Acknowledgements

We gratefully acknowledge assistance and guidance from the following groups and individuals. Our main debt is to state court administrators and their staff. They are the source for most of the information contained in this report and its compilation depends on the patience and expertise with which they respond to requests for additional detail or clarifications. We particularly acknowledge the staff members in the administrative offices of the courts who serve as contact persons between their offices and the Court Statistics Project.

The clerks of the appellate courts in many states also provided caseload statistics in published or unpublished form for inclusion in the report. Their willingness to provide and verify information about the appellate courts is much appreciated.

The 12 members of the Conference of State Court Administrators's Court Statistics and Technology Committee were charged with overseeing the production of this report. In addition to providing general direction for our approach to collecting and reporting state court caseloads, the committee members reviewed the contents of the report in draft form. Their corrections, suggestions, and comments were vital to the process of producing the report.

Larry Polansky was a member of the COSCA Court Statistics and Technology Committee for 10 years, serving as its chairman since January, 1987. Larry's formal association with the work of the Court Statistics Project

will end upon his retirement as Executive Officer of the Courts of the District of Columbia in February 1990. But he will leave a strong legacy of commitment to continuous improvement and a firm belief that national caseload statistics from the state courts should be published early in the following calendar year.

Funding from the State Justice Institute made the preparation and publication of the report possible through Grant SJI-88-07X-067. We appreciate the Institute's continuing financial support and the interest shown by our project monitor, Kathy Schwartz. It should be noted that the points of view expressed in the report are those of the Court Statistics Project staff and do not necessarily represent the official position or policies of the State Justice Institute.

Advice on the draft was also received from our colleagues Joy Chapper and Roger Hanson. Their suggestions on matters editorial and substantive is received with thanks.

Full responsibility for the information reported herein and the text of Parts I and II lies with the Court Statistics Project staff. The more general responsibility for developing the report series and promoting improvements to the accuracy and usefulness of court statistics lies with NCSC management and Court Statistics Project staff, working with the policy direction of the COSCA Court Statistics Committee.

Overview of the Report

This report presents a comprehensive picture of the work of state trial and appellate courts in 1988. It is the twelfth in a series of annual reports on state court caseloads produced as a cooperative effort by the Conference of State Court Administrators (COSCA) and the National Center for State Courts (NCSC).

The 1988 report is divided into five parts. The overview describes the contents of the parts and explains how they are interrelated, offers advice on how to use the report, and outlines the work of the NCSC's Court Statistics Project. Although designed to be consistent with previous reports in the series, the 1988 report introduces several new features that are highlighted in the overview.

Contents of the 1988 Report

The report presents caseload statistics; supplementary information on the jurisdiction, structure, and recordkeeping in each state's court system needed to compare and interpret caseload statistics; and commentaries that analyze the statistical and other information to portray the current situation of the state courts.

Part I begins the report with a general commentary on 1988 trial and appellate caseloads across the country. Part I highlights findings of general interest and explores the factors pertinent to any examination or analysis of caseload data. The situation of trial courts and appellate courts in 1988 is discussed and then placed in the context of trends in felony and tort case filings and in appellate caseloads since 1984.

Part II presents a special analysis of how cases were concluded in state trial courts during 1988. How frequently do civil and criminal cases go to trial? Are jury trials more common than bench trials for particular types of cases? Questions about the method of case disposition address concerns by the court community over the adequacy of court resources, the efficiency of case processing, and case outcomes. Part II assesses the current status of the information available on method of case disposition, uses that information to describe the situation in 1988, and suggests ways to improve the collection and publication of relevant data. The analysis draws on statistics collected annually by the NCSC's Court Statistics Project but not routinely published in its caseload statistics report series. Part II continues the practice of

devoting a part of an annual report to issues of current interest to the state court community.

Caseload statistics are provided in Part III. The sixteen detailed tables are the core of the report. Appellate court caseloads in 1988 are enumerated in the first six tables. Table 1 gives the total caseload of appellate courts for the year and describes the comparability and completeness of the information that is presented. Other tables describe particular types of appellate cases and particular aspects of case processing.

Trial court caseloads in 1988 are detailed in the next six tables. Table 7 shows the total trial court caseload and the comparability and completeness of the underlying state statistics. Table 8 reviews the total number of cases filed and disposed for each state and individual courts within each state. Other tables describe the civil, criminal, juvenile, and traffic and other ordinance violation caseloads of state trial courts.

The remaining four tables are new. Table 13 and 14 bring together statistics for the years 1984-88 on mandatory and discretionary cases in state appellate courts. Table 15 contains the numbers of felony case filings in state trial courts for the same period. Table 16 reports the numbers of tort case filings for those five years. The new tables support the increased emphasis in the report series on the analysis of trends.

The tables of caseload statistics found in Part III are intended as basic reference sources. Each table compiles information from the 50 states, the District of Columbia, and Puerto Rico. In addition, the tables impose a degree of standardization. Particular features that affect the comparability of caseload information across states from year to year are appended to the tables. Footnotes to caseload numbers explain how a court system's reported caseloads are related to the standard categories for reporting such information recommended in the *State Court Model Statistical Dictionary*. A footnote alerts the user to three circumstances that qualify the validity of the reported number. Caseload numbers are cited if they are incomplete in the types of cases represented, they are overinclusive, or both. Numbers without footnotes should be interpreted as in compliance with the dictionary's standard definitions.

Part IV summarizes the structure of each state court system in the form of a one-page chart. The charts

identify all of the state courts in operation during the year, describe their geographic and subject matter jurisdiction, note the number of authorized judicial posts, indicate whether funding is primarily local or state, and outline the routes of appeal that link the courts.

Part V lists the statutes and recordkeeping practices that may affect the comparability of caseload information reported by the courts. Eight figures note, for example, the time period used for court statistical reporting, whether calendar year, fiscal year, or court calendar year; define the method by which cases are counted in appellate courts and in criminal, civil, and juvenile trial court proceedings; and identify trial courts with the authority to hear appeals. The figures define what constitutes a case in each court, making it possible to determine which appellate and trial courts compile caseloads on a similar basis. The most important information in the figures is repeated in the main caseload tables (Part III). In the 1988 report, information detailing how trial courts resolve the specific issues raised when counting support/custody cases is located in Table 9, Part III, eliminating Figure 1.

Appendix A explains the methodology used to collate the information provided by the states into a standard format.

Uses of Court Statistics

Caseload statistics are simply counts of the number of cases filed in and disposed of by a court and, if available, inventories of the number of cases pending at the beginning and at the end of the reporting period. That information provides building blocks that can be combined and used to construct answers to basic questions about the state courts: How many disputes are the courts asked to resolve? How many of those disputes are in fact decided?

Furthermore, caseload statistics can be combined with jurisdictional and other information in this report to describe the work and operations of the state courts. Topics that can be addressed include the composition of caseloads at different court levels, the extent of case specialization by particular courts, and the effect of discretionary review on the ability of appellate courts to avoid case backlogs.

Caseload statistics also offer a basis for determining the similarities and differences among state court systems. To what extent are appellate and trial courts in various states processing similar types of cases in similar volumes? States can then be grouped into distinct categories, and the impact of those distinctions on the ability of courts to keep up with their incoming caseloads determined. Caseload statistics for several years can be combined to discern trends. Felony case filings can be traced over time and compared to parallel patterns in case filings for other types of criminal offenses, or to trends in arrests or incarcerations. The extent of consistent national direction to changes in the level of civil litigation can also be studied.

There are limits, however, to the uses that can be made of available court caseload statistics. A court case

is not analogous to a unit of currency. Financial accounts are precise and comparable among firms because accountants can make use of a standard unit, the dollar or other national currency. By contrast, court cases vary in subject matter and complexity. A criminal case can be an accusation of murder or of petty theft. A civil suit may seek to recover \$25 in losses or \$25 million. This report necessarily focuses on broad categories of cases: mandatory appeals and discretionary petitions for appellate courts; civil, criminal, and juvenile cases for trial courts. Despite these limitations, the outline of state court activity emerges from caseload statistics.

How to Use the Report

This report is designed to accommodate all of the above uses. The commentary in Part I is fashioned from material in Parts III, IV, and V. The user's purpose determines the parts to consult and the order in which they should be consulted.

Part I should suffice if the report is being used to obtain a general description of the work of the state courts. The methodology in Appendix A should be reviewed, however, before drawing conclusions.

The best route for obtaining information on a specific state or a specific state court is to read Appendix A and then consult the relevant caseload tables in Part III. Detailed information on the status of the information in the court or state can be found in footnotes to the tables in Part III, and in Parts IV and V. For example, the total caseload for the trial courts of Virginia can be found in Table 8, Part III. The absence of a footnote indicates that the total conforms to the specifications in the *State Court Model Statistical Dictionary* and a code indicates that parking violations are counted as court filings. The court structure chart for Virginia in Part IV describes the subject matter of the cases that comprise the total, while the figures in Part V provide details on the basis by which various types of civil and criminal cases are defined.

Differences in the size and composition of court caseloads reflect differences in how states distribute the jurisdiction to decide cases and in how states collect and disseminate court statistics. Comparisons among states or courts therefore require considerable care. Parts IV and V are essential for determining when like is being compared to like. Appendix A explains the conventions and codes that identify similar courts with similar caseload counts.

The NCSC Court Statistics Project

The NCSC Court Statistics Project was established in 1977 to develop a meaningful profile of the work of the state courts. The caseload report series and other project publications, such as the *State Court Model Statistical Dictionary*, seek to encourage uniformity in how courts and state court administrative offices collect and publish caseload information.

The 1988 report, like previous reports, is a joint effort by the Conference of State Court Administrators and the

National Center for State Courts. COSCA, through its Court Statistics Committee, oversees the preparation of project publications and provides policy guidance for devising or revising generic reporting categories and procedures. The NCSC provides project staff and support facilities. Preparation of the 1988 report is funded by a grant from the State Justice Institute to the NCSC.

The staff of the Court Statistics Project can provide advice and clarification on the use of the statistics from this and previous caseload reports. Project staff can also provide the full range of information delivered by the states. The prototype statistical profiles (Appendix C)

used by project staff to collect data reflect the full range of information sought from the states. Most states provide far more detailed caseload information than that presented in Part III of this report.

Comments, suggestions, and corrections from users of the report are encouraged. Please direct questions about and reactions to the report to:

Part I
State Court Caseloads in 1988

State Court Caseloads in 1988

"A judicious man looks at Statistics not to get knowledge but to save himself from having ignorance foisted on him."

Thomas Carlyle

More than 98 million new cases were filed in state courts during 1988. Mandatory appeals and discretionary petitions to state appellate courts account for 221,000 cases. The remainder are trial court filings: 16.9 million civil cases, 11.9 million criminal cases, 1.4 million juvenile cases, and 68.2 million traffic or other ordinance violation cases.

Civil trial court filings, which include torts, contracts, domestic relations, and small claims cases, grew by 4.3 percent from the 1987 total. Criminal trial court filings, which include felony and misdemeanor cases, increased by 5.0 percent over the previous year's total. Rising filing levels also characterized state appellate courts, where filings of mandatory appeals grew by 4.9 percent and discretionary petitions by 1.9 percent.

With more than 98 million new cases, state courts resolve the overwhelming majority of legal disputes. By contrast, 45,043 appeals and petitions were filed in the federal appellate courts during 1988; 4,775 in the U.S. Supreme Court. There were also 240,232 new civil filings and 44,761 new criminal filings during 1988 in the U.S. District Courts, the main federal trial courts.¹ Consequently, five times as many appeals and 100 times as many civil and criminal trial court cases were filed in state courts than were filed in federal courts.

The caseload statistics reported here represent the most comprehensive picture available of the number and types of cases reaching appellate and trial courts nationwide. Basic filing and disposition data are available for all state appellate courts, although cases cannot always be divided into specific categories. Trial court caseloads are available for all but one state, although statistics for other states are incomplete, with traffic and ordinance violation cases being the most underreported.

Plan of Analysis

A primary goal of the Court Statistics Project is to collect and disseminate comparable state court caseload

statistics. This report seeks to achieve three intermediate objectives in meeting that larger goal:

To present caseload information in a manner that maximizes its comparability across states and uses that information to describe the work of state court systems during 1988.

To highlight the similarities and differences among the states and, where possible, to relate that variation to the manner in which states organize their court system and other state characteristics.

To develop a data series that describes trends in state court caseloads, thus monitoring change over time in state court systems.

As noted in the Overview, Part I has been refined and reformatted to meet more completely these objectives.

Trial courts are examined first. The section first highlights the quality of available trial court caseload data and references the location of more detailed data descriptions available in this volume. The section continues by describing and establishing patterns in caseload for both general and limited jurisdiction trial courts. Variation among states with respect to the filing and disposition of civil, criminal, and juvenile cases during 1988 is then reviewed and discussed.

Appellate courts are the focus of the second section of the commentary. Following a discussion of appellate court structure and jurisdiction, the comparability of appellate court caseload data is reviewed and the location of more detailed information elsewhere in this volume noted. The section continues by examining the distribution of the overall appellate court caseload in 1988. Variation among states in the rate at which two specific types of cases are filed is the focus: mandatory appeals and discretionary petitions. The section also reviews for each type of case the extent to which appellate courts kept pace in 1988 with their incoming caseload, and, for discretionary petitions, the percentage that the courts granted. Subsections examine the cases filed that appellate courts will decide on the merits and the number of opinions written during 1988.

The patterns found in state court caseloads in 1988 are then placed in the perspective of trends over the 1984-88 period. For appellate courts, the trend section focuses on recent changes in the level of mandatory and

¹ Filings in the U.S. Courts of Appeals and the U.S. District Courts are from *Want's Federal State Court Directory: 1989 Edition*, Washington, D.C. Want Publishing. Filings in the U.S. Supreme Court are from unpublished statistics provided by the Office of the Clerk and refer to the twelve months ending September 30, 1988. U.S. District Court filings do not include bankruptcy code filings, which are heard by bankruptcy judges, or misdemeanor cases heard by magistrates.

discretionary filings and dispositions. The emphasis is on the growth in appellate court caseloads and whether case dispositions are keeping pace with the influx of new cases. For trial courts, the focus is on the recent trends in the rate of filings of felony and tort cases, two types of cases that impose considerable demands on court resources, are subjects of contemporary public policy debates, and are defined consistently over time as caseload reporting categories.

Part I concludes by reiterating the main findings and patterns that tie the tables, charts, graphs, and maps that were reviewed back to the three objectives.

Comparability and Reliability

The commentary in Part I is a synthesis of material from three other parts of the report: the main caseload statistics tables (Part III), the court structure charts (Part IV), and figures describing court jurisdiction and statistical reporting practices (Part V). Before proceeding, it is helpful to develop a working knowledge of factors that affect the comparability of the caseload statistics.

"Comparable" in this report refers to the standard for reporting court caseloads established by the Conference of State Court Administrators, through its Court Statistics Committee, as defined in the *State Court Model Statistical Dictionary*.²

Comparability is most often compromised when court caseload is incomplete because some types of cases that should be included are omitted; overinclusive when it contains some types of cases that should not have been included; or the caseload figures are both incomplete and overinclusive. Caseload comparability is also compromised when states use methods for counting cases that artificially inflate or deflate the magnitude of their case filings or case dispositions relative to other courts.

"Incomplete" means that types of cases that should be included in a count are omitted. For example, the definition of a criminal case found in the *State Court Model Statistical Dictionary* includes the offense of Driving While Intoxicated (DWI/DUI). A general jurisdiction trial court that reaches decisions in such cases but classifies them, for reporting purposes, with traffic violations rather than with criminal cases will have its total criminal caseload footnoted as incomplete.

Conversely, the count of traffic and other ordinance violation cases will be "overinclusive" in that court, since it includes cases that should, according to the standard, be classified as criminal. It is possible for a caseload count to be simultaneously incomplete and overinclusive if the total omits some types of cases and includes others that do not meet the definition.

Comparability is also affected by basic decisions a state or court makes when designing its court records system. One basic decision is the "unit of count." Some appellate courts count the receipt of the "notice of appeal"

as the step that initiates the appellate process. Other courts wait until the trial court record is prepared and transmitted to the appellate court before counting a filing, by which time some appeals have been withdrawn, settled, or dismissed, especially in civil cases (see Figure B, Part V, p. 241).

Trial courts differ both in what is counted as a filing and in when the count is taken. For criminal cases, some courts count each charge, some count each defendant, and some count charging documents that contain multiple charges and/or multiple defendants. Counts are taken at an early stage in some courts, such as the filing of the complaint, while in other courts the counts are taken only when cases result in an arraignment. These practices are described using a common framework in Figure D, Part V (p. 253) in this report.

Trial courts tend to count civil cases at the filing of an initial petition or complaint with the clerk of court, but practices vary. What constitutes a case may differ by specific casetype; for example, courts differ in whether support/custody proceedings are counted as a case filing or as part of the marriage dissolution case. A common framework is used in this report to describe the method of count used in each state trial court system for civil cases generally (Figure H, Part V p. 271) and for support/custody cases specifically (Table 9, Part III).

Charts, graphs, and maps summarize caseload and related information from other parts of the report in a comparable manner. However, the differences in case volume observed in 1988 reflect many factors, including the constitutions, statutes, court structure and rules, and administrative recordkeeping practices of the 50 states, the District of Columbia, and Puerto Rico.

Trial Court Caseloads in 1988

This section begins with a summary of the overall activity during 1988 within state trial courts. It then highlights the distinction between courts of general and limited jurisdiction and reviews the overall completeness and comparability of the caseload data. The remainder of this section considers, in turn, civil, criminal, and juvenile cases. The main conclusions are summarized at the end of the section.

Overview

States reported 98,502,813 trial court filings for 1988, a total formed by 16,919,204 civil cases, 11,961,285 criminal cases, 1,435,857 juvenile cases, and 68,186,467 traffic and other ordinance violation cases. **Chart 1** displays filings for each casetype as a proportion of the total. Civil filings represented 17.2 percent of the total, criminal filings 12.1 percent, and juvenile filings 1.5 percent. More than two-thirds of the total (69.2 percent) consists of traffic/other ordinance violation cases.

Civil and criminal trial court case filings increased during 1988. When the comparison to 1987 filings is restricted to courts that reported relevant data in both years, the following changes are found. Civil filings in general jurisdiction courts increased by 3.5 percent and

Total = 98,502,813

CHART 2: Trial Court Filings in General Jurisdiction Courts, 1988

Total = 26,680,462

civil filings in limited jurisdiction courts by 5.1 percent. Criminal filings in general jurisdiction courts increased by 8.4 percent and criminal filings in limited jurisdiction courts by 3.8 percent.

General and Limited Jurisdiction Courts

General jurisdiction courts are major courts of record from which there is a right of appeal to the state intermediate appellate court (IAC) or court of last resort (COLR). Forty-four states in 1988 also had a lower trial court level, consisting of courts of limited jurisdiction. Various called municipal, district justice, justice of the peace, or magistrate courts, these courts are usually restricted in the range of cases that they can decide.

There were an estimated 2,253 courts of general jurisdiction and 13,231 courts of limited jurisdiction in 1987. Case filings in those courts were heard by 8,937 judges of general jurisdiction courts and 18,563 magistrates, district justices, and justices of the peace of limited jurisdiction courts (Figure G, Part V, p. 269).

Of the reported total of 98,502,813 court filings, 26,680,462 were in general jurisdiction courts, 27.0 percent of the total. Despite the incompleteness of the data from many states, the respective roles of general and limited jurisdiction courts emerge from a comparison of the composition of their 1988 filings.

Chart 2 summarizes general jurisdiction court filings in 1988. Civil case filings represented nearly one-third of the total caseload (31.4 percent), criminal case filings nearly one-eighth (12.8 percent), and juvenile cases, 3.8 percent. Traffic/other violation cases represented the majority (52.0 percent) of all general jurisdiction court filings.

Chart 3 divides the total limited jurisdiction court caseload into the four main casetypes. Civil and criminal

CHART 3: Trial Court Filings in Limited Jurisdiction Courts, 1988

Total = 71,822,351

filings each accounted for 12 percent of the total, with juvenile filings representing 0.6 percent. The remaining three-fourths of the filings were traffic/ordinance violation cases.

Percentage shares derived from the national caseload should be viewed with caution. In particular, the actual role of the general jurisdiction court is obscured. The national data combine states that only have a general jurisdiction trial court with states that have a second trial court level. The national total also merges data from states that hear juvenile cases in their general jurisdiction

courts with data from states that have established a court of specialized (limited) jurisdiction for that purpose.

The composition of general jurisdiction court caseloads is shown more clearly by focusing on states with a two-tier trial court system. First, where juvenile cases are heard exclusively in the general jurisdiction court, the composition of case filings in 1988 was 70.4 percent civil, 18.9 percent criminal, and 10.7 percent juvenile.³ Second, where juvenile cases are heard in courts of special jurisdiction, the 1988 case filings were 66.4 percent civil and 33.6 percent criminal.⁴ Whether a case is filed in the general jurisdiction or in the special juvenile court often is primarily determined by the age of the defendant, based on statute provisions that vary among the states in ways that will be discussed in the subsection on juvenile filings.

Completeness and Comparability of Data

As a national figure, the 98 million trial court cases reported is incomplete. The deficiency is mainly in the reported traffic/other ordinance violation filings. Only 15 states and the District of Columbia reported complete (although at times overinclusive) data on their traffic/other violation caseloads. Generally, problems of comparability and completeness are more serious for trial court than for appellate court caseload statistics. Mississippi did not report trial court caseload data.⁵

The completeness of civil and criminal caseload data from the other 49 states, the District of Columbia, and Puerto Rico is outlined in Table 7, Part III (p. 111). Other tables in Part III display the number of case filings and case dispositions for the four main trial court casetypes, noting instances where court statistics are incomplete, overinclusive, or simultaneously incomplete and overinclusive: total civil caseloads, Table 9; total criminal caseloads, Table 10; total traffic/other ordinance violation caseloads, Table 11; and total juvenile caseloads, Table 12. The sum of all four casetypes, by court and by state, is presented in Table 8.

Before examining and comparing state filing rates and clearance rates, it is also useful to highlight some important dimensions on which state trial court systems differ. State trial court systems are diverse in structure and division of jurisdiction among courts and between the two levels of courts.

Differences in court structure and jurisdiction can be important for understanding the comparability and completeness of caseload data from a state.

The conventional wisdom of court reform stresses the virtues of consolidation. In trial courts, this is manifest

in the move toward uniform and simple jurisdiction. Uniform jurisdiction means that all trial courts at each level have identical authority to decide cases. Simple jurisdiction means that the allocation of subject matter jurisdiction does not overlap between levels.⁶ The degree of consolidation of a state's trial courts offers a basis for classification.

In six states and the District of Columbia, consolidation has resulted in a single trial court that has jurisdiction over all cases and proceedings. The other 44 states have a two-tier trial court system but differ in the degree to which jurisdiction is allocated in a uniform and simple manner. **Map 1** summarizes the differences present in court structure during 1988. Four court structures are differentiated:

- (1) Unified: Six states (Idaho, Illinois, Iowa, Massachusetts, Minnesota, and South Dakota) and the District of Columbia with all trial courts unified.
- (2) Mainly Consolidated: Fifteen states with two court levels, but in which all limited jurisdiction courts have uniform jurisdiction.
- (3) Mixed: Sixteen states with two court levels that overlap in their jurisdiction.
- (4) Complex: Fifteen states in which there are several general jurisdiction courts and/or a multiplicity of limited jurisdiction courts that overlap in jurisdiction both with courts at the same level and with courts at the general jurisdiction level.⁷

Reference to the court structure charts in Part IV testifies to the varying degrees of complexity that distinguish the four types of court structure.

The Composition of Trial Court Caseloads in 1988

A more in-depth analysis of civil, criminal, and juvenile cases follows. The discussions of civil, criminal, and juvenile cases include consideration of the relative use of general and limited jurisdiction courts, filing rates per 100,000 population, and clearance rates.

CIVIL FILINGS IN 1988. States reported the filing of 16,919,204 civil cases in 1988. A civil case is a request for the enforcement or protection of a right, or the redress or prevention of a wrong. To meet the definition recom-

³ This is based on data from four states: Arkansas, Arizona, California, and Florida. Percentages were derived by combining unweighted case filings.

⁴ This is based on data from two states: Michigan and North Carolina. Percentages were derived by combining unweighted case filings.

⁵ Trial court statistics from Nevada are included for the first time in the caseload report series.

⁶ The "conventional wisdom" is that articulated by the American Bar Association in its *Standards Relating to Court Organization*, Chicago: ABA, 1974, pp. 1-10.

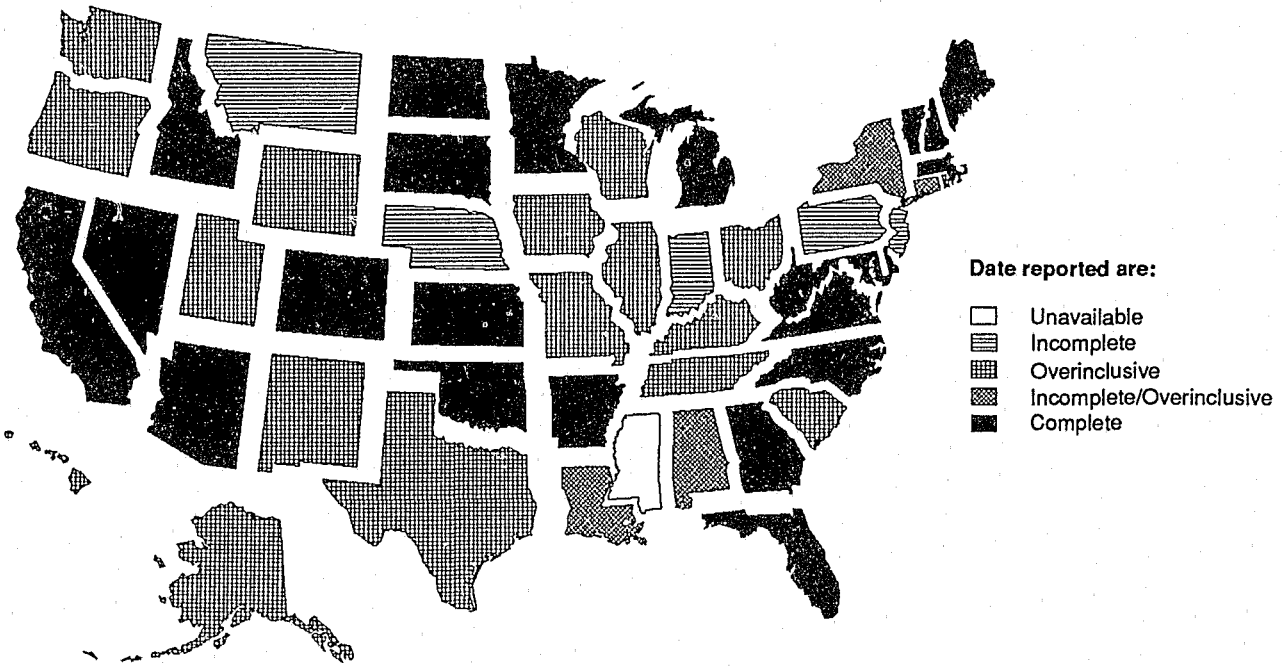

⁷ States are assigned to categories based on information contained in David Rottman, Robert Roper, and Dixie Knoebel, *State Court Organization 1987*, Williamsburg, VA: National Center for State Courts, 1988. An earlier typology of state court systems based on the number of courts and the allocation of jurisdiction among the courts can be found in Henry R. Glick, "State Court Systems," pp. 682-700 in R. Janosik (ed.) *The Encyclopedia of the American Judicial System*, New York: Scribners, 1987, p. 688.

The following states are not included:
 AL, AR, GA, LA, ME, MD, MS, MT, NV, NJ,
 NM, NY, OK, OR, RI, TN, WI.

mended by the *State Court Model Statistical Dictionary*, the category should include all torts, contracts, real property rights, small claims, domestic relations, mental health, and estate cases over which the court has jurisdiction. It also includes all appeals of administrative agency decisions filed in the court and appeals of decisions of limited jurisdiction trial courts in civil cases to general jurisdiction courts. A review of the footnotes to Table 9, Part III (p. 123) indicates the degree to which states report data conforming to the recommended definition. **Map 2** summarizes the impact of the footnotes on the general jurisdiction court filing data reported by each state.

Graph 1 displays the total civil case filings in 33 states, the District of Columbia, and Puerto Rico. The range is from 3,499 filings per 100,000 population in Puerto Rico to 24,722 in the District of Columbia. Nebraska has the median filing rate of 6,245. The magnitude of the range is deceptive. Most states report filing rates clustered near the median. Hawaii has the second lowest filing rate of 4,629 per 100,000 population, a rate only 26 percent below the median. At the top of the range, the filing rate for Virginia is 2.8 times greater than the median. But Virginia and the District of Columbia clearly stand apart from the other jurisdictions included in the graph. Delaware, with the third highest filing rate, reported 9,851

filings per 100,000 population—58 percent above the median.

Reported civil caseloads are affected by the point at which filings are counted, whether reopened cases are treated as new filings, and the manner in which support/custody proceedings are incorporated into court statistics on marriage dissolution cases. Figure H, Part V (p. 271), details the method by which each court counts civil cases and Table 9, Part III (p. 123), details the method by which support/custody cases are counted.

Different approaches to counting civil, and especially support/custody, caseloads affect the ranking of states in Graph 1. The limited jurisdiction court in Virginia, the district court, regards all reopened civil cases as new filings, counts support/custody proceedings as separate filings, and enters changes to a marriage decree as a case commenced. Most states, and the general jurisdiction court in Virginia, the circuit court, do not count reopened civil cases as new filings and count support/custody proceedings as part of the original marriage dissolution filing unless issues that arise at a later point in time or as a post-decree action are involved. Because the method of count varies between the general and limited jurisdiction courts in Virginia, the allocation of subject matter jurisdiction also is relevant. The circuit court in

Virginia has exclusive domestic relations jurisdiction, with the exception of support/custody cases, which can be heard in the district court. Thus, the relatively high rate of civil filings in Virginia, and the atypical concentration of civil cases in the state's limited jurisdiction courts, is attributable, in part, to choices made when designing court recordkeeping procedures.

Courts hearing child support/custody cases in Florida, Pennsylvania, South Dakota, Vermont, and Wyoming also count cases in a way that inflates their total civil filing rate relative to other states. A uniform method of counting would alter the ranking of states found in Graph 1, but it is unlikely that the impact would be dramatic.

Differences in counting practices may affect the relative share of the civil caseload heard in courts of general and limited jurisdiction in a state, as was noted for Virginia. However, differences in the allocation of subject matter jurisdiction are more likely explanations for why the flow of case filings is mainly toward one court level. Delaware is an example. While the overall high civil filing rate found in that state may reflect the state's popularity among companies seeking a jurisdiction in which to register as a corporation, Delaware is distinctive in having five separate limited jurisdiction courts with the authority to hear civil cases, including the family court, which has exclusive jurisdiction over domestic relations cases. Fewer than one of every eight civil cases in Delaware is filed in one of the state's two general jurisdiction court systems. Delaware's combination of a high filing rate and multiple limited civil jurisdiction courts is consistent with the general observation that states with high total civil filing rates have allocated substantial relevant subject matter jurisdiction to lower level courts. However, even here there is an exception. Massachusetts, with a unified trial court system, has the fourth highest state filing rate: 8,763 per 100,000 population.

There is little evidence linking the size of the civil court filing rate in a state to the appellate filing rate. For example, Massachusetts has the second *lowest* appellate filing rate (see p. 23) and the fourth *highest* civil trial court filing rate. The District of Columbia is the only jurisdiction to report high levels for both rates. With the possible exception of Alaska, other states with high appellate rates are found at all points in the state ranking based on civil trial court filings.

Clearance Rates for Civil Cases. Trial courts that disposed of more civil cases during 1988 (cases that may have been filed in previous years) than were filed reduced the size of their pending civil caseload. Text Table 1 abstracts the relevant information from Table 9, Part III (p. 123) to present a clearance rate for general jurisdiction and limited jurisdiction courts with the authority to hear civil cases. The two court levels are shown separately, with courts listed from lowest to highest statewide civil clearance rate.

Thirty-nine courts of general jurisdiction and 20 courts of limited jurisdiction are included in Text Table 1. Most states ended 1988 with a larger pending caseload than had been present at the start of the reporting year. Looking first at courts of general jurisdiction, only 12 of the

TEXT TABLE 1: Trial Court Clearance Rates for Civil Cases, 1988

State	General Jurisdiction	
	1988	1987

South Carolina	102.9	101.0

Source: Table 9, Part III
National Center for State Courts, 1990

39 reported clearance rates of 100 percent or greater. The courts of Wyoming reported the largest clearance rate: 120.2 percent. With the exception of New York, with a rate of 108.1 percent, most of the other states that disposed of more cases than were filed did not greatly reduce the size of their pending caseloads. The general jurisdiction court systems of an additional 13 states reported clearance rates of between 95 and 100 percent. Seven states reported clearance rates falling between 90 and 95 percent, while seven of the 39 states reported clearance rates of less than 90 percent, with the 85.6 percent in Florida marking the lowest reported rate for that year.

To address the question of whether the patterns found in 1988 reflect short-term or long-term problems of the state courts, Text Table 1 includes the clearance rates of the general and limited jurisdiction courts of each state recorded in 1987. For most general jurisdiction courts clearance rates are similar in the two years. Moreover, the changes that occurred were evenly split between increases and decreases, with 15 declining clearance rates and 17 increasing rates; in the remaining seven court systems there was no real change.

Clearance rates can be calculated for the limited jurisdiction courts of 20 states. The courts of five of those states reported clearance rates of 100 percent or greater. The highest rate was 102.9 percent, recorded in both Colorado and South Carolina. In three states, the clearance rate was between 95 and 100 percent, and in a further nine it was between 90 and 95. Limited jurisdiction courts in three states—California, Washington, and Alaska—reported lower clearance rates. The same court systems reported the lowest rates in 1987, suggesting long-term rather than short-term factors underlie difficulty in keeping pace with the flow of new cases.

Overall, however, civil clearance rates were marginally better in 1988 than in the previous year. Some states experienced striking changes of fortune, exemplified in the abrupt shift in the New York general jurisdiction courts from a 76 percent to a 108.1 percent clearance rate. The more extreme year-to-year changes, however, often have simple explanations. Here, filing fees appear to be responsible. The filing fee at the general jurisdiction court level was increased from \$35 to \$100 during 1988, leading plaintiffs in New York State to file their complaints in limited jurisdiction courts charging considerably lower fees (see p. 32). Since the number of dispositions was not greatly affected, the number of cases disposed of during 1988 significantly exceeded the number of new filings, yielding a high clearance rate for the year.

It remains the case that most courts at both levels failed to keep pace with the flow of new case filings. Most ended 1988 with a larger pending caseload than had been present at the start of the year.

CRIMINAL FILINGS IN 1988. States reported 11,961,285 new criminal case filings in 1988, 28.5 percent in courts of general jurisdiction. Case filing data from Mississippi and Nevada are not available for 1988 and the caseload data reported by courts in many states either include other casetypes, particularly ordinance violations, or omit casetypes that should be included, particu-

larly DWI/DUI cases. **Map 3** summarizes the impact this has on the general jurisdiction court data reported by each state. Generally, criminal case filing statistics are compiled less consistently than statistics on civil caseloads.

The *State Court Model Statistical Dictionary* defines a criminal case as one in which a defendant is charged with the violation of a state law. Subcategories of criminal cases include felonies, misdemeanors, driving while intoxicated (DWI/DUI), and appeals of trial court cases. Felonies that can be tried to completion in the court in which they are filed are distinguished from felony cases that must be bound over for trial to another court. Limited jurisdiction courts in most states hold preliminary hearings for felony cases and in 26 states can dismiss a felony case; however, such courts can sentence convicted felons in only six states (Alabama, Indiana, Maine, Maryland, Rhode Island, and South Carolina).⁸ Filings of felony cases in limited jurisdiction courts for the purpose of conducting preliminary hearings are not added to the state criminal caseload if the result is a defendant being bound over for trial in another court. Such cases are thus only counted once, as a filing in the court of general jurisdiction.

Graph 2 displays the total criminal filings per 100,000 population for states that report data from all courts with relevant subject matter jurisdiction.⁹ Thirty-four states, the District of Columbia, and Puerto Rico are included. Reference to the footnotes to the statistics in Table 10, Part III (p. 132) indicates why the remaining states were excluded and the extent to which the caseload for a state at either the general or limited jurisdiction level is incomplete or overinclusive.

The size of state criminal caseloads varies substantially. Rates per 100,000 population range from a low of 1,599 reported by Kansas to a high of 14,994 reported by Delaware; the same states defined the lower and upper bounds of the range in 1986 and 1987. The nearly tenfold difference from lowest to highest rate and the dispersion around the median contrast sharply with the consistency found for state civil filing rates. Variation among the states in crime rates and prosecutorial practices explain part of that variation. However, differences in how and when criminal cases are counted also affect the filing rates per 100,000 population.

