since the Project's beginning. As shown, employment reached a peak of 41 at the end of the third quarter of 1979 and decreased to 34 by the end of the first quarter of 1980. The number of terminations reached very high levels for the last half of 1979 and continued into the first quarter of 1980, with a termination volume about 40 percent higher than the hiring volume. While the turnover rate is very high, eight of the terminations in March 1980 were the result of a reduction in force in order to reduce expenditures and to keep staff level more in line with the number of residents.

As noted in previous reports, the hiring decisions made in the third and fourth quarters accounted for the majority of terminations during the same period. Also, as indicated, the greatest difficulty was, and continues to be, with the public safety officer positions. As shown in Table 3, five of the six terminations made in the fourth quarter of persons who were also hired in that quarter were public safety officers. Also, four of the six made in the first quarter of 1980 were public safety officers. This position and that of the project director are the only positions that appear to present consistent difficulty to the project.

Table 2, Employment Progressions Profile, shows a frequency distribution of the relation of employees' previous work experience to their assignment at Swift Bird upon hiring, and the number of terminations and promotions occurring during the same period of hiring. While the volume of terminations overall (not shown completely in this table) has increased at Swift Bird, the proportion of persons terminated during the same period they were hired has ranged from 30 to 60 percent of total quarterly hirings.

As Table 3 indicates, however, the difficulty with retaining public safety officers has remained even through the first quarter of 1980. Also, since the third quarter of 1979, the number of hirings continues to be dominated by persons for whom their assignment constitutes a new experience. Not surprisingly, the greatest number of terminations are

from those for whom the work is a "new experience." In February 1980, the starting salary of the public safety officers was raised \$1,000.00 in an effort to decrease turnover. The impact of this change cannot be ascertained at this date. Table 4 shows that most employees (79 percent) came from Marksville and the Reservation area. Only one of the employees is currently living off the Reservation.

#### Project Finance and Economic Impact

Project Expenses - As can be seen in Table 5, the bimonthly payroll increased to a high of \$15,073.93 for payroll #5 in 1980. The payroll, however, shows a decrease for the immediately following period, which it should, since staff cutbacks have been substantial. If the 1980 #6 payroll were exemplary, the Project's monthly payroll needs would appear to be between \$26,000 and \$27,000.

Table 6 shows that the initial construction expenditures have been virtually completed. To date, the construction category has accounted for about 28 percent of all expenditures; personnel and fringes, 38 percent; and operating, 34 percent. Since staff reductions are continuing, the figures for March 1980 are probably the closest approximation (based on available data) to the Project's monthly financial needs. This figure is about \$70,000, of which 57 percent is payroll and fringes and 43 percent is operating expenses. Further substantial staff reductions could, of course, further reduce this requirement.

The average monthly expenditures were about \$50,000 a month during the third quarter of 1979, and about \$61,300 during the fourth quarter.

The number of residents required for the Project to be self-sustaining, at \$25 per day income per resident, was 82 for the fourth quarter and 67 for the third quarter. At the current expenditure rate of \$70,000 per month, the Project would need about 90 residents bringing revenue of \$25 per day. This figure is actually somewhat higher, since there is an incremental operating cost increase with each new resident added.

Location of Expenditures - Table 7 summarizes the expenditures by location for the third and fourth quarters of 1979 and the first quarter of 1980. Understandably, large construction expenditures tapered off during the fourth quarter of 1979 and became marginal for the first quarter of 1980. During the three quarters reported, it is clear that the State of South Dakota benefited the most, with a total capture of 54 percent; other states second, with 34 percent; and the Reservation third, with 12 percent of all expenditures, excluding payroll.

Businesses in the small town of Gettysburg, which is the nearest non-Reservation town, have obviously benefited from the Project's proximity, capturing 13 percent of all expenditures, which is slightly more than the total expenditures on the Reservation. This does not include payroll expenditures, which also constitute primarily local benefit, since virtually all Project employees are residents of the project or Marksville area or the Reservation. It can be expected that a rather

portion of payroll was spent in or near Gettysburg because it is the nearest town for purchasing necessities. The exact percentage spent in Gettysburg is unknown. Not suprisingly, the construction expenditures had their greatest impact in the non-Reservation areas of South Dakota and other States (94 percent of total construction expenditures for the three quarters reported). Assuming that the fourth quarter 1979 and first quarter 1980 expenditure patterns are more typical, about 80 percent of normal monthly expenditures will be made within South Dakota and 20 percent in other states.