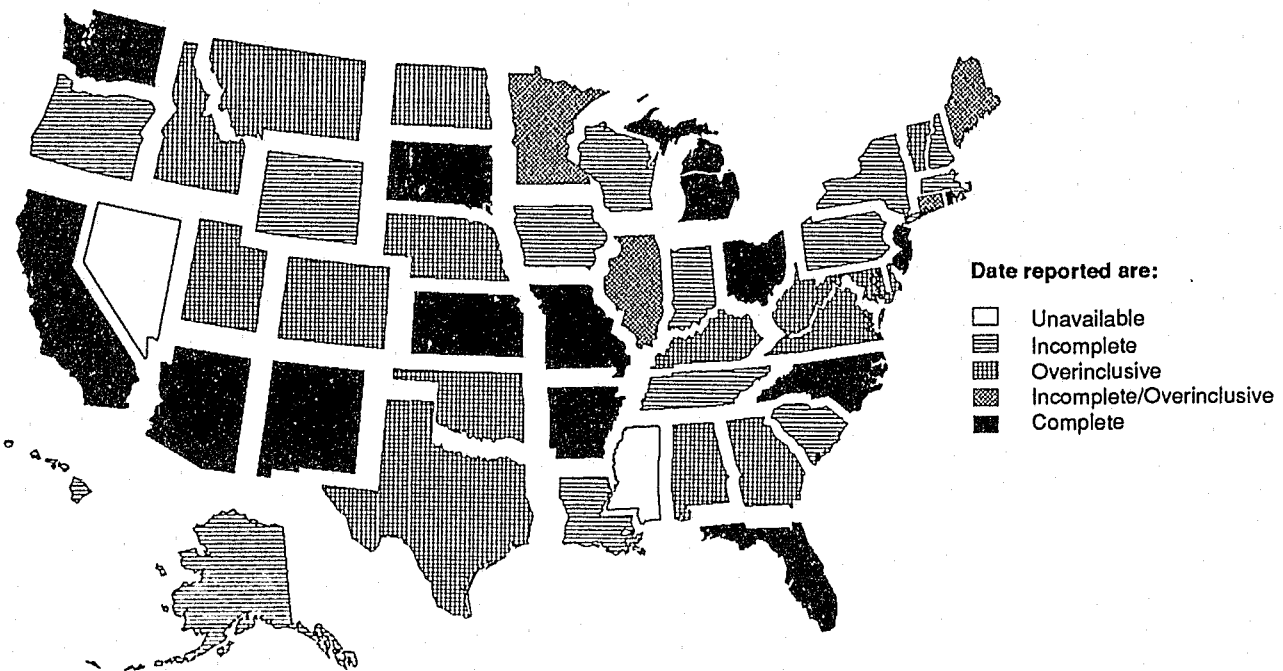

The median filing rate is 4,769. The consistency in criminal filing rates between 1987 and 1988 at either extreme is quite noticeable. Eight jurisdictions report distinctively low rates of criminal filings: Kansas, Iowa, Colorado, Oklahoma, Missouri, Puerto Rico, Michigan, and Hawaii. The same eight jurisdictions in the identical rank order had the lowest filing rates in 1987.

Rates that substantially exceeded the median are found in five states. The same states maintained the

⁸ D. Rottman, R. Roper, and D. Knoebel, *State Court Organization 1987*. Williamsburg, VA, 1988, Table 16, pp. 221-239.

⁹ Filing rates in Table 10, Part III, are computed on the basis of state adult population, the practice in previous caseload statistics reports. Graph 2, however, uses total population to derive filing rates, thus facilitating comparisons to the size and ranking of state civil filing rates.

MAP 3: Comparability of Criminal Filing Data in General Jurisdiction Courts, 1988

Source: Table 10 in Part III
National Center for State Courts, 1990

same rank ordered positions they held in 1987: Virginia, Arizona, North Carolina, Texas, and Delaware form a cluster of states that reported more than 8,000 filings per 100,000 population.

The ranking of states on Graph 2 (particularly at either extreme) is influenced by the unit of count and the point at which the count is taken in compiling court statistics. Figure D, Part V (p. 253), describes, and Table 10, Part III (p. 132), summarizes, the practice in each court with criminal jurisdiction. The unit of count is defined by (a) whether a case filing contains charges facing only an individual defendant or if two or more defendants can be included in one filing, and (b) whether the count is taken by charge or charging documents that contain one charge, one incident, or multiple incidents.

States and trial court systems within states have adopted different bases by which criminal cases are counted. The impact of such variation is considerable. Some states take the count of filings at an early stage in the process, typically the filing of a complaint, information, or indictment; other states only count a case as filed when the defendant enters a plea. The number of defendants per case and the number of charges per charging document will also greatly affect the number of cases reported as filed during a year.¹⁰

Consideration of the unit of count and point of filing used to compile the statistics explains, in part, the ranking of individual states on Graph 2. The state with the lowest filing rate, Kansas, counts filings at the first appearance before the court by the defendant, a later point than the

filing of the information or indictment used by most states. Hawaii (in the district court) is the only other state following that practice; it, too, has a relatively low filing rate. By contrast, states with the highest filings tend to count each charge against each defendant as a separate filing: Arizona, Delaware (in its courts of limited jurisdiction, with the exception of the family court), Texas, and Virginia. Other states following that practice tend to be found in the top half of the ranking; Hawaii is the exception, but its use of a later than typical point for taking the count compensates for the effect of basing the count on charges rather than incidents.¹¹

Thus, some of the variation found in Graph 2, perhaps a substantial amount, is attributable to the impact of

¹⁰ A 1985 directory survey of general jurisdiction courts, carried out by the U.S. Bureau of the Census for the Bureau of Justice Statistics, found that 80 percent of the courts based their felony count on defendants and that 75 percent of convicted defendants were convicted on one charge. The survey also suggests substantial variation among individual courts within a state and identified counties that use more than one unit of count when compiling their criminal caseload data.

¹¹ The high rate of criminal filings recorded in Delaware, however, meshes with that state's rate of prison sentences per 100,000 population, which is one of the highest in the nation. In 1988, Delaware reported 354 sentences of imprisonment per 100,000 resident population, the third highest rate among the states (Nevada and Louisiana reported higher rates). Lawrence Greenfield, *Prisoners in 1988*. Washington D.C.: U.S. Department of Justice, Bureau of Justice Statistics, 1989, p. 2. Problems of comparability exist, however, for prison incarceration rates as well as filing rates, with the Delaware statistics including both jail and prison inmates.

GRAPH 2: Criminal Filings per 100,000 Population in State Trial Courts, 1988

The following states are not included:
 AL, AR, GA, LA, ME, MI, MT, NE, NY, ND,
 OH, SC, TN, WV, WI, WY.

differences in how courts maintain statistical records, rather than to known differences among states in crime rates or in the propensity to prosecute. Differences also reflect the status of ordinance violation cases, which the definition of a criminal case excludes from the count of a state's total criminal caseload. The counts of criminal cases from the courts of Delaware and Virginia, two states with high filing rates, include some ordinance violation cases in their criminal caseloads. However, other states for which that is true—New York, Ohio, Oklahoma, Pennsylvania, and Vermont—are found at all points in the ranking shown in Graph 2.

There is little evidence linking the rate of criminal trial court filings in a state to the rate of appellate filings. Alaska, Arizona, and the District of Columbia report high rates of both appeals (see pp. 20-23) and trial court filings, while Massachusetts and North Carolina report relatively high rates of criminal filings and low rates of appeals. As with civil filings, the rankings for most states on appellate and trial court filing rates appear unrelated.

There is stronger evidence suggesting that some states have consistently high or low filing rates for civil and criminal cases. Civil filings in the District of Columbia, Delaware, Massachusetts, and Utah were far higher than in the median rate at which most states clustered. All

four jurisdictions reported relatively high criminal filing rates. Missouri reported low filing rates for both civil and criminal filings.

Clearance Rates for Criminal Cases. Text Table 2 summarizes the information on clearance rates available from Table 10, Part III. Clearance rates are shown for the general jurisdiction courts of 38 states, the District of Columbia, and Puerto Rico. Of these, five reported clearance rates greater than 100 percent: North Dakota (100.5 percent), Delaware (104.3 percent), Kansas (106 percent), West Virginia (106.6 percent), and Montana (110.4 percent). Twenty jurisdictions, including the District of Columbia and Puerto Rico, reported clearance rates in the 95-100 percent range, with Michigan and Vermont fractionally below 100 percent. Rates in the 90-95 percent range were recorded in six states. Nine states reported clearance rates of lower than 90 percent, with Hawaii reporting the lowest clearance rate—53.5 percent. Thus, during 1988, only one state in eight managed to keep pace with the flow of new case filings, the remainder adding to the stock of cases pending before their general jurisdiction trial courts, with one state in five adding a substantial block of cases.

Limited jurisdiction courts, which in most states hear and decide the bulk of criminal caseloads (see Graph 2),

TEXT TABLE 2: Trial Court Clearance Rates for Criminal Cases, 1988

State	General Jurisdiction	
	1988	1987
Hawaii	53.5%	76.0%
Rhode Island	81.0	101.3
Washington	85.1	86.8
Nebraska	88.8	104.4
Florida	88.8	92.7
Missouri	89.2	91.1
Oklahoma	89.4	89.2
New Jersey	89.5	94.2
Maryland	89.8	81.3
Maine	91.2	95.3
South Carolina	91.3	99.4
Alabama	92.0	94.5
Oregon	93.6	92.2
Iowa	94.5	96.0
Alaska	94.7	89.8
New Mexico	95.1	93.3
Connecticut	95.5	95.1
Indiana	95.5	88.7
Virginia	95.5	93.2
Arizona	95.6	91.8
North Carolina	95.7	97.2
Illinois	97.2	103.8
Puerto Rico	96.0	98.7
California	96.1	94.3
Idaho	96.1	98.6
New York	96.2	99.5
Wyoming	96.4	105.3
Pennsylvania	96.6	97.9
Minnesota	97.2	94.9
District of Columbia	97.4	101.9
Ohio	97.7	99.0
Colorado	97.8	102.2
Kentucky	99.2	97.8
Michigan	99.7	95.8
Vermont	99.9	94.4
North Dakota	100.5	90.9
Delaware	104.3	106.0
Kansas	106.0	103.4
West Virginia	106.6	103.6
Montana	110.4	119.3

State	Limited Jurisdiction	
	1988	1987
Washington	73.1%	85.1%
California	83.4	82.5
Florida	86.3	84.8
Rhode Island	88.0	91.0
Michigan	91.7	95.4
Oregon	91.9	92.2
New Jersey	92.3	93.4
Arizona	92.4	84.3
Hawaii	92.5	95.9
Kentucky	94.7	96.4
Nebraska	95.0	97.7
Puerto Rico	95.4	98.8
Alaska	95.6	92.1
Colorado	96.0	99.0
North Carolina	97.3	97.7
Delaware	99.8	98.7
Virginia	100.3	100.7
New Mexico	100.7	78.4
Indiana	101.6	92.4
Kansas	112.7

Source: Table 10, Part III

National Center for State Courts, 1990

were only slightly more successful in coping with the flow of new cases. In four of the 20 states included in Text Table 2, the clearance rate exceeded 100 percent. Five states were in the 95-100 percent range and seven in the 90-95 percent range. Four of the 20 states reported limited jurisdiction court filing rates of less than 90 percent.

Most statewide trial court systems were unable to keep pace with the increasing volume of criminal cases. Since the number of cases disposed of during the year fell short of the number of new filings, the pending caseload grew, although the data do not tell us by how much. By whatever margin it grew, however, the change has serious implications. Cases are being handled less expeditiously than previously and courts are accumulating problems that must be confronted in subsequent years. Also, courts appeared to have coped more successfully with the rise in civil cases than with the rise in criminal cases. Criminal cases are generally subject to more stringent time standards for case processing than are civil cases. This suggests that the large influx of new criminal cases during 1988, an increase at the general jurisdiction court level of 8.4 percent, is creating problems that warrant serious concern and corrective action.

One index of the magnitude of the problem courts face is the extent to which 1988 clearance rates differ from those recorded in the previous year. Among general jurisdiction courts, 23 reported lower rates in 1988 than in 1987 and 15 higher rates. The clearance rates for the general jurisdiction courts of two states were essentially unchanged. Among limited jurisdiction courts, the change was more evenly divided between increases and decreases: eight states show a decrease and six an increase. The downward shifts at both court levels tended to be more substantial than shifts toward higher, improved clearance rates. The overall impression is of statewide court systems facing considerable difficulty in responding to the growth in criminal filings.

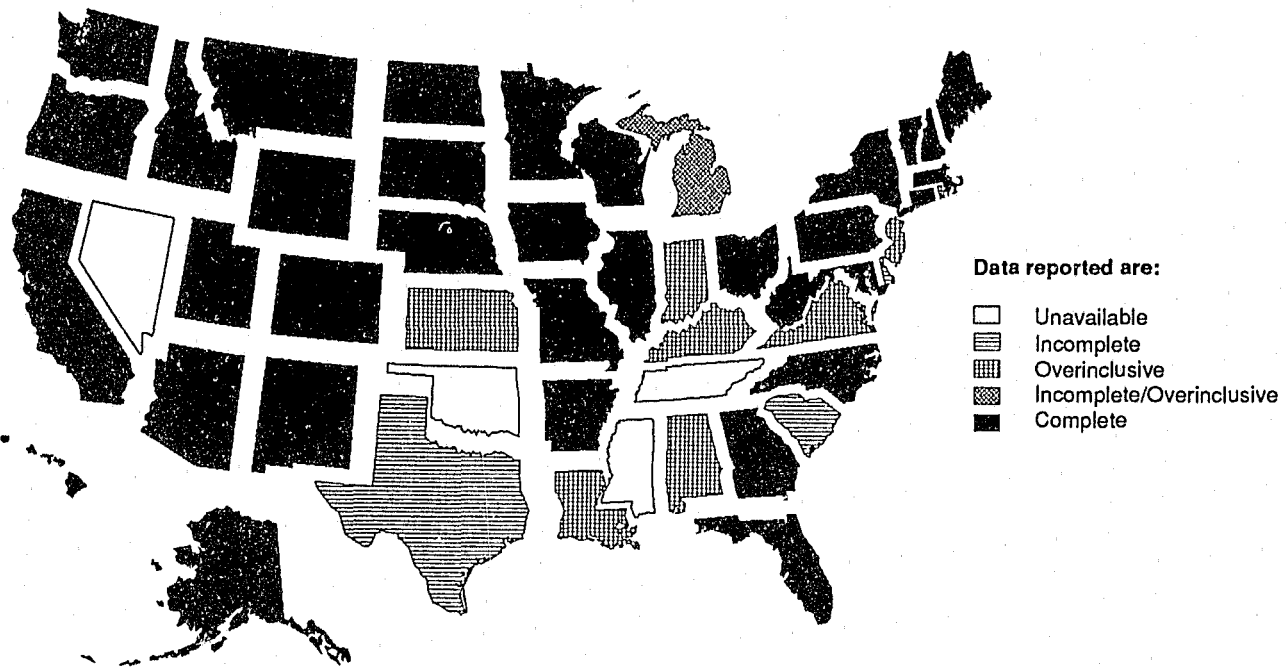

JUVENILE FILINGS IN 1988. The 1,435,857 juvenile petitions filed during 1988 represent a small share (1.5 percent) of the total reported trial court caseload. Even when traffic and ordinance violation cases are omitted, juvenile petitions only account for about one trial court filing in 22 (4.7 percent).

Juvenile caseloads reflect the use made of the various special procedures (sometimes special jurisdiction trial courts) that have been established to hear cases involving persons defined by state law as juveniles. The casetype includes criminal-type juvenile petitions, status offense petitions (conduct illegal only for children), and child victim petitions. A juvenile petition is the equivalent to a case filing in an adult trial court case.

Most states now decide juvenile petitions within a court of general jurisdiction, although often in a specially designated division or department. As a result, nearly three quarters (73 percent) of all juvenile petitions were filed in a court of general jurisdiction, where they represent 8.3 percent of the combined civil, criminal, and juvenile caseload.

Filing and disposition statistics, along with explanatory footnotes, for each court with juvenile subject matter

MAP 4: Comparability of Juvenile Filing Data, 1988

Source: Table 12 in Part III
National Center for State Courts, 1990

jurisdiction can be found in Table 12, Part III (p. 149). Relevant statistics were not reported by Mississippi, Nevada, Oklahoma, and Tennessee. **Map 4** describes the comparability across the remaining states of statistics on the number of juvenile petitions filed in 1988, based on the footnotes to Table 12.

Juvenile caseloads emerge as the most variable component of state trial court caseloads. This describes both the share that juvenile petitions represented of new case filings in a state's trial courts and the rate of new cases filed per 100,000 juveniles in the state population during 1988.

Graph 3 demonstrates the variability present in the rate at which juvenile petitions were filed during 1988, with the rates calculated per 100,000 state residents age 17 or under. Forty-one states, the District of Columbia, and Puerto Rico are included.¹² The bars in the graph distinguish filings in a court of general jurisdiction from those in courts of limited or special jurisdiction. All filings in Kentucky, Maine, Michigan, Nebraska, New Hampshire, New York, North Carolina, Rhode Island, Utah, and

Virginia were in a court of limited jurisdiction. All juvenile petitions in 27 of the states included on the graph were filed in a general jurisdiction court; only Alabama, Alaska, Indiana, Louisiana, and Maryland reported juvenile filings at both court levels.

Juvenile filing rates per 100,000 juvenile population vary widely from 620 in Puerto Rico and 622 in Montana to 9,946 in the District of Columbia. New Jersey had the second highest filing rate (6,878), which is nearly one-third less than that reported for the District of Columbia. The median filing rate was 1,923, reported by the courts of Pennsylvania. Thus, although there is a wide range in juvenile filing rates, most states are concentrated at relatively low levels.

What explains this diversity, so much greater than what was found for either civil or criminal filing rates? One factor is the divergent means and degrees to which states have established special procedures and courts to process cases involving delinquent juveniles. The composition of "civil" and "criminal" as caseload categories does not differ significantly from state to state, with much the same type of cases forming the 1988 filings of each state. There is no such broad agreement on what constitutes a "juvenile" case. What is heard through regular court procedures in one state may well be heard in a special juvenile court in another.

That difference is manifest in the age at which a person is no longer eligible for juvenile court handling. Most states define a juvenile as a person under age 18, often with exceptions based on the offense alleged (for

¹² The Arkansas County Court, sitting as the juvenile court, had exclusive jurisdiction to handle juvenile petitions until early in 1987. The Arkansas Supreme Court found that practice unconstitutional. Effective January 20, 1987, juvenile jurisdiction was transferred to the circuit court and the chancery and probate court, pending approval of a constitutional amendment, which was approved in November, 1988, and pending a 1989 legislative act that would structure a new juvenile court system.

GRAPH 3: Juvenile Filings per 100,000 Population in State Trial Courts, 1988

The following states are not included:
DE, GA, MS, NV, OK, SC, TN, TX, WI

example, Louisiana statutes define a juvenile as a person under age 17, but a 15-year-old can be charged in the district court as an adult if the offense is first or second degree murder, manslaughter, or aggravated rape; the threshold rises to 16 if the offense is armed robbery, aggravated burglary, or aggravated kidnapping).

The age at which a person is no longer eligible for original juvenile court handling can have a large impact on both a state's criminal and juvenile caseload. Research consistently shows that involvement in crime peaks in the 15-17 age group. Arrest statistics show that 15-to-19 year olds represent 28.7 percent of those arrested for FBI index crimes and 8.2 percent of the national population.¹³ Therefore, the choice of 17 rather than 19 as the point to transfer court jurisdiction, or even 18, can significantly affect the relative number of juvenile as opposed to criminal court filings.

¹³ The authority for the "peak" at age 15-17 in criminal activity is Travis Hirschi and Michael Gottfredson, "Age and the Explanation of Crime," *American Journal of Sociology* Vol. 89, No. 3 (November), 1983. The arrest percentage is calculated from Federal Bureau of Investigation, U.S. Department of Justice, *Crime in the United States: Uniform Crime Reports 1987*. Washington, D.C.: U.S. Government Printing Office, 1988, Table 33, p. 174.

Thirty-seven states and the District of Columbia terminate original juvenile delinquency jurisdiction in juvenile courts at age 18; Wyoming at age 19. Georgia, Illinois, Louisiana, Massachusetts, Michigan, Missouri, South Carolina, and Texas define an adult for purposes of court jurisdiction as a 17-year-old. Four states use 16 as the threshold age dividing juvenile and adult status: Connecticut, New York, North Carolina, and Vermont.

The two latter groups of states have defined juvenile more narrowly than most states; this should be reflected in the size of their juvenile caseload. Graph 3 suggests that is indeed the case, as all four states have filing rates below the median. The use of a lower than typical age to transfer persons from juvenile status may be a factor in the relatively low rates reported by Illinois and Michigan, but states that have adopted age 17 as the point of transfer did not consistently report low filing rates.

Other factors may help explain these variations. Law enforcement agencies differ in the extent to which they divert juvenile law violators from further penetration into the justice system. Case screening practices by juvenile court intake officers vary significantly and may result in a wide range of referral to petition ratios. Prosecutors have differing authority at the intake juncture, which may have an impact on these ratios. The amount of judge time

available and the extent of probation officers' supervision caseloads also may influence referral to petition ratios. Rural communities and states tend to file fewer petitions proportionally than more urban jurisdictions; their delinquent offenses may be less serious and more amenable to noncourt or informal handling. Some states allow for direct filings of charges in a criminal court, particularly with older juveniles and more serious offenses, although the numbers of cases involved are not great.

Generally, the juvenile status offense category is known to have extreme variance. Such cases are rarely or infrequently petitioned in some jurisdictions, but regularly petitioned elsewhere. The differences are sometimes pronounced, even within one state.

That variation may have grown in recent years as the number of dependency, neglect, and abuse case filings increased. The frequency with which a child protection agency files juvenile court petitions, as opposed to working with a family without court intervention, has been shown to vary sizably, adding to the differences among the states in the rate at which juvenile petitions are filed.

The significance of juvenile petitions in the total state trial court caseload could be determined for 27 states, the District of Columbia, and Puerto Rico. When civil, criminal, and juvenile filings are combined in those jurisdictions, the percentage share formed by juvenile petitions ranged from 2 percent in Arizona and North Carolina to 16.5 percent in Hawaii. In 19 states and Puerto Rico, the share is in the 3-to-5 percent range.¹⁴ Larger shares are reported by the District of Columbia (6.6 percent), Kansas (7.2 percent), Kentucky (8.0 percent), Florida (6.4 percent), Minnesota (14.0 percent), and Utah (12.3 percent); as noted previously, juvenile cases were most prevalent in the Hawaii caseload: 16.5 percent of the total caseload and 39.8 percent of filings in the state's general jurisdiction court.

That variability means that most states rank quite differently in terms of the rate of criminal and of juvenile case filings. The District of Columbia, Utah, and Virginia are distinctive in ranking high for both criminal and juvenile case filings. Iowa and Missouri are distinctive for the degree to which low juvenile filings coincide with low criminal filing rates. However, Hawaii and New Jersey reflect more inconsistency. Both states have among the highest rates at which juvenile petitions are filed but among the lowest rates for criminal case filings.

Clearance Rates for Juvenile Petitions. Clearance rates for juvenile petitions, based on caseload statistics from Table 12, Part III (p. 149), are presented in Text Table 3 to address the question of whether juvenile petitions were being processed more expeditiously dur-

¹⁴ The 19 states in which juvenile filings represent 3 to 5 percent of total civil, criminal, and juvenile filings are: Alaska, California, Colorado, Connecticut, Idaho, Illinois, Indiana, Iowa, Massachusetts, Michigan, Missouri, Nebraska, New Hampshire, Pennsylvania, South Dakota, Vermont, Virginia, Washington, and Wyoming. The percentage share of each type of case will be affected by footnotes indicating that statistics are incomplete or overinclusive in Tables 9, 10, and 12, Part III.

TEXT TABLE 3: Trial Court Clearance Rates for Juvenile Cases, 1988

State	General Jurisdiction	
	1988	1987
Florida	69.4%	67.7%
Alaska	75.5	82.9
Illinois	76.1	81.0
Alabama	78.4	79.7
Montana	83.4	84.7
Indiana	86.2	99.9
Colorado	87.9	88.1
West Virginia	88.7	101.1
Washington	89.3	87.6
Pennsylvania	95.4	94.4
Maryland	95.6	97.3
Vermont	95.9	96.4
California	95.9	92.9
Kansas	96.4	95.5
Hawaii	96.9	98.7
Ohio	97.6	99.6
Idaho	98.7	98.5
New Jersey	98.9	98.0
Arizona	99.5	103.2

Source: Table 12, Part III
National Center for State Courts, 1990

ing 1988 than were civil or criminal cases. The table also provides the clearance rate each court recorded in 1987 to help address the question of whether the patterns found in 1988 reflect short-term or long-term problems of the state courts.

Clearance rates are available from 38 separate state-wide court systems. Those rates vary from a low of 69.4 percent in Florida to a high of 120.5 percent in Texas. Nine courts report clearance rates of 100 percent or greater, 12 (all of them courts of general jurisdiction) report rates between 95 and 100 percent, five (all courts of special jurisdiction) report rates between 90 and 95 percent, and 12 courts report rates of less than 90 percent. In 1988, there was no clear difference between general jurisdiction and limited jurisdiction courts in the

degree to which they were able to keep pace with the flow of new cases. Most statewide court systems ended 1988 with a larger pending juvenile caseload than they had at the start of the year.

The consistency in clearance rates in 1987 and 1988 is striking. Inconsistencies were most notable in states where the clearance rate declined between the two years. For example, the clearance rate for the general jurisdiction courts of Indiana declined from 99.9 percent to 86.2 percent, while those in West Virginia declined from 101.1 percent to 88.7 percent. A few states, most notably Texas, sharply improved their clearance rate, but the examination of 1987 clearance rates suggests both the persistence of the problem facing the state courts and the possibility that it is increasing over time.

Trial Courts in 1988: A Summary

State trial court filings increased in 1988. The increase was greatest for criminal cases, especially those filed in general jurisdiction courts (an increase of 8.4 percent). Civil case filings increased by 4.3 percent, with a larger increase in limited than in general jurisdiction courts. The increase parallels the experience of appellate courts, which reported 4.2 percent more filings in 1988 than in 1987.

There was little variation among states in the rate of 1988 civil filings. Most states report civil filing rates close to the median of 6,338 per 100,000 population. Considerable variation was present for criminal filing rates. The range was substantial, from 1,466 to 13,565 per 100,000 population, with a median of 4,843 filings and little concentration around the median. Greater variation still characterized juvenile filing rates. States filing rates ranged from 633 to 9,078 filings per 100,000 juvenile population in 1988 and rates were scattered throughout that range.

The differences among states reflect both real variation in the extent to which cases are brought before the courts and the various methods of count and degrees of data completeness. However, the degree of variation found for the three types of cases is consistent with what would be expected. Civil law and procedure are broadly similar across the country. Crime rates, substantive criminal laws, and law enforcement practices all differ among states in ways that affect the number of cases reaching the courts. Such differences are still more pronounced in their impact on the use of courts to handle juvenile cases.

A few states report consistently high or consistently low use of their trial courts. Delaware, the District of Columbia, and Virginia reported among the highest filing rates for all three types of cases. Missouri reported among the lowest rates for all three. In states with two-tier trial court systems, civil cases dominate the caseload of general jurisdiction courts.

A strong and disturbing pattern in 1988 trial court caseload statistics is low clearance rates. Many, perhaps most, courts are experiencing difficulty in keeping up with the inflow of new cases. The number of new cases filed in 1988 often substantially exceeded the number of cases

that were disposed of by the court. The problem is more prevalent for juvenile petition and criminal cases than for civil cases, and more serious for limited jurisdiction than for general jurisdiction courts.

Rising civil and criminal caseloads create problems that ultimately will be transferred to the appellate courts. More cases add to the potential pool from which appeals are drawn and appellate courts will need to cope with the consequences of the trial court caseload growth recorded during 1988 as the cases filed in that year reach judgment.

Appellate Court Caseloads in 1988

This section begins with a summary of overall activity within the state appellate courts. It then provides background on distinctions in appellate court structure (the roles of courts of last resort and intermediate appellate courts) and the manner in which new cases reach appellate courts (i.e., mandatory appeals and discretionary petitions). An appraisal of the overall completeness and comparability of the appellate caseload data follows. The magnitude and composition of total state appellate caseloads are then described and their relationship to appellate structure explored. The remainder of this section considers, in turn, mandatory appeals and discretionary petitions. The main conclusions are summarized at the end.

Overview

State appellate courts reported 221,794 filings in 1988: 161,762 mandatory appeals and 60,032 discretionary petitions. Filing data are available for all 95 courts of last resort (COLRs) and intermediate appellate courts (IACs) in the 50 states and the District of Columbia.¹⁵ There was a 3.9 percent increase in total appellate filings between 1987 and 1988. This increase was not evenly distributed between COLRs and IACs or between mandatory appeals and discretionary petitions. Overall, COLR filings increased by 3.4 percent and IAC filings by 4.4 percent. The increase was strongest for mandatory appeals filed in COLRs: COLRs with relevant data for both years reported 7.1 percent more appeals in 1988 than in 1987. Filings of mandatory appeals in IACs increased by 4.5 percent. IAC discretionary petitions increased by 3.1 percent and IAC mandatory appeals by 1.0 percent.¹⁶ The connection between caseload composition and appellate structure is important for any consideration of the work, operations, and problems of appellate courts nationally. This is addressed in the next section.

¹⁵ Puerto Rico reports trial court but not appellate court statistics to the NCSC Court Statistics Project.

¹⁶ United States Courts of Appeal experienced a 8.3 percent increase in filings between 1987 and 1988. In particular, "criminal appeals were up 24 percent, largely due to implementation of US sentencing guidelines." *Walt's Federal-State Directory, 1990 Edition*, p. 144.

Appellate Court Structure and Jurisdiction in 1988

Mandatory jurisdiction refers to appeals as a matter of right: those cases for which the court is required by state constitution or statute to hear and decide the appeal on the merits. Discretionary jurisdiction refers to casetypes in which a party must file a petition asking the court to hear the case. The appellate court then decides whether to exercise its discretionary power to consider the case on the merits.

All states have established a court of last resort (COLR), usually named the supreme court, by constitution. The COLR has the final jurisdiction over all appeals within the state. Thirty eight states have also established one or more intermediate appellate courts to hear appeals from trial courts and administrative agencies as specified in state law or at the discretion of the COLR.

According to an influential perspective on the appropriate role and structure of appellate courts,¹⁷ there are two basic functions: (1) the review of specific trial court proceedings to correct errors in the application of law and procedure, and (2) the development of law for the benefit of the community at large. The error correction function should be exercised through mandatory jurisdiction, with each unsuccessful party entitled to one appeal as a matter of right. Further appellate review should serve the function of developing the law, including ensuring its uniform application by trial courts throughout the state, and be undertaken on a discretionary basis by selecting the appropriate cases out of those reaching the court through petitions. Where the volume of cases exceeds the capacity of the COLR, an IAC should assume the error correction function and the COLR should, by the exercise of its discretion to review all manner of appeals, develop the law.¹⁸

The influence of this perspective on state court systems is evident in the extent to which states have created IACs in response to growing appellate caseloads. Twenty-five states established their IACs in recent decades (since 1958). Yet, despite the common contexts in which they were created, a careful examination reveals complex differences in the allocation of jurisdiction to both COLRs and IACs.

¹⁷ The perspective is put forward in several authoritative texts that vary in nuance. The summary here is derived from the American Bar Association, *Standards Relating to Court Organization*, ABA, 1974, pp. 1-10.

¹⁸ This perspective has clearly applied with great force to the federal system. The U.S. Circuit Courts of Appeals were established in 1891 as an IAC on a regional basis and assumed much of the U.S. Supreme Court's mandatory caseload. The federal appellate system evolved subsequently through a series of significant transfers of mandatory appellate jurisdiction from the Supreme Court to the Circuit Courts of Appeals. This culminated in Public Law 100-352 (Act of June 27, 1988, 102 Stat. 662), which "substantially eliminates" the mandatory jurisdiction of the Supreme Court." Seven states had established an IAC before 1891: Illinois, Louisiana, Missouri, New Jersey, New York, Ohio, and Texas (Robert R. Stern, *Appellate Practice in the United States*: Second Edition, Washington, D.C.: Bureau of National Affairs, 1989, p. 6).

CHART 4: Appellate Case Filings, 1988

The consequences of these complex differences are highlighted when one matches appellate structure with jurisdiction. The matching process produces four categories of cases: (1) COLR mandatory appeals, (2) COLR discretionary petitions, (3) IAC mandatory appeals, and (4) IAC discretionary petitions.

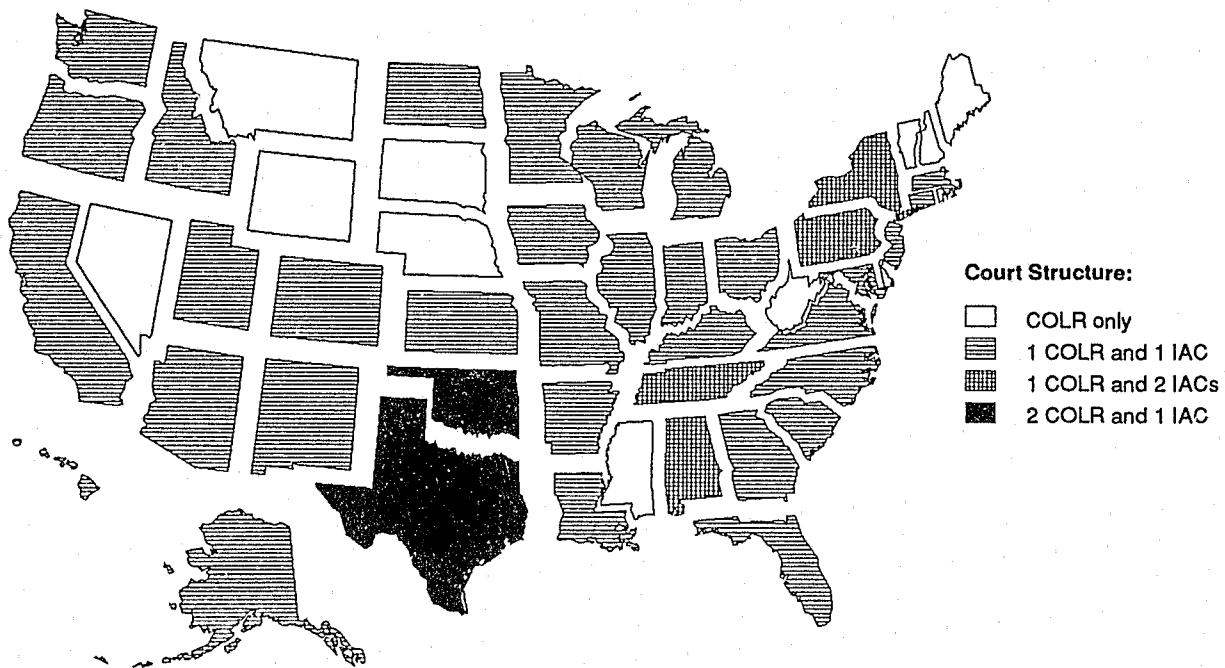

If we combine the appellate filings reported by the states according to court level and jurisdiction, the 1988 appellate caseload is as shown in **Chart 4**. Nineteen percent of all filings were discretionary petitions to COLRs and 12 percent of all filings took the form of mandatory appeals to COLRs. Mandatory appeals to IACs represented 61 percent of the total state appellate caseload for the year, while 8 percent consisted of discretionary petitions to IACs.

Completeness and Comparability of Data

Care is required when determining when like is being compared to like in the world of appellate courts. Before examining and comparing state appellate court filing data and clearance rates, it is useful to highlight some important dimensions on which state appellate court systems differ.

The first dimension is the number of courts that have been established at each level in the 50 states and the District of Columbia. This can be seen in **Map 5**. The 12 states with only one appellate court are typically sparsely populated or geographically small. Thirty-two states have one COLR and one IAC. Texas and Oklahoma have separate COLRs for criminal and civil cases, and one IAC. Four states have established multiple IACs. Alabama and Tennessee maintain separate courts for civil and criminal appeals, while Pennsylvania divides jurisdiction between its commonwealth court and its superior court on the basis of subject matter. New York divides

MAP 5: Appellate Court Structures, 1988

Source: Court structure charts in Part IV
National Center for State Courts, 1990

jurisdiction between its two IACs primarily by the trial court from which the appeal is taken.

Map 6 addresses the dimension of how states allocate mandatory and discretionary jurisdiction within their appellate systems. The District of Columbia and 8 of the 12 states with only one appellate court have both mandatory and discretionary jurisdiction. The COLRs in New Hampshire, West Virginia, and Wisconsin exercise full discretionary jurisdiction over their dockets, while all COLR filings in Nevada, North Dakota, and Wyoming are appeals of right (totally mandatory jurisdiction). States with IACs differ in the manner in which jurisdiction is allocated between the two appellate court levels. The court structure charts in Part IV of the report provide a point of reference for further distinguishing between appellate court structures.

The nearly 222,000 appellate court case filings reported in 1988 is not definitive since there is both undercounting in some courts and double counting in others. Table 1, Part III (p. 72) reviews the quality of the caseload information used to generate the national totals. Other tables in Part III provide information on mandatory appeals, discretionary petitions, and opinions reported by state appellate courts, noting instances where court statistics are incomplete, overinclusive, or simultaneously incomplete and overinclusive. The most serious problem is counts that are overinclusive because discretionary petitions granted by the court are included both as petitions and as mandatory appeals.