Revenue From Committing Jurisdictions - As noted under Project Expenses, the operating cost of the Project through the first quarter of 1980 was at a rate of about \$70,000 per month. One of the original goals of the Swift Bird Project was to become financially self-sustaining. As shown in Table 8, the reported revenues through March 1980 were equal to only about 18 percent of the project's operating costs on a monthly basis (using the revenue for 1980 first quarter). The estimate of 90 residents needed at \$25 per day to achieve the goal of self-sufficiency discussed under Project Expenses is well above the resident intake volume that the Project has attained to date. It is clear that the Project will need more time and subsidy, at its present level of operating expenses, if the goal of financial self-sufficiency is to be attained. With the impact of inflation, it might be reasonable to negotiate increases in the \$25 per day average charge per resident. However, it must be realized that the marginal or incremental cost of the

last resident transferred to the Project from the committing jurisdiction may be much less than \$25 per day and, thereby, increase the total cost of incarceration of that resident to the committing jurisdiction.

Resource Benefits for Non-Residents - As shown in Table 9, the number of activities and non-residents involved increased substantially during the third and fourth quarters of 1979. The big change came during the fourth quarter when 2,459 attendees who were neither residents nor staff of the Project participated in the various activities. Sweat Lodge ceremonies and classes sponsored by the Cheyenne River Community College were the sources of the greatest increases in activities. Also, the data reported for January 1980 (data not reported for February and March) shows rates of participation by staff, residents, and Reservation residents that would yield comparable quarterly levels to that attained in the fourth quarter of 1979. Thus, the Project facilities have served as an extremely good community center for the Eastern part of the Reservation, which previously had extremely limited facilities.

Community Economic Impact - Aside from the impact the Project may have on the rehabilitation of Indian offenders, it has had a significant economic impact upon the Reservation community. Unemployment on the Reservation was estimated near 50 percent at the time the Project began building its staff. The 42 jobs available at the Project comprised the largest single employer on the Eastern side of the Reservation. Total payroll since the Project start-up date has been approximately \$450,000,

with virtually all of it earned by individuals who were residents of the Reservation at the time of employment. Therefore, the money stayed in the local economy for at least the first round of spending.

In addition, based upon the three quarters of data reported, 12 percent of all other operating and construction expenditures resulted in income on the Reservation. On this basis, another \$147,700 was added to the Reservation economy. Total direct expenditures to the Reservation economy were, therefore, \$597,700. Utilizing a conservative expenditure multiplier of 1.5, an estimate of the economic impact of the Project to the Reservation community is approximately \$900,000. Similar analysis would indicate that the economic impact of the Project to the entire State would be approximately \$1.9 million.

#### Resident Profile and Flow Data

Tables 10 through 17 summarize a variety of resident data. The number of applications received by the Project and the variety of applicants' tribal affiliations increased substantially between the second and third quarters, as shown in Table 10. Thirty-seven applications were received in both the third and fourth quarters, compared to nine for the second quarter. Through the first quarter of 1980, the Oglala Sioux, Standing Rock Sioux, Cheyenne River Sioux, and the Chippewa Tribes accounted for 50 percent of all applications, much more than any of the other tribes. Also, for the same period, South Dakota and

Washington were the largest sources from the committing institutions standpoint (65 percent of all applicants).

It is obvious from Table 10 that the rate of receipt of applications was drastically reduced during the first quarter of 1980. Less than half the number of applications considered during the third and fourth quarters of 1979 were considered during the first quarter of 1980. This will have a seriously negative effect on the Project's goal of financial self-sufficiency, since the rate of intake of residents is directly related to the volume of applicants considered. As shown in Tables 11 and 12, the staff and board decisions to accept, reject, or postpone applicants have remained virtually identical. A change in the project director did result in a change in the application process. Since early February 1980, the Project will accept residents based upon the committing jurisdiction's recommendation. This should result in more residents at the Project.

The Bureau of Prisons, Minnesota, and South Dakota have remained relatively high sources of applicants. Unfortunately, the rate of rejection of applicants has increased substantially for the first quarter of 1980, to the point where it is almost a reversal of the rate for the third quarter. In comparing the volume of rejections and acceptances for the three quarters, a trend toward an increasing rate of rejection is evident. Only two residents were accepted in the first quarter of 1980. The rate of intake is, in fact, so low for the first quarter of

1980 that the project's goal of self-sufficiency in the near future will be impossible if this low rate of intake is maintained.

Whereas "disciplinary record" was the most prevalent reason for rejection in the fourth quarter of 1979, the reasons were much more varied for the first quarter of 1980, as shown in Table 13. This may indicate that either the staff is locating the wrong type of prospective residents, or the decision criteria and judgement of the staff and Board have become more restrictive than was the case in 1979. In either case, this is sufficient reason to recommend a re-evaluation of the criteria and procedures used for both obtaining applicants and deciding on their acceptance into the Project. As shown in Table 14, rejections due to committing authority decisions are marginal, with only one to date, which was during the third quarter of 1979.

The actual flow of residents into and out of the Project is shown in Table 15. It should be remembered that the number of residents actually received will lag behind the number of applicants, since applicants' intake dates vary from the time action is taken on their application. As shown in Table 15, the number of releases has been increasing from quarter to quarter. Also, as confirmed by Table 16, the reasons for release due to completion of sentence versus some other unsuccessful reason are about equal in number. To date, five of the ten releases were for "completion of sentence" and five were for unsuccessful or negative actions by the resident.

From August 16, 1979, to March 31, 1980, there were a total of 229 calendar days. Based upon a maximum average operating capacity of 60 residents, a total of 13,740 resident days were available to the Project during that time period. As shown in Table 8, only 2,482 of the available resident days were served, indicating an average occupancy rate of 18 percent of available bedspaces. While 60 residents could not have been expected within the first few months of opening, the trend in the number of resident days served does indicate that the Project is not able to attract the number of residents it wants or needs under present policies.

Table 17 shows the tribal membership of residents. As with the membership status of applicants, the Standing Rock Sioux and Oglala Sioux have accounted for more residents than any other tribes.

#### Status of Programs and Physical Plant

Table 18 is a rating matrix used to show the status of the various programs and physical plant of the Project. As indicated, all aspects of the physical plant were judged by the consultant to be adequate during March 1980. Also as shown, most programs were found to be fully operative by March 1980.

\*Figures are for staff hired during the period indicated only.

NOTES:

- (1) Apparent Upgrades: Persons whose position at Swift Bird appeared to constitute an advancement in responsibility and/or complexity compared to their employment history.
- (2) New Experience: Persons whose position at Swift Bird appeared totally dissimilar in type and responsibility compared to their employment history.
- (3) Similar to Past Experience: Persons whose position at Swift Bird appeared to be the same or quite similar in type and responsibility compared to their employment history.

These categorical assignments are judgemental by the Consultant, based upon information received from Swift Bird personnel records.

section 

# Community Attitude Survey

The impact on a community of a project of this nature, or of any correctional facility, can take many forms. As shown in the preceding section, the economic impact on the Eastern Reservation community was significant in terms of employment and, therefore, community income. These are positive impacts on the community. However, in many cases, the location of a correctional facility within a community is believed to have a negative impact on that community.

The negative aspects of a correctional facility within a community are usually thought of in terms of increased concerns about security and safety. These concerns often result in the inability to locate a correctional facility within a community. In this instance, the community accepted the Swift Bird Project, and an evaluation was undertaken to assess community attitudes and concerns about the Project prior to its receiving residents and after residents had been at the site for a period of time.

A discussion of the findings of the Second Community Attitude Survey is presented in the following pages. In addition, the results of the second survey are compared to those of the first survey, which was discussed in Quarterly Report #1. The survey instruments, including the response frequencies, are included at the end of this section.

### Methodological Approach

The sample consisted of individuals living in and around the Gettysburg community and from Indian communities on the Cheyenne River Sioux Indian Reservation. All individuals interviewed lived within a 50-mile radius of the Swift Bird Project.

Two individuals were involved in the survey effort: one resident of the Indian Reservation and the survey coordinator from Carter-Goble-Roberts. The surveys were administered face-to-face along the Indian Reservation's rural routes and on the main streets of Gettysburg and Eagle Butte. A total of 101 individuals were surveyed between March 28, 1980 and April 11, 1980.