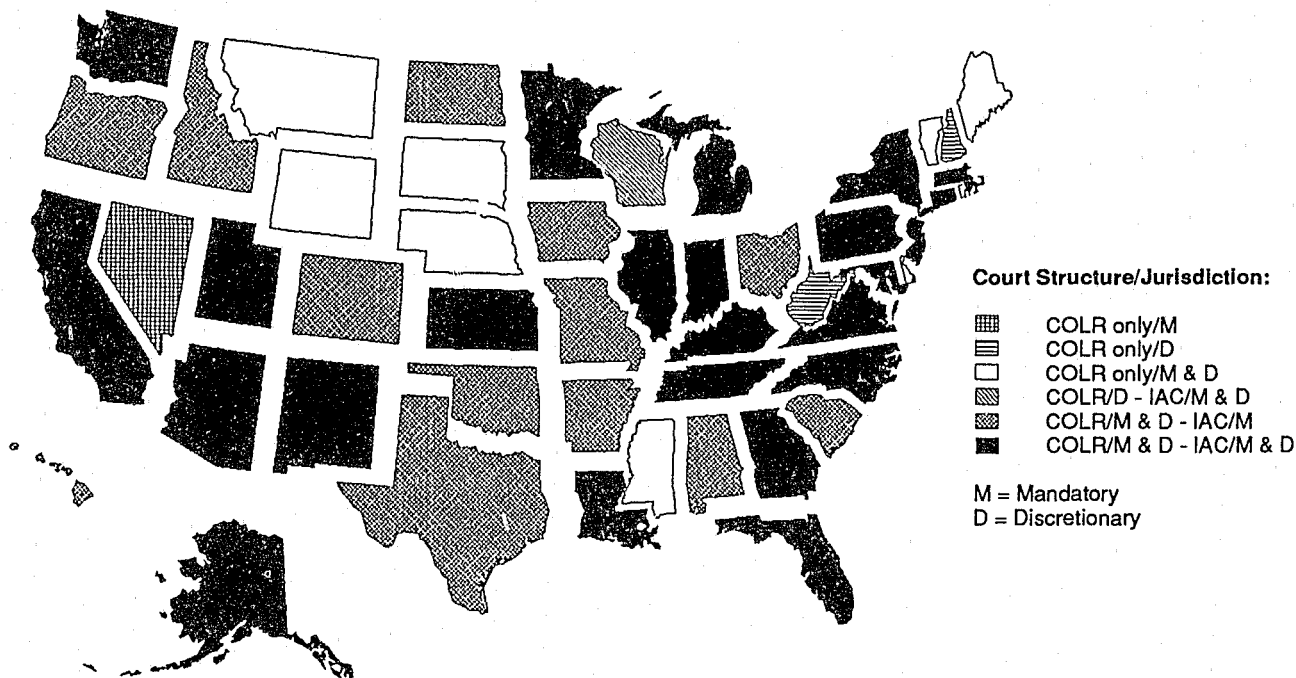

The 1988 totals for the appellate courts of individual states can be found in Table 2, Part III (p. 74), which reports the number of mandatory appeals filed and disposed, the number of petitions that were filed and disposed of, and the number of petitions granted (and previously granted petition dispositions). Tables 3 (Part III (p. 88)), 4 (Part III (p. 94)), and 5 (Part III (p. 100)) report more detailed information on, respectively, mandatory appeals, discretionary petitions, and discretionary petitions granted. Table 6 (Part III (p. 106)) displays information on opinions reported by the state appellate courts. In all instances, states are listed according to their appellate structure. States with one COLR and one IAC are listed first, followed by states with only a COLR, and finally states with more than one COLR or IAC.

The text and graphics that follow describe and compare appellate caseloads reported by the states. The review begins with the big picture, comparing the size and composition of total state appellate caseloads.

The Composition of Appellate Court Caseloads in 1988

As a generalization, the substantial portion of the work of COLRs is to review petitions and then decide those petitions that were granted. Of every 100 cases filed in a state COLR, 62 were discretionary petitions. This contrasts with the IAC caseload, in which only 12 of every 100 filings were discretionary petitions. IACs are the workhorses of state appellate systems. Three quar-

MAP 6: Appellate Court Caseload Jurisdiction, 1988

Source: Court structure charts in Part IV
National Center for State Courts, 1990

ters (75.1 percent) of appellate filings in states with both a COLR and an IAC went to the IAC.¹⁹

The issue considered here is whether differences in appellate structure are associated with particular caseload patterns. Several interrelated questions revolve around this issue.

Are the caseloads of one-level appellate systems distinctive from other systems?

Does the generalization cited above on the respective role of COLRS and IACs in two-tier systems apply to all states or are other patterns identifiable?

Are states with multiple appellate courts at any level distinctive in the composition of their caseloads?

Such questions are important as the answers indicate the extent to which like is being compared with like when

appellate systems are discussed and also speak to whether appellate court reform has had the intended impact. These issues are addressed below.

Graph 4 displays case filings per 100,000 population in the appellate courts of 44 states and the District of Columbia. The information used to generate the graph can be found in Table 2, Part III (p. 74). The two main conclusions that can be drawn from the information are that caseload levels are similar across the states once adjusted for state population size and particular appellate structures are not closely linked to high or low caseloads.²⁰

States with only one appellate court are readily identified in Graph 4. The bar representing their case filings has either one or two sections. Filing rates per 100,000 population in those states tend to be lower than in states with a two-level appellate system. The difference is not absolute. Nevada and Vermont have filing rates above the median, as do West Virginia, which has entirely discretionary jurisdiction, and the District of Columbia, which has the highest filing rate.

¹⁹ A second appeal is possible in most states with a two-tier appellate system. This means that a case may be counted twice in a state's filing statistics, first as a mandatory appeal of the trial court judgement to the IAC and then as a petition for the review by the COLR of an unfavorable IAC decision. One study concluded that between one fifth and one half of IAC decisions are appealed to the COLR but that few of those petitions are granted. See Stephen Wasby, Thomas Marvel, and Alexander Aikman, *Volume and Delay in State Appellate Courts: Problems and Responses*, Williamsburg, VA: National Center for State Courts, 1979, pp. 54-55.

²⁰ Graph 1 overstates the presence of mandatory appeals relative to discretionary petitions in appellate court caseloads. The footnotes to Table 2, Part III indicate that the number of mandatory appeals is overinclusive, encompassing all discretionary petitions: Arkansas Supreme Court, Illinois Appellate Court, Kansas Court of Appeals, Michigan Court of Appeals, Maine Supreme Judicial Court, Nebraska Supreme Court, New York Appellate Division of the Supreme Court, New York Terms of the Supreme Court, and the Oklahoma Court of Criminal Appeals.

GRAPH 4: Total Appellate Filings per 100,000 Population, 1988

The following states are not included:
IN, KS, NJ, PA, PR, TN, VA.

Appellate structure is more strongly associated with the composition of the appellate caseload. Two of the 12 states with only one appellate court have entirely mandatory jurisdiction (Nevada and Wyoming). Another four states (Delaware, Maine, Mississippi, and Nebraska) have allocated only minor discretionary jurisdiction to their appellate court. Thus, few discretionary petitions were filed in those courts. Filings in the appellate courts of the District of Columbia, Montana, South Dakota, and Vermont were overwhelmingly in the form of mandatory appeals. Rhode Island was the only state with one appellate court in which discretionary petitions and mandatory appeals were filed in roughly equal numbers. The COLRs in New Hampshire and West Virginia have solely discretionary jurisdiction, but most of the work of a

COLR in a one-tier appellate system is to decide mandatory appeals.

Appellate filings in about half of the states with one COLR and one IAC conform to the standard perspective on appellate structure and jurisdiction. Filings in the COLR represent a small proportion of the state total and are mainly discretionary petitions, while filings in the IAC are primarily mandatory cases.²¹

²¹ This describes the appellate systems of Arizona, Arkansas, Colorado, Connecticut, Georgia, Illinois, Kansas, Kentucky, Maryland, Michigan, Minnesota, Missouri, New Jersey, North Carolina, Ohio, Oregon, Utah, Virginia, Washington, and Wisconsin. The states of California, Florida, Louisiana, and Massachusetts adhere to only part of the perspective. Discretionary petitions form a larger than typical share of IAC filings.

Six states offer a very different pattern, with most filings in the COLR rather than the IAC: Hawaii, Idaho, Iowa, New Mexico, North Dakota, and South Carolina. The pattern is perhaps clearest in New Mexico. In that state, 62 percent of mandatory appeals and 80 percent of discretionary petitions were filed in the COLR (Table 2, Part III, p. 74). That basic pattern applies to those states in which the IAC hears cases on assignment from the COLR.²²

Alaska, the remaining state with one COLR and one IAC, is distinctive because a substantial share of the total appellate filings are in the COLR and most COLR filings are mandatory appeals rather than discretionary petitions. The Alaska COLR has mandatory jurisdiction to hear civil appeals and discretionary jurisdiction over other appellate casetypes, while that state's IAC has mandatory jurisdiction over criminal cases but no jurisdiction in civil cases.

Alabama and Tennessee have separate IACs for civil and criminal appeals. The 1988 caseload in Tennessee conforms to the most common pattern of a COLR with a limited share of the total caseload consisting mainly of discretionary petitions and an IAC with case filings in the form of mandatory appeals. The Alabama appellate caseload is more evenly divided between the two court levels and the majority of COLR cases and all of the IAC cases are mandatory appeals.

Texas has two COLRs, one with jurisdiction exclusively over criminal appeals. The combined COLR caseload is about one-half mandatory. In other respects, the pattern is similar to the most common one in that the vast majority of appellate filings are mandatory cases in the IAC.

There is much diversity in the composition of state appellate caseloads. That diversity reflects how states have responded to increases in the volume of case filings. The available statistical evidence suggests that state appellate caseloads doubled in the 1960s and then again in the 1970s and grew at a more modest pace in the 1980s.²³ Some states conform to the standard perspective on structuring and allocating jurisdiction to their appellate courts. Other patterns can be identified, however, even among states with two-tier systems. Local circumstances and needs tempered the application of the standard perspective in many states. In particular, the bulk of the appellate burden remains on the COLR in some states (e.g. Alaska and New Mexico) and some states (e.g. Hawaii, Idaho, Iowa, South Carolina) have

retained substantial mandatory jurisdiction in their COLRs and others have allocated discretion to their IACs.

These reported filing levels reflect court rules, definitions of appellate jurisdiction, methods of counting filings, the incidental appellate jurisdiction assigned to trial courts, and the rate at which trial court filings result in trials, and thus generate issues that can be the subject of an appeal. Variation in these factors will result in differences between states in filing rates and, if they were taken into consideration, would probably reduce the amount of variation among states in the same region and with similar sizes and economic bases. The variation found in Graph 4 will be examined by appellate court structure.

The rest of the appellate caseload section considers, in turn, mandatory appeals and discretionary petitions. For mandatory appeals, the focus is on filing rates per 100,000 population and dispositions as a percentage of filings. For discretionary petitions, the topics covered include filing rates, petitions disposed as a percentage of petitions filed, and the percentage of petitions granted. The information on mandatory appeals and number of petitions is then brought together by adding the number of petitions granted during 1988 to the number of mandatory appeals filed, yielding a basic caseload measure for many appellate systems: the number of cases to be heard and decided on the merits. Appellate opinions are the final topic considered.

MANDATORY APPELLATE CASELOADS IN 1988.

States reported 161,762 mandatory appeals in 1988, 15.8 percent of which were filed in COLRs. Forty-eight states and the District of Columbia had appellate courts with mandatory jurisdiction.

Mandatory Appeals Filed in State Appellate Courts. Graph 5 summarizes mandatory filings in 45 states and the District of Columbia, based on the information presented in Table 3, Part III (p. 88). Filings are expressed as rates per 100,000 population and filings in a COLR are differentiated from those in an IAC.

The resulting range is substantial, from 23 per 100,000 population in North Carolina to 263 per 100,000 population in the District of Columbia. The median rate is 70.3, with nearly one-half of the states (22 of 46) falling within a band that includes Iowa (54 filings per 100,000 population) and Pennsylvania (81 filings per 100,000 population). There is a broad middle range of states with roughly comparable levels of mandatory appeals.

There is no evident pattern linking filing rates to region, state population, or court structure. States without an IAC tend to be small, located in New England or the Great Plains, and tend to have a COLR with little or no discretionary jurisdiction. Yet, the 12 states meeting those criteria (including Mississippi and West Virginia) are scattered on the graph.²⁴

²² All IAC filings in Hawaii, Idaho, Iowa, and North Dakota are filed through assignment by the state COLR, while filings in the South Carolina IAC arrive both directly and through COLR assignment. With the exception of New Mexico, these states have relatively low rates of total appellate filings per 100,000 population. In Oklahoma, all appeals in civil cases are directed to the Supreme Court, which then transfers cases to the Court of Appeals, the state's IAC.

²³ "State appellate caseloads have, on the average, doubled every ten years since the Second World War." American Bar Association, Judicial Administration Division, *Standards Relating to Appellate Delay Reduction*, Chicago: American Bar Association, 1988, p. 11.

²⁴ Mississippi (35.1), Rhode Island (41.3), and Maine (43.8) are at the low end; South Dakota (60.0) and Nebraska (68.9), fall below the median rate of 70.3; Delaware, Montana, and Wyoming are located slightly above the median; and Nevada (94.0) and Vermont (111.3) show rates considerably above the median.

GRAPH 5: Mandatory Filings per 100,000 Population, 1988

The following states are not included:
IN, NH*, PR, TN, VA, WV*

* State does not have mandatory jurisdiction.

Some of the rankings found in Graph 5 may be attributed to differences in the breadth of appellate court jurisdiction and to how cases are counted. The highest filing rate is in the District of Columbia, which has one appellate court system, and that court has very limited discretionary jurisdiction. Of the five states with the next highest per 100,000 population filing rate, two (Alaska and New Mexico) retain substantial mandatory jurisdiction at the COLR level and three (Arizona, Florida and Oregon) do not.

In some states, appeals in death penalty cases increasingly fill the dockets of courts of last resort. Thirty-four of the 37 states with capital punishment statutes in effect during 1988 provide for the automatic review of death sentences, usually by the COLR. In California, which has such review, one commentator described the state supreme court as expending much of its effort during 1988 on death penalty cases, yet "after devoting so much energy to the death penalty backlog, the court finished its second year where it started. Its 73 decisions were matched by 73 new death penalty judgments."²⁵

²⁵ Gerald Uelman, "Mainstream Justice: A Review of the Second Year of the Lucas Court," *California Lawyer*, July, 1989, p. 40.

The method of count also affects the filing rate. Appeals in the California appellate courts, for example, are counted at the filing of the trial record, a point by which some appeals have been closed, and therefore not counted. Other states with low filing rates (Massachusetts, North Carolina, and South Carolina) also base their count on documents filed after the notice of appeal.

Clearance Rates for Mandatory Appeals. Appellate courts that disposed of more cases than were filed during 1988 reduced their pending caseloads. Cases disposed during 1988 could have been filed in previous years. **Text Table 4** combines the relevant 1988 information from Table 3, Part III (p. 88) with the corresponding data from 1987, allowing a two-year comparison of clearance rates for each COLR and each IAC. States are listed from lowest to highest 1988 clearance rates.

A clearance rate could be calculated for COLRs in 30 states and the District of Columbia. For 32 states, a clearance rate could be obtained for the IAC and is included in Text Table 4. In COLRs the percentages range from a low of 70.4 percent in Arizona to a high of 144.9 percent in North Carolina. COLRs in 14 states are reducing their pending caseload (reporting clearance rates of over 100 percent) in 1988. This is a slight

TEXT TABLE 4: Appellate Court Clearance Rates for Mandatory Appeals, 1988

State	Court of Last Resort	
	1988	1987
Arizona	70.4%	74.1%
Maryland	75.6	95.3
Hawaii	85.2	94.0
Delaware	86.1	105.5
Mississippi	96.3	93.3
Idaho	86.9	102.1
Minnesota	92.3	84.7
Ohio	92.4	90.1
Nevada	93.0	118.3
Wyoming	93.6	94.4
Missouri	95.2	
Vermont	95.7	98.0
Maine	96.0	
New Jersey	97.8	109.2
Rhode Island	98.3	124.5
District of Columbia	98.7	106.3
Texas	99.1	99.9
Nebraska	99.2	80.6
Illinois	103.3	97.9
Florida	104.7	94.3
South Dakota	108.2	
Alaska	108.5	79.1
Louisiana	108.9	91.1
North Dakota	110.4	93.5
Iowa	112.2	107.6
Arkansas	114.3	90.6
Kentucky	117.1	103.8
Alabama	119.9	101.9
Washington	129.1	109.6
Kansas	132.3	155.6
North Carolina	144.9	106.1

State	Intermediate Appellate Court	
	1988	1987
Idaho	71.4%	96.1%
Arizona	83.0	97.7
Kentucky	84.2	85.6
Georgia	86.1	94.7
Louisiana	86.4	87.9
Oklahoma	89.2	78.2
Iowa	91.9	93.5
Arkansas	92.0	103.6
Alaska	92.6	91.5
Indiana	92.7	98.4
North Carolina	94.2	103.6
Illinois	94.2	93.7
Minnesota	94.4	99.6
Missouri	94.9	
Florida	95.5	98.1
California	96.6	106.9
Ohio	96.6	94.1
Texas	96.8	99.6
Michigan	99.3	91.6
Kansas	99.8	104.4
Maryland	100.5	103.7

Alabama	101.6	102.5
Connecticut	103.1	94.1
Washington	104.2	119.5
Colorado	104.2	83.0
Oregon	106.6	98.3
Hawaii	107.5	106.0
Wisconsin	110.3	101.0
New York	118.7	136.0
South Carolina	119.5	83.6
North Dakota	144.4	

Note: A blank space indicates that a calculation is inappropriate for that year.

Source: Tables 2 and 3, Part III
National Center for State Courts, 1990

improvement over 1987, when only 12 kept pace with the flow of new mandatory appeal filings.

Mandatory clearance rates reported by IACs are somewhat lower than for COLRs. The percentages range from 71.4 percent in Idaho to 144.4 percent in North Dakota. In 1988, only 12 IACs reported clearance rates in excess of 100 percent which is a slight improvement over the 11 IACs that reduced their pending caseloads in 1987.

DISCRETIONARY APPELLATE CASELOADS IN 1988. This section examines the 60,032 petitions that were filed for review in state appellate courts. More than two-thirds (69 percent) of those petitions were filed in a COLR.

In state courts, "appellate capacity at an intermediate level does not always spawn discretionary review at the top, as it did in the federal system."²⁶ State COLRs often retain substantial mandatory jurisdiction and IACs are often created with discretionary jurisdiction. Thus, the division between the work of COLRs and IACs is not as clear in most states as in the federal appellate system.

Appellate courts vary in the procedures to decide which petitions to accept for review. In 31 states, a decision to grant review in the COLR requires a majority of the members of the full court or of the panel, whichever is used to review petitions. In the remaining COLRs with discretionary jurisdiction, a minority (in several courts a single justice) of the members of the court or of a panel can grant a petition.

This section considers the number of petitions filed per 100,000 state population, clearance rates for petitions, and the percentage of petitions that were granted.

Discretionary Petitions Filed. The number of petitions filed in each appellate court with discretionary jurisdiction can be found in Table 3, Part III (p. 88). Graph 6 summarizes that information for 36 states and the District of Columbia. The remaining states either lack discretionary jurisdiction or did not provide the relevant data for all courts with discretionary jurisdiction.

The median filing rate is 19.5 per 100,000 population. Filing rates range from no filings in Mississippi to a high of 153.3 per 100,000 population in Louisiana. Most filing rates, however, are less than 30 per 100,000 population. Louisiana (153.3 per 100,000 population), which allocates substantial discretionary jurisdiction to both its COLR and IAC, and West Virginia (86.4 per 100,000 population), a one-court appellate system without mandatory jurisdiction, stand far above other states in the magnitude of their discretionary petition caseloads.

There is greater uniformity among the states in discretionary filing rates than for rates of mandatory appeals. States fall into four main categories: those with discretionary filing rates of less than 10 per 100,000 population (11 states); those with filing rates between 10 and 20 petitions per 100,000 population (seven); those with filing rates between 20 and 31 petitions per 100,000 population

²⁶ Doris Marie Provine, "Certiorari", pp. 783-794 in R. Janosik (ed.), *Encyclopedia of the American Judicial Process*. New York: Scribners, p. 784.

GRAPH 6: Discretionary Filings per 100,000 Population, 1988

The following states are not included:

NJ, OK, PA, PR, TN, WY*.

* State does not have discretionary jurisdiction.

(12 states); and those with filing rates in excess of 40 petitions per 100,000 (6 states). Louisiana and West Virginia are distinct. Their appellate court filing rates lie considerably far from the filing rate found in the state with the third highest rate, Alaska (59 per 100,000 population).

IACs receive more discretionary petitions than the COLRs in California, Florida, Louisiana, and Massachusetts. A substantial proportion of all discretionary petitions were filed in the IACs of Georgia, North Carolina, and Virginia. The filing rates in all of those states, except North Carolina, are above the median of 19.5 per 100,000 population.

There is a relationship between the size of mandatory and discretionary caseloads. This is manifest at the high and low ends of the rankings. Alaska, Arizona, Florida, Louisiana, and Oregon have both high mandatory and high discretionary filing rates. Some of the states at the low end of the range for discretionary filings simply lack significant jurisdiction for discretionary petitions. However, Connecticut, Mississippi, and South Carolina, have low filing rates for both mandatory appeals and discretionary petitions.

Clearance Rates for Discretionary Petitions. Text Table 5 provides information on discretionary petitions that were decided during 1988 as a percentage of those

filed during the year (derived from Table 4, Part III, p. 94), as well as the corresponding information from 1987. Comparable filing and disposition data are available for COLRs of 29 states and the District of Columbia.

The lowest clearance rate in a COLR is 75 percent, reported by the COLR in Delaware, and the highest is 115 percent reported by the COLR in Virginia. Roughly one-half (14 out of 30) of COLRs reported disposing of more petitions in 1988 than were filed. Relative to 1987, the number of COLRs with clearance rates in excess of 100 percent improved substantially, from 8 out of 27 to 14 out of 30.²⁷ Generally, pending discretionary caseloads in COLRs during 1988 changed at the same pace as did pending caseloads for mandatory appeals.

Discretionary clearance rates in IACs are limited to 13 states. IACs of six states are reporting clearance rates of 100 percent or greater and are thereby reducing their pending caseloads. These results are nearly identical to what the IACs experienced in 1987. In fact, the actual clearance rate levels varied little between the two years, with five of the states that reported clearance rates in

²⁷ Fourteen COLRs reduced the size of their pending caseload during 1988 compared to only eight in 1987.

TEXT TABLE 5: Discretionary Petitions Decided as a Percentage of Petitions Filed, 1988

State	Court of Last Resort	
	1988	1987
Delaware	75.0%	100.0%
Iowa	78.4	96.9
Alabama	78.8	91.7
New York	79.3	
North Dakota	83.3	
Louisiana	87.3	99.5

National Center for State Courts, 1990

excess of 100 percent in 1987 also reporting rates exceeding 100 percent in 1988.

Discretionary Petitions Granted. The U.S. Supreme Court accepts for review about 5 percent of the discretionary petitions filed.²⁸ State COLRs tend to accept a larger percentage of petitions filed. During 1988, state COLRs granted 16.4 percent of the discretionary petitions filed.

²⁸ Provine, *supra* note 27, p. 783.

TEXT TABLE 6: Discretionary Petitions Granted as a Percentage of Total Discretionary Cases Filed in COLRS, 1988

State	Number of Petitions Filed	Number of Petitions Granted	Percentage of Petitions Granted
Alaska	244	29	11.9%
District of Columbia	61	9	14.8
Hawaii	45	10	22.2
Illinois	1,558	210	13.5
Louisiana	2,657	395	14.9
Maryland	682	140	20.5

Texas	2,659	482	18.1
Virginia	1,439	192	13.3
West Virginia	1,621	789	48.7
Wisconsin	915	181	19.8

Source: Tables 2, 4, and 5, Part III
National Center for State Courts, 1990

That percentage is derived from Text Table 6, which shows the number of petitions filed, the number and the percentage granted, for the COLRs of 19 states and the District of Columbia. The percentage granted ranges from the low of 3 percent in Michigan to a high of 48.7 percent in West Virginia. The COLRs in Michigan (3 percent), North Carolina (9 percent), and New Jersey (9.3 percent) granted fewer than one of every ten petitions filed. Where an IAC has been established, the precise boundaries of the COLR's jurisdiction become important to understanding the flow of cases to the COLR and, possibly, the percentage of petitions that are granted. For example, the types of cases that would go to the IAC in Michigan are filed instead in the COLR in West Virginia, where no IAC has been established and the Supreme Court has exclusively discretionary jurisdiction.

The two Texas COLRs, one for civil and one for criminal cases, granted 18.1 percent of the total discretionary petitions filed. The Texas Supreme Court, which hears appeals on civil matters, received three mandatory appeals and 1,243 discretionary petitions, granting 14.1 percent of the petitions. The Texas Court of Criminal Appeals received 3,578 mandatory appeals and 1416 discretionary petitions, granting 21.7 percent of the petitions. The Texas IAC has exclusively mandatory jurisdiction, and recorded 8,250 filings. These caseload statistics are taken from Table 2, Part III (p. 74), and the jurisdictional information from the court structure charts in Part IV.

IACs with discretionary jurisdiction tend to grant a higher percentage of petitions than is the practice in their

state COLR or in COLRs generally. Table 2, Part III (p. 74), provides information on the percentage of discretionary petitions granted in eight IACs: California Courts of Appeal, 8.6 percent; Indiana Court of Appeals, 51.3 percent; Louisiana Courts of Appeal, 29.3 percent; Maryland Court of Special Appeals, 10 percent; Minnesota Court of Appeals, 35 percent; New Mexico Court of Appeals, 23.4 percent; and North Carolina Court of Appeals, 15.9 percent. With the exception of Maryland, the IAC grants a higher percentage of discretionary petitions filed than does the state COLR.

Discretionary jurisdiction enables courts to control their dockets. Generally, courts are selective in the petitions that are granted. The use of discretion, however, is exercised very differently among the states. IACs also exercise discretionary power differently than COLRs, reflecting their respective roles in state appellate systems and, perhaps, the capacity of IACs to expand the number of authorized judgeships in the face of rising caseloads.

MANDATORY APPEALS AND PETITIONS GRANTED IN 1988. Appellate courts decide two types of cases: mandatory appeals and discretionary petitions that have been granted. Courts differ in the process through which discretionary petitions are reviewed, resulting in varying workload implications for the court and its justices. Therefore, the most comparable and perhaps most important index of the work carried out by state appellate courts in 1988 is the total number of mandatory appeals and discretionary petitions granted. This is the pool of cases that the courts will decide on the merits.

The number of relevant cases can be calculated from all of the appellate courts in 17 states and the District of Columbia using information in Table 5, Part III (p. 100). Text Table 7 displays filings per 100,000 population of mandatory appeals and discretionary petitions that were subsequently granted. States are grouped according to their appellate structure. The filing rate includes all mandatory appeals and all discretionary petitions that were subsequently granted.

Filing rates range from 25.1 in North Carolina to 146.5 in Oregon for states with one COLR and one IAC. Most of the filings in Louisiana and Oregon were in the IAC. However, New Mexico, with the third highest filing rate, received the majority of filings in the COLR (62.7 percent of the total). Contrasting the filing rates from these courts with those with either no IAC or multiple COLRs does not appear to show any systemic variation. The one possible exception is the District of Columbia, where the filing rate far exceeds the level found in all states. The 1988 filing rates parallel those found for 1987 (Text Table 4, p. 13, *State Court Caseload Statistics: 1987 Annual Report*). State filing rates do not, however, appear to reflect the type of appellate court structure a state has adopted.

The ranking of states essentially parallels that found for the rate of mandatory appeals per 100,000 population (see Graph 5). The Louisiana appellate courts, however, move ahead of Ohio and New Mexico, and the Minnesota appellate courts move ahead of the North Dakota courts when both granted petitions and mandatory appeals are used to calculate the rate of appeals. Compared to the appellate systems of Ohio and New Mexico, Louisiana's

TEXT TABLE 7: Mandatory Appeals Filed and Discretionary Petitions Granted per 100,000 Population, 1988

Appellate Structure/State	
States with one COLR and one IAC	
North Carolina	25.1

National Center for State Courts, 1990

courts both receive a large proportion of their total filings as discretionary petitions and grant a high percentage (23 percent) of the petitions filed.

Graph 7 focuses on the COLRs in states with at least one IAC. Filings that will be decided on the merits range from less than one per 100,000 population in Michigan to 75 per 100,000 population in Alaska. Granted petitions constitute the majority of cases decided by the COLRs of Louisiana, Massachusetts, Missouri, and Pennsylvania. In California, the number of appeals and the number of granted petitions are nearly equivalent.

Caseloads are presented as filings per 100,000 population. While facilitating comparisons among the states, it is not the measure of greatest weight for the justices or clerks of those courts. Rates based on filings per justice/judge, presented in Tables 2-5, Part III, are perhaps more responsive to the immediate concerns of those working in appellate courts. The next subsection examines a particular aspect of appellate court workload: written opinions.

APPELLATE COURT OPINIONS IN 1988. The preparation of full written opinions "has been called the single most time-consuming task in the appellate process."²⁹ Rising appellate caseloads have led to both curtailment of full opinions to decide cases and to concern

²⁹ American Bar Association, Judicial Administration Division, *supra* note 23, p. 21.

GRAPH 7: Mandatory Filings and Petitions Granted per 100,000 Population in COLRs, 1988

The following states are not included:
AL, AZ, AR, CO, CT, FL, ID, IN, IA, NY,
UT, VA, WA, WI.

over the availability of sufficient judicial time to prepare full opinions in important cases.

Table 6, Part III (p. 106), presents the number of signed opinions issued by state appellate courts during 1988. The table also provides supplementary information that describes whether the count is by case or by written document and whether majority opinions, per curiam opinions, and memorandums/orders are included in the count. Information is also provided on the number of justices or judges serving on each court and the number of support staff with legal training that the court employs. The number of justices or judges is particularly significant, as appellate courts, and especially IACs, vary greatly in size. COLRs vary from three (the Oklahoma Court of Criminal Appeals) to nine justices (the Alabama Supreme Court, the District of Columbia Court of Appeals, the Iowa Supreme Court, the Mississippi Supreme Court, the Texas Supreme Court, and the Washington Supreme Court). IACs range in size from three judges (in Alabama, Alaska, Hawaii, and Idaho) to the 88-judge California Courts of Appeal.

The restricted size of COLRs and the nature of their responsibilities tends to limit the number of signed opinions to several hundred in a year (the U.S. Supreme Court

typically decides about 150 cases a year by opinion).³⁰ Generally, courts can determine how they decide cases, whether by full explanatory opinion or by order, and thus control their workload. Therefore, the number of signed opinions is not directly related to the number of cases decided by the court on the merits during 1988. Among COLRs, they range from 55 in Delaware to 672 in Alabama.

IACs vary considerably in the number of signed opinions issued during 1988. The highest number was reported by the California Courts of Appeal: 8,693 (compared to the 122 opinions reported by the California Supreme Court). The IACs in Florida, Michigan, Ohio, Pennsylvania, and Texas reported more than 4,000 signed opinions.

Appellate courts decide appeals in other ways that also state the facts of the case and reasons for the court's decision. These include memorandum decisions, which are signed, and per curiam opinions, which are for the

³⁰ The U.S. Supreme Court disposed of 156 cases by signed opinion (133 consolidated opinions) and 12 cases by per curiam opinion (statistics supplied by the Office of the Clerk, Supreme Court of the United States).

court and generally very brief, but in some appellate courts they state the court's reasoning. What differentiates a signed opinion from a memorandum decision varies among appellate courts. All unpublished opinions are designated memorandum decisions by some courts and are counted separately from the signed opinions shown in Table 6, Part III. Other courts merge memorandum decisions with the count of signed opinions. Therefore, despite their significance, statistics on opinions are the least comparable element to appellate court caseloads.

Appellate Courts in 1988: A Summary

Nationally, there were 4.2 percent more appellate filings in 1988 than in 1987. Of course, this does not mean that filings in all courts increased; rather, more COLRs and IACs reported increases than reported decreases. The general increase, based on courts reporting comparable data in the two years, should be viewed in the context of increasing appellate caseloads over the past three decades.

The combined state court appellate filings in 1988 consisted of 11.5 percent mandatory appeals to COLRs, 18.8 percent discretionary petitions to COLRs, 61.4 percent mandatory appeals to IACs, and 8.3 percent discretionary petitions to IACs.

Most two-tier appellate systems conformed to the pattern in which the COLR controls its docket through discretionary jurisdiction and most mandatory appeals are heard in an IAC. There are a number of states to which that pattern does not apply. In some states, the COLR continues to hear and decide most of the filings, often in the form of mandatory appeals. The IACs in these and other states have been allocated significant discretionary jurisdiction.

The rate at which appeals are filed per 100,000 population varies substantially among the states. When mandatory appeals and discretionary petitions are examined separately, however, there is a large middle ground of states with broadly similar filing rates. Differences in appellate procedure and jurisdiction are shown in the percentages by which courts grant discretionary petitions. Generally, IACs grant a higher percentage of petitions than do COLRs, but information on the number of petitions granted is not made available by most appellate courts.

Appellate courts in most states disposed of more cases in 1988 than were filed during the year. A case disposed of in 1988 could, of course, have originated in a filing several years previously. Appellate courts that report clearance rates of substantially less than 100 percent accumulated a larger pending caseload during 1988 and cases must be heard and decided more expeditiously in 1989 and subsequent years if these courts are to remain current.

Trial Court and Appellate Court Caseload Trends, 1984-88

This section describes change over a five-year period in the caseloads of state trial and appellate courts.

Such a more-broadly based appraisal of the work of the state courts during the mid-1980s serves several purposes. First, it indicates whether the differences among states and the patterns highlighted in the preceding sections for 1988 are stable features of state court systems. Second, it outlines the direction, if any, in which courts and court users nationally are now moving. Clear trends allow us to infer probable future situations from previous circumstances. The examination of recent trends begins with trial court case filings, focusing on felony and tort cases.

Trends in Civil and Criminal Trial Court Filings, 1984-88

This analysis places 1988 trial court filings in the context of recent caseload trends. Two questions are addressed. First, to what extent are filing rates for individual states and courts essentially stable over time? If filing rates change dramatically and unsystematically from year to year, then the rankings of states reported in the preceding section for civil, criminal, and juvenile filing rates are probably attributable to short-term or random factors. Stability in ranking suggests that durable characteristics such as state legal systems, economies, and demographics are influential in determining the size and composition of court caseloads.

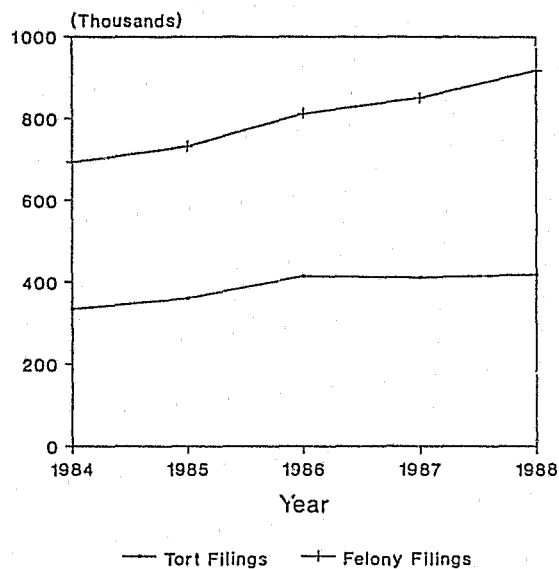

Second, is there sufficient consistency among courts and states to draw conclusions about nationwide change in the state courts? Although states differ in how they report their caseload data, each state tends to retain its system for generating caseload statistics and can thus define its own baseline when assessing the direction and magnitude of change over time. Also, sharp fluctuations from one year to the next can be linked with specific changes in a state's law, procedures, or recordkeeping and not confused with underlying, fundamental trends in filing levels.

The baseline used for this section is the caseload reported by state trial courts in 1984.³¹ The trends describe subsequent changes in felony and tort case filings. Contract and real property rights cases are also briefly examined to determine if such civil cases are changing in the same direction and at the same pace as tort cases. Felony, tort, contract, and real property rights cases tend to consume more court resources than other case categories and to speak directly to the concerns and questions court managers, legislators, and the public have about the work of the state courts.

The data used in this section consists of caseload information reported in the *State Court Caseload Statistics: Annual Report* series, 1984 to 1988. Examining

³¹ The caseload statistics series published by the National Center for State Courts begins in 1975. However, the period 1984 to 1988 is the longest continuous time span for which caseload data comparable to that reported in this volume can be obtained for a significant number of general jurisdiction courts. The only other annual series on state court caseloads was collected and published by the U.S. Bureau of the Census. The last volume in that series reported 1946 statistics.

CHART 5: Felony and Tort Trial Court Filings, 1984-88 Trends

Felony and Tort totals refer only to courts listed in Tables 15 and 16, respectively

trends limits the data to states that reported statistics in comparable terms over the entire time span. Therefore, some states that have refined their data collection procedures in recent years may have relevant statistics in the 1988 report but are excluded from the trend analysis, which includes those states that provided data throughout the five-year span.