### Synopsis of Results

The 101 individuals surveyed were generally reflective of the range of demographic characteristics found in the Swift Bird and Gettysburg communities. Fifty-one percent of those interviewed were men and 49 percent were women. Forty-seven percent surveyed were Caucasian, while 53 percent were of Indian descent. The sample of respondents included individuals of various occupations and ranged in age from 18 to 74 (see survey for greater detail).

The results of the survey reflected a high degree of awareness of the Swift Bird Project among the local citizenry. Approximately 94 percent of the respondents indicated that they had heard of the Center, with close to 70 percent of the respondents able to state, in general terms, the Project's purpose.

The individuals surveyed were asked if they care one way or another about having a correctional facility close by. Forty-eight percent liked the idea, while 12 percent indicated disapproval of the Project, and 40 percent offered no opinion. Asked whether the fact that the Project was for Indian offenders made any difference, a vast majority (90 percent) indicated that it did not. When asked whether the Swift Bird Project was, generally, a good or bad idea, again, a large majority (81 percent) responded favorably.

Two factors that seemed to support a favorable response from the individuals surveyed revolved around the economic benefits the Project was bringing to the community. New jobs, new money, and new people were the three most often cited benefits to the community. Only a few respondents indicated that they felt the greatest benefit of the Project was that it was helping Indian offenders in the transition from incarceration to re-entry into society. A majority (67 percent) thought that, overall, the Project would have a positive effect on the community. Eighty-six percent of the respondents considered Swift Bird an economic boost to the area.

Respondents were also asked if their attitudes about the Project had changed over time and, if so, in what way. Fifty-nine percent responded that their views about the Project had not changed, while 26 percent indicated that their views had changed. Of those having a change in attitude about the Project, 11 individuals felt better about it than they had previously, while the views of 16 individuals had changed for the worse.

Most of the area's residents (78 percent) were not using any of the facilities at the Swift Bird Project, but an equally large number (73 percent) felt that the Project's facilities should be made more available to community residents. Of those surveyed, 48 percent indicated that they might use the Project's facilities in the future, while 46 percent found it unlikely.

While most impressions were generally favorable, there were some concerns expressed about the Project. When respondents were asked what their greatest concerns were, personal concerns about safety and security were the most frequent responses (21 percent of the time). Other concerns expressed by respondents included doubt about the success and cost of the Project (18 percent): fear that the Project would close and jobs would be lost (10 percent): and criticism about management and hiring practices (seven percent).

A final question concerning the individuals' willingness to hire residents of the Swift Bird Project for employment was asked of each respondent. Of those interviewed, 55 percent indicated that they would consider hiring a Swift Bird resident. 15 percent indicated they would not; and 30 percent offered no response.

#### Comparison of Results of First and Second Surveys

In general, responses were similar in both the first and second community surveys. A significant difference in opinions was noted in only two areas: personal security and safety opinions and indications of concern about the Project. In the first survey, almost 30 percent of the respondents were concerned about safety at the Swift Bird Project; in the second survey, only 15 percent indicated any kind of personal safety concerns.

The largest shift of opinion was noted when respondents were asked, in an open-ended fashion, what their greatest concern about the Project was. In the first survey, 48 percent were concerned about safety from prisoners and whether the Project would be guarded and secure. In the second survey, new types of concerns were expressed. Again, the major concern among the respondents (21 percent) was security.

The next five most often cited concerns centered around skepticism about the running of the Project. Fourteen percent felt that the

Project was not successful; 10 percent were fearful that it soon may close and were worried about the loss of jobs; 10 percent felt that the Project was mismanaged and that unqualified people were being hired; four percent thought the Project was a waste of tax money; and another five percent thought that the original concept of the Project had changed and that it would no longer be effective. These five responses indicate a change in attitude about the Project and indicate an undercurrent of skepticism about its success and worth.

In summary, the Project has met with general approval from community residents. There does, however, seem to be a growing concern, especially among Indian Reservation residents, that the Project has significant internal problems.

The detailed results of the both the First and Second Community Attitude Surveys are presented in the following pages.