TRENDS IN FELONY FILINGS, 1984-88. Felonies are serious criminal offenses. The line dividing felonies from other criminal offenses and the specific offenses included varies among the states but felony case filings always include the most serious offenses and exclude minor offenses. Typically, a felony is an offense for which the minimum prison sentence is one year or more.³²

Comparable felony filing data can be obtained from 32 statewide general jurisdiction trial court systems for the period 1984 to 1988. The number of felony cases filed per year in each court system is detailed in Table 15, Part III (pp. 171-74). The combined felony caseloads of the 32 states rose by nearly one-third (32.2 percent) between 1984 and 1988. Chart 5 depicts the trend that links the filing levels in those two years. The largest year-to-year change was in 1985-86, when filings rose by 10.8 percent (see Table 15, Part III).

Text Table 8 summarizes the experiences over those years of the general jurisdiction courts in each of the 32

³² Wayne Logan, Lindsay Stellwagen, and Patrick Langan, *Felony Sentencing Law of the 50 States and the District of Columbia, 1986*. Washington D.C.: U.S. Department of Justice, Bureau of Justice Statistics (NCJ-105066), 1988.

states, using filing rates per 100,000 adult population. States are ranked by the magnitude of the overall percentage change in filing rates over the five years. Percentage changes between adjacent years are also shown. The use of population based rates implicitly imposes a burden for a trend analysis in which court caseloads must rise more rapidly than the state population to show an increase. Population adjusted rates, however, are used to be consistent with previous sections and to facilitate comparisons by identifying the relative size of the caseloads confronting the various states. The subsection on tort trends discusses the implications of population-adjusted filing rates.

The trend over the 1980s is clear: felony filings are increasing and increasing substantially in the general jurisdiction courts of most states. Consistency across states strongly supports the identification of a national trend.

Filings per 100,000 population increased in approximately two-thirds of the courts reporting relevant data for each set of adjacent years. Between 1987 and 1988, six states registered a decrease, (although the change in four states was 2 percent or less) and 26 registered an increase. The patterns of change observed over this most recent period were roughly similar to those occurring throughout the past five years.

Increases tended to be substantial. While very few state courts reported a decrease of more than 10 percent, and most decreases were less than 5 percent, many courts reported year-to-year increases of 10 to 20 percent. Of the 32 states reporting relevant data, 13 showed continuous yearly increases across the five-year span. There were, however, fluctuations for most courts despite the strong underlying trend toward higher felony filings. Montana, for example, registered little change between 1985-86, a 5 percent decrease between 1986-87, and a 12 percent increase between 1987-88. No state registered four successive decreases during the five-year period and only two states with relevant data (Hawaii and Oklahoma) failed to register at least one increase of 5 percent or more. In all, 29 of the 32 states showed an increase in felony filings over the last five years.

Despite the general trend in increasing filings, there are important differences among the states in the patterns that characterize the annual rates of change. The experience of the states in changing levels of felony filings per 100,000 population between 1984 and 1988 falls into four main patterns. First, strong and consistent upward trends (1 percent or more per year) are identifiable in California (a cumulative increase of 41.5 percent), Connecticut (55.5 percent), the District of Columbia (106.3 percent), Indiana (52.4 percent), Minnesota (30.3 percent), New Hampshire (42.5 percent), New York (34.5 percent), Oregon (27.4 percent), Texas (33.9 percent), and Washington (52.3 percent).

Second, seven other states manifest a pattern that can be categorized as having a clear upward trend, but without consistent year-to-year increases exceeding 1 percent over the time period (some years changes in felony filing rates were in the -1 percent to 1 percent

*Figures for felony filings do not match those reported in the 1984, 1985, and 1986 *State Court Caseload Statistics: Annual Reports*. For Connecticut Superior, the felony filings have been adjusted to include only triable felonies so as to be comparable to 1987 and 1988 data. For Hawaii Circuit, misdemeanor cases have been included to allow comparability with 1987 and 1988 data.

Source: Table 15, Part III
National Center for State Courts, 1990

range). These states (and the percent increase recorded between 1984 and 1988) are Arizona (25.0 percent), Colorado (12.3 percent), New Jersey (13.5 percent), North Dakota (17.6 percent), Oklahoma (8.3 percent), South Dakota (21.1 percent), and Virginia (16.0 percent).

Third, there is a pattern of mixed increases and decreases in the yearly changes experienced by Arkansas, Illinois, Iowa, Kansas, Maine, Montana, North Carolina, Ohio, Rhode Island, Vermont, Wisconsin, and Wyoming. It should be noted that the percentage change for the five years as a whole was positive in all these courts. However, the direction of year-to-year changes was not consistent.

Lastly, three states (Hawaii, Missouri, and West Virginia) appear to have experienced downward trends.

Filing rates in those states tended to decline over the 1984-88 period but not consistently.

In sum, felony filings nationally manifest a clear upward trend. The time span covered is still brief and data are not available for some states. But virtually all states with relevant data, states drawn from all regions of the country, demonstrate a pattern of rising felony case filings.

TRENDS IN TORT FILINGS, 1984-88. Torts are allegations of injury or wrong committed either against a person or against a person's property by a party who either failed to do something that they were obligated to do or did something that they were obligated not to do. The caseload statistics reports for 1985, 1986, and 1987 contained a separate section devoted to trends in tort

National Center for State Courts, 1990

litigation. This report updates selected indicators of trends in torts and general civil case filings.³³

Comparable tort filing data can be obtained from 20 general jurisdiction courts for the period 1984 to 1988. The actual number of tort filings per year are detailed in

³³ Before 1986, civil case filings in New York's general jurisdiction courts, the supreme court and county court, were reported based on a count taken at the "trial note of issue," a document by which the parties indicate their readiness for trial. In 1986, 1987, and 1988, civil filing statistics from those courts are based on a count taken at the "request for judicial intervention," which is usually filed with the first motion, an event that takes place at an earlier stage in the litigation process than the "trial note of issue." The change in the point of count is of great significance for the caseload data. The New York supreme and county courts reported 126,776 civil case filings in 1985 and 284,568 in 1986. To make the trend tables prepared by the NCSC Court Statistics Project consistent over time, Table 16 in Part III is based on a count of filings taken at the "trial note of issue" using information provided by the New York state office of court administration.

Table 16, Part III (p. 175). **Text Table 9** summarizes the change experienced by each court in each year by showing the rate of filings per 100,000 population (in 1984 and 1988) and the percentage change between adjacent years and for the five-year period as a whole. The courts are ranked by the percentage change in the rate of tort filings per 100,000 population over the past five years.

The data suggest three consistencies in tort filings. First, tort filing rates in most states fluctuate rather than remain stable. Second, there is a national direction to the fluctuation in a given year. Third, despite the fluctuations, there is an apparent underlying upward or downward trend in some states.

The first consistency answers the question about stability in filing rates. Filing rates in most states fluctuate from year-to-year, often substantially. The more extreme year to year changes in tort filing levels are often the short-term effects of tort reform legislation that make it advantageous for litigants to file a lawsuit either before or after a particular date. This issue is examined by linking the

timing of recent statutory changes in Alaska, Arizona, Michigan, New Jersey, Washington, and Utah to observed abrupt shifts in the level of tort filings in those states.

Tort reform legislation during 1986 and 1987 revised several aspects of Alaska's civil law. In 1986 a \$500,000 ceiling on noneconomic damages in personal injury cases was established.³⁴ In addition, the Alaska legislature in 1987 did away with pure joint and several liability for joint tortfeasors (defendants).³⁵ The result is that a plaintiff can no longer recover all damages from one tortfeasor; rather, each tortfeasor is now responsible for an amount of damages based upon his or her percentage of fault. The substantial rise in tort filings during 1985 and 1986 is likely to represent an effort by people to have their cases decided under the old law. The sharp declines during 1987 and 1988 to levels roughly in line with pre-1985 filing rates support this reasoning.

Arizona offers a clear example of the potential impact of change in filing incentives brought about by changes in the legal framework. In 1987, the Arizona legislature abolished joint and several liability with the statute taking effect on January 1, 1988.³⁶ The impact was dramatic. "Of the 17,128 tort cases pending in Maricopa County as of December 30, 1987, 8,223 were filed in that very month, precisely to take advantage of the old doctrine. The court administrator's office reports that the average number of new tort filings per month in Maricopa County is 615."³⁷ This change undoubtedly underlies the 62 percent increase in the tort filing rate per 100,000 population between 1987 and 1988.³⁸

In 1986, the Michigan legislature established a case evaluation panel to screen most civil actions in order to identify and penalize frivolous law suits (especially tort actions).³⁹ The panel became effective on October 1, 1986. When the panel determines that an action is frivolous, the plaintiff proceeds to trial at the risk of serious penalties should the judgment be against him or her. This statute seemingly accounts for the large increase in the number of tort filings in 1986 (the last year before the evaluation panel came into effect).

On December 27, 1987, New Jersey statute law established mandatory arbitration for personal injury actions involving less than \$20,000.⁴⁰ Because arbitration is generally less expensive for the litigants, this change in the law provides a strong incentive for the plaintiffs with relatively small personal injury claims to bring suit where they otherwise would not. This statute is one factor responsible for the nearly 20 percent increase

in tort filings per 100,000 population the state recorded during 1988.

Tort reform legislation in Utah during 1986 set a cap on the amount of noneconomic damages that a plaintiff could recover, modified the doctrine of joint and several liability, and required structured settlements for certain categories of awards. Tort filings in Utah doubled between 1985 and 1986 and then decreased by 48 percent between 1986 and 1987. Thereafter, the upheaval dissipated, with tort filings remaining relatively constant between 1987 and 1988 (a slight increase of just under 5 percent). The net effect was minor when considered in relation to population: there were 76 tort filings per 100,000 population in the Utah District Court in 1985, spiked to 152 filings per 100,000 population in 1986, and dropped to 83 per 100,000 population in 1988.

The sharp fluctuations noted for the state of Washington appear to reflect the same pattern of a sharp rise in response to incentives to file in one year followed by an equally precipitous decline back to a rate near the original filing level. Tort filings doubled between 1985 and 1986 and then fell by 59 percent in 1987. The 1988 statistics suggest the short-term nature of this jolt as the tort filing rate in 1988 is quite similar to the pre-1986 levels.

Other fluctuations may reflect changes over the 1980s in the maximum dollar amount jurisdiction for cases filed in courts of limited jurisdiction and for small claims procedures. In most states, those maximums have increased substantially. Limited jurisdiction courts and small claims procedures are now viable alternatives to filing a tort case in the general jurisdiction courts of many states. This adds weight to the significance of the increases observed in tort filings, since case filings in general jurisdiction courts perhaps represent a declining share of total claims for tort damages. For example, on July 1, 1986 (the start of the court reporting year), the maximum dollar amount of a small claims filing in the Alaska District Court rose from \$1,000 to \$5,000. This change, in addition to the change in tort law discussed earlier, may account for the large decreases in the tort filing rate per 100,000 population in both the Alaska Superior and Alaska District Courts during the 1986 to 1988 period.

A second consistency in tort filing rates in the latter half of the 1980s speaks to the question of national patterns. There is some consistency among states in the timing of upward and downward fluctuations. Filing rates tended to increase in 1985 and again in 1986. Between 1984 and 1985, 14 of 20 states registered increases in the rate at which tort cases were filed in their general jurisdiction trial court. Between 1985 and 1986, 16 of 20 states registered an increase. This upward trend seems to be leveling off in that the changes between 1986 and 1987 and between 1987 and 1988 both showed an even mix of increases and decreases.

This appearance of a leveling off in tort filings is further confirmed by examining the aggregate number of tort filings for the 20 states being examined, as shown in Chart 5 (Table 16, Part III, p. 175). For those states, there was an overall increase in tort filings of 24.7 percent during the past five years. Most of this growth occurred between 1984 and 1986 (23.8 percent). Although some

³⁵ Chapter 16 of the Code of Civil Procedure was repealed in 1987.

³⁶ Section 12-2506 of the Arizona Revised Statutes. This change became effective January 1, 1988.

³⁷ Elliot Talenfeld, "Instructing the jury as to the effect of joint and several liability: time for the court to address the issue on the merits," *Arizona State Law Journal*, 20:925, 1988.

³⁸ Although the new statute took effect January 1, 1988, its impact was felt on the 1988 filing rates because Arizona is on a July 1-June 30 reporting period.

³⁹ Section 600.4963 of the Michigan Compiled Laws.

⁴⁰ Section 2A:23A-20 of the New Jersey Revised Statutes.

growth has continued between 1986 and 1988, it is slight (just under 1 percent). This consistency suggests factors operating at a national or perhaps regional level that affect the extent and direction of change to tort filing rates. Thus despite the link between extreme fluctuations in some states and specific legislative initiatives, there is nevertheless some evidence of a national direction in tort filings. This may reflect the pervasiveness of the wave of tort reform in the mid-1980s or other factors that affect incentives to litigate.

A third consistent pattern is that the direction of trends in filings is upward. Maine is the only state in Text Table 9 in which tort filings decreased each year during the five-year period. Despite the apparent slowing in tort growth over the past two years, enough states are still experiencing increases in their general jurisdiction court filings during the 1984-88 period to support a general upward trend. Kansas, New Jersey, and Arizona experienced four successive increases, while 13 of the 20 states showed an overall increase in tort filings between 1984 and 1988.

Some of the increases over the full 1984-88 period are substantial indeed. Tort filings per 100,000 population increased by 95 percent in Arizona, 23 percent in California, 31 percent in Michigan and New Jersey, and 28 percent in Ohio. Most increases were more modest and the story that emerges from the case filing statistics will vary depending on which states are regarded as the most significant bellwethers of change. Some tentative trends can be discerned, however, based on the 1984-88 tort filing data. Each trend is distinctive in terms of the consistency and direction of change in filing rates.

First, tort filings in three states have grown consistently over the 1984-88 period: Arizona, Kansas, and New Jersey. Second, there was an apparent upward trend in eight states, broken only in one year. The following states show an increase in tort filings for all years except: (a) 1984-85—Maryland; (b) 1986-87—Colorado and Washington; and (c) 1987-88—California, Hawaii, Ohio, Puerto Rico, and Texas. Third, filings in seven states do not manifest a clear direction, fluctuating from year to year. Those states showing substantial fluctuation over the five-year period are: Alaska, Idaho, and Utah. Those states that have exhibited relatively minor year-to-year change are: Florida, Montana, North Dakota, Michigan, and New York.

Maine suggests a fourth trend that may also be present in states not included in Text Table 9. Maine is the only state offering consistent evidence of a downward trend; the decrease, however, has been slight in most years.

To summarize, the available state court data suggest that overall tort filings are currently increasing at much more modest rates than earlier in the decade. This trend is less apparent at the state level where a great deal of variability exists. Over the last five years, the courts examined include three states with a consistent upward trend and eight additional states with a predominant upward trend despite some yearly fluctuation. The filing rate has consistently decreased in only one state. There

is no satisfactory basis for attributing a direction to the filing data for the eight remaining states.

Torts are a type of court case likely to consume substantial court resources and are used as a key measure in the debate on whether the level of litigation in this country is rising. This section has laid the groundwork by examining the growth of tort filings as a distinct casetype. The next subsection extends the analysis by examining the growth of tort filings relative to other categories of civil caseload.

TORTS AND OTHER CIVIL LITIGATION, 1984-88.

The trends just identified are short-term. The available information covers too brief a time span to draw firm conclusions about the extent and direction of fundamental change in tort filings. It would buttress the tentative conclusions considerably, however, if even in the short-term, tort filings were increasing more rapidly than other types of civil cases.

This is pursued by providing a broader context to gauge what is now happening in tort litigation. The first method considers torts as a percentage of total civil filings between 1984 and 1988. Since torts are a component of total civil filings, a change in this percentage indicates whether torts are becoming a larger component of state court caseloads. This index provides another way to judge the amount of change in tort litigation.

The second method is to offer a more refined standard by which to judge the degree of change in tort litigation. This takes the form of a comparison of the five-year trends in tort, contract, and real property rights cases. Examining trends in these select casetypes allows us to draw conclusions on whether torts are increasing more sharply and more consistently than other major forms of civil cases.

Torts as a Percentage of Total Civil Filings. It is possible to calculate the percentage tort cases represent of total civil filings in 20 general jurisdiction state court systems. The number of tort cases filed annually in each court system is shown in **Text Table 10**; total civil filings are taken from Table 9 in the various annual caseload reports for the years under consideration.

In 12 states the percentage was essentially unchanged over the five-year period; in one state the percentage consistently increased; and in seven states there were mixed increases and decreases.⁴¹

The only state to show a continual increase in the percentage of tort cases was Arizona. Torts represented 10.7 percent of Arizona's 1984 civil filings and 19.1 percent of 1988 filings. This increase reflects the effects of tort reform discussed earlier. There were several states that showed pronounced increases in specific years or for certain periods in the five-year span. California, Hawaii, and Texas all showed an increasing percentage of tort filings from 1984 to 1987 before a slight decline

⁴¹ A more formal analysis would take into consideration that a change from 21 percent to 22 percent is not proportional to a change from, say 3 percent to 4 percent. The standard procedure is a logarithmic transformation of the data.

TEXT TABLE 10: Tort Filings as a Percentage of Civil Filings

Court	1984	1985	1986	1987	1988

in 1988. After a small decline in 1985, the percentage of tort filings in Maryland has increased from 10.1 percent to 12.6 percent in 1988. Given the legislative initiatives previously discussed, it is predictable that Utah and Washington show large increases in 1986 in the share tort cases represent of total civil filings. Again, the change in tort filings relative to total civil filings underscores the importance of tort reform for the composition of total civil caseloads.

A pattern of continuously smaller percentages is not found. However, all courts except Arizona had at least one year where torts as a percentage of total civil caseload declined.

Torts as a percentage of total civil filings offers an indicator of change that is not linked to state population. The size of the population is growing in most states, and if the absolute number of filings remains constant from one year to the next the result is a decreased filing rate. The use of population adjusted filing data therefore imposes a more difficult standard for upward trends than for downward trends. Also, population change for individual states is often influenced by net migration, which can cause rapid change to the population size of states in some regions.⁴²

In general, the use of percentages in this section tends to support the conclusions drawn using tort filing trends and rates per 100,000 population of the last section. Overall, in 11 of the 20 states torts were increasing more rapidly than other civil filings between 1984-88.

⁴² Tort filings can be standardized using a variety of rates, including rates per 100,000 households, rates per 100,000 firms, or rates per 100,000 economic transactions in a state. The rate selected should reflect the purpose of the analysis. In this report, the issue is simply whether filings are increasing more or less rapidly than the population.

There was, however, a sharp upward swing in tort filings between 1985 and 1986: torts increased as a percent of total civil filings in 15 of 20 courts reporting comparable data. Although that degree of increase did not recur for most states in either 1986-87 or 1987-88, there is more evidence in support of rising tort filings than in support of declining tort filings.

Trends in Tort, Contract, and Real Property Rights Filings, 1984-88. Torts are a small component of civil filings in most general jurisdiction trial courts. The range in 1988 was from 3 percent (in Kansas) to 26 percent (in Maine), with the majority being less than 10 percent. Therefore, when comparing torts as a percentage of total civil filings, large increases in tort filings may be partially concealed because torts are so small a percentage of all civil cases. This section attempts to alleviate this concern by narrowing the field of inquiry to an examination of the relationship between tort, contract, and real property rights cases.

Contract case is a major classification category for civil cases that includes disputes over a promissory agreement between two or more parties. Real property rights cases arise out of contention on the ownership, use, or disposition of land or real estate (*State Court Model Statistical Dictionary*). Examining trends in these two major forms of civil litigation in relation to tort cases provides a further means of assessing the change in tort litigation. Specifically, are these two casetypes changing more consistently and substantially than tort filings? This is the case in the federal courts, where contract cases are increasing more rapidly than tort filings.⁴³

Continued on next page

Complete and comparable data on tort, contract, and real property rights filings are available for 13 of the 20 general jurisdiction courts discussed in the last section. Annual filing rates per 100,000 population for the three types of civil cases and the overall percentage changes in filing rates between 1984 and 1988 are summarized in Text Table 11. The courts are categorized by the five-year percentage change.

The consistencies identified for tort filing rates also apply to contract and real property cases over the 1984-

88 period. During the five-year period, the change in all three casetypes was upward in most states. Aggregating the data from all 13 courts shows that between 1984 and 1988 tort filings increased by 26.4 percent while contract filings increased 16.9 percent and real property rights filings rose by 35.1 percent.

This overall upward trend characterizes the experience of the individual states. Between 1984 and 1988, 7 of the 13 states reported increases in contract filings, 8 states reported increases in real property rights filings,

Source: National Center for State Courts, 1990

while 10 states reported increases in tort filings. The highest rate of increase in tort filings over the past five years was in Arizona—growing by over 95 percent. This was substantially more than the growth in contract filings (12.0 percent), but less than the 106.5 percent growth in real property rights filings (although the absolute number of real property rights filings is substantially less than either tort or contract filings). At the other extreme, tort filings in Utah declined by 4 percent between 1984 and 1988, but torts still increased relative to contract and real property rights filings in that these two declined even further, 92.9 percent and 9.9 percent, respectively. In all, tort filings rose relative to contract and real property filings in four states—Hawaii, New Jersey, Texas, and Utah. Contract filings rose relative to tort and real property filings in two courts (Maryland and Puerto Rico) and the remaining seven courts showed real property rights filings increasing more rapidly than either tort or contract filings.

The change in tort filings relative to contract and real property rights varies considerably when state-by-state and year-to-year changes are examined. Aggregating the data from the 13 courts shows that both contract and real property filings increased relative to tort filings between 1984 and 1985. Only in Hawaii, Puerto Rico, and Utah did torts increase more rapidly than contract and real property rights case filings. The years 1985 and 1986 were marked by substantial increases in filing rates in all three categories of civil filings, but particularly in torts. Aggregating the 13 states, tort filings increased by 15.8

percent during the 1985-86 period, substantially faster than either contract (5.7 percent) or real property filings (9.0 percent). This appears to reflect the prevalence of tort reform during 1986. In fact, torts rose relative to both contract and real property rights filings in 6 of the 13 courts.

Following the rather large increases in civil caseload filings in 1985-86, the 1986-87 period showed substantially slower growth. In aggregate, tort filings declined by 4.3 percent between 1986 and 1987. In comparison, contract filings rose by 2.3 percent and real property rights filings increased by 4.3 percent.

During 1987 and 1988, both aggregate tort and real property rights filings recorded large increases, 8.3 percent and 9.1 percent, respectively. Aggregate contract filings also increased slightly (0.1 percent) for the fifth straight year, although it should be noted, increases in contract filings became progressively smaller over the five years. Tort filings rose relative to contract and real property rights filings in six states. Overall, on a yearly basis, tort filings show the most pronounced variation. It seems reasonable to attribute this to specific tort reform legislation.

There is little consistency over the 1984-88 period in the relative growth in tort, contract, and real property rights filings within specific states. Only Florida shows a continual increase in one of the three civil casetypes relative to the others across the five years being studied, with real property rights filings increasing relative to both tort and contract filings. Real property rights cases in four

additional states (Arizona, Colorado, North Dakota, and Washington) grew relative to both tort and contract filings for three of the four pairs of adjacent years. In only two states (Hawaii and New Jersey) did tort filings rise relative to contract and real property rights filings a majority of the time. Maryland, Puerto Rico, Texas, and Utah experienced a relative increase in torts across two of the four pairs of adjacent years. There is no identifiable pattern to the changes in Kansas, Montana, Texas, and Utah.

Overall, the evidence presented here indicates that tort filings are not increasing at rates that greatly exceed other major categories of civil filings. In fact, only in the 1985-86 period did the aggregate growth in torts exceed both contract and real property rights filings. Within the states, the results show more variation, but no state recorded a continual, yearly relative rise in tort filings during the 1984-88 period. There are sufficient differences between tort, contract, and real property rights case filing patterns to suggest that the factors promoting increased or decreased levels of tort litigation in states are not having a similar effect on contract and real property rights litigation.

CASE FILING TRENDS, 1984-88: A SUMMARY.

This section reveals some dynamics underlying the 1988 trial court caseload statistics. Change rather than continuity characterizes filing levels for felony and civil case filings. Specifically, civil filing rates in general jurisdiction courts tend to fluctuate from year to year. The direction is toward higher rather than lower case filings, but few courts consistently demonstrate annual increases even over the limited time period considered here.

The addition of 1988 data to the tort filing time series is far from conclusive in establishing clear trends. Between 1985 and 1986 tort filing rates increased in most states reporting data, often substantially. This was largely reversed between 1986 and 1987 with tort filings leveling off, often near pre-1986 levels in 1988. An underlying tendency toward higher filing rates can be identified, but the assessment of its strength depends on the importance given to different states and to different ways of presenting the trends. A conclusive assessment awaits the accumulation of more time points in the trend series.

The trend analysis also suggests that tort filings are changing over time in a manner that differs from other civil case categories. It is possible that much of the variation in tort filing rates is attributable to specific legislative changes enacted by states during the second wave of major tort reform (the previous wave was in the late 1970s).

This implies that the identification of national patterns in civil filings is tentative. The consistencies must be balanced against the substantial variation that is present among the states and, for most states, over the 1984-88 period.

By contrast, felony case filings are clearly experiencing an upward trend. The result is a growth in the portion of criminal caseloads that carries the most substantial implications for court staffing and resources. Most courts were processing far more felony cases in 1988 than at the start of the decade.

Appellate Court Caseload Trends, 1984-88

Recent trends in appellate court caseloads can address two main questions. First, are changes in the filing and disposition rates of individual states and courts consistent from year to year? A five-year timeframe indicates whether growth or decline recorded in 1988 is attributable to long-term patterns or short-term factors. The initial step is to measure the magnitude and consistency of changes over the five years. The second step is to compare the experiences of courts of last resort with intermediate appellate courts. The final step is to determine if caseloads in states that have adopted the now standard two-level appellate system are changing in ways that differ from states with one-level systems.

Second, is there sufficient consistency among courts and states to draw conclusions about changes in appellate caseload volume on a national level. Here, the overall growth in appeals is of crucial importance. Appellate caseloads soared over recent decades, doubling from the mid-1960s to the mid-1970s and then doubling again in the period up to 1984. The 4.2 percent growth in filings recorded by appellate courts in 1988 suggests a more modest rate of growth.⁴⁴ Is this characteristic of the mid-1980s?

SOURCES OF DATA. Filing and disposition statistics are drawn from information reported in the *State Court Caseload Statistics: Annual Report* series, 1984 to 1988. Most state appellate courts are included, although the states included in the trend analysis were limited to those that provided relevant data throughout the five-year span. Still, differences exist among states in what is included in certain case categories and care should be taken when making comparisons among states. Trends describe changes in: (1) mandatory filings and dispositions, and (2) discretionary filings, discretionary petitions granted, and dispositions of discretionary appellate cases.

TYPES OF ANALYSIS. During the 1984-88 period, mandatory appeals comprised 68.6 percent of all cases, the remaining 31.4 percent were discretionary petitions. Overall, mandatory appeals increased by 10.3 percent over the five years. Discretionary petitions increased by 13.1 percent.

Breaking these figures into separate growth rates for the two levels of appellate courts shows that the total number of mandatory appeals grew in the COLRs by 16.7 percent and by 9.1 percent in the IACs (see **Chart 6**). During this same time span, the number of discretionary appeals increased by 2.7 percent in the COLRs and by 30.6 percent in the IACs. The overall growth rates for the combined appellate courts therefore conceals important differences between COLRs and the IACs. The trend

⁴⁴ Earlier examinations of appellate caseload growth include: Victor E. Flango and Nora F. Blair, "Creating an Intermediate Appellate Court: Does It Reduce the Caseload of a State's Highest Court?," *Judicature*, 64, August, 1980 and *The Growth of Appeals*, U.S. Department of Justice, Bureau of Justice Statistics Bulletin, February, 1985.

CHART 6: Mandatory and Discretionary Appellate Court Filings, 1984-88 Trends

Mandatory and Discretionary totals refer only to courts listed in Tables 13 and 14, respectively

analysis therefore treats COLR and the IAC caseloads separately.

The main source tables for the trend analysis are located in Part III. Table 13 (p. 154) lists the number of mandatory appeals filed and disposed annually between 1984 and 1988, while Table 14 (p. 164) provides similar information for discretionary petitions. Text tables draw from those sources to present filing levels and clearance rates, as well as supplementary information, such as the percentage of discretionary petitions granted by the courts. Change in filing rates is measured for adjacent years and for the five-year period as a whole. Clearance rates are calculated by dividing the number of cases disposed of by the court during the year by the number filed in that same year. A rate of 100 percent or greater means that the court reduced the size of its pending caseload during the year. A rate of less than 100 percent means that the court did not keep up with the volume of new cases being filed, and thus ended the year with a larger pending caseload than it had at the start.

MANDATORY FILINGS IN APPELLATE COURTS, 1984-88. A mandatory case refers to an "appeal of right" which the appellate court must hear and decide on the merits. The trend analysis includes information from 39 COLRs in 38 states and the District of Columbia and from 33 IACs in 31 states. The number of filings and the percentage change by year and for the five-year period for both COLRs and IACs are shown in **Text Table 12**.

Two broad trends in mandatory filings emerge. First, mandatory filing levels are not stable; most states show broad fluctuations. Second, despite the increases recorded in previous decades, courts are almost as likely to

be experiencing a downward trend in mandatory filings as upward.

The first trend answers the question of patterns of change in appellate filings. Filing rates in most states fluctuate widely from year to year. Over the five-year period, the growth in mandatory filings in the COLRs ranges widely, from a decline of 55 percent in Pennsylvania, to an increase of 138 percent in the Illinois Supreme Court. If one examines the percentages, or even merely the direction, of the yearly percentage change columns for COLRs, it is apparent that roughly one-half of these courts experience a decline in filings between any two given years. Only the Washington and Utah⁴⁵ courts of last resort show a sustained decline in mandatory filings over the five-year period. In the other direction, five COLRs—in Hawaii, Illinois, Kansas, South Dakota, and Texas—had a continuous rise in mandatory filings over the last five years.

Nearly all of the IACs experienced one or more years in which filing rates declined. But in comparison to the abrupt changes COLRs recorded, IAC filing rates tend to be relatively constant over the five-year period. Still, the variation among IACs is considerable, extending from a decline of nearly 27 percent in Connecticut to an increase of 73 percent in Oklahoma. No IAC manifested a continual decline in mandatory filings over the five-year span. IACs in Alabama, Arizona, Colorado, Florida, Idaho, Ohio, and Pennsylvania experienced yearly increases in mandatory filings between 1984-88. A particularly telling example of the variability in IAC mandatory filings is found in the data from Oklahoma. This court showed the largest overall increase in mandatory filings despite declines recorded in two of the five years examined.

The structure of the appellate system seems to make little difference. Changes in filing rates for COLRs without an IAC or with multiple IACs are evenly distributed with those appellate courts having one COLR and one IAC.

States with large increases in mandatory COLR filings over the five years experienced a much smaller increase, or a decline, in IAC mandatory filings (i.e., California, Illinois, Kansas, New Mexico, Ohio, and South Carolina). Likewise, IACs recording large increases in mandatory filing rates tended to be in states in which the mandatory filing rates of the COLR decreased or increased slightly (i.e., Arizona, Colorado, Florida, Idaho, and Oklahoma). Filings at both court levels recorded a considerable increase only in one state—Hawaii.

The second trend suggests a major national shift in mandatory appellate court filing trends. For the past few decades, appellate caseloads were rising at a brisk pace indeed, doubling in each decade. One striking measure of the rapidity with which new cases were reaching appellate courts was the finding that mandatory appeals of final judgments rose between 1973 and 1982, ten times faster than the national population and three times faster than new appellate judgeships.⁴⁶

⁴⁵ Much of the decline in mandatory filings in the Utah COLR is attributable to an IAC being established in 1987.

*The composition of cases included in the court's total mandatory filings varied during the five-year period. However, it was determined that the variation had only a slight impact on the reported trends. See the footnotes in Table 13 (Part III) for information on the changes that affected comparability. Courts were excluded when there was a change in case composition that significantly influenced the five-year trends.

**Percentage change by year only shown for courts where mandatory filings exceed 10.

The TYPE variable indicates the appellate court structure: 1=COLR with one IAC; 2=COLR without an IAC; 4=Mixed-COLR with multiple IACs or one of two COLRs

continued on next page

Such an expansion did not carry beyond the early 1980s. Overall, COLRs and the IACs experienced growth in mandatory filings since 1984, but rates of change varied substantially from state to state. Sixteen of 39 COLRs actually experienced a decline in their mandatory

caseload between 1984 and 1988. Roughly one-quarter of the IACs experienced falling caseloads over the five-year span. Further, the 16.7 percent overall increase in COLR filings was primarily driven by large increases in one court—the Texas Court of Criminal Appeals. The influence of this one court is exceptional when one considers that the 3,578 filings in that court during 1988 represent 16.5 percent of the total mandatory appeals filed in COLRs. The five-year increase in COLR mandatory filings is reduced from 16.7 percent to 8.9 percent if

*The composition of cases included in the court's total mandatory filings varied during the five-year period. However, it was determined that the variation had only a slight impact on the reported trends. See the footnotes in Table 13 (Part III) for information on the changes that affected comparability. Courts were excluded when there was a change in case composition that significantly influenced the five-year trends.

**Figures for mandatory filings in 1984 and 1985 do not match those shown in Table 13 (Part III). Cases transferred from the Superior Court and Court of Common Pleas have been removed so as to be comparable to 1986-88 data.

The TYPE variable indicates the appellate court structure: 3=IAC; 5=Mixed-IAC with multiple COLRs or one of two IACs

Source: Table 13, Part III
National Center for State Courts, 1990

the Texas Court of Criminal Appeals is excluded from the total.

Comparing the rate of growth in mandatory filings to population and appellate judgeship change indicates that caseloads are still expanding, but not at an explosive pace. Text Table 13 provides the overall change in population and appellate judgeships for the states included in the trend analysis. One interpretation is that an increase in mandatory filings equivalent to the rise in population or appellate judgeships does not indicate a growing propensity to litigate or that increasing strain is being placed on the appellate system.

Population in the states being considered increased by 4.7 percent, intermediate appellate court judgeships increased by 6.5 percent, and there was no change to

supreme court judgeships over the five years. The primary implication is that the number of mandatory appeals per appellate court judgeship continues to increase, and thus cause concern, but at slower rates than earlier in the decade. Of course, appellate courts are still striving to contend with the massive inflow of appeals experienced in the 1970s and early 1980s that vastly expanded the number of appeals before state courts.

DISPOSITIONS OF MANDATORY FILINGS, 1984-88. Beyond charting the growth in mandatory filings, a principal concern is the response of the courts to the challenge of rising caseloads. The analysis therefore turns to changes in clearance rates.

Are the courts keeping up with caseload demands? The answer depends on the productivity of the courts as

TEXT TABLE 13: Changes in State Population, Mandatory Filings, and Appellate Judgeships, 1984-88

Factor	Increase
Population	4.7%
COLR Judgeships	0.0%
IAC Judgeships	6.5%
COLR Mandatory Filings	16.7%
IAC Mandatory Filings	9.1%

shown in the overall number of case dispositions, the number of cases disposed of relative to the number filed, and the number of cases disposed of per judge. To undertake this analysis, the courts included have been further restricted to those reporting statistics on both mandatory filings and dispositions over the five years. Twenty-four COLRs and 27 IACs are included. The change in case dispositions in those courts is shown in Table 13, Part III (pp. 154-62).

On average the number of COLR case dispositions rose 26.5 percent over the five-year period. But, there was considerable variability with roughly one-third of the COLRs recording a decline in the number of case dispositions. The downward trend in many COLRs is not unexpected, since nearly one-half of COLRs experienced declining rates of mandatory filings during the same period. Comparing filing and disposition numbers indicates that the decline in dispositions registered in the COLRs of New Jersey, North Carolina, and Washington paralleled declining mandatory filings. Similarly, large increases in mandatory filings in the COLRs in Hawaii, Illinois, Kansas, Ohio, and Texas accompanied large increases in dispositions over the five-year span.

Dispositions in IACs increased by 7.9 percent. The variability in dispositions was less pronounced in IACs than in COLRs, ranging from a decline of 16.8 percent in Kentucky to an increase of 80.6 percent in Connecticut. As with COLRs, declining numbers of dispositions mirror declining rates of mandatory filings (i.e., Alaska, Kentucky, Maryland, and South Carolina), while increasing rates of dispositions were associated with rising rates of mandatory filings (i.e., Arizona, Colorado, Iowa, and Oklahoma). The one anomaly appears to be Connecticut, where filings of mandatory filings decreased by 26.9 percent and the *largest* increase in dispositions (80.6 percent) was recorded.

The relationship between mandatory filings and dispositions in the appellate court system is most directly expressed by computing a clearance rate. Text Table 14 provides information on mandatory appeals that were decided as a percentage of those filed for each of the last five years for both COLRs and IACs. The resulting clearance rates show considerable variation. Explanations for this variance may include such factors as large increases

in filings due to transfers of jurisdiction to decide appeals, special efforts to clear backlog through the use of temporary judges, or the introduction of new procedures to expedite cases. Clearance rates are unrelated to state size, region of the country, or appellate court structure.

To summarize, appellate courts are keeping up with mandatory caseload demands. The overall five-year rate of change for the 24 COLRs reporting statistics on both filings and dispositions shows that filings increased by 20.3 percent while dispositions increased by 26.5 percent. Filings in IACs rose by 11.2 percent and dispositions increased by 7.9 percent over the same five years in question. These percentages would seem to indicate that courts are unwilling to respond to increasing caseloads by increasing delay and backlog. Rather, the upward trend in filings is being met by increasing the output of dispositions. In the period 1984 to 1988, the overall number of dispositions of mandatory cases per judge in the COLRs grew from 68.4 to 87.1. Over the same period, the average number of dispositions per judge in the IACs rose from 172.6 to 176.1.

TRENDS IN DISCRETIONARY FILINGS AND DISPOSITIONS, 1984-88. Trends in filings and dispositions of discretionary petitions are the next topic. Once again, the central questions are: (1) What are the patterns of change exhibited by individual states and courts?, and (2) Does sufficient consistency exist among states and courts to draw conclusions on a national level? The relevant data can be found in Table 14, Part III (pp. 164-70).

On average, the discretionary component of the appellate court system caseload constitutes just over 30 percent of the total caseload. This figure is misleading as an indicator of the allocation of the appellate workload. The vast majority of IAC filings are mandatory cases (approximately 84 percent). By contrast, less than 35 percent of all filings in COLRs are mandatory appeals. During the period 1984-88, roughly 66 percent of all discretionary petitions were filed in COLRs.

The courts included in this section of the analysis are restricted to those providing information on discretionary appeals filed over the full five years. Statistics on discretionary appeals are available from 36 COLRs in 34 states and the District of Columbia. Data are also available from 12 IACs in 12 states. Text Table 15 displays the number and percentage rates of change for discretionary filings.

Turning first to the COLRs, it is apparent that patterns of change are not readily identifiable. When the rate of change between any two adjacent years is examined, one-half of the courts had a decline in discretionary filings. However, the direction of change for a particular court rarely holds constant for consecutive years. New Hampshire is the only court to show a decrease in discretionary petitions in each of the five years. On the other hand, only Missouri and Wisconsin, show a consistent increase in discretionary filings over the period. The remaining courts have varying patterns of increases and decreases over the five-year span.

Variability is also apparent in the intermediate appellate courts. From 1984 to 1986, the 12 IACs show a dominant upward trend in discretionary filings. This is

*The composition of cases included in the court's total mandatory filings varied during the five-year period. However, it was determined that the variation had only a slight impact on the reported trends. See the footnotes in Table 14 (Part III) for information on the changes that affected comparability. Courts were excluded when there was a change in case composition that significantly influenced the five-year trends.

**Percentage change by year only shown for courts where discretionary filings exceed 10.

The TYPE variable indicates the appellate court structure: 1=COLR with one IAC; 2=COLR without an IAC; 4=Mixed-COLR with multiple IACs or one of two COLRs

Source: Table 5, *State Court Caseload Statistics: Annual Reports, 1984 - 1988 Editions* National Center for State Courts, 1990

partially reversed in 1987, when 6 of the 12 courts record a decline and several others only a small increase. The trend is once again upward in 1988. Despite the prevalence of rising caseloads, only the California and Louisiana IACs have consistent increases over the five-year period. Moreover, those two courts account for the vast majority of IAC discretionary cases. No IAC out of the 12 examined recorded a consistent downward trend in discretionary filings.

With regard to the question of national trends, the information on discretionary filings is inconclusive. Total discretionary filings in COLRs increased by 7.2 percent from 1984 to 1986, fell 5.1 percent in 1987, and grew by less than 1 percent during 1988, for a cumulative five-year increase of 2.7 percent. Nearly 40 percent of the COLRs experienced a decline and 60 percent an increase in discretionary filings over the five years.

The association between filing trends and jurisdiction for discretionary petitions is no stronger than was evident for mandatory filings. West Virginia and New Hampshire, the two states with completely discretionary jurisdiction, are distinct. While West Virginia shows an overall rise of 26.4 percent in discretionary filings (placing it in the upper quartile), New Hampshire is the only state with a consistent decline in filings over the five-year period (placing it in the lower quartile). In addition, there does not appear to be a clear relationship between discretionary filings and state appellate structure.

DISPOSITIONS OF DISCRETIONARY PETITIONS, 1984-88. The number of petitions filed provides a measure of the volume of business brought to the appellate

courts. The number of petitions granted and the total disposed represent the outputs of a court during a specific period of time. Trends for COLRs in those two measures complete the discussion of discretionary petitions. Few IACs provide complete statistics on the number of discretionary petitions granted and the total number of discretionary petitions disposed of over the past five years. Any generalizations based on so few courts would be problematic at best.

Discretionary Jurisdiction Cases Granted Review.

Filing a discretionary petition does not ensure appellate review. The court decides whether to exercise its discretionary power to consider the case on its merits. Text Table 16 reports the total number of discretionary petitions filed and the number and percentage granted review for the 20 COLRs providing complete data.

Viewing the information by state, the primary consistency is that the percentage of discretionary petitions granted remains relatively constant. There is, of course, some variability by year, sometimes extreme, but the overall pattern is one of consistency. The COLRs that granted review of a small percentage of discretionary cases in 1988 (5 percent or less) tended to grant a small percentage throughout the five-year period (e.g., California and Michigan). Most states remain within a range of about 10 to 25 percent. West Virginia, whose COLR has no mandatory jurisdiction, and which has no IAC, consistently grants the highest percentage of discretionary petitions: nearly 50 percent in 1988. In Massachusetts and New Mexico, the number of petitions granted has remained relatively constant but the percentage has

TEXT TABLE 17: Appellate Court Clearance Rates for Discretionary Appeals, 1984-88

Court	Type of Appellate Jurisdiction	Courts of Last Resort				
		Clearance Rate 1984	Clearance Rate 1985	Clearance Rate 1986	Clearance Rate 1987	Clearance Rate 1988
Alaska Supreme Court	1	99.5%	101.5%	92.7%	105.5%	104.5%
Arizona Supreme Court	1	103.1	92.9	100.0	105.9	88.9

West Virginia Supreme Court of Appeals	2	87.7	92.4	88.1	93.7	109.5
Texas Court of Criminal Appeal	4	84.4	76.9	80.9	124.9	101.5
Texas Supreme Court	4	91.5	101.5	95.0	107.2	94.0

The TYPE variable indicates the appellate court structure: 1=COLR with one IAC; 2=COLR without an IAC; 4=Mixed-COLR with multiple IACs or one of two COLRs

Source: Table 14, Part III
National Center for State Courts, 1990

fluctuated widely due to broad changes in the number of discretionary petitions being filed.

Over the five years, the number of discretionary petitions filed rose by 2.7 percent in the 20 COLRs, while the number granted has increased by 14.8 percent. The result is an increase in the percentage granted from 13 to 15 percent for those courts.

Discretionary Petitions Disposed. Trends in discretionary petition dispositions indicate the extent to which appellate courts are keeping up with their discretionary caseloads. This issue will be addressed by examining the productivity of the courts in terms of the overall number of discretionary petitions disposed of and the number of discretionary petitions disposed of relative to the number filed. The growth and percentage change in discretionary decision output for the 24 COLRs providing information on both discretionary filings and dispositions is shown in Table 14, Part III (p. 164).

As with mandatory case dispositions, there is considerable variability among the courts. No court experienced a continual decline during the five-year period, but nearly one-half of the courts recorded a decline in the number of discretionary petitions between any pair of adjacent years. In addition, for the majority of courts, there appears to be no consistent pattern to the direction of change between years. Only Ohio shows a consistent increase in discretionary dispositions throughout the five-year span. For

courts that disposed of more than five cases per year, six of the eight that had declining disposition rates also had declining discretionary filing rates over the five-year period.

The relationship between filings and dispositions is more directly seen by examining clearance rates. Text Table 17 displays the five-year trend in clearance rates for 23 COLRs. The most noticeable feature is again the wide variability in clearance rates. The extent of the range and the sharp fluctuations from year to year suggest that clearance rates vary in response to short-term factors that affect the work of the appellate courts.

Appellate caseload trends, such as those just examined, are often shaped by changes to jurisdiction. An abrupt rise or decline in the filings of a court in a two-tier appellate system may reflect the transfer of jurisdiction between the COLR and IAC. A common transfer in recent years shifts the jurisdiction to hear appeals involving a sentence of life imprisonment from the COLR to the IAC. In other states, however, the shift has been in the reverse direction, with all mandatory appeals of convictions for offenses such as first degree homicide falling within the jurisdiction of the COLR. More generally, sentencing reform can change the role of a state's appellate courts in the review of sentences.

Changes to state constitutions and statutes governing civil law can have a similar impact. For example, in

Pennsylvania mandatory jurisdiction over appeals of decisions by certain administrative agencies shifted in 1983 from the COLR to the commonwealth court, one of the state's two IACs. The COLR's review became discretionary.⁴⁷ Court rules or policies can also change in ways that redistributes appellate jurisdiction, particularly in those states in which the COLR assigns cases to the IAC.

New legislation can also generate a large number of appeals in the short term. Tort reform or sentencing reform legislation, for example, can initially lead to a large number of appeals, but as the COLR develops the law the number of resulting appeals will dwindle. The Texas Court of Criminal Appeals during 1988 experienced a substantial increase in the number of writs filed. Much of the increase can be traced to the Texas Prison Management Act, which deals with the accumulation of "good time" credits in the state prison system.⁴⁸ Cases raising issues relating to that act were consolidated and the issue decided during the year.

APPELLATE CASELOAD TRENDS, 1984-88: A SUMMARY. The trend tables highlight consistency and variation among state appellate courts. Rates of change of mandatory and discretionary filings and dispositions vary significantly among states reporting complete and comparable data between 1984 and 1988, both for courts of last resort and intermediate appellate courts.

While the data presented here are not conclusive evidence, they suggest that the rate of increase in appellate court filings over the past five years is substantially slower than that experienced from the mid-1960s to the mid-1980s. In addition, this overall moderate growth in filings has been accompanied by a concomitant growth in dispositions, indicating that the state appellate courts as a whole are successful in keeping pace with the growth in filings. This ability may reflect the substantial innovation over the 1970s and early 1980s in appellate court structure and procedure. However, it must be stressed that it is very difficult to draw national generalizations because of continuing state-by-state and year-to-year variations in the data. The rates of filings and dispositions are increasing in some states, decreasing in others, and remaining essentially unchanged in still other jurisdictions. Therefore, it is not surprising that there remains a considerable breadth of opinion as to the existence of any national trends in appellate caseloads.

Conclusion

This commentary has three main objectives. The first is to describe the work of state court systems, identifying similarities and differences. The second is to

relate the similarities and differences to the manner in which states organize their court systems and to other state characteristics. The third is to assess changes over time in state court caseloads.

Similarities among appellate court systems include the filing rates for both mandatory appeals and discretionary petitions, which clustered around the median, creating a broad middle range of states. Most appellate courts reported success in keeping pace with flow of new case filings and reduced the size of their pending caseloads.

Differences in appellate court systems include the extent to which filings are mandatory appeals or discretionary petitions and the percentage of discretionary petitions that are granted. Two-tier appellate systems differ in the degree to which they conform to the pattern in which the COLR has discretionary control of its docket and the IAC hears mandatory appeals.

Among trial court systems, there was broad similarity in the rate of civil case filings per 100,000 population. Rates of criminal case filings were more varied, but a middle range could be identified. For civil, criminal, and juvenile cases, states shared problems of increasing pending caseloads. Fewer cases were disposed of than were filed. The resulting problems are more acute in most states for criminal and juvenile cases than for civil cases.

State trial court systems differed in the rate at which juvenile petitions were filed during 1988. Compared to civil and criminal cases, the variation in juvenile filings was substantial. Trial court systems also differ in the use made of general and limited jurisdiction courts to hear cases.

Many of the similarities and differences reflect the manner in which states allocate the jurisdiction to hear and decide various types of cases to their appellate and trial courts. Differences in court structure, however, are not strongly related to either filing or clearance rates. Trial courts in a one-tier system, for example, are not more or less likely than courts in a two-tier system to keep pace with their incoming caseloads.

Court filings and court clearance rates do not form clear regional patterns. There is also no clear evidence linking court caseloads to the state population size or to other state characteristics. It is possible, of course, that subtle patterns exist but would only emerge through more systematic comparisons than were possible in this commentary. Also, the similarities and differences discussed are based both on real variation in filing rates and variation due to how cases are categorized and counted.

The analysis of trends, which allows each state to serve as its own point of comparison, produced more patterns. National appellate filings and national trial court filings both increased during 1988. At the appellate level, the trends in mandatory filings and discretionary petitions show a great deal of state-by-state and year-to-year variation. This lack of consistent change makes it difficult to draw firm conclusions as to the existence of national trends. The data appear to suggest, however, that

⁴⁷ The relevant statute is 42 Pa. Cons. Stat. secs. 723(a), 763, as interpreted by the state supreme court in *O'Brien v. State Employee's Retirement System*, 503 Pa. 399, 469 A.2d 1008, cert. denied, 469 U.S. 816 (1983).

⁴⁸ Texas Prison Management Act, Art. 6184o.

appellate filings have assumed a more modest growth rate in the latter half of the 1980s relative to the experience of the 1970s and early 1980s. In addition, the growth in dispositions appears to be keeping pace with the growth in filings.

Within the trial courts, a strong upward trend in felony filing rates can be identified for the 1984-88 period. The result was a substantial increase in the number of serious offenses moving through the state courts.

On the civil side, the 1984-88 period was marked by substantial fluctuation in the rate of tort filings. Tort reform legislation appears to underlie some of the abrupt fluctuations in tort filing rates, particularly in 1985 and 1986. Overall, the evidence presented here indicates that tort filings do not appear to be increasing at rates in excess of other important components of civil caseload such as contract or real property rights cases.

Part II
Method of Case Disposition
in State Trial Courts

Method of Case Disposition in State Trial Courts

What happens to trial court cases once they are filed? We know from research studies that most civil and criminal cases end because they have been withdrawn or settled by the parties, dismissed by the court, or not prosecuted. Few cases reach a trial. However, what we know about patterns in case dispositions is far from definitive. Research typically describes dispositions in one trial court or in a small group of trial courts over a limited period of time. National statistics are needed to strengthen what we know about disposition methods in state trial courts.

National statistics contribute both greater precision and meaningful context. Currently, we can only approximate the proportion of cases that are disposed of by each method. A rigorous framework for classifying dispositions would permit clear statements on the relative frequency of jury trials, bench trials, pretrial dismissals, and other disposition methods. National statistics put single jurisdiction research into context. Does the proportion of cases disposed of by various methods vary among the states? Within a state, do the proportions change over time?

The precision and context offered by national statistics are important. A jury trial rate of 3 percent imposes substantially different demands on trial court resources than a rate of 6 or 9 percent. Trial courts in which one-third of all civil cases are dismissed before trial are likely to process cases quite differently than systems with dismissal rates of 60 percent or more. If we can explain such differences, we have the potential to understand the processes that determine need for court resources. We can also relate disposition rates to court backlogs, the impact of alternative dispute resolution programs, and case management systems.

There are, however, significant obstacles to achieving comprehensive national statistics on case disposition methods. First, many states do not routinely collect such information. Second, the categories states use to collect method of disposition information are often not comparable. Even the definition of what constitutes a jury trial varies: some states count only cases that reach a verdict, while others count any case in which a witness is sworn as a disposition at trial regardless of whether a dismissal or settlement ensues. Third, method of disposition statistics usually refer to a broad mix of either civil or criminal cases. The coverage is so wide that the usefulness of the information is blunted by the diversity of cases that are being described.

This part reports on efforts to devise a framework for collecting and displaying information on 1988 case dispositions. The framework serves three objectives. First, it catalogues factors that inhibit the use of the information now available. Second, similarities and differences among states are described in the use of dismissals, guilty pleas, jury trials, and bench trials to dispose of criminal and civil cases. Third, suggestions are offered for improving the statistics that state court administrative offices and individual trial courts maintain on method of disposition. While Part II provides the best available information on dispositions, prudence requires that as much attention be given to the methodological limitations of the information as to their descriptive content.

The main products of this effort are carefully footnoted compilations of method of disposition statistics. Two tables at the end of Part II summarize the data provided to the Court Statistics Project for 1988. Table 1 reports on method of disposition in criminal cases. Table 2 reports on method of disposition in civil cases.¹

Data Completeness and Comparability

How much information on case disposition method is currently available and to what extent is it comparable across states? Tables 1 and 2 provide the basis for the answers offered in this section. For each statewide trial court system included, the tables indicate the total number of cases disposed of through basic disposition categories during 1988, as well as the total number of case dispositions. Supporting material in each table designates the underlying definitions of trials and methods for counting cases and trials used in the state, as well as the casetypes for which data can be obtained. The tables were generated from statistics published in state court annual reports or unpublished tabulations made available by state court administrative offices. This section provides a guide to issues that affect the completeness and the comparability of the data in the tables. This is an

¹ The summary tables permit direct comparisons between states only after careful consideration of various of factors. Part II discusses those factors that are specific to method of disposition statistics, such as whether the trial count consists of cases that reach trial regardless of outcome or only cases that reach a verdict at trial. Differences in subject matter jurisdiction, court structure, and units for counting cases, as discussed in Part I, also have a bearing on the use of method of disposition statistics.

TEXT TABLE 1: Trial Definition in Criminal and Civil Cases

Definition	Number of states which use definition for	
	Criminal	Civil
A) A jury trial is counted at jury selection, empaneling, or when jury is sworn. A non-jury trial is counted when evidence is first introduced or first witness is sworn.	22	23
B) A jury trial is counted at introduction of evidence or swearing of first witness. A nonjury trial is counted when evidence is first introduced or swearing of first witness.	2	0
C) A jury trial is counted at verdict or decision. A nonjury trial is counted at the decision.	12	13

essential step. Across states, the measurement of disposition methods encounters many of the problems that existed 15 years ago for case filing and disposition caseload statistics.

Completeness

Thirty-six statewide general jurisdiction court systems provide criminal disposition data; 36 states provide civil disposition data.² Yet, Tables 1 and 2 reveal serious gaps in the available data. Even for the 36 states reporting method of disposition data, the available information offers an incomplete picture of disposition outcomes. For criminal cases, three states report the total number of trials without distinguishing between jury or bench trial. Only nine states record whether trials resulted in acquittal or conviction during 1988.

Comprehensive, complete disposition data are available only for a handful of states. This is often attributable to a lack of specificity in the reporting categories used to collect and collate disposition method statistics. Several distinct disposition methods may be subsumed under one heading. For example, civil cases terminated through a default judgment may be merged with dismissals as part of the "other" method of disposition category; criminal cases concluded through guilty pleas may be combined with dismissals in criminal cases when nontrial disposition methods are not disaggregated. Lack of specificity in reporting categories is the main obstacle to a more comprehensive view of method of case disposition.

Comparability

Practices and procedures for collecting civil and criminal case disposition data vary widely among the

states. This complicates the inevitable difficulties of combining information describing 52 different jurisdictions (the 50 states, the District of Columbia, and Puerto Rico) with distinctive laws and court structures.

There are, however, some key definitional and measurement characteristics that groups of states share. Comparability is possible where states count trials similarly, use similar methods for counting what is a case, and report information for a similar range of casetypes.³

In current practice, the point at which a state counts a jury trial varies widely. Some court systems count trials when the first juror is examined; some when the first evidence is introduced; some when a verdict is reached; and some at other intervening points. **Text Table 1** shows the relative use of alternative trial definitions for the courts displayed in Tables 1 and 2. Two-thirds of the states share a trial definition in which a jury trial is counted when the jury is selected, empaneled, or sworn, and a bench trial is counted when the first evidence is introduced or first witness sworn.

The impact on state trial rates from definitional differences is highlighted by a recent study of the lengths of civil and criminal trials in three general jurisdiction courts located in each of three states: California, Colorado, and New Jersey.⁴ **Text Table 2** summarizes the percentage of criminal and civil trials tried to a jury verdict or a bench judgment after trial commenced. A substantial percentage of cases that begin the trial process "wash out" before a verdict is reached. For example, fully one-quarter of both civil and criminal jury trials in the California sites are not tried to verdict. This implies that the jury trial rate in California, which counts a case as disposed at trial once the jury selection process begins, is significantly higher

² The following tables refer only to general jurisdiction courts. In the 44 states with both general and limited jurisdiction courts, most of the trial court caseload is disposed of in the limited jurisdiction courts. Before making comparisons among states it is important to consult the individual court structure charts in Part IV to determine the subject matter of cases heard in courts of general jurisdiction.

³ Suggested definitions for key terms are supplied in the *State Court Model Statistical Dictionary, 1989*.

⁴ Dale A. Sipes, *On Trial*, National Center for State Courts, 1988. The sites were: California (superior courts in Oakland, Monterey, and Marin County); Colorado (district courts in Denver, Colorado Springs, and Golden); and New Jersey (superior courts in Jersey City, Paterson, and Elizabeth).

TEXT TABLE 2: Percentage of Civil and Criminal Cases Tried to Verdict by Jury and Bench Trial

	Criminal Cases	
	Jury	Bench
California	71 %	100 %
Colorado	85	83
New Jersey	82	75
	Civil Cases	
	Jury	Bench
California	74 %	90 %
Colorado	77	90
New Jersey	63	81

than it would be if a trial disposition was defined as a jury verdict being reached.

Trial definitions for each court system are displayed under the "trial definition" column in Tables 1 and 2. These definitional differences undoubtedly explain some of the variation in trial rates that will be examined later. Generally, most states providing data define a trial in a way that overstates the number of cases concluded at trial. That definition could, however, provide court managers with guidance on the number of trial settings that need to be scheduled by judicial district.

At a more fundamental level, the size of the total pool of criminal cases available for disposition is affected by definitional considerations. Courts differ in the point at which a case is initially counted as filed, ranging from the filing of the information or indictment to the time of the arraignment. Given that a certain number of cases will drop out of the system between those two points—usually through a plea or dismissal—those courts that use an early count will tend to have a higher rate of nontrial dispositions for purely definitional reasons.

Courts also differ in the case unit of count. This is particularly important for criminal cases, where courts variously use charges, defendants, or indictments as the basic unit for collecting statistics. A single criminal incident involving two defendants can be counted as one case (a single incident) or two cases (one for each defendant) or as more than two cases if each count against each defendant is considered a case. Table 1 summarizes the point and unit of count underlying the statistics reported for each court system.

The casetypes for which method of disposition data were sought are shown as headings to the right of each table. The "+" symbol is used to designate if a casetype is included in a particular row of information. Where pos-

sible, disposition methods are displayed separately for each casetype. Where the "o" symbol appears, reported data do not include that particular casetype.⁵

For most states, disposition data describe a mix of casetypes. This obscures the implications of the resulting trial rate, because different types of cases require differing amounts of time to decide depending on the complexity of the issues. For example, an uncontested divorce will typically require only a few minutes of court time, while the average contract case disposed by jury trial requires two days (14 hours and 2 minutes of trial time⁶). Some types of cases have an inherently high trial rate. Statutes in many states provide that appeals of administrative agency decisions are to be resolved through bench trials in the general jurisdiction court. This inflates the bench trial rate for court systems in which such appeals are included in the base of case dispositions for which a rate is calculated. Generally, Tables 1 and 2 report the most detailed breakdowns of disposition method data available.

The lack of complete and comparable information for all states makes it impossible to offer a definitive assessment of how trial court cases are decided. It is possible, however, to remain within the limits of what is prudent given the state of the data and still draw conclusions. The states reporting data represent a broad cross-section of regions, population sizes, court structures, and criminal and civil caseload sizes.

Patterns of Trial Court Dispositions, 1988

The following sections describe national patterns on the method of disposing of criminal and civil cases in 1988. Criminal and civil cases are treated separately but through a similar framework. First, court procedures are outlined to develop issues for discussion using the data and to highlight the various methods of disposition. Then, the relative frequency is examined for trials, guilty pleas, and dismissals as methods for disposing of criminal cases and for trials, defaults, and settlements in civil cases. Where possible, jury and bench trial rates are examined separately. The discussion respects the limits of comparability and completeness, while still addressing matters of substantive concern to the court community.

Criminal Dispositions

Stages in the Disposition of a Criminal Case

Criminal cases enter the court system at the decision to file charges. Charges are initiated by the prosecutor, although the official charging document differs between

⁵ For example, if one is interested in criminal dispositions in the Wisconsin Circuit Court, turn to Table 1. The first of the three rows under Wisconsin has a + sign under the F casetype, which indicates that the disposition information in that row contains information on felony caseloads. The second and third rows provide exclusive disposition information on, respectively, misdemeanors and DWI/DUI cases.

⁶ Sipes, *supra* note 4, at p. 10.

felony and misdemeanor offenses and varies among the states (and often by district, circuit, or county within states). In one-half of the states, felony charges require an indictment by a grand jury unless the defendant waives that right. In states without a grand jury, charges are initiated by an information signed by the prosecutor. Misdemeanor cases typically are initiated through the filing of a complaint.

Once an indictment or information is filed with the trial court, defendants are scheduled for arraignment. At the arraignment, defendants are formally charged, advised of their rights, and called upon to plead. If the defendant pleads guilty or nolo contendere, the judge can either accept or reject the plea. A date for sentencing is then set if the plea is accepted. The plea may be rejected if, for example, the judge believes that defendants do not fully understand their rights. The case would then proceed to trial.

A trial date is set if the defendant pleads not guilty. The defendant has the right to either a trial by jury or a bench trial. In both instances, the prosecution and defense present their statements and evidence and the judge rules on issues of law in jury trials and on both law and fact in bench trials. Although most trials result in either an acquittal or conviction, a mistrial is another possible outcome. Further, guilty pleas are sometimes entered during the course of a trial and cases are dismissed on the motion of the prosecutor, defense counsel, or the judge.

Criminal Dispositions by Casetype, 1988

The available information permits an overview of the use of trials, guilty pleas, and dismissals in 1988.⁷ Table 1 presents the summary data on the method of disposition for criminal cases.

TRIAL. Few criminal cases are resolved by formal trial proceedings. The overwhelming majority of criminal cases are disposed by either a guilty plea or a dismissal. **Text Table 3** shows the percentage of dispositions reached through the trial process by state and in the aggregate nationally. Overall, approximately 6 percent of criminal cases were disposed at trial in 1988. States vary substantially, however, in the frequency with which trials were held. The trial rate ranges from lows of less than 1 percent in Connecticut (misdemeanors only) and Texas (misdemeanors only) to highs of 25 percent in Missouri (misdemeanors only), 33 percent in Virginia (misdemeanors and other criminal cases only), and 38 percent in Hawaii (DUI cases only). Some of this variation undoubtedly can be attributed to inconsistencies in the criminal casetypes included in the reported trial rates and the definition of a trial. As can be seen in Table 1, the trial rates may include any combination of felony, misdemeanor, DUI/DWI, or other criminal cases. The varying patterns of consolidating the different criminal casetypes apparent in Text

Table 3 make it difficult to interpret and compare the published trial rates.

Text Table 4 narrows the field to felony cases. In 12 states and the District of Columbia a trial rate specifically for felony cases could be determined. Trial rates ranged from a low of 3 percent in Texas (2 percent jury and 1 percent bench) to a high of 28 percent in Virginia (6 percent jury and 22 percent bench). The figure for Virginia is twice the rate of the second highest felony trial rate of 14 percent in Missouri.

JURY TRIALS. Aggregating data for the 32 states reveals a virtually even split between jury and bench trials, with jury trials representing 47.4 percent of all trials held and bench trials the remaining 52.6 percent (**Text Table 3**). Aggregation, however, conceals the fact that jury trial rates exceed bench trial rates in 19 of the 32 states. Further, 19,703 of the 51,478 reported criminal bench trials occurred in Virginia. The influence of this one court system is extreme. If the data from Virginia is excluded from the total, the split between jury and bench trial reverses, with jury trials representing 57 percent and bench trials 43 percent of all trials. The percentage of total dispositions by jury trial ranges from a low of less than 1 percent in Connecticut (misdemeanor data only) to a high of 11 percent in Hawaii (a combination of felony, misdemeanor, and other criminal cases).⁸

A focus on felony cases again adds precision. Indeed, **Text Table 4** shows jury trial rates for felonies occupy a narrow range: from 2 percent in Texas to 7 percent in Alaska and the District of Columbia. In addition, jury trial rates in felony cases exceed bench trial rates in 10 of the 13 reporting states.

BENCH TRIALS. Most states report bench trial rates in the range of 1 to 4 percent. In **Text Table 3**, bench trials represent less than 1 percent of all dispositions in ten states⁹ and the District of Columbia. Although bench trials account for 31 percent of dispositions in Hawaii (DUI cases only) and Virginia (misdemeanor and other criminal cases only), only in two other states—Missouri (22 percent) and North Dakota (15 percent)—do bench trial rates exceed 10 percent.

The high bench trial rates in Hawaii, Missouri, North Dakota, and Virginia may reflect peculiarities associated with the types of cases being reported (e.g., DUI in Hawaii); distinctive definitions for what is to be counted as a bench trial, including proceedings that are not treated as trial settings in other states (e.g., probation revocation hearings); or jurisdictional or procedural factors that promote the use of bench trials to decide cases.

Returning to felony cases, in 13 courts the field is narrowed to a well-defined type of case. **Text Table 4** displays bench trial rates in 13 states, including Missouri and Virginia. The courts in 12 of the 13 states have felony bench trial rates of less than 10 percent. These rates are comparable with those reported in a 1987 study of 26

⁸ Twenty-four of the 32 states publishing the appropriate data had jury trial rates of 5 percent or less.

⁹ These states are: Alaska, Arizona, Colorado, Connecticut, Delaware, Florida, Minnesota, New Jersey, Texas, and Vermont.

⁷ See the *State Court Model Statistical Dictionary, 1989* for standardized definitions of the disposition terms used in this section.

urban trial courts.¹⁰ Virginia remains atypical, however, with a felony bench trial rate of 22 percent. When coupled

¹⁰ John Goerdts et al., *Examining Court Delay: The Pace of Litigation in 26 Urban Trial Courts, 1987*, National Center for State Courts, 1989. The data appendix to this report shows bench trial rates ranging from a low of less than 1 percent in Miami, Minneapolis, and Newark to a high of 9 percent in Portland.

with the high bench trial rates for misdemeanor and other criminal cases, this suggests that perhaps some Virginia general jurisdiction courts use a broader measure of bench trial rates than other courts.¹¹

VARIATION IN TRIAL RATES. How trials are defined offers a likely explanation for the variation in trial disposition rates among states. Examining Table 1 in

TEXT TABLE 4: Percentage of Felony Dispositions at Trial, 1988

State	Percent Trial	Percent by Jury	Percent by Bench
Alaska	7.2%	6.9%	0.3%
District of Columbia	7.1	6.9	0.2
Indiana	12.5	6.0	6.5
Minnesota	5.4	4.6	0.8
Missouri	13.6	4.2	9.4

Ohio	8.3	4.3	4.0
Oregon	7.9	4.5	3.5
South Dakota	5.6	4.3	1.3
Texas	3.1	2.1	1.0
Vermont	3.5	3.0	0.5
Virginia	28.3	6.4	21.9
Wisconsin	6.8	4.9	1.9

conjunction with Text Table 4 provides information on both the definition of a trial and the trial rate for felony cases. States with low bench trial rates like Alaska and New Jersey count a case as disposed only if the case is tried to decision. This contrasts with the practice of states that report comparatively high bench trial rates. In Missouri and Virginia a case is counted as disposed by a bench trial once the opening statements are made. However, this explanation is not fully satisfactory. The District of Columbia, for example, reports a bench trial rate of less than 1 percent using the same definition as Virginia, where the rate is 22 percent.

It appears, therefore, that other, more substantive factors may be at work. One of these may be the size of the court's caseload. A full-fledged trial is an expensive proposition both in terms of judicial time and limited courtroom and other court resources. Most states have a relatively fixed capacity (e.g., limited number of judges and courtrooms) with which to handle trials. This suggests that rising caseloads may be counterbalanced by decreasing percentages of cases disposed at trial. Prosecutors recognize the limitations and become more selective in the cases that they take to trial.

Such reasoning may help to explain why states with a higher ratio of caseload to court capacity tend to have relatively fewer trials. As expanding caseloads impinge on a fixed court size, increasing congestion and delay may boost the incentive to seek alternatives to formal trial dispositions. Therefore, while the absolute number of trials may be larger in such courts, the percentage of cases disposed of at trial may be smaller. A comparison of Hawaii and California is illustrative. California has approximately 10 times as many bench trials and 20 times as many jury trials as Hawaii. Yet trials represent 7 percent of California's total criminal dispositions, compared to the 17 percent of cases in Hawaii that are

¹¹ This viewpoint is supported by Goerdts et al., which showed bench trial rates for two large urban courts in Virginia: Fairfax (7%) and Norfolk (6%). There is variation between these figures and those published for the two circuits in the 1987 Virginia Annual Report. Fairfax showed a bench trial rate of 44% and Norfolk showed a bench trial rate of 7%.

disposed of through trial. Other factors underlying the variation in trial rates are less readily measured within the confines of this study. However, these "unmeasured explanations for the variation in trial disposition rates may involve various idiosyncracies relevant to state laws, prosecutorial philosophies and case screening policies, state legal cultures and norms, and the formal involvement of judges in the pretrial resolution stage."¹²

TRIAL VERDICTS. The number and frequency of trials is of interest to judges and court administrators. There is probably wider interest in the verdicts that result from those trials.

Anticipating the rate at which defendants are convicted or acquitted at trial is challenging. The number of cases terminated by formal trial proceedings is quite small, the product of a lengthy screening process. Since most defendants are convicted by a plea of guilty (a topic discussed in the next section), can one characterize the type of case that proceeds to trial?

Incentives from prosecutors in the form of charge reductions and recommendations for reduced sentences, as well as the risk of longer sentences following a trial conviction, are strong inducements to most clearly guilty defendants to plead guilty prior to trial.¹³ In addition, defendants facing questionable evidence or prosecution witnesses who are less than credible are likely to be offered even more substantial plea bargains as incentives.¹⁴ This implies that most of the prosecution's "strong" cases, as well as many cases with more tenuous evidence will be settled by plea agreement.

To forgo attractive prosecutorial offers and risk an extended prison sentence implies that many defendants who proceed to trial estimate a relatively high probability of acquittal. Of course, not every such decision is based on rational, calculated decision-making. Some defendants will go to trial regardless of the strength of the prosecution's case. And we cannot discount the situation of defendants who indeed are innocent and believe that the trial process will bear that out.

Text Table 5 shows the jury and bench trial conviction rates for 9 of the 36 states. The data from those states demonstrate that whatever the perception underlying decisions to proceed to trial, the rate of acquittal is low. Approximately two-thirds of all defendants who went to trial in those states' general jurisdiction courts in 1988 were convicted.¹⁵ These results seem to be consistent

¹² Victor E. Flango et al., *The Business of State Trial Courts*, National Center for State Courts, 1983, p. 40.

¹³ The existence of differential sentencing (the belief that a defendant who pleads guilty will receive a less severe sentence than one who is convicted at trial) has been confirmed in a wide variety of studies. For a review of the literature, see William F. McDonald, *Plea Bargaining: Critical Issues and Common Practices*, U.S. Dept. of Justice, National Institute of Justice, 1985.

¹⁴ Both the decision to plead guilty rather than go to trial and the extent of the offered plea agreement are reported by virtually all researchers to depend on case strength. See, e.g., Joan Jacoby, *The American Prosecutor: A Search for Identity*, Lexington Books, 1980.

¹⁵ There is some variation between courts, especially with regard to bench trial rates. Florida and New Jersey both report bench trial conviction rates of less than 50 percent.

TEXT TABLE 5: Conviction Rate at Trial, 1988

State	Percent Jury Convict	Percent Bench Convict	F M D O

over time, meshing with 1978 figures reported for a similar mix of courts in an earlier NCSC Court Statistics Project publication, *The Business of State Trial Courts*, as well as several classic case studies.¹⁶

GUILTY PLEAS. Text Table 6 indicates that 66 percent of all criminal case are disposed of by a guilty plea.¹⁷ Most states conform rather closely to that rate. Departures from the two-thirds norm are often for specific types of cases. However, California reports that guilty pleas were obtained in 87.2 percent of all cases while Pennsylvania reports guilty pleas in 46.7 percent of cases.

When consideration is restricted to felony cases, as shown in Text Table 7, guilty pleas range from relatively low rates of 46 percent in Texas and 51 percent in South Dakota and Virginia to relatively high rates of 71 percent in Ohio and 84 percent in Rhode Island.

THE GUILTY PLEA PROCESS. Because the determination of guilt is so critical, there is a well-defined process and a number of constitutional guarantees that underlie a plea of guilty. At the point of the arraignment, the defendant must decide whether to proceed to trial or admit guilt. There are several plea alternatives if the defendant opts to forgo trial. First, the defendant may plead guilty to the charges. A second alternative, available in most jurisdictions, is a plea of nolo contendere, or no contest, to the charges. A third alternative is a plea of not guilty by reason of insanity or mental illness.

Before the court's acceptance of any plea, the federal court rules, as well as those of most states, require that an extensive dialogue take place, on the record, between the

¹⁷ This is the percentage of filings that were disposed of by a guilty plea. An estimate of the number of convictions disposed of by a guilty plea can be obtained by first subtracting the number of cases dismissed from the filing total. This gives a guilty plea rate of 79 percent of convictions.