EXHIBIT III-1  
RESULTS OF SECOND COMMUNITY ATTITUDE SURVEY

Community Attitude Survey  
SWIFT BIRD PROJECT

Hello, my name is \_\_\_\_\_ and I am helping in an effort to assess local opinions concerning the Swift Bird Project near the Marksville Community. If you have a few moments, I'd like to ask you a few questions. (If the Respondent is hesitant, explain to him/her that their responses are confidential - no names will be taken - and it should only take a few minutes.)

(Total Number of Respondents = 101)

- | <u>No.</u> | <u>%</u>     |  |
|------------|--------------|--|
| 1.         |              | Have you heard or are you aware of the Swift Bird Project  |
| 95         | <u>(94%)</u> | Yes  |
| 6          | <u>(06%)</u> | No   |
|            |              | _____ Don't know/no response   |
| 2.         |              | Do you know of the purpose of the Swift Bird Project? (Do you know what's going on over there?)      |
| 86         | <u>(85%)</u> | Yes (If yes, ask 2a)   |
| 14         | <u>(14%)</u> | No   |
| 1          | <u>(01%)</u> | Doesn't know/no response   |
| 2a.        |              | Could you tell me what you know or have heard about the Center?                                      |
|            |              | _____  |
|            |              | _____  |
| 3.         |              | Do you like, dislike or don't care one way or the other about having a correctional facility nearby? |
| 49         | <u>(48%)</u> | Like (Ask 3a)  |
| 12         | <u>(12%)</u> | Dislike (Ask 3a)   |
| 40         | <u>(40%)</u> | No opinion (Ask 3a)  |

Community Attitude Survey  
SWIFT BIRD PROJECT  
Page 2

- 3a. Does it make any difference to you that the Swift Bird Project is for Indian offenders? (Probe)  
2 (02%) Yes, makes a difference; 91 (90%) No, makes no difference; 8 (08%) Don't know/no response
4. Do you think the Swift Bird Project is generally a good or bad idea?  
82 (81%) Good  
8 (08%) Bad  
11 (11%) Don't know/no response
5. Has the Swift Bird Project affected you or your family's life in any way?  
16 (16%) Yes (If yes, ask 5a)  
80 (79%) No  
5 (05%) Don't know/no response
- 5a. In what ways has it affected you? Of the 16 individuals responding: 5 - employment; 2 - stimulates business; 4 - use Center facilities; 5 - no response
6. What is your greatest concern about the Center? (Probe)  
21 (21%) Security; 14 (14%) Concern about success; 10 (10%) Fear it will close; 10 (10%) Mismanagement and unqualified staff;  
4 (04%) Waste of tax money; 5 (05%) Original concept changed;  
36 (35%) Other/no response
7. What do you think is the greatest benefit of the Center to your community?  
59 (58%) More employment; 7 (07%) Helps Indian people; 2 (02%) Use of facilities; 2 (02%) More money in community; 30 (30%) Don't know/no response

Community Attitude Survey  
SWIFT BIRD PROJECT  
Page 3

8. Overall, do you think Swift Bird will have a negative or positive effect on the community?

- 13 (13%) Negative (Ask 8a)  
68 (67%) Positive (Ask 8a)  
20 (20%) Don't know/no response

8a. Why do you think it will have a (negative/positive) effect on the community?

---

---

9. How long have you known about Swift Bird? (Years or months) (If more than 3 months, ask 9a)

- 25 (25%) Less than 1 year; 31 (30%) 1-2 years; 29 (29%) More than 2 years; 16 (16%) Don't know/no response
- 

9a. Have your attitudes changed about the Project over time and, if so, in what ways?

- 26 (26%) Changed  
60 (59%) Not changed  
15 (15%) Don't know/no response

Of those who changed their attitude: 11 changed for the better; 15 changed for the worse

---

10. Do you think the Swift Bird Project will have any economic benefit to the community? (e.g. more jobs, better paying employment, etc.)

- 87 (86%) Yes (Ask 10a)  
8 (08%) No  
6 (06%) Don't know/no response

10a. In what ways? 76 (75%) Better employment/more jobs

4 (04%) Helps Indian people

21 (21%) Don't know/no response

---

11. Do you think the Center's facilities should be made more available to community residents? (e.g. medical facility, cafeteria, recreational facilities)

- 73 (72%)Yes
- 23 (23%)No
- 5 (05%)Don't know/no response

11a. Do you currently use any of the Swift Bird Project's facilities?