TEXT TABLE 6: Nontrial Criminal Dispositions, 1988*

judge and the defendant to ensure that the plea was fully explained and the consequences of the plea understood. This dialogue establishes an adequate record that the defendant knowingly waived the privilege against self-incrimination, the right to trial by jury, and the right to face one's accusers; ensures that the nature of the offense was fully explained to the defendant; and verifies that the plea was fully explained and the consequences of the plea understood. Another requirement is that the defendant be represented by counsel to provide an informed and impartial analysis of the prospects at trial relative to a guilty plea.

The plea process is certainly swifter than the formal trial process, but it need not be less fair. Although fairness

TEXT TABLE 7: Nontrial Felony Dispositions, 1988

is a difficult quality to measure, the overwhelming prevalence of guilty pleas provides strong evidence that the plea process is more desirable to both defendants and prosecutors than trial. Both sides benefit. Prosecutors benefit because they are able to secure high conviction rates without incurring the uncertainty and cost of trial. Defendants presumably prefer the outcome of the negotiation to the exercise of their trial rights or the deal would not have been struck. The defendant also saves the uncertainty and cost of trial.¹⁸

THE PREVALENCE OF GUILTY PLEAS. Approximately 79 percent of all criminal convictions occur through a guilty plea. Often this involves an explicit bargain or agreement between the defense and prosecution. The prevalence of plea bargaining has been explained by the impact of caseload pressure upon criminal court operations.¹⁹ As caseload pressure increases, it is argued, overworked prosecutors substitute compromise (plea bargaining) for traditional due process methods and guilty pleas replace trials as the primary form of disposition. Furthermore, this situation can only be remedied by reducing caseload pressures through a large infusion of resources into the criminal justice system.

¹⁸ The debate over the efficacy of plea bargaining has created a large literature. See, e.g., Lynn Mather, *Plea Bargaining or Trial?*, Lexington Books, 1979.

¹⁹ See, Albert Alschuler, "The Prosecutor's role in Plea Bargaining," 36 *University of Chicago Law Review* (1968). The theory of caseload pressure should be contrasted with Malcom Feeley, "Plea Bargaining and the Structure of the Criminal Process," *Justice System Journal*, vol. 7, no. 3, 1982, p. 338. Rather than issues of caseload pressure, efficiency considerations, or resource conservation underlying the prevalence of plea bargaining, Feeley argues that changes in the structure of the criminal justice system (e.g., expansion of criminal law and procedural rights, the rise of criminal justice professionals) has increased the level of adversariness. This increased adversariness has led to increased negotiation resulting in a more evenly balanced relationship between the state and the defendant.

This conventional wisdom is challenged by several recent studies. A study conducted in the Connecticut Superior Court found that the trial rate had remained relatively unchanged at about 8.7 percent from 1880 to 1959 although caseloads considerably increased. Similar results were found in a more statistically rigorous study of the Chicago courts, where variations in caseload did not affect the guilty plea rate or the decision to pursue a case to trial.²⁰

Examining this issue using felony disposition data, Text Table 7, in conjunction with Table 15 (Part III, p. xxx), provides some support for these recent findings. There is no evidence of a relationship between caseload levels and the number of guilty pleas.²¹ For example, the percentage of guilty pleas in states with large felony caseloads such as Texas (46%) and New Jersey (65%) do not differ greatly from the percentage of guilty pleas in low criminal caseload states such as Alaska (65%) and South Dakota (51%). Although such comparisons are far from conclusive, they support the view that caseload pressure alone does not explain the prevalence of guilty pleas and, by inference, of plea bargaining. It is therefore highly unlikely that an increase in criminal justice resources, on its own, would lead to the elimination of plea bargaining. Prosecutors would still have incentives to plea bargain in cases where questions exist over the credibility of witnesses, cases where key evidence might not stand up at trial, and in many other situations. Prosecutors, however, mention caseload pressures as one important reason for engaging in plea bargaining.²² A reasonable conclusion is that caseload pressures are but one ingredient in the plea bargaining decision. Caseload pressure is a general impetus to plea bargain, but does not determine which specific cases will be bargained or the generosity of any particular bargain.

DISMISSALS. In a pretrial meeting, the defense attorney may ask the prosecutor to dismiss the charges against the client. An unqualified dismissal involves neither a plea by the defendant nor an exchange by the prosecutor; rather, a dismissal is a decision by the trial court to terminate all charges against a defendant. Dismissals typically point to questions over the sufficiency of the evidence. Eyewitness identification may be uncertain, victims reluctant to testify, and the evidence circumstantial.

Text Table 6 indicates that approximately 20 percent of all criminal cases are dismissed, making it the second most common method of case disposition. The lowest dismissal rate for felony cases (Text Table 7) are 10 percent in Ohio and 11 percent in Missouri. The highest

²⁰ See, e.g., Milton Heumann, *Plea Bargaining*, University of Chicago Press, 1978; Peter Nardulli, "The Caseload Controversy and the Study of Criminal Courts," 70 *Journal of Criminal Law and Criminology* (1979).

²¹ These figures should only be viewed as suggestive since they do not control for the staffing size of the courts or the prosecutor's offices.

²² For an example of research based on prosecutor interview data which has found caseload pressure to have a direct effect on case determination, see William F. McDonald, *Plea Bargaining: Critical Issues and Common Practice*, National Institute of Justice, 1985.

rates are in North Carolina (30 percent) and South Dakota (43 percent). It is noteworthy that the lowest dismissal rate is higher than the average trial rates.

Civil Dispositions

The proceedings and outcomes of civil cases do not possess the peculiar fascination that the public and press find in serious criminal cases. Only the occasional multi-million dollar judgment brings the civil courts into the limelight. This obscures reality because most of the workload of general jurisdiction courts consists of civil cases.²³

There are some important procedural differences between criminal and civil cases. This section outlines the stages of a civil action from the filing of the initial complaint to case termination. An analysis of the frequency with which civil cases are disposed by trial, settlement, dismissals, and default then follows.

Stages in the Disposition of a Civil Case

All states have established rules of civil procedure that mandate the way that civil actions are to be initiated and processed. The process begins when a complaint is filed with the clerk of the court outlining the facts of the case, the alleged civil wrong, and a request for a court ordered remedy such as monetary damages. The defendant is informed of the complaint through a summons and is required to respond to the complaint within a limited time period; otherwise, default judgment may be entered against the defendant.

Once a civil action has been initiated, it may be several years before the trial stage is reached. This underscores the lack of binding rules concerning the pace of civil litigation (23 states have nonbinding "goals" for increasing the pace of civil cases) that contrast with the speedy trial rules enforced for criminal cases.²⁴

Both parties are likely to use the interim period to prepare their cases through the discovery process. This may take the form of verbal questioning under oath (depositions) or by asking detailed and specific written questions (interrogatories). This process allows each party to clarify exactly what is disputed by the other party, and which witnesses the opposing party will use to prove its case. At the completion of discovery, many courts schedule a pretrial conference with the opposing parties and the judge to examine the legal issues and discuss the possibility of settlement.

As in criminal cases, a civil case that proceeds to trial may be held before either a judge or jury. If the jury finds

in favor of the plaintiff, the jury also sets the monetary amount of the award. This varies from the standard practice in most criminal courts where the jury determines guilt or innocence, but the sentencing is left to the judge. In other respects, the form of a civil trial is similar to a criminal trial.

Civil Dispositions by Casetype, 1988

This section now turns to an analysis of specific patterns that are evident for dispositions by trial and by settlement, dismissal, or default. Table 2 displays summary data on the method of disposition of civil cases in 1988. The civil casetypes included as well as bench and jury trial definitions are also shown for each court in Table 2.

TRIAL. Most civil cases are settled prior to trial. Therefore, as with criminal cases, the formal trial process is the least used method of civil case disposition. Text Table 8 displays civil trial rates by state and in aggregate.

Overall, trials account for 9.2 percent of all civil dispositions in 1988. Of the 34 states reporting relevant information, 21 have combined jury and bench trial rates of 9 percent or less for all civil casetypes. The remaining courts show considerable variation, with trial rates reaching to as high as 35 percent in Oklahoma (small claims cases only) and 39 percent in Missouri (small claims cases only).

As with criminal trial rates, it is likely that the various combinations of general civil (tort, contract, and real property), small claims, domestic relations, and other civil cases shown in Text Table 8 complicate interpretation of civil trial rates. Text Table 9 presents trial rate information for general civil cases only.²⁵ As can be seen, there is still considerable variation in trial rates. The range however is more restricted, with highs of 20 percent in North Carolina and 24 percent in Oklahoma. Fifteen of the 27 states publishing data on general civil caseloads report trial rates of 7 percent or less.²⁶

JURY TRIALS. Aggregating over the 34 states in Text Table 8 finds that 12.5 percent of all civil trials were jury trials; the remaining 87.5 percent were before the bench. There is little variation in jury trial rates, with all states reporting civil jury trial rates of less than 6 percent.²⁷ In only six states do jury trial rates exceed bench trial rates.

In many instances, Text Table 9 allows an examination of jury trial rates for the components of general civil caseload. For the 10 states that report such specific data, it can be seen that jury trial rates in tort cases are all below

²³ In 1988, Table 7 (Part III, p. 111) shows that 71 percent of the general jurisdiction caseload was civil cases with the remaining 29 percent being criminal cases.

²⁴ The difference in case processing time between civil and criminal cases is substantial. The NCSC publication, *Examining Court Delay: The Pace of Litigation in 26 Urban Trial Courts, 1987*, p. 12, 54, shows the median time from complaint to disposition in civil cases to be 333 days and the median time from arrest to disposition in felony cases to be 119 days.

²⁵ The reported general civil trial rates may include some "other civil" cases if they cannot be separated from tort, contract, and real property cases. It is important to focus on this grouping as general civil excludes casetypes such as small claims where a jury trial is not an option.

²⁶ These results do not significantly differ from those found by Goerd et al. In unpublished data from *Examining Court Delay: The Pace of Litigation in 26 Urban Trial Courts, 1987*, the civil trial rate ranged from a low of 2 percent in Dayton to highs of 18 percent in Portland and 20 percent in Fairfax.

²⁷ Again, these rates mirror the levels found in Goerd et al., *supra* note 10, p. 24.

5 percent. For contract and real property rights cases, jury trial rates do not exceed 2 percent and 5 percent, respectively.

BENCH TRIALS. Whereas criminal trials were split nearly equally between bench and jury trials, approximately 87 percent of all civil trials are bench trials. Given the fixed nature of jury trial rates, the wide variation in overall trial rates is obviously driven by the variation in bench trial rates. Bench trial rates range from as low as less than 1 percent in Florida (other civil cases only), Hawaii (tort and real property rights cases only), Michigan (tort cases only), and Minnesota (other civil cases only) to

as high of 35 percent in Oklahoma (small claims cases only) and 39 percent in Missouri (small claims cases only).

Restricting the analysis to general civil caseloads, Text Table 9 shows the bench trial rates to be highest in Missouri (19 percent for general civil plus other civil), Indiana (19 percent for general civil plus other civil), and Oklahoma (23 percent for general civil).²⁸

Refining the analysis one step further, the bench trial rate in tort cases ranges as high as 12 percent in Minnesota, although it is 4 percent or less in 8 of the 10 states providing such specific data. Likewise, bench trial rates in contract cases range as high as 9 percent in Massachusetts and Texas, while bench trials in real property rights cases are highest in Texas (17 percent).

One reason for the apparent preference for bench trials is that jury trials are not suitable or even not permitted for the most common civil casetypes (e.g., domestic relations and small claims). The influence of these high volume casetypes on the disposition totals dilutes the impact of relatively high jury trial rate casetypes, such as torts. As with criminal cases, jury and bench trial rates vary greatly by civil casetype.

SETTLEMENTS, DISMISSALS, AND DEFAULTS.

Rising civil caseloads have prompted a shift in resources and decision mechanisms away from formal trial proceedings and toward pretrial settlements in many civil courts.²⁹ The broad acceptance of the role of settlement in meeting the civil objectives of a "just, speedy, and an inexpensive determination of every action"³⁰ reflects the emergence of the judge as manager. "Today the need for judges to actively exercise control over the progress of and preparation of civil cases is accepted as a philosophical concept and is written into rules in a number of instances."³¹ Encouraging the use of settlement, where applicable, is a principal tool of civil case management in many states and individual trial courts. To an unknown degree, this shift in emphasis may have reinforced the importance of nontrial methods of disposition in civil cases.

The data in Table 2 reflect the importance of settlement as a dominant method of civil case disposition. Text Table 10 shows the percentage of civil dispositions occurring through a dismissal or settlement, default, or other disposition. Cases that are either settled or dismissed represent between one-quarter to three-quarters of total dispositions in most courts. The total disposition figures include, however, a large number of cases that were initiated but quickly terminated or never fully pursued. These are cases settled by default (the defendant did not respond to the plaintiff's allegations in the initial

Casetype: T=Tort; C=Contract; R=Real Property; O=Other Civil.

percent in Minnesota) percentage of cases dismissed or settled. Contract cases are nearly as diverse. The dismissal/settlement rate for contract cases ranges from 33 percent in Minnesota to 72 percent in Massachusetts. Real property rights cases have rates that range from 37 percent in Florida to 81 percent in Massachusetts.

Overall, some important similarities are found for the patterns of disposition in civil and criminal cases. Most importantly, the percentage of dispositions by trial and nontrial methods are similar. The percentages can, however, obscure the point that substantially more general jurisdiction civil cases are being filed and disposed than criminal cases. Table 7, in Part III, indicates that the total number of civil dispositions is nearly two and one-half times greater than the total criminal dispositions in general jurisdiction courts in 1988. Therefore, while the relative mix of disposition methods may be similar in civil and criminal cases, the actual number of civil disposi-

tions, and the consequent impact on the court system, exceeds the criminal side.

CONCLUSION. The disposition data available from general jurisdiction courts in 1988 indicate that most cases, civil as well as criminal, are not disposed at trial. However, although the trial rate for the country as a whole is less than 10 percent, there is a good deal of variation between states. Felony trial dispositions range from about 1 percent to 24 percent, while general civil trial dispositions range from approximately 1 percent to 28 percent of all cases. Most criminal convictions, however, are obtained through guilty pleas and most civil cases are disposed through settlement.

Thus, despite the widespread availability of a trial before a jury of their peers, overseen by an impartial judiciary, few litigants exercise this option. Although a large number of cases are being disposed without formal trial proceedings, there is an increasing concern by the public and legal community about rising costs, delay, and inefficiency. In addition, there is the perception by some that the most common methods of case termination—the guilty plea in criminal cases and settlement in civil cases—are lacking in fairness.³² In order to fully explore these issues, accessible and reliable disposition statistics from the nation's state courts are essential.

Observations and Recommendations

The most telling comment on the current status of information about method of trial court dispositions is that little has changed in the last ten years. Roughly the same number of general jurisdiction court systems were included in *The Business of the State Trial Courts*, which described state court activity in 1978, as are found in Tables 1 and 2.³³ Many states are not currently in a position to publish statistics that speak directly to the concerns that the public, judges, the legal profession, and court administrators have on how courts dispose of cases.

This is true despite great strides in automating court records and the extensive development of information systems for tracking criminal and civil cases. The extensive research that accompanied the move toward sentencing guidelines and determinate sentencing systems (and tort reform legislation and alternative dispute resolution in civil law) has not led to the ready availability of

³² For example, it was these sorts of concerns that led the Senate Judiciary Committee to convene a task force of major participants in the civil justice system in 1988 to explore ways to reduce court congestion, delay, and cost. The results are published in *Justice for All: Reducing Costs and Delay in Civil Litigation*, The Brookings Institute, October 1989.

³³ In 1978, 27 general jurisdiction court systems had relatively complete information on plea, dismissal, and overall trial rates (no distinction was made between jury and bench trial rates). On the civil side, 33 states had information on overall trial rates. However, only 7 of these states also reported information on settlement and dismissal rates.

statistics on trial rates, dismissals, guilty pleas, or acquittals at trial.

Our focus is on the statistics published in annual state court reports or readily available from the administrative offices of the courts. But that is the main official source available to those interested in examining the patterns of case outcomes. Special studies of case disposition methods often exist. Part II of this report is intended to encourage the more systematic and widespread incorporation of such data collection efforts into state court annual reports.

Clearly, more attention should be placed on the quantity and quality of information administrative offices of the court collect and report on the method of case disposition. Two steps are necessary if that is to occur.

First, more consideration needs to be given to the purposes for which such information is collected. What is it that the public, presiding judges, and court administrators need to know on a regular basis? The way in which scarce court system resources are allocated between alternative disposition procedures depends on their relative use. For example, the number of trials per judge offers a basic index of the adequacy of formal trial resources. Similarly, effective differentiated case management requires information on varying time to disposition statistics for each disposition alternative.

Moreover, method of case disposition statistics provide a context for more standard caseload measures like the number of case filings and dispositions. Clearance rates, for example, may fall in a period of stable case filings if more cases are going to trial.

Further, it is helpful to distinguish information on the method by which cases are decided from the type of decision. Criminal cases are resolved at jury trial or bench trial, by a guilty plea or a dismissal before trial, or through a nolle prosequi. Cases can also be disposed of in a court by transfer to another court's jurisdiction; some cases are in practice disposed of when the defendant fails to appear. Civil cases are disposed of by jury trial, bench trial, as uncontested, or when they are dismissed, withdrawn, settled, or submitted to arbitration before trial. The method of disposition categories used should cover the range of options that matter, grouping those options that are similar in their consequences and implications for court schedules and staffing.

The type of decision overlaps with method of disposition for most nontrial methods in criminal cases. Statistics are needed on the number of cases that reach trial but are dismissed, settled, or resolved by a plea. In addition,

there is substantial interest in the rates of acquittal and conviction at trial. Public perception of court performance often hinges on the perceived fairness of dispositional outcomes. For civil cases, a different classification scheme is needed. The prototype statistical profile for court reporting in Appendix C (as elaborated in the 1989 edition of the *State Court Model Statistical Dictionary*) is a good starting point.³⁴ It is recommended, however, that the prototype be modified to include an additional disposition category for summary judgments. Summary judgment allows the court to enter judgment in a case when the court determines that there are "no genuine issues of material fact"³⁵ so as to avoid the time and expense of trial. It may be that some courts are including summary judgments in the trial category thereby inflating the published trial rate. Clearly distinguishing between summary judgment and trial would increase the precision of method of disposition statistics for civil caseloads.

Second, once a clear set of purposes are agreed, it is necessary to establish clear rules for categorizing and counting dispositions. The *State Court Model Statistical Dictionary* recommends that a jury trial be counted when the jury is sworn and the first evidence is introduced; a bench trial is counted when the first evidence is introduced. Once begun, a trial is counted regardless of whether a judgment is reached.

Clearly stated rules are also needed on what is being counted. It is recommended that defendants be the unit for criminal cases and the complaint the unit for describing method and type of decision. Rules and conventions need to be devised and published for treating such complicating factors as counterclaims and multipoint plaintiff and multidefendant civil actions. A meaningful breakdown of types of cases needs to be adopted for collecting and reporting method of disposition information. In all instances, the rule or convention should respond to the purposes for which the information is being collected.

Finally, it would be advantageous if these steps were taken in tandem by states and, within states, by all court systems with relevant jurisdiction. The current patchwork of information available on courts of general jurisdiction is inadequate as a basis for describing how court cases are resolved.

³⁴ This prototype, however, has not yet been modified to include categories reporting type of decision in civil cases.

³⁵ Federal Rules of Civil Procedure, Rule 56(c).

Table 1: Criminal Dispositions by Casetype for General Jurisdiction Courts, 1988. (continued)

Note: An NA indicates that the data are not available or that the calculations are inappropriate. States omitted from this table did not specifically report criminal trial data in sufficient detail. State courts with the possibility of jury trials can be identified in the state court system charts located in Part III of this report.

* = Other dispositions include transfers and other disposition types that are specific to individual states.

NA = Not available.

+ = Data are given for these casetypes.

o = Data do not include these casetypes.

Key:

F = Felony

M = Misdemeanors

D = DWI/DUI

O = Other Criminal

Trial definitions:

A = A jury trial is counted at jury selection, empaneling, or when jury is sworn.

B = A jury trial is counted at introduction of evidence or swearing of first witness.

C = A jury trial is counted at verdict or decision.

D = A nonjury trial is counted when evidence is first introduced or swearing of first witness.

E = A nonjury trial is counted at the decision.

Criminal case use of count codes:

Contents of case (number of defendants/number of charges):

1 = Single defendant/single charge

2 = Single defendant/single incident

3 = Single defendant/single incident (maximum number of charges)

4 = Single defendant/one or more incidents

5 = Single defendant/varies with prosecutor

6 = One or more defendants/single charge

7 = One or more defendants/single incidents

8 = One or more defendants/single incidents (maximum number of charges)

9 = One or more defendants/one or more incidents

10 = One or more defendants/varies with prosecutor

11 = Varies with prosecutor/varies with prosecutor

Point at which case is counted:

A = At the filing of the information or indictment

B = At the filing of the information or complaint

C = At the filing of the complaint (warrant or accusation)

D = At the assigning of a docket number

E = At the arraignment (first appearance)

A: Data are incomplete:

Hawaii--Circuit Court--All criminal casetypes do not include reopened prior cases.

Iowa--District Court--Misdemeanor and DWI/DUI disposed data do not include some cases.

New York--Supreme and County--Criminal disposed data do not include appeals.

Oregon--Circuit Court--Criminal disposed data do not include appeals.

Pennsylvania--Court of Common Pleas--Criminal disposed data do not include some appeal cases.

Wisconsin--Circuit Court--DWI/DUI data does not include Milwaukee County.

Wyoming--District Court--Disposed data do not include criminal appeals.

B: Data are overinclusive:

Colorado--Superior Court--Criminal disposition data include extraditions, revocations, parole, and release from commitment hearings.

Connecticut--Superior Court--Misdemeanor data include ordinance violation cases.

Florida--Circuit Court--Felony data include misdemeanors, DWI/DUI and miscellaneous criminal cases.

Iowa--District Court--Felony data include some DWI/DUI cases.

Maine--Superior Court--Misdemeanor disposition data include some criminal appeal cases. Unclassified criminal include ordinance violations, miscellaneous criminal, and other proceedings.

Minnesota--District Court--Misdemeanor disposition data include ordinance violation and some DWI/DUI cases.

Missouri--Circuit Court--Felony and misdemeanor disposition data include some DWI/DUI cases.

North Carolina--Superior Court--Criminal appeals disposed data include misdemeanor cases.

North Dakota--District Court--Criminal disposed data include other proceedings.

Oklahoma--Felony data include some miscellaneous criminal cases. Misdemeanor data include ordinance violations and some miscellaneous criminal cases.

Rhode Island--Superior Court--Criminal appeals disposed data include misdemeanor and DWI/DUI cases.

Virginia--Circuit Court--Criminal appeals disposed data include misdemeanor and ordinance violation cases.

West Virginia--Circuit Court--Criminal casetypes include postconviction remedy proceedings.

C: Data are incomplete and overinclusive:

Hawaii--Circuit Court--Felony data include misdemeanor cases, but do not include reopened prior cases.

Maryland--Circuit Court--Felony data include misdemeanors but do not include some cases.

Table 2: Civil Dispositions by Casetype for General Jurisdiction Courts, 1988. (continued)

Note: All available data are entered in the table and all appropriate calculations are included. An NA indicates that the data are not available, or calculations are inappropriate.

A civil case is counted when it has reached issue.

Casetypes:

T = Tort
C = Contract
R = Real Property
D = Domestic Relations
S = Small Claims
O = Other Civil

NA = Not available.
+ = Data are given for these casetypes.
o = Data do not include these casetypes.

Trial definition:

- 1 = A jury trial is counted at jury selection, empaneling, or when the jury is sworn.
- 2 = A jury trial is counted at introduction of evidence or swearing of first witness.
- 3 = A jury trial is counted at verdict or decision.
- 4 = A nonjury trial is counted when first evidence is introduced or first witness is sworn.
- 5 = A nonjury trial is counted when the decision is made.
- * = Other dispositions include transfers, arbitrations, and categories that are specific to individual states.

A: Data are not complete:

- Hawaii--Circuit Court--All casetypes do not include some cases reported as reopened prior cases.
- Indiana--Superior Court and Circuit Court--All civil case disposition figures do not include some cases reported as "redocketed" in Indiana.
- Maine--Superior Court--Domestic relations do not include support/custody (which is not counted separately from marriage dissolution) or paternity/bastardy cases. Civil appeals do not include administrative agency appeals.
- Massachusetts--Trial Court of Commonwealth--Tort data do not include data from Boston Municipal and District Court Departments. Real property rights disposed data do not include summary process and civil cases from the Housing Court Department.
- Montana--District Court--Total civil data do not include some trial court appeals.
- Ohio--Disposition data are missing wrongful death torts and miscellaneous civil cases.
- Pennsylvania--Court of Common Pleas--Civil data do not include arbitration cases.

B: Data are overinclusive:

- Alaska--Superior Court--Unclassified civil disposed data include tort, contract, real property, miscellaneous civil cases, and postconviction remedies.
- Florida--Circuit Court--Unclassified civil data include miscellaneous civil cases.
- Oregon--Circuit Court--Civil disposed data include postconviction remedy proceedings.
- Wyoming--District Court--Juvenile cases and criminal appeals are included in the civil data.

C: Data are incomplete and overinclusive:

- Iowa--District Court--Civil disposed data include postconviction remedy proceedings, but do not include some miscellaneous domestic relations cases.
- New York--Supreme and County Court--Civil data include postconviction remedy proceedings, but do not include trial court appeals.

Part III
1988 State Court Caseload Tables

TABLE 1: Reported National Caseload for State Appellate Courts, 1988

Reported Caseload	Filed	Disposed
Courts of last resort:		
I. Mandatory jurisdiction cases:		
A. Number of reported complete cases	18,641	15,103
Number of courts reporting complete data	34	24
Number of states with courts of last resort reporting complete mandatory jurisdiction data	33	23
Percent of the total population of states with mandatory jurisdiction represented by complete data	61%	51%
B. Number of reported complete cases that include some discretionary petitions	5,555	6,969
Number of courts reporting complete data with some discretionary petitions	10	13
Number of states with courts of last resort reporting complete mandatory jurisdiction data that include some discretionary petitions	10	13
Percent of the total population of states with mandatory jurisdiction represented by complete data that include some discretionary petitions	18%	12%
C. Number of reported cases that are either incomplete, or incomplete and include some discretionary petitions	1,359	1,144
Number of courts reporting incomplete data, or incomplete and include some discretionary petitions	4	4
Number of states with courts of last resort reporting either incomplete mandatory jurisdiction data or data that are both incomplete and include some discretionary petitions	4	4
Percent of the total population of states with mandatory jurisdiction represented by incomplete data, or incomplete and include some discretionary petitions	14%	14%
II. Discretionary jurisdiction petitions:		
A. Number of reported complete petitions	35,824	28,870
Number of courts reporting complete petitions	36	29
Number of states with courts of last resort reporting complete discretionary jurisdiction petitions	35	28
Percent of the total population of states with discretionary jurisdiction represented by complete data	79%	67%
B. Number of reported complete petitions that include some mandatory cases	1,018	6,832
Number of courts reporting complete petitions with some mandatory cases	1	5
Number of states with courts of last resort reporting complete petitions that include some mandatory cases	1	5
Percent of the total population of states with discretionary jurisdiction represented by complete data that include some mandatory cases	1%	11%
C. Number of reported petitions that are either incomplete, or incomplete and include some mandatory cases	4,845	2,879
Number of courts reporting incomplete petitions, or incomplete and include some mandatory cases	8	6
Number of states with courts of last resort reporting either incomplete petitions or incomplete and include some mandatory cases	8	6
Percent of the total population of states with discretionary jurisdiction represented by incomplete data, or incomplete and include some mandatory cases	14%	9%

Table 2: Reported total caseload for all state appellate courts, 1988. (continued)

COURT TYPE:

COLR = Court of last resort
IAC = Intermediate appellate court

POINTS AT WHICH CASES ARE COUNTED:

- 1 = At the notice of appeal
- 2 = At the filing of trial record
- 3 = At the filing of trial record and complete briefs
- 4 = At transfer
- 5 = Other
- 6 = Varies

NOTE: NA indicates that the data are unavailable. Blank spaces indicate that a calculation is inappropriate.

NJ = This case type is not handled in this court.
- = Inapplicable

() = Mandatory and discretionary jurisdiction cases cannot be separately identified. Data are reported within the jurisdiction where the court has the majority of its caseload.

QUALIFYING FOOTNOTES:

An absence of a qualifying footnote indicates that the data are complete.

*See the qualifying footnote for each court within the state. Each footnote will have impact on the state's total.

**Total discretionary petitions filed, granted, and disposed in the Louisiana Supreme Court do not include 224 writs that were granted and transferred.

- A: The following courts' data are incomplete:
- Arizona--Supreme Court--Data do not include mandatory judge disciplinary cases.
 - California--Supreme Court--Total mandatory filed data do not include mandatory judge disciplinary cases. Mandatory disposed data do not include disciplinary cases which are estimated to make the total less than 75% complete. Total discretionary petitions granted do not include original proceedings and administrative agency cases.
 - Connecticut--Supreme Court--Data do not include some unclassified appeals and judge disciplinary cases.
 - Delaware--Supreme Court--Data do not include some discretionary interlocutory decision cases, which are reported with mandatory jurisdiction cases.
 - Georgia--Supreme Court--Discretionary petitions granted do not include interlocutory decisions.
 - Iowa--Supreme Court--Data do not include discretionary petitions that were dismissed by the court, which are reported with mandatory jurisdiction cases. Discretionary petitions granted and disposed do not include some discretionary original proceedings.
 - Kentucky--Supreme Court--Data do not include some discretionary unclassified petitions.
 - Minnesota--Court of Appeals--Total discretionary petitions do not include discretionary petitions of final judgments that were denied. Total discretionary petitions granted do not include "other" discretionary petitions granted.
 - New Jersey--Supreme Court--Data do not include discretionary interlocutory decisions.
 - Oklahoma--Supreme Court--Disposed data do not include some discretionary petitions which are reported with mandatory jurisdiction cases.
 - Pennsylvania--Commonwealth Court--Filed

mandatory jurisdiction cases do not include transfers from the Superior Court and the Court of Common Pleas.
South Carolina--Supreme Court--Filed data do not include discretionary petitions that were denied or otherwise dismissed/withdrawn, or settled.
South Dakota--Supreme Court--Data do not include advisory opinions reported with mandatory jurisdiction cases.
Virginia--Court of Appeals--Filed data do not include original proceeding petitions granted.
Washington--Supreme Court--Data do not include some discretionary petitions.

- B: The following courts' data are overinclusive:
- Arizona--Supreme Court--Data include mandatory judge disciplinary cases.
 - Colorado--Supreme Court--Disposed data include mandatory jurisdiction cases.
 - Delaware--Supreme Court--Data include some discretionary petitions and filed data include discretionary petitions that were granted.
 - Georgia--Supreme Court--Total mandatory filed data include a few discretionary petitions that were granted and refiled as appeals. Discretionary petitions disposed data represent some double counting because they include all mandatory appeals and discretionary petitions granted that are refiled as a mandatory case.
--Court of Appeals--Total mandatory data include all discretionary petitions that were granted and refiled as appeals.
 - Hawaii--Supreme Court--Data include a few discretionary petitions granted.
 - Idaho--Supreme Court--Data include discretionary petitions reviewed on the merits. Mandatory disposed data include petitions granted disposed.
 - Illinois--Appellate Court--Data include all discretionary petitions.
 - Iowa--Supreme Court--Data include some discretionary petitions that were dismissed by the Court.
 - Kansas--Court of Appeals--Data include all discretionary petitions.
 - Maryland--Court of Appeals--Data include discretionary petitions that were granted and refiled as appeals.
 - Massachusetts--Supreme Court--Disposed data include all mandatory appeals disposed.
--Appeals Court--Data include all discretionary petitions.
 - Michigan--Supreme Court--Disposed data include mandatory jurisdiction cases.
--Court of Appeals--Total mandatory data include discretionary petitions.
 - Montana--Supreme Court--Mandatory cases disposed include all discretionary petitions.
 - Nebraska--Supreme Court--Data include all discretionary petitions.
 - New Jersey--Appellate Division of Superior Court--Data include all discretionary petitions that were granted.
 - New Mexico--Court of Appeals--Disposed data include all discretionary petitions.
 - New York--Appellate Divisions of Supreme Court--Data include all discretionary petitions.
--Appellate Terms of Supreme Court--Data include all discretionary petitions.
 - North Carolina--Court of Appeals--Mandatory filed data include discretionary petitions that were granted and refiled as appeals.
 - Oklahoma--Supreme Court--Disposed data include some discretionary petitions.
--Court of Criminal Appeals--Mandatory filed data include all discretionary petitions.

TABLE 2: Reported Total Caseload for State Appellate Courts, 1988. (continued)

Oregon--Supreme Court--Disposed data include all discretionary petitions that were granted.
Pennsylvania--Superior Court--Data include all discretionary petitions that were granted.
--Commonwealth Court--Disposed data include all discretionary petitions.
South Carolina--Supreme Court--Disposed data include all discretionary petitions that were disposed.
South Dakota--Filed data include discretionary advisory opinions. Mandatory jurisdiction dispositions include all discretionary petitions.
Tennessee--Supreme Court--Discretionary petitions disposed data include all mandatory jurisdiction cases.
--Court of Criminal Appeals--Mandatory jurisdiction disposed data include some discretionary petitions.
Utah--Supreme Court--Disposed data include all discretionary petitions.
--Court of Appeals--Disposed data include all discretionary petitions.
Virginia--Court of Appeals--Discretionary petitions disposed data include all mandatory jurisdiction cases.
Washington--Supreme Court--Data include some discretionary petitions.

C: The following courts' data are both incomplete and overinclusive:
Arkansas--Supreme Court--Data include a few discretionary petitions, but do not include mandatory attorney disciplinary cases and certified questions from the federal courts.
Connecticut--Supreme Court--Disposed data include mandatory cases, but do not include some unclassified appeals and judge disciplinary cases.
Maine--Supreme Judicial Court Sitting as Law Court--Total mandatory jurisdiction data include discretionary petitions but do not include mandatory disciplinary and advisory opinion cases.
Pennsylvania--Supreme Court--Total discretionary jurisdiction filed data include non-case motions, but do not include original proceeding petitions.

TABLE 3: Selected Caseload and Processing Measures for Mandatory Cases in State Appellate Courts, 1988. (continued)

COURT TYPE:

COLR = Court of Last Resort
 IAC = Intermediate Appellate Court

NOTE: NA indicates that the data are unavailable. Blank spaces indicate that a calculation is inappropriate.

NJ = This case type is not handled in this court
 -- = Inapplicable

(B): Mandatory jurisdiction cases cannot be separately identified and are reported with discretionary petitions. (See Table 4)

QUALIFYING FOOTNOTES:

The absence of a qualifying footnote indicates that data are complete.

*See the qualifying footnote written for each court in the state. Each footnote has an impact on the state total.

A: The following courts' data are incomplete:

- Arizona--Supreme Court--Data do not include Judge disciplinary cases.
- California--Supreme Court--Filed data do not include Judge disciplinary cases. Discretionary disposed data do not include disciplinary cases, which are estimated to make the total less than 75% complete.
- Pennsylvania--Commonwealth Court--Filed data do not include transfers from the Superior Court and the Court of Common Pleas.

B: The following courts' data are overinclusive:

- Delaware--Supreme Court--Data include some discretionary petitions and discretionary petitions that were granted.
- Georgia--Supreme Court--Mandatory jurisdiction filed data include discretionary petitions that were granted and refiled as appeals.
 --Court of Appeals--Mandatory jurisdiction data include discretionary petitions that were granted and refiled as appeals.
- Hawaii--Supreme Court--Data include discretionary petitions that were granted, and refiled as appeals.
- Idaho--Supreme Court--Data include discretionary petitions reviewed on the merits. Disposed data include petitions granted disposed.
- Illinois--Appellate Court--Data include discretionary petitions.
- Iowa--Supreme Court--Filed data include discretionary original proceedings. Disposed data include some discretionary cases that were dismissed.
- Kansas--Court of Appeals--Data include all discretionary cases.
- Maryland--Court of Appeals--Data include discretionary petitions that were granted and refiled as appeals.

Massachusetts--Appeals Court--Filed data include a small number of discretionary interlocutory decision petitions.

Michigan--Court of Appeals--Data include discretionary petitions.

Montana--Supreme Court--Disposed data include all discretionary petitions.

Nebraska--Supreme Court--Data include all discretionary petitions.

New Jersey--Appellate Division of Superior Court--Data include discretionary petitions that were granted.

New Mexico--Court of Appeals--Disposed data include discretionary petitions.

New York--Court of Appeals--Data include granted discretionary petitions that were disposed.

--Appellate Divisions of Supreme Court--Data include discretionary petitions.

--Appellate Terms of Supreme Court--Data include discretionary petitions.

North Carolina--Court of Appeals--Data include discretionary petitions that were granted, and refiled as appeals.

Oklahoma--Supreme Court--Disposed data include granted discretionary petitions that were disposed.

--Court of Criminal Appeals--Filed data include all discretionary jurisdiction cases.

Oregon--Supreme Court--Disposed data include discretionary petitions that were granted.

Pennsylvania--Superior Court--Data include all discretionary petitions that were granted.

--Commonwealth Court--Disposed data include discretionary petitions.

South Carolina--Supreme Court--Disposed data include all discretionary petitions that were disposed.

South Dakota--Supreme Court--Disposed data include all discretionary jurisdiction cases. Filed data include advisory opinions.