- 21 (21%)Use
- 79 (78%)Don't use
- 1 (01%)Don't know/no response

11b. Do you think you might use them in the future?

- 49 (48%)Yes
- 46 (46%)No
- 6 (06%)No response

12. Do you have any concerns about personal safety or security because of the Swift Bird Project?

- 15 (15%)Yes (Ask 12a)
- 82 (81%)No
- 4 (04%)Don't know/no response

12a. If yes, what are those concerns? \_\_\_\_\_  
\_\_\_\_\_  
\_\_\_\_\_

13. Would you be willing to hire a resident of the Swift Bird Project?

- 56 (55%)Yes
- 15 (15%)No
- 30 (30%)Don't know/no response

EXHIBIT III-2  
RESULTS OF FIRST COMMUNITY ATTITUDE SURVEY

Code Number

Community Attitude Survey  
SWIFT BIRD PROJECT

Hello, my name is \_\_\_\_\_, and I am helping in an effort to assess local opinions concerning the Swift Bird Project near the Marksville Community. If you have a few moments, I'd like to ask you a few questions. (If the Respondent is hesitant, explain to him/her that their responses are confidential - no names will be taken - and it should only take a few minutes.)

Total Number of Respondents - 107

1. Have you heard or are you aware of the Swift Bird Corrections Center?  
98 (92%) Yes  
7 (6%) No  
2 (2%) Don't know/no response
  
2. Do you know of the purpose of the Swift Bird Project? (Do you know what's going on over there?)  
79 (74%) Yes (If yes, ask 2a)  
23 (21%) No  
5 (5%) Doesn't know/no response
  
- 2a. Could you tell me what you know or have heard about the Center?  
Correction Center for Indians (27) Rehabilitation Center Indian minor offenders (24) Something to do with prisoners (3)
  
3. Do you like, dislike or don't care one way or the other about having a correctional facility nearby?  
41 (38%) Like (Ask 3a)  
15 (14%) Dislike (Ask 3a)  
51 (48%) No opinion (Ask 3a)

Community Attitude Survey  
SWIFT BIRD PROJECT  
Page 2

- 3a. Does it make any difference to you that the Swift Bird Project is for Indian offenders? (Probe)  
No difference - 74 (69%), disliked idea - 2 (2%), no response - 31 (30%)
4. Do you think the Swift Bird Project is generally a good or bad idea?  
82 (77%) Good  
12 (10%) Bad  
14 (13%) Don't know/no response  
Missing observations - 1
5. Has the Swift Bird Project affected you or your family's life in any way?  
13 (12%) Yes (If yes, ask 5a)  
91 (85%) No  
3 (3%) Don't know/no response
- 5a. In what ways has it affected you? \_\_\_\_\_  
Employed family member - 4 (4%)
6. What is your greatest concern about the Center? (Probe) Safety from prisons - 50 (48%), skeptical about possibility of success for Center - 12 (11%), too much money spent - 4 (4%)
7. What do you think is the greatest benefit of the Center to your community?  
Employment - 41 (39%), new people in area - 12 (11%), recreational opportunities - 2 (2%)

Community Attitude Survey  
SWIFT BIRD PROJECT

8. Overall, do you think Swift Bird will have a negative or positive effect on the community?

17 (16%) Negative (Ask 8a)

48 (45%) Positive (Ask 8a)

40 (37%) Don't know/no response

Missing responses - 2 (2%)

8a. Why do you think it will have a (negative/positive) effect on the community?

Positive - new jobs, new money, new people

---

Negative - security risks.

---

9. How long have you known about Swift Bird? (Years or months) (If more than 3 months, ask 9a)

---

9a. Have your attitudes changed about the Project over time and, if so, in what ways?

18 (17%) Changed

69 (64%) Not changed

11 (10%) Don't know/no response

Missing responses - 9 (9%)

---

10. Do you think the Swift Bird Project will have any economic benefit to the community? (e.g. more jobs, better paying employment, etc.)

76 (71%) Yes (Ask 10a)

13 (12%) No

14 (13%) Don't know/no response

Missing responses - 4 (4%)

10a. In what ways?

---

Same basic response pattern as no. 7.

---