Tennessee--Court of Criminal Appeals--Data include some discretionary petitions.

--Court of Appeals--Disposed data include some discretionary petitions.

Utah--Supreme Court--Disposed data include discretionary petitions.

Washington--Supreme Court--Data include some discretionary petitions.

C: The following courts' data are both incomplete and overinclusive:

- Arkansas--Supreme Court--Data include a few discretionary petitions, but do not include mandatory attorney disciplinary cases and certified questions from the federal courts.
- Maine--Supreme Judicial Court Sitting as Law Court--Data include discretionary petition cases, but do not include mandatory disciplinary and advisory opinion cases.

TABLE 4: Selected Caseload and Processing Measures for Discretionary Petitions in State Appellate Courts, 1988. (continued)

COURT TYPE:

COLR = Court of Last Resort

IAC = Intermediate Appellate Court

NOTE: NA indicates that the data are unavailable. Blank spaces indicate that a calculation is inappropriate.

NJ = This case type is not handled in this court
- = Inapplicable

(B): Discretionary petitions cannot be separately identified and are reported with mandatory cases. (See Table 3)

QUALIFYING FOOTNOTES:

The absence of a qualifying footnote indicates that data are complete.

*See the qualifying footnote written for each court in the state. Each footnote has an impact on the state's total.

- A: The following courts' data are incomplete:
- Connecticut--Supreme Court--Filed data do not include disciplinary cases.
 - Delaware--Supreme Court--Data do not include some discretionary interlocutory petitions and some discretionary advisory opinions.
 - Iowa--Supreme Court--Data do not include discretionary cases that were dismissed by the court.
 - Kentucky--Supreme Court--Data do not include some discretionary unclassified petitions.
 - Minnesota--Court of Appeals--Data do not include petitions of final judgments that were denied.
 - New Jersey--Supreme Court--Data do not include discretionary interlocutory petitions.
 - Oklahoma--Supreme Court--Disposed data do not include discretionary petitions granted and disposed.

South Carolina--Supreme Court--Filed data do not include discretionary petitions that were denied or otherwise dismissed/withdrawn, or settled.

South Dakota--Supreme Court--Filed data do not include advisory opinions which are reported with mandatory jurisdiction cases.

Tennessee--Court of Criminal Appeals--Disposed data do not include some cases which are reported with mandatory jurisdiction cases.

Washington--Supreme Court--Data do not include some cases which are reported with mandatory jurisdiction cases.

- B: The following courts' data are overinclusive:
- Arizona--Supreme Court--Data include mandatory judge disciplinary cases.
 - Colorado--Supreme Court--Disposed data include all mandatory jurisdiction cases.
 - Georgia--Supreme Court--Disposed data include all mandatory jurisdiction cases and discretionary petitions granted, that are refiled as a mandatory case.
 - Michigan--Supreme Court--Disposed data include mandatory jurisdiction cases.
 - Tennessee--Supreme Court--Disposed data include all mandatory jurisdiction cases.
 - Virginia--Court of Appeals--Disposed data include all mandatory jurisdiction cases.
- C: The following courts' data are both incomplete and overinclusive:
- Connecticut--Supreme Court--Disposed data include mandatory cases, but do not include some unclassified appeals and judge disciplinary cases.
 - Pennsylvania--Supreme Court--Filed data include non-case motions that could not be separated, but do not include original proceeding petitions.

TABLE 5: Selected Caseload and Processing Measures for Discretionary Petitions Granted in State Appellate Courts, 1988. (continued)

COURT TYPE:

COLR = Court of Last Resort
IAC = Intermediate Appellate Court

NOTE: NA indicates that the data are unavailable.
Blank spaces indicate that a calculation is inappropriate.

NJ = This casetype is not handled in this court
- = Inapplicable

QUALIFYING FOOTNOTES:

The absence of a qualifying footnote indicates that data are complete.

*See the qualifying footnote for each court in the state. Each footnote has an impact on the state's total.

- A: The following courts' data are incomplete:
- California--Supreme Court--Filed data do not include original proceedings initially heard in the Supreme Court that were granted.
 - Connecticut--Supreme Court--Discretionary petitions filed data do not include disciplinary cases.
 - Delaware--Supreme Court--Discretionary petitions filed data do not include some discretionary interlocutory petitions and some discretionary advisory opinions.
 - Iowa--Supreme Court--Disposed data do not include some original proceedings.

Kentucky--Supreme Court--Discretionary petitions filed data do not include some discretionary unclassified petitions.

Minnesota--Court of Appeals--Data do not include some petitions.

New Jersey--Supreme Court--Filed data do not include discretionary interlocutory petitions granted.

Virginia--Court of Appeals--Filed data do not include original proceedings petitions granted.

Washington--Supreme Court--Discretionary petitions filed data do not include some cases reported with mandatory jurisdiction cases.

- B: The following courts' data are overinclusive:
- Arizona--Supreme Court--Disposed data include mandatory judge disciplinary cases.
 - Massachusetts--Supreme Judicial Court --Disposed data include all mandatory jurisdiction cases disposed.
 - North Carolina--Court of Appeals--Data include discretionary petitions granted that were disposed.
- C: The following court's data are incomplete and overinclusive:
- Pennsylvania--Supreme Court--Filing data include motions that could not be separated, but do not include original proceeding petitions that were granted.

TABLE 8: Reported Grand Total State Trial Court Caseload, 1988. (continued)

NOTE: The trial courts of Mississippi are not included in this table, as neither grand total caseload nor court jurisdiction information is available for 1988. All other state trial courts with grand total jurisdiction are listed in the table, regardless of whether caseload data are available. Blank spaces in the table indicate that a particular calculation, such as the total state caseload, is not appropriate. State total "filings per 100,000 population" may not equal the sum of the filing rates for the individual courts due to rounding.

NA = Data are not available.

JURISDICTION CODES:

G = General Jurisdiction
L = Limited Jurisdiction

SUPPORT/CUSTODY CODES:

- 1 = The court does not have jurisdiction over support/custody cases
- 2 = Support/custody caseload data are not available
- 3 = Only contested support/custody cases and all URESA cases (where the court has jurisdiction) are counted separately from marriage dissolution cases
- 4 = Both contested and uncontested support/custody cases and URESA cases (where the court has jurisdiction) are counted separately from marriage dissolution cases
- 5 = Support/custody is counted as a proceeding of the marriage dissolution and thus a marriage dissolution that involves support/custody is counted as one case
- 6 = Support/custody is counted as a proceeding of the marriage dissolution but URESA cases are counted separately
- ** = Nondissolution support/custody cases are also counted separately
- *** = Court has only URESA jurisdiction

PARKING CODES:

- 1 = Parking data are unavailable
- 2 = Court does not have parking jurisdiction
- 3 = Only contested parking cases are included
- 4 = Both contested and uncontested parking cases are included
- 5 = Parking cases are handled administratively
- 6 = Uncontested parking cases are handled administratively; contested parking cases are handled by the court

CRIMINAL UNIT OF COUNT CODES:

- M = Missing Data
- I = Data element is inapplicable
- A = Single defendant--single charge
- B = Single defendant--single incident (one/more charges)
- C = Single defendant--single incident/maximum number charges (usually two)
- D = Single defendant--one/more incidents
- E = Single defendant--content varies with prosecutor
- F = One/more defendants--single charge
- G = One/more defendants--single incident (one/more charges)
- H = One/more defendants--single incident/maximum number charges (usually two)
- J = One/more defendants--one/more incidents
- K = One/more defendants--content varies with prosecutor
- L = Inconsistent during reporting year
- Z = Both the defendant and charge components vary within the state

QUALIFYING FOOTNOTES:

The absence of a qualifying footnote indicates that data are complete.

*See the qualifying footnote for each court within the state. Each footnote has an impact on the state's total.

A: The following courts' data are incomplete:

- Arizona--Justice of the Peace Court--Grand total filed and disposed data do not include limited felony cases.
- Arkansas--County Court--Grand total filed and disposed data do not include real property rights, miscellaneous domestic relations, and miscellaneous civil cases.
--Municipal Court--Grand total filed and disposed data do not include cases from several municipalities which did not report.
- Colorado--County Court--Grand total filed and disposed data do not include civil data from Denver County.
- Delaware--Court of Common Pleas--Grand total filed and disposed data do not include most felony cases.
--Family Court--Grand total filed and disposed data do not include status petitions and child-victim petitions.
--Municipal Court of Wilmington--Grand total filed and disposed data do not include limited felony cases.
- Georgia--Magistrate Court--Grand total filed and disposed data do not include cases from 19 counties, and include only partial data from 11 counties.
--Probate Court--Grand total filed data include cases from 75 of 159 counties, and are less than 75% complete. Disposed data do not include any civil cases, and partial criminal and traffic data from 84 counties, and are less than 75% complete.
--State Court--Grand total filed and disposed data include data from 24 of 63 courts, and are less than 75% complete.
- Indiana--Superior and Circuit Courts--Grand total filed and disposed data do not include civil appeals and criminal appeals cases.
--Municipal Court of Marion County--Grand total filed and disposed data do not include appeals of trial court cases.
- Kansas--Municipal Court--Grand total filed and disposed data represent 119 of 390 municipal courts.
- Maryland--District Court--Grand total filed data do not include ordinance violation and parking cases. Disposed data do not include civil, ordinance violation, and parking cases, and are less than 75% complete.
- Massachusetts--Trial Court of the Commonwealth--Grand total filed data do not include parking cases. Disposed data do not include civil cases from the Housing Court Department, miscellaneous civil data from the Probate/Family Court Department, criminal cases from the Boston Municipal, Housing and Juvenile Court Departments, moving traffic cases from the Boston Municipal Court Department, parking, ordinance violation and miscellaneous traffic cases, and juvenile data from the Juvenile Court Department, and are less than 75% complete.
- Michigan--Probate Court--Grand total filed data do not include status petitions. Disposed data do not include paternity/bastardy, miscellaneous domestic relations, mental health, miscellaneous civil, and status petition cases, and are less than 75% complete.
- Nebraska--County Court--Grand total filed and disposed data do not include limited felony and parking cases.

TABLE 8: Reported Grand Total State Trial Court Caseload, 1988. (continued)

- Nevada--District Court--Grand total filed data do not include felony, misdemeanor, DW/DUI, miscellaneous criminal, and all juvenile cases, and are less than 75% complete.
- New Hampshire--Superior Court--Grand total filed data do not include some criminal appeals cases.
--District Court--Grand total filed data do not include limited felony cases. Disposed data do not include criminal, traffic and juvenile cases, are missing all civil casetypes except mental health, and are less than 75% complete.
--Municipal Court--Grand total filed data do not include limited felony cases.
- New Mexico--Metropolitan Court of Bernalillo County--Grand total filed data do not include limited felony cases. Disposed data do not include limited felony and miscellaneous traffic cases.
- New York--District and City Courts--Grand total filed and disposed data do not include civil appeals cases.
--Civil Court of the City of New York--Grand total filed and disposed data do not include civil appeals cases.
--Criminal Court of the City of New York--Grand total filed and disposed data do not include moving traffic, miscellaneous traffic, and some ordinance violation cases.
--Surrogates' Court--Grand total disposed data do not include miscellaneous estate cases, and are less than 75% complete.
- North Carolina--District Court--Grand total filed and disposed data do not include limited felony cases.
- North Dakota--County Court--Grand total filed and disposed data do not include limited felony cases.
--Municipal Court--Grand total disposed data do not include ordinance violation and parking cases, and are less than 75% complete.
- Oklahoma--District Court--Grand total filed and disposed data do not include any juvenile cases.
- Oregon--District Court--Grand total filed and disposed data do not include felony and parking cases.
- Pennsylvania--Court of Common Pleas--Grand total data do not include some civil cases and postconviction criminal appeals.
--Pittsburgh City Magistrates Court--Grand total filed data do not include limited felony cases.
- Rhode Island--District Court--Grand total filed and disposed data do not include administrative agency appeals, mental health, and limited felony cases.
--Family Court--Grand total filed data do not include paternity/bastardy cases. Disposed data do not include most marriage dissolution cases and all paternity/bastardy cases, and are less than 75% complete.
- South Carolina--Magistrate Court--Grand total filed and disposed data do not include limited felony cases.
--Municipal Court--Grand total filed and disposed data do not include limited felony cases.
- South Dakota--Circuit Court--Grand total disposed data do not include adoption, miscellaneous domestic relations, estate, mental health, administrative agency appeals, and juvenile data.
- Texas--Justice of the Peace Court--Grand total filed and disposed data do not include limited felony cases and represent a reporting rate of 80%.
--Municipal Court--Grand total filed and disposed data do not include limited felony cases and represent a reporting rate of 77%.
- Utah--Justice Court--Grand total filed and disposed data do not include limited felony cases.
- Washington--District Court--Grand total filed and disposed data do not include limited felony cases.
- West Virginia--Magistrate Court--Grand total filed and disposed data do not include limited felony cases.
- Wisconsin--Municipal Court--Grand total disposed data do not include data from several municipalities.
- Wyoming--County Court--Grand total filed data do not include limited felony cases. Disposed data do not include appeals of trial court cases, felony and criminal appeals cases.
--Justice of the Peace Court--Grand total filed and disposed data do not include limited felony cases.
- B: The following courts' data are overinclusive:
- Alabama--Circuit Court--Grand total filed and disposed data include postconviction remedy proceedings.
--District Court--Grand total filed and disposed data include preliminary hearing proceedings.
- Arkansas--Circuit Court--Grand total disposed data include postconviction remedy and probation revocation proceedings.
- California--Justice Court--Grand total filed and disposed data include preliminary hearing bindovers and transfers.
--Municipal Court--Grand total filed and disposed data include preliminary hearing bindovers and transfers.
- Colorado--District, Denver Juvenile, and Denver Probate Courts--Grand total filed and disposed data include extraditions, revocations, parole, and release from commitment hearings.
- Delaware--Superior Court--Grand total filed and disposed data include postconviction remedy proceedings.
- Hawaii--Circuit Court--Grand total filed and disposed data include criminal postconviction remedy proceedings.
- Illinois--Circuit Court--Grand total filed and disposed data include preliminary hearing proceedings.
- Iowa--District Court--Grand total filed data include postconviction remedy proceedings.
- Kentucky--Circuit Court--Grand total filed and disposed data include sentence review only and postconviction remedy proceedings.
- Louisiana--District Court--Grand total filed data include postconviction remedy proceedings.
- Maine--Superior Court--Grand total filed and disposed data include postconviction remedy and sentence review only proceedings.
--District Court--Grand total filed and disposed data include preliminary hearing proceedings.
- Maryland--Circuit Court--Grand total filed and disposed data include some postconviction remedy proceedings.
- Nebraska--District Court--Grand total filed and disposed data include postconviction remedy proceedings.
- New Mexico--District Court--Grand total filed and disposed data include postconviction remedy proceedings.
--Magistrate Court--Grand total filed and disposed data include preliminary hearing proceedings.
- North Dakota--District Court--Grand total filed and disposed data include sentence review only and postconviction remedy proceedings.
- Ohio--Court of Common Pleas--Grand total filed and disposed data include postconviction remedy proceedings.
- Oregon--Circuit Court--Grand total filed data include postconviction remedy proceedings.
--Justice Court--Grand total filed and disposed data include preliminary hearing proceedings.
- Pennsylvania--Philadelphia Municipal Court--Grand total filed and disposed data include preliminary hearing proceedings.
- Puerto Rico--District Court--Grand total filed and disposed data include transfers and reopened cases.
- Rhode Island--Superior Court--Grand total filed and disposed data include postconviction remedy proceedings.
- South Carolina--Circuit Court--Grand total filed and disposed data include postconviction remedy proceedings.

TABLE 8: Reported Grand Total State Trial Court Caseload, 1988. (continued)

Texas--District Court--Grand total filed and disposed data include some other proceedings (i.e., motions to revoke, etc.)

Utah--District Court--Grand total filed data include postconviction remedy and sentence review only proceedings.

--Circuit Court--Grand total filed data include postconviction remedy proceedings.

Washington--Superior Court--Grand total filed and disposed data include postconviction remedy proceedings.

West Virginia--Circuit Court--Grand total filed and disposed data include postconviction remedy proceedings.

Wyoming--District Court--Grand total filed and disposed data include postconviction remedy proceedings.

C: The following courts' data are incomplete and overinclusive:

Alaska--Superior Court--Grand total filed and disposed data include postconviction remedy proceedings, but do not include criminal appeals cases.

Connecticut--Superior Court--Grand total filed data include postconviction remedy proceedings, but do not include some miscellaneous domestic relations cases. Grand total disposed data include postconviction remedy proceedings, but do not include some miscellaneous domestic relations, and most small claims cases.

Idaho--District Court--Grand total filed and disposed data include postconviction remedy and sentence review only proceedings, but do not include parking cases.

Iowa--District Court--Grand total disposed data include postconviction remedy proceedings, but do not include juvenile cases and a few domestic relations cases.

Kentucky--District Court--Grand total filed and disposed data include sentence review only proceedings, but do not include limited felony cases.

Missouri--Circuit Court--Grand total filed and disposed data include postconviction remedy proceedings, but do not include some ordinance violation and some parking cases.

New York--Supreme and County Courts--Grand total filed and disposed data include postconviction remedy proceedings, but do not include civil appeals and criminal appeals cases.

Oregon--Circuit Court--Grand total disposed data include postconviction remedy proceedings, but do not include adoption, mental health, and juvenile cases.

Puerto Rico--Superior Court--Grand total filed and disposed data include transfers and reopened cases, but do not include URESA cases.

Tennessee--Circuit, Criminal, and Chancery Courts--Grand total filed data include postconviction remedy proceedings, but do not include traffic/other violation cases. Disposed data include postconviction remedy proceedings, but do not include DW/DUI, and traffic/other violation cases.

Utah--District Court--Grand total disposed data include postconviction remedy and sentence review only proceedings, but are incomplete due to conversion from a manual to an automated data system which, at present, is incomplete.

--Circuit Court--Grand total disposed data include postconviction remedy proceedings, but are incomplete due to conversion from a manual to an automated data system which, at present, is incomplete.

TABLE 9: Reported Total State Trial Court Civil Caseload, 1988. (continued)

NOTE: The trial courts of Mississippi are not included in this table as neither civil caseload nor court jurisdiction information is available for 1988. All other state trial courts with civil jurisdiction are listed in the table regardless of whether caseload data are available. Blank spaces in the table indicate that a particular calculation, such as the total state caseload, is not appropriate. State total "filings per 100,000 population" may not equal the sum of the filing rates for the individual courts due to rounding.

NA= Data are not available

JURISDICTION CODES:

G = General Jurisdiction
L = Limited Jurisdiction

SUPPORT/CUSTODY CODES:

- 1 = The court does not have jurisdiction over support/custody cases
- 2 = Support/custody caseload data are not available
- 3 = Only contested support/custody cases and all URESA cases (where the court has jurisdiction) are counted separately from marriage dissolution cases
- 4 = Both contested and uncontested support/custody cases and URESA cases (where the court has jurisdiction) are counted separately from marriage dissolution cases
- 5 = Support/custody is counted as a proceeding of the marriage dissolution and thus a marriage dissolution that involves support/custody is counted as one case
- 6 = Support/custody is counted as a proceeding of the marriage dissolution but URESA cases are counted separately

**Nondissolution support/custody cases are also counted separately

***Court has only URESA jurisdiction

QUALIFYING FOOTNOTES:

The absence of a qualifying footnote indicates that data are complete.

*See the qualifying footnote for each court within the state. Each footnote has an impact on the state's total.

A: The following courts' data are incomplete:

- Arkansas--County Court--Total civil filed and disposed data do not include real property rights, miscellaneous domestic relations, and miscellaneous civil cases.
--Municipal Court--Total civil filed and disposed data do not include data from 10 municipalities, and partial data from 21 others.
- Colorado--County Court--Total civil filed and disposed data do not include cases from Denver County.
- Georgia--Magistrate Court--Total civil filed and disposed data do not include any cases from 19 of 159 counties, and partial data from 11 counties.
--Probate Court--Total civil filed data include cases from 75 of 159 counties, and are less than 75% complete.
--State Court--Total civil filed and disposed data include cases from 24 of 63 courts, and are therefore less than 75% complete.
- Indiana--Superior and Circuit Courts--Total civil filed and disposed data do not include civil appeals, miscellaneous domestic relations, and some support/custody cases.
--Probate Court--Total civil filed and disposed data

do not include miscellaneous domestic relations cases.

--Municipal Court of Marion County--Total civil filed and disposed data do not include appeals of trial court cases.

Kentucky--District Court--Total civil filed and disposed data do not include paternity/bastardy cases.

Massachusetts--Trial Court of the Commonwealth--Total civil disposed data do not include real property rights and small claims cases from the Housing Court Department and miscellaneous civil cases from the Probate/Family Court Department.

Michigan--Probate Court--Total civil disposed data do not include paternity/ bastardy, miscellaneous domestic relations, mental health, and miscellaneous civil cases, and are less than 75% complete.

Montana--District Court--Total civil filed and disposed data do not include some appeals of trial court cases.

Nebraska--District Court--Total civil filed and disposed data do not include civil appeals.

New Hampshire--District Court--Total civil disposed data do not include tort, contract, real property rights, small claims, and miscellaneous domestic relations cases, and are less than 75% complete.

New Jersey--Superior Court--Total civil filed and disposed data do not include a few domestic relations cases.

New York--District and City Courts--Total civil filed and disposed data do not include civil appeals cases.

--Civil Court of the City of New York--Total civil filed and disposed data do not include civil appeals cases.

--Surrogates' Court--Total civil disposed data do not include miscellaneous estate cases, and are less than 75% complete.

Pennsylvania--Court of Common Pleas--Total civil data do not include some unclassified civil cases.

--Philadelphia Municipal Court--Total civil filed and disposed data do not include miscellaneous domestic relations cases.

Rhode Island--District Court--Total civil filed and disposed data do not include administrative agency appeals and mental health cases.

--Family Court--Total civil filed data do not include paternity/bastardy and adoption cases. Disposed data do not include most marriage dissolution cases, all adoption and paternity/bastardy cases, and are less than 75% complete.

South Dakota--Circuit Court--Total civil disposed data do not include adoption, miscellaneous domestic relations, estate, mental health, and administrative agency appeals cases.

Texas--Justice of the Peace Court--Total civil filed and disposed data represent a reporting rate of 80%.

--Municipal Court--Total civil filed and disposed data represent a reporting rate of 77%.

Utah--Circuit Court--Total civil disposed data do not include some cases. Conversion from a manual to an automated data system is incomplete and disposition data, at present, are incomplete.

Virginia--District Court--Total civil filed and disposed data do not include some mental health and some domestic relations cases.

Wyoming--County Court--Total civil disposed data do not include appeals of trial court cases.

B: The following courts' data are overinclusive:

Alaska--Superior Court--Total civil filed and disposed data include postconviction remedy proceedings.

Hawaii--Circuit Court--Total civil filed and disposed data include criminal postconviction remedy proceedings and some criminal and traffic/other violation cases.

Illinois--Circuit Court--Total civil filed and disposed data include miscellaneous criminal cases.

TABLE 9: Reported Total State Trial Court Civil Caseload, 1988. (continued)

Iowa--District Court--Total civil filed data include postconviction remedy proceedings.

Kentucky--Circuit Court--Total civil filed and disposed data include some postconviction remedy proceedings.

Louisiana--District Court--Total civil filed data include postconviction remedy proceedings.

Missouri--Circuit Court--Total civil filed data include postconviction remedy proceedings.

New Mexico--District Court--Total civil filed, and disposed data include postconviction remedy proceedings.

Ohio--Court of Common Pleas--Total civil filed and disposed data include postconviction remedy proceedings.

Oregon--Circuit Court--Total civil filed data include criminal appeals cases and postconviction remedy proceedings.

Rhode Island--Superior Court--Total civil filed and disposed data include postconviction remedy proceedings.

South Carolina--Circuit Court--Total civil filed and disposed data include criminal appeals and postconviction remedy proceedings.

Tennessee--Circuit, Criminal, and Chancery Court--Total civil filed and disposed data include postconviction remedy proceedings and miscellaneous criminal cases.

Texas--District Court--Total civil filed and disposed data include child-victim petition cases and some other proceedings.

--County-Level Courts--Total civil filed and disposed data include child-victim petition cases.

Utah--District Court--Total civil filed data include postconviction remedy proceedings.

Washington--Superior Court--Total civil filed and disposed data include postconviction remedy proceedings.

Wisconsin--Circuit Court--Total civil filed and disposed data include criminal appeals cases.

Wyoming--District Court--Total civil filed data include criminal appeals cases and postconviction remedy proceedings. Total civil disposed data include criminal appeals, juvenile cases and postconviction remedy proceedings.

C: The following courts' data are incomplete and overinclusive:

Alabama--Circuit Court--Total civil filed and disposed data include postconviction remedy proceedings, but do not include URESA cases.

Connecticut--Superior Court--Total civil filed data include postconviction remedy proceedings, but do not include some miscellaneous domestic relations cases. Disposed data include postconviction remedy proceedings, but do not include some miscellaneous domestic relations, most small claims cases, and are less than 75% complete.

Iowa--District Court--Total civil disposed data include postconviction remedy proceedings, but do not include a few domestic relations cases.

Missouri--Circuit Court--Total civil disposed data include postconviction remedy proceedings, but do not include adoption and miscellaneous domestic relations cases.

New York--Supreme and County Courts--Total civil filed and disposed data include postconviction remedy proceedings, but do not include civil appeals cases.

Oregon--Circuit Court--Total civil disposed data include criminal appeals and postconviction remedy proceedings, but do not include adoption and mental health cases.

Puerto Rico--Superior Court--Total civil filed and disposed data include transfers and reopened cases, but do not include URESA cases.

--District Court--Total civil filed and disposed data include transfers and reopened cases, but do not include small claims cases.

Utah--District Court--Total civil disposed data include postconviction remedy proceedings, but do not include some cases. Conversion from a manual to an automated data system is incomplete, and disposition data, at present, is incomplete.

TABLE 10: Reported Total State Trial Court Criminal Caseload, 1988. (continued)

NOTE: The trial courts of Mississippi are not included in this table, as neither criminal caseload nor court jurisdiction information is available for 1988. All other state trial courts with criminal jurisdiction are listed in the table regardless of whether caseload data are available. Blank spaces in the table indicate that a particular calculation, such as the total state caseload, is not appropriate. State total "filings per 100,000 population" may not equal the sum of the filing rates for the individual courts due to rounding.

NA = Data are not available.

JURISDICTION CODES:

G = General Jurisdiction
L = Limited Jurisdiction

UNIT OF COUNT CODES:

M = Missing Data
I = Data element is inapplicable
A = Single defendant-single charge
B = Single defendant-single incident (one/more charges)
C = Single defendant-single incident/maximum number charges (usually two)
D = Single defendant-one/more incidents
E = Single defendant-content varies with prosecutor
F = One/more defendants-single charge
G = One/more defendants-single incident (one/more charges)
H = One/more defendants-single incident/maximum number charges (usually two)
J = One/more defendants-one/more incidents
K = One/more defendants-content varies with prosecutor
L = Inconsistent during reporting year
Z = Both the defendant and charge components vary within the state

POINT OF FILING CODES:

M = Missing Data
I = Data element is inapplicable
A = At the filing of the information/indictment
B = At the filing of the complaint
C = When defendant enters plea/initial appearance
D = When docketed
E = At issuing of warrant
F = At filing of information/complaint
G = Varies (at filing of the complaint, information, indictment)

QUALIFYING FOOTNOTES:

The absence of a qualifying footnote indicates that data are complete.

*See the qualifying footnote for each court within the state. Each footnote has an impact on the state's total.

- A: The following courts' data are incomplete:
 - Alaska--Superior Court--Total criminal filed and disposed data do not include criminal appeals cases.
 - Arizona--Justice of the Peace Court--Total criminal filed and disposed data do not include limited felony cases.
 - Delaware--Court of Common Pleas--Total criminal filed and disposed data do not include most felony cases.
 - Justice of the Peace Court--Total criminal filed and disposed data do not include most DW/DUI cases.

District of Columbia--Superior Court--Total criminal

filed and disposed data do not include DW/DUI cases. Georgia--Probate Court--Total criminal filed and disposed data include cases from 75 of 159 counties, do not include DW/DUI cases, which are reported with traffic/other violation data, and are less than 75% complete.

--State Court--Total criminal filed and disposed data include cases from 24 of 63 courts, do not include some DW/DUI cases, which are reported with traffic/other violation data, and are less than 75% complete.

Hawaii--Circuit Court--Total criminal filed and disposed data do not include reopened prior cases.

--District Court--Total criminal filed and disposed data do not include some misdemeanor cases.

Indiana--Superior and Circuit Courts--Total criminal filed and disposed data do not include criminal appeals cases.

Iowa--District Court--Total criminal filed and disposed data do not include some misdemeanor cases.

Kansas--Municipal Court--Total criminal filed and disposed data represent 119 of 390 municipal courts.

Louisiana--District Court--This figure is estimated by the State Court Administrator's Office on the basis that 75% of criminal cases reported are traffic cases. Filed data do not include DW/DUI cases.

Maryland--District Court--Total criminal disposed data do not include DW/DUI cases.

Massachusetts--Trial Court of the Commonwealth--Total criminal filed data do not include some misdemeanor and some DW/DUI cases. Disposed data do not include felony, misdemeanor, DW/DUI, miscellaneous criminal and some criminal appeals cases, and are less than 75% complete.

Nevada--District Court--Total criminal filed data do not include felony, misdemeanor, DW/DUI, and miscellaneous criminal cases, and are less than 75% complete.

New Hampshire--Superior Court--Total criminal filed data do not include some criminal appeals cases.

--District Court--Total criminal filed data do not include limited felony cases.

--Municipal Court--Total criminal filed data do not include limited felony cases.

New York--Supreme and County Courts--Total criminal filed and disposed data do not include criminal appeals cases.

--Criminal Court of the City of New York--Total criminal filed and disposed data do not include limited felony cases.

North Dakota--County Court--Total criminal filed and disposed data do not include limited felony cases.

Oregon--Circuit Court--Total criminal filed and disposed data do not include criminal appeals cases.

--District Court--Total criminal filed and disposed data do not include limited felony cases.

Pennsylvania--Court of Common Pleas--Total criminal filed and disposed data do not include some criminal appeals cases.

South Carolina--Circuit Court--Total criminal filed and disposed data do not include criminal appeals cases.

--Municipal Court--Total criminal filed data do not include limited felony cases.

South Dakota--Circuit Court--Total criminal disposed data do not include most misdemeanor and some criminal appeals cases, and are less than 75% complete.

Tennessee--Circuit, Criminal, and Chancery Courts--Total criminal filed data do not include miscellaneous criminal cases. Disposed data do not include DW/DUI and miscellaneous criminal cases.

Texas--County-Level Courts--Total criminal disposed data do not include some criminal appeals cases.

TABLE 10: Reported Total State Trial Court Criminal Caseload, 1988. (continued)

- Justice of the Peace Court--Total criminal filed and disposed data do not include limited felony cases and represent a reporting rate of 80%.
 - Municipal Court--Total criminal filed and disposed data do not include limited felony cases and represent a 77% reporting rate.
 - Virginia--District Court--Total criminal filed and disposed data do not include DW/DUI cases.
 - Washington--District Court--Total criminal filed and disposed data do not include limited felony cases.
 - West Virginia--Magistrate Court--Total criminal filed and disposed data do not include limited felony cases.
 - Wisconsin--Circuit Court--Total criminal filed and disposed data do not include any criminal appeals cases, or DW/DUI cases from District 1.
 - Wyoming--District Court--Total criminal filed and disposed data do not include criminal appeals cases.
 - County Court--Total criminal filed data do not include limited felony cases.
 - Justice of the Peace Court--Total criminal filed data do not include limited felony cases.
- B: The following courts' data are overinclusive:**
- Alabama--Circuit Court--Total criminal filed and disposed data include postconviction remedy proceedings.
 - District Court--Total criminal filed and disposed data include preliminary hearing proceedings.
 - Alaska--District Court--Total criminal filed and disposed data include some moving traffic cases and all ordinance violation cases.
 - Arkansas--Circuit Court--Total criminal disposed data include postconviction remedy and probation revocation proceedings.
 - City Court--Total criminal filed and disposed data include ordinance violation cases.
 - Colorado--District, Denver Juvenile, and Denver Probate Courts--Total criminal filed and disposed data include extraditions, revocations, parole, and release from commitment hearings.
 - Delaware--Superior Court--Total criminal filed and disposed data include postconviction remedy proceedings.
 - Alderman's Court--Total criminal filed and disposed data include ordinance violation cases.
 - Georgia--Superior Court--Total criminal filed and disposed data include all traffic/other violation cases.
 - Idaho--District Court--Total criminal filed and disposed data include ordinance violations, postconviction remedy and sentence review only proceedings.
 - Indiana--City and Town Courts--Total criminal filed and disposed data include some ordinance violation and some other traffic cases.
 - Kentucky--Circuit Court--Total criminal filed and disposed data include sentence review only and some postconviction remedy proceedings.
 - Maryland--Circuit Court--Total criminal filed and disposed data include some postconviction remedy proceedings.
 - Montana--District Court--Total criminal filed data include appeals of trial court cases. Disposed data include all civil appeals cases.
 - Nebraska--District Court--Total criminal filed and disposed data include civil appeals cases and postconviction remedy proceedings.
 - New Mexico--Magistrate Court--Total criminal filed and disposed data include preliminary hearing proceedings.
 - New York--District and City Courts--Total criminal filed and disposed data include ordinance violation cases.
 - North Dakota--District Court--Total criminal filed and disposed data include sentence review only and postconviction remedy proceedings.
 - Ohio--County Court--Total criminal filed and disposed data include ordinance violation cases.
 - Municipal Court--Total criminal filed and disposed data include ordinance violation cases.
 - Oklahoma--District Court--Total criminal filed and disposed data include ordinance violation cases.
 - Oregon--Justice Court--Total criminal filed and disposed data include preliminary hearings.
 - Pennsylvania--District Justice Court--Total criminal filed and disposed data include ordinance violation cases.
 - Puerto Rico--Superior Court--Total criminal filed and disposed data include transfers and reopened cases.
 - Texas--District Court--Total criminal filed data include some other proceedings.
 - Utah--District Court--Total criminal filed data include postconviction remedy and all sentence review only proceedings.
 - Vermont--District Court--Total criminal filed and disposed data include ordinance violation cases.
 - Virginia--Circuit Court--Total criminal filed and disposed data include ordinance violation cases.
 - West Virginia--Circuit Court--Total criminal filed and disposed data include postconviction remedy proceedings.
- C: The following courts' data are incomplete and overinclusive:**
- Arkansas--Municipal Court--Total criminal filed and disposed data include ordinance violation cases, but do not include felony cases and data from several municipalities.
 - California--Justice Court--Total criminal filed and disposed data include preliminary hearing bindovers and transfers, and some ordinance violation cases, but do not include DW/DUI cases.
 - Municipal Court--Total criminal filed and disposed data include preliminary hearing bindovers and transfers and some ordinance violation cases, but do not include DW/DUI cases.
 - Colorado--County Court--Total criminal filed and disposed data include some preliminary hearings, but do not include DW/DUI cases.
 - Connecticut--Superior Court--Total criminal filed and disposed data include ordinance violation cases, but do not include DW/DUI cases.
 - Delaware--Municipal Court of Wilmington--Total criminal filed and disposed data include ordinance violation cases, but do not include limited felony and most DW/DUI cases.
 - Illinois--Circuit Court--Total criminal filed and disposed data include some preliminary hearings and some ordinance violation cases, but do not include DW/DUI and miscellaneous criminal cases.
 - Kentucky--District Court--Total criminal filed and disposed data include ordinance violation cases and sentence review only proceedings, but do not include limited felony cases.
 - Louisiana--City and Parish Courts--Total criminal filed and disposed data include ordinance violation cases, but do not include DW/DUI cases and are less than 75% complete.
 - Maine--Superior Court--Total criminal filed and disposed data include ordinance violation cases, and postconviction remedy and sentence review only proceedings, but do not include DW/DUI and some criminal appeals cases.
 - District Court--Total criminal filed and disposed data include preliminary hearings, do not include DW/DUI and some misdemeanor cases, and are less than 75% complete.
 - Michigan--District Court--Total criminal filed and disposed data include ordinance violation cases, but do not include DW/DUI cases.
 - Municipal Court--Total criminal filed and disposed data include ordinance violation cases, but do not include DW/DUI cases.

TABLE 10: Reported Total State Trial Court Criminal Caseload, 1988. (continued)

Minnesota--District Court--Total criminal filed and disposed data include ordinance violation cases, but do not include some DW/DUI cases. Nebraska--County Court--Total criminal filed and disposed data include ordinance violations, but do not include limited felony cases.

New Mexico--Metropolitan Court of Bernalillo County--Total criminal filed and disposed data include ordinance violation cases, but do not include limited felony cases.

North Carolina--District Court--Total criminal filed and disposed data include ordinance violations, but do not include limited felony cases.

Oregon--Municipal Court--Total criminal filed and disposed data include ordinance violation cases, but do not include DW/DUI cases.

Pennsylvania--Philadelphia Municipal Court--Total criminal filed and disposed data include preliminary hearing proceedings, but do not include some misdemeanor cases.

--Pittsburgh City Magistrates--Total criminal filed data include ordinance violation cases, but do not include limited felony cases.

Puerto Rico--District Court--Total criminal filed and disposed data include transfers and reopened cases, and ordinance violation cases, but do not include limited felony and DW/DUI cases.

Rhode Island--District Court--Total criminal filed and disposed data include moving traffic violation and ordinance violation cases, but do not include limited felony cases.

South Carolina--Magistrate Court--Total criminal filed and disposed data include miscellaneous juvenile cases, but do not include felony and DW/DUI cases, and are less than 75% complete. (Filed data were estimated using percentages provided by the AOC).

Utah--District Court--Total criminal disposed data include postconviction remedy and sentence review only proceedings, but do not include some cases. Conversion from a manual to an automated data system is incomplete, and the disposition data, at present, is incomplete.

--Circuit Court--Total criminal filed and disposed data include postconviction remedy proceedings, but do not include some miscellaneous criminal cases. Disposed data do not include some cases due to conversion from a manual to an automated data system. The conversion process is incomplete, rendering the disposition data incomplete at the present time.

--Justice Court--Total criminal filed and disposed data include some moving traffic violation cases, but do not include limited felony cases.

TABLE 11: Reported Total State Trial Court Traffic/Other Violation Caseload, 1988. (continued)

NOTE: Parking violations are defined as part of the traffic/other violation caseload. However, states and courts within a state differ to the extent in which parking violations are processed through the courts. A code opposite the name of each court indicates the manner in which parking cases are reported by the court. Qualifying footnotes in Table 11 do not repeat the information provided by the code, and thus refer only to the status of the statistics on moving traffic, miscellaneous traffic, and ordinance violations. The trial courts of Mississippi are not included in this table as neither traffic/other violation caseload nor court jurisdiction information is available for 1988. All other state trial courts with traffic/other violation jurisdiction are listed in the table regardless of whether caseload data are available. Blank spaces in the table indicate that a particular calculation, such as the total state caseload, is not appropriate. State total "filings per 100,000 population" may not equal the sum of the filing rates for the individual courts due to rounding.

NA = Data are not available.

JURISDICTION CODES:

G = General Jurisdiction
L = Limited Jurisdiction

PARKING CODES:

- 1 = Parking data are unavailable
- 2 = Court does not have parking jurisdiction
- 3 = Only contested parking cases are included
- 4 = Both contested and uncontested parking cases are included
- 5 = Parking cases are handled administratively
- 6 = Uncontested parking cases are handled administratively; contested parking cases are handled by the Court

QUALIFYING FOOTNOTES:

The absence of a qualifying footnote indicates that data are complete.

*See the qualifying footnote for each court within the state. Each footnote has an impact on the state's total.

A: The following courts' data are incomplete:

- Alaska--District Court--Total traffic/other violation filed and disposed data do not include some moving traffic violation cases and all ordinance violation cases.
- Arkansas--City Court--Total traffic/other violation filed and disposed data do not include ordinance violation cases.
--Municipal Court--Total traffic/other violation filed and disposed data do not include ordinance violation cases, and are missing all data from 10 municipalities, and partial data from 21 others.
- Delaware--Alderman's Court--Total traffic/other violation filed and disposed data do not include ordinance violation cases.
- Georgia--Magistrate Court--Total traffic/other violation filed and disposed data do not include any cases from 19 counties, and partial data from 11 counties.
- Hawaii--Circuit Court--Total traffic/other violation filed and disposed data do not include reopened prior cases.
- Idaho--District Court--Total traffic/other violation filed and disposed data do not include ordinance violation and parking cases, and are less than 75% complete.
- Indiana--City and Town Courts--Total traffic/other violation filed and disposed data do not include

- some ordinance violation and some other traffic cases.
- Kansas--District Court--Total traffic/ other violation filed and disposed data do not include juvenile traffic cases.
--Municipal Court--Total traffic/other violation data represent 119 of 390 municipal courts.
- Kentucky--District Court--Total traffic/other violation filed and disposed data do not include ordinance violation cases.
- Maryland--District Court--Total traffic/other violation filed data do not include ordinance violation and parking cases, and are less than 75% complete.
- Missouri--Circuit Court--Total traffic/other violation filed and disposed data do not include ordinance violation and parking cases heard by Municipal Judges.
- Nebraska--County Court--Total traffic/other violation data do not include ordinance violation and parking cases.
- New Mexico--Metropolitan Court of Bernalillo County--Total traffic/other violation filed data do not include ordinance violation cases. Disposed data do not include ordinance violation and miscellaneous traffic cases.
- New York--District and City Courts--Total traffic/other violation filed and disposed data do not include ordinance violation cases.
--Criminal Court of the City of New York--Total traffic/other violation filed and disposed data do not include moving traffic, miscellaneous traffic, and some ordinance violation cases, and are less than 75% complete.
- North Carolina--District Court--Total traffic/other violation filed and disposed data do not include ordinance violation cases.
- North Dakota--County Court--Total traffic/other violation data do not include parking cases, and are less than 75% complete.
- Ohio--County Court--Total traffic/other violation filed and disposed data do not include ordinance violation cases.
--Municipal Court--Total traffic/other violation filed and disposed data do not include ordinance violation cases.
- Oklahoma--District Court--Total traffic/other violation filed and disposed data do not include ordinance violation cases.
- Oregon--District Court--Total traffic/other violation filed and disposed data do not include parking cases.
- Pennsylvania--District Justice Court--Total traffic/other violation filed and disposed data do not include ordinance violation cases.
--Pittsburgh City Magistrates--Total traffic/other violation filed data do not include ordinance violation cases.
- Texas--Justice of the Peace Court--Total traffic/other violation filed and disposed data do not include some cases due to a reporting rate of 80%.
--Municipal Court--Total traffic/other violation filed and disposed data do not include some cases due to a reporting rate of 77%.
- Utah--Justice Court--Total traffic/other violation filed and disposed data do not include some moving traffic cases.
- Vermont--District Court--Total traffic/other violation filed and disposed data do not include ordinance violation cases.

B: The following courts' data are overinclusive:

- Colorado--County Court--Total traffic/other violation filed and disposed data include DWI/DUI cases.
- Delaware--Justice of the Peace Court--Total traffic/other violation filed and disposed data include most of the DWI/DUI cases.

TABLE 11: Reported Total State Trial Court Traffic/Other Violation Caseload, 1988. (continued)

District of Columbia--Superior Court--Total traffic/other violation filed and disposed data include DWI/DUI cases.

Hawaii--District Court--Total traffic/other violation filed and disposed data include some misdemeanor cases.

Iowa--District Court--Total traffic/other violation filed and disposed data include some misdemeanor cases.

Louisiana--District Court--This figure is estimated by the State Court Administrator's Office on the basis that 75% of criminal cases reported (359,588) are traffic cases. Data include DWI/DUI cases.

Maine--District Court--Total traffic/other violation filed and disposed data include some misdemeanor and all DWI/DUI cases.

Pennsylvania--Philadelphia Municipal Court--Total traffic/other violation filed and disposed data include miscellaneous domestic relations and some misdemeanor cases.

South Carolina--Magistrate Court--Total traffic/other violation filed and disposed data include DWI/DUI cases.

--Municipal Court--Total traffic/other violation disposed data include misdemeanor and DWI/DUI cases.

South Dakota--Circuit Court--Total traffic/other violation disposed data include some misdemeanor and some criminal appeals cases.

Texas--County-Level Courts--Total traffic/other violation disposed data include some criminal appeals cases.

Utah--Circuit Court--Total traffic/other violation filed data include some miscellaneous criminal cases.

Virginia--District Court--Total traffic/other violation filed and disposed data include DWI/DUI cases.

Wyoming--County Court--Total traffic/other violation disposed data include misdemeanor and DWI/DUI cases.

--Justice of the Peace Court--Total traffic/other violation disposed data include misdemeanor, DWI/DUI, and criminal appeals cases.

Maine--Superior Court--Total traffic/other violation filed and disposed data include DWI/DUI and some criminal appeals cases, but do not include ordinance violation cases.

Maryland--District Court--Total traffic/other violation disposed data include DWI/DUI cases, but do not include ordinance violation and parking cases, and are less than 75% complete.

Massachusetts--Trial Court of the Commonwealth--Total traffic/other violation filed data include some misdemeanor and some DWI/DUI cases, but do not include parking cases. Disposed data include some misdemeanor cases, but do not include ordinance violation, parking, miscellaneous traffic and some moving traffic cases.

Michigan--District Court--Total traffic/other violation filed and disposed data include DWI/DUI cases, but do not include ordinance violation cases.

--Municipal Court--Total traffic/other violation filed and disposed data include DWI/DUI cases, but do not include ordinance violation cases.

Minnesota--District Court--Total traffic/other violation filed and disposed data include some DWI/DUI cases, but do not include ordinance violation cases.

North Dakota--Municipal Court--Total traffic/other violation disposed data include DWI/DUI cases, but do not include ordinance violation and parking cases, and are less than 75% complete.

Oregon--Municipal Court--Total traffic/other violation filed and disposed data include DWI/DUI cases, but do not include ordinance violation cases.

Puerto Rico--District Court--Total traffic/other violation filed and disposed data include DWI/DUI cases, transfers, and reopened cases, but do not include ordinance violation cases.

Utah--Circuit Court--Total traffic/other violation disposed data include some miscellaneous criminal cases, but do not include some cases. Conversion from a manual to an automated data system is incomplete and the disposition data, at present, are incomplete.

Wisconsin--Municipal Court--Total traffic/other violation disposed data include DWI/DUI cases, but do not include cases from several municipalities.

C: The following courts' data are incomplete and overinclusive:

California--Justice Court--Total traffic/other violation filed and disposed data include DWI/DUI cases, but do not include some ordinance violation cases.

--Municipal Court--Total traffic/other violation filed and disposed data include DWI/DUI cases, but do not include some ordinance violation cases.

Connecticut--Superior Court--Total traffic/other violation filed and disposed data include DWI/DUI cases, but do not include ordinance violation cases.

Delaware--Municipal Court of Wilmington--Total traffic/other violation filed and disposed data include most DWI/DUI cases, but do not include ordinance violation cases.

Georgia--State Court--Total traffic/other violation filed and disposed data include some DWI/DUI cases, represent data from 24 of 63 courts, and are less than 75% complete.

--Probate Court--Total traffic/other violation filed and disposed data include DWI/DUI cases, represent data from 75 of 159 counties, and are less than 75% complete.

Illinois--Circuit Court--Total traffic/other violation filed and disposed data include DWI/DUI cases, but do not include ordinance violation cases from Cook County and parking cases from anywhere but Cook County.

Louisiana--City and Parish Court--Total traffic/other violation filed and disposed data include DWI/DUI cases, but do not include ordinance violation cases.

TABLE 12: Reported Total State Trial Court Juvenile Caseload, 1988. (continued)

NOTE: The trial courts of Mississippi are not included in this table as neither juvenile caseload nor court jurisdiction information is available for 1988. All other state trial courts with juvenile jurisdiction are listed in the table regardless of whether caseload data are available. Blank spaces in the table indicate that a particular calculation, such as the total state caseload, is not appropriate. State total "filings per 100,000 population" may not equal the sum of the filing rates for the individual courts due to rounding.

NA = Data are not available.

JURISDICTION CODES:

G = General Jurisdiction
L = Limited Jurisdiction

POINT OF FILING CODES:

M = Missing Data
I = Data element is inapplicable
A = Filing of complaint
B = At initial hearing (intake)
C = Filing of petition
E = Issuance of warrant
F = At referral
G = Varies

QUALIFYING FOOTNOTES:

The absence of a qualifying footnote indicates that data are complete.

*See the qualifying footnote for each court within the state. Each footnote has an impact on the state's total.

A: The following courts' data are incomplete:

Delaware--Family Court--Total juvenile filed and disposed data do not include status petition and child-victim petition cases, and are less than 75% complete.

Texas--District Court--Total juvenile filed and disposed data do not include child-victim petition cases.

--County-Level Court--Total juvenile filed and disposed data do not include child-victim petition cases, and are less than 75% complete.

B: The following courts' data are overinclusive:

Alabama--Circuit Court--Total juvenile filed and disposed data include URESA cases.

Indiana--Superior and Circuit Courts--Total juvenile filed and disposed data include miscellaneous domestic relations and some support/custody cases.

--Probate Court--Total juvenile filed and disposed data include miscellaneous domestic relations cases.

Kansas--District Court--Total juvenile filed and disposed data include juvenile traffic/other violation cases.

Kentucky--District Court--Total juvenile filed and disposed data include paternity/bastardy cases.

Louisiana--Family and Juvenile Courts--Total juvenile filed data include support/custody, URESA, adoption, and mental health cases.

Missouri--Circuit Court--Total juvenile disposed data include adoption and miscellaneous domestic relations cases (i.e., termination of parental rights).

New Jersey--Superior Court--Total juvenile filed and disposed data include termination of parental rights cases.

North Dakota--District Court--Total juvenile disposed data include traffic/other violation cases.

Puerto Rico--Superior Court--Total juvenile filed and disposed data include transfers, reopened cases, and appeals.

Rhode Island--Family Court--Total juvenile filed and disposed data include adoption cases.

South Carolina--Family Court--Total juvenile filed and disposed data include traffic/other violation cases.

Virginia--District Court--Total juvenile filed and disposed data include some mental health and domestic relations cases.

C: The following courts' data are incomplete and overinclusive:

Massachusetts--Trial Court of the Commonwealth--Total juvenile disposed data include juvenile traffic/other violation cases, but do not include any cases from the Juvenile Court Department, and appeals from the District Court Department. The data are less than 75% complete.

Michigan--Probate Court--Total juvenile filed and disposed data include traffic/other violation cases, but do not include status petition cases.

TABLE 13: Mandatory Caseloads In State Appellate Courts, 1984-88. (continued)

COURT TYPE:

COLR = Court of last resort
 IAC = Intermediate appellate court

NOTE: NA indicates that the data are unavailable.

QUALIFYING FOOTNOTES:

An absence of a qualifying footnote indicates that the data are complete.

- A:** The following courts' data are incomplete:
- Arizona--Supreme Court--Data do not include mandatory judge disciplinary cases.
 - California--Supreme Court--Data do not include judge disciplinary cases.
 - Oklahoma--Supreme Court--Disposed data for 1984-1986 do not include mandatory appeals of final judgments, mandatory disciplinary cases and mandatory interlocutory decisions.
 - Pennsylvania--Commonwealth Court--Data do not include transfers from the Superior Court and Court of Common Pleas.
- B:** The following courts' data are overinclusive:
- Connecticut--Appellate Court--Data for 1984-1986 include a few discretionary petitions that were granted review.
 - Delaware--Supreme Court--Data include some discretionary petitions and filed data include discretionary petitions that were granted.
 - District of Columbia--Court of Appeals--Data for 1984 and 1985 include discretionary petitions that were granted and refiled as appeals.
 - Georgia--Supreme Court--Total mandatory filed data include a few discretionary petitions that were granted and refiled as appeals.
 - Court of Appeals--Total mandatory data include all discretionary petitions that were granted and refiled as appeals.
 - Hawaii--Supreme Court--Data include a few discretionary petitions granted.
 - Idaho--Supreme Court--Data include discretionary petitions that were granted.
 - Illinois--Appellate Court--Data include all discretionary petitions.
 - Indiana--Court of Appeals--Data include all discretionary petitions.

- Kansas--Court of Appeals--Filed data include a few discretionary petitions that were granted.
- Disposed data include all discretionary petitions.
- Louisiana--Supreme Court--Data for 1984 and 1985 include a few discretionary appeals.
- Courts of Appeal--Data for 1984 and 1985 include refiled discretionary petitions that are granted review.
- Maryland--Court of Appeals--Data include discretionary petitions that were granted, and refiled as appeals.
- Massachusetts--Appeals Court--Data include a few discretionary interlocutory decision petitions.
- Nebraska--Supreme Court--Data include discretionary petitions.
- New Jersey--Appellate Division of Superior Court--Data include all discretionary petitions that were granted.
- North Carolina--Court of Appeals--Mandatory filed data include a few discretionary petitions that were granted and refiled as appeals. Data include some cases where relief, not review, was granted.
- Oklahoma--Supreme Court--Data for 1987 and 1988 include granted discretionary petitions that were disposed.
- Oregon--Supreme Court--Disposed data include all discretionary petitions that were granted.
- Pennsylvania--Superior Court--Data include all discretionary petitions that were granted.
- South Dakota--Supreme Court--Data include discretionary advisory opinions.
- Vermont--Supreme Court--Data for 1984 include discretionary petitions that were granted and decided.
- Washington--Supreme Court--Data include some discretionary petitions.

- C:** The following courts' data are both incomplete and overinclusive:
- Arkansas--Supreme Court--Data include a few discretionary petitions, but do not include mandatory attorney disciplinary cases and certified questions from the federal courts.

TABLE 14: Discretionary Caseloads in State Appellate Courts, 1984-88. (continued)

COURT TYPE:

COLR = Court of last resort
IAC = Intermediate appellate court

QUALIFYING FOOTNOTES:

An absence of a qualifying footnote indicates that the data are complete.

- A: The following court's data are incomplete:
- Delaware--Supreme Court--Data do not include some discretionary interlocutory decision cases, which are reported with mandatory jurisdiction cases.
 - Kentucky--Supreme Court--Data for 1987 and 1988 do not include some discretionary unclassified petitions.
 - Louisiana--Supreme Court--Data for 1984 and 1985 do not include some discretionary petitions that are reported with mandatory jurisdiction caseload.

New Hampshire--Supreme Court--Data for 1984-1987 include discretionary judge disciplinary cases.
New Jersey--Supreme Court--Data do not include discretionary interlocutory decisions.
South Dakota--Supreme Court--Data do not include advisory opinions.
Washington--Supreme Court--Data do not include some cases which are reported with mandatory jurisdiction cases.

- B: The following courts' data are overinclusive:
- Arizona--Supreme Court--Data include mandatory judge disciplinary cases.
 - Michigan--Supreme Court--Disposed data include a few mandatory jurisdiction cases.

TABLE 15: Felony Caseloads in State Trial Courts, 1984-1988. (continued)

COURT TYPE:

- G = General Jurisdiction
- L = Limited Jurisdiction

NOTE: The footnoting scheme has been consolidated. Footnotes for 1984-1987 have been translated into the footnote scheme for 1988.

QUALIFYING FOOTNOTES:

A: The following courts' data are incomplete:
Arizona--Superior Court--Felony data do not include some cases reported with unclassified criminal data.
Delaware--Court of Common Pleas--Felony data do not include most cases which are reported with preliminary hearings.
Michigan--District Court--Felony data do not include cases from several courts which were unavailable.

B: The following courts' data are overinclusive:
Arkansas--Circuit Court--Felony data include DWI/DUI cases.
California--Superior Court--Felony data include DWI/DUI cases.
--Justice Court--Felony data include preliminary hearing bindovers and transfers.
--Municipal Court--Felony data include preliminary hearing bindovers and transfers.
Illinois--Circuit Court--Felony data include preliminary hearings for courts "downstate."
Indiana--Superior and Circuit Courts--Felony data include DWI/DUI cases.
--County Court--Felony data include DWI/DUI cases.
Iowa--District Court--Felony data include third offense DWI/DUI cases.
Missouri--Circuit Court--Felony data include some DWI/DUI cases and include preliminary hearing proceedings, which are included in the main caseload tables in caseload reports before 1987. The 1988 report excludes those preliminary hearing proceedings.

New York--Supreme and County Courts--Felony data include DWI/DUI cases.
North Dakota--District Court--Felony data include sentence review only and postconviction remedy proceedings.
Oklahoma--District Court--Felony data include some miscellaneous criminal cases.
Texas--District Court--Felony data include some other proceedings (e.g., motions to revoke).
West Virginia--Circuit Court--Felony data include postconviction remedy proceedings.

C: The following courts' data are incomplete and overinclusive:
Hawaii--Circuit Court--Felony data include misdemeanor cases, but do not include reopened prior cases.
Montana--District Court--Felony data include criminal appeals, but do not include some cases reported with unclassified criminal data.

*** Additional information:**
Connecticut--Superior Court--Figures for felony filings do not match those reported in the 1984, 1985 and 1986 State Court Caseload Statistics: Annual Reports. Felony filings have been adjusted to include only triable felonies so as to be comparable to 1987 and 1988 data.
Hawaii--Circuit Court--Figures for felony filings do not match those reported in the 1984, 1985 and 1986 State Court Caseload Statistics: Annual Reports. Misdemeanor cases have been included to allow comparability with 1987 and 1988 data.
Indiana--Superior and Circuit Courts--County Court--1985-1988 data are not comparable with previous years' figures due to changes in classification of County Court function.
New York--Supreme and County Courts--These courts experienced a significant increase in the number of filings due to the change to an individual calendaring system in 1986.

TABLE 16: Tort Caseloads in State Trial Courts, 1984-88. (continued)

NOTE: The footnoting scheme has been consolidated. Footnotes for 1984-1987 have been translated into the footnote scheme for 1988.

COURT TYPE:

G = General Jurisdiction
L = Limited Jurisdiction

QUALIFYING FOOTNOTES:

nc: The following courts' data are not comparable:
Alaska--Superior Court--District Court--The 1984 data are not comparable to the 1985, 1986, 1987, and 1988 data because torts are separated from the unclassified civil figure in significantly greater quantities during 1985, 1986, 1987 and 1988 than in previous years.

A: The following courts' data are incomplete:
Alaska--District Court--Data do not include filings in the low volume District Courts, which are reported with unclassified civil cases.
Florida--Circuit Court--Data do not include professional tort cases reported with other civil cases.
Hawaii--Circuit Court--Data do not include a small number of District Court transfers reported with other civil cases.
Idaho--District Court--Data do not include some filings reported with unclassified civil cases. The unclassified figures for 1984, 1985, 1986, 1987, and 1988 respectively are: 20,365, 20,644, 21,281, 22,202, and 24,226.

Maryland--Circuit Court--Data do not include some filings reported with unclassified civil cases. The unclassified figures for 1984, 1985, 1986, 1987 and 1988 respectively are: 827, 1,438, 976, 1,829, and 1,761.

Michigan--Circuit Court--Tort filings are unavailable in 1984 for Hillsdale County, Osceola County, Kalkaska County, and Delta County.

New Jersey--Superior Court--Data do not include some torts reported with unclassified civil cases. The unclassified figures for 1984, 1985, 1986, 1987, and 1988 respectively are: 38,025, 40,026, 46,865, 44,850, and 49,189.

B: The following courts' data are overinclusive:
Utah--District Court--Tort filings include de novo appeals from the Justice of the Peace Courts.

* Additional court information:
Colorado--District and Denver Superior Courts--The Denver Superior Court was abolished 11/14/86 and the caseload absorbed by the District Court.
Florida--Circuit Court--Figures for tort filings do not match those reported in the 1986, 1987, and 1988 State Court Caseload Statistics: Annual Reports. Professional tort cases have been removed so as to be comparable to 1984 and 1985 data.

Part IV
1988 State Court Structure Charts

1988 State Court Structure Charts

An Explanatory Note

The court structure charts summarize in a one-page diagram the key features of each state's court organization. The format meets two objectives: (1) it is comprehensive, indicating all court systems in the state and their interrelationships; and (2) it describes the jurisdiction of the court systems, using a comparable set of terminology and symbols. The court structure charts employ the common terminology developed by the NCSC's Court Statistics Project for reporting caseload statistics.

The first chart is a prototype. It represents a state court organization in which there is one of each of the four court system levels recognized by the Court Statistics Project: courts of last resort, intermediate appellate courts, general jurisdiction trial courts, and limited jurisdiction trial courts. Routes of appeal from one court to another are indicated by lines, with an arrow showing which court receives the appeal or petition.

The charts also provide basic descriptive information, such as the number of authorized justices, judges, and magistrates (or other judicial officers). Each court system's subject matter jurisdiction is indicated using the Court Statistics Project casetypes. Information is also provided on the use of districts, circuits, or divisions in organizing the courts within the system and the number of courts, where this coincides with a basic government unit.

The casetypes, which define a court system's subject matter jurisdiction, require the most explanation. This is done separately for appellate and trial court systems.

Appellate Courts

The rectangle representing each appellate court contains information on the number of authorized justices; the number of geographic divisions, if any, that are maintained; whether court decisions are made en banc, in panels, or both; and the Court Statistics Project casetypes that are heard by the court. The casetypes are shown separately for mandatory and discretionary cases. The casetypes themselves are defined in other Court Statistics Project publications, especially *1984 State Appellate Court Jurisdiction Guide for Statistical Reporting and State Court Model Statistical Dictionary: 1989 Edition*.

An appellate court can have both mandatory and discretionary jurisdiction over the same Court Statistics Project casetype. This arises, in part, because the Court Statistics Project casetypes are defined broadly in order to be applicable to every state's courts. There are, for example, only two appellate Court Statistics Project casetypes for criminal appeals: capital and noncapital. A court may have mandatory jurisdiction over felony cases but discretionary jurisdiction over misdemeanors. The listing of casetypes would include "criminal" for both mandatory and discretionary jurisdiction. The duplication of a casetype under both headings can also occur if appeals from one lower court for that casetype are mandatory, while appeals from another lower court are discretionary. Also, statutory provisions or court rules in some states automatically convert a mandatory appeal into a discretionary petition—for example, when an appeal is not filed within a specified time limit. A more comprehensive description of each appellate court's subject matter jurisdiction can be found in the *1984 State Appellate Court Jurisdiction Guide for Statistical Reporting*.

Trial Courts

The rectangle representing each trial court also lists the applicable Court Statistics Project casetypes. These include civil, criminal, traffic/other violation, and juvenile. Where a casetype is simply listed, it means that the court system shares jurisdiction over it with other courts. The presence of exclusive jurisdiction is always explicitly stated. The absence of a casetype from a list means that the court does not have that subject matter jurisdiction. The dollar amount jurisdiction is shown where there is an upper or a lower limit to the cases that can be filed in a court. A dollar limit is not listed if a court does not have a minimum or maximum dollar jurisdiction for general civil cases. In criminal cases, jurisdiction is distinguished between "triable felony," where the court can try a felony case to verdict and sentencing, and "limited felony," which applies to those limited jurisdiction courts that can conduct preliminary hearings that bind a defendant over for trial in a higher court.

Trial courts can have what is termed incidental appellate jurisdiction. The presence of such jurisdiction over

the decisions of other courts is noted in the list of casetypes as either "civil appeals," "criminal appeals," or "administrative agency appeals." A trial court that hears appeals directly from an administrative agency has an "A" in the upper right corner of the rectangle.

For each trial court, the chart states the authorized number of judges and whether the court can empanel a jury. The rectangle representing the court also indicates the number of districts, divisions, or circuits into which the court system is divided. These subdivisions are stated using the court system's own terminology. The descriptions, therefore are not standardized across states or court systems.

Trial courts are differentiated into those that are totally funded from local sources and those that receive some form of state funds. Locally funded court systems are drawn with broken lines. A solid line indicates some or all of the funding is derived from state funds.

Symbols and Abbreviations

An "A" in the upper right corner of a rectangle, representing either an appellate or a trial court, indicates that the court receives appeals directly from the decisions of an administrative agency. Where "administrative agency appeals" is listed as a casetype, it indicates that the court hears appeals from decisions of another court on an administrative agency's actions. It is possible for a court to both have an "A" designation and to have "administrative agency appeals" listed as a casetype. Such a court

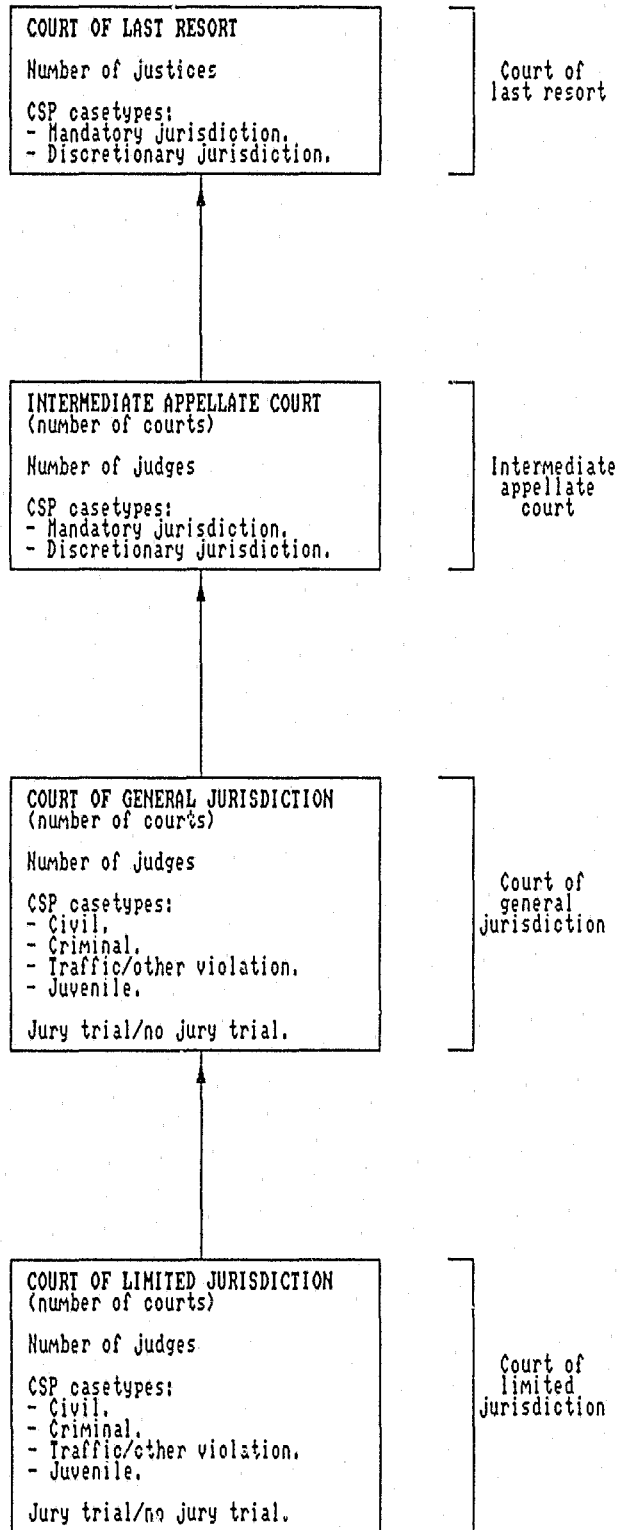

hears appeals directly from an administrative agency ("A") and has appellate jurisdiction over the decisions of a lower court that has already reviewed the decision of the administrative agency (and is thus listed as a casetype).

The number of justices or judges is sometimes stated as "FTE." This represents "full time equivalent" authorized judicial positions. "DWI/ DUI" stands for "driving while intoxicated/driving under the influence." The abbreviation, "SC", stands for "small claims." The dollar amount jurisdiction for civil cases is indicated in parenthesis with a dollar sign. Where the small claims dollar amount jurisdiction is different, it is noted.

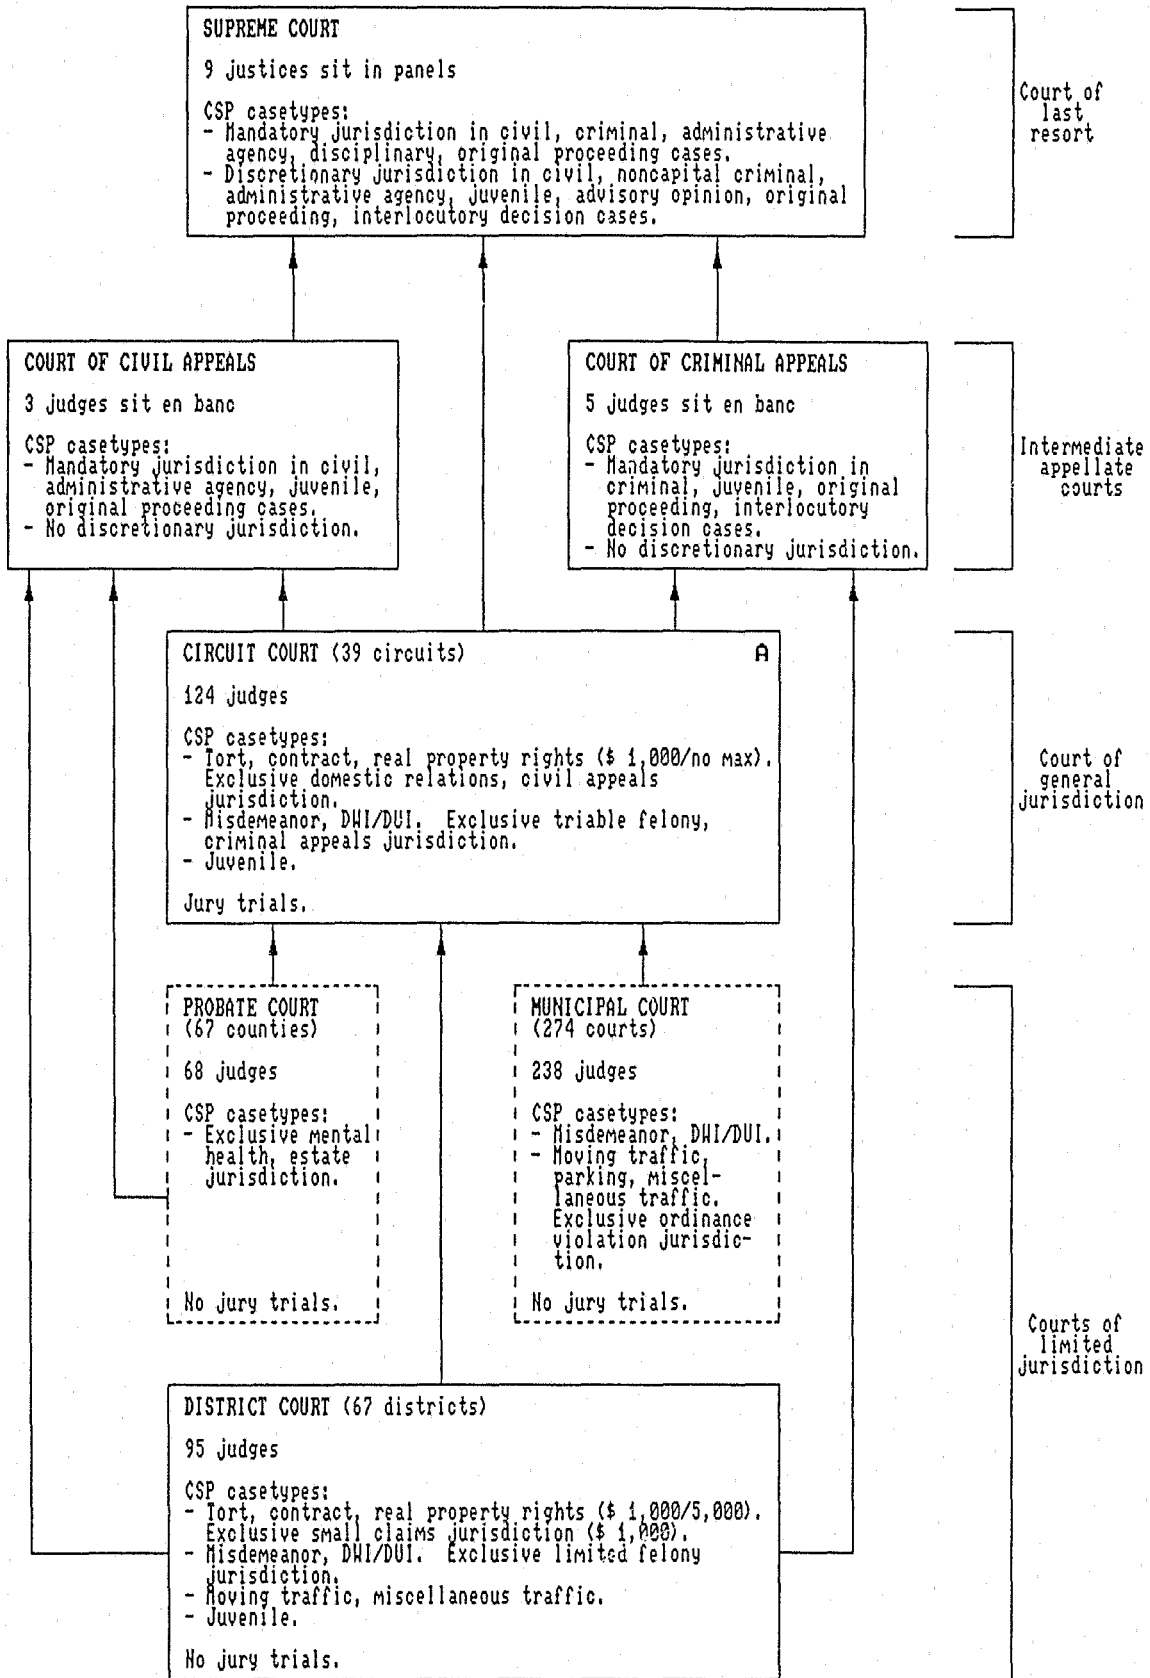

Conclusion

The court structure charts are convenient summaries. They do not substitute for the detailed descriptive material contained in *State Court Organization 1987*, another Court Statistics Project publication. Moreover, they are based on the Court Statistics Project's terminology and categories. This means that a state may have established courts that are not included in these charts. Some states have courts of special jurisdiction to receive complaints on matters that are more typically directed to administrative boards and agencies. Since these courts receive cases that do not fall within the Court Statistics Project casetypes, they are not included in the charts. The existence of such courts, however, is recognized in a footnote to the state's court structure chart.

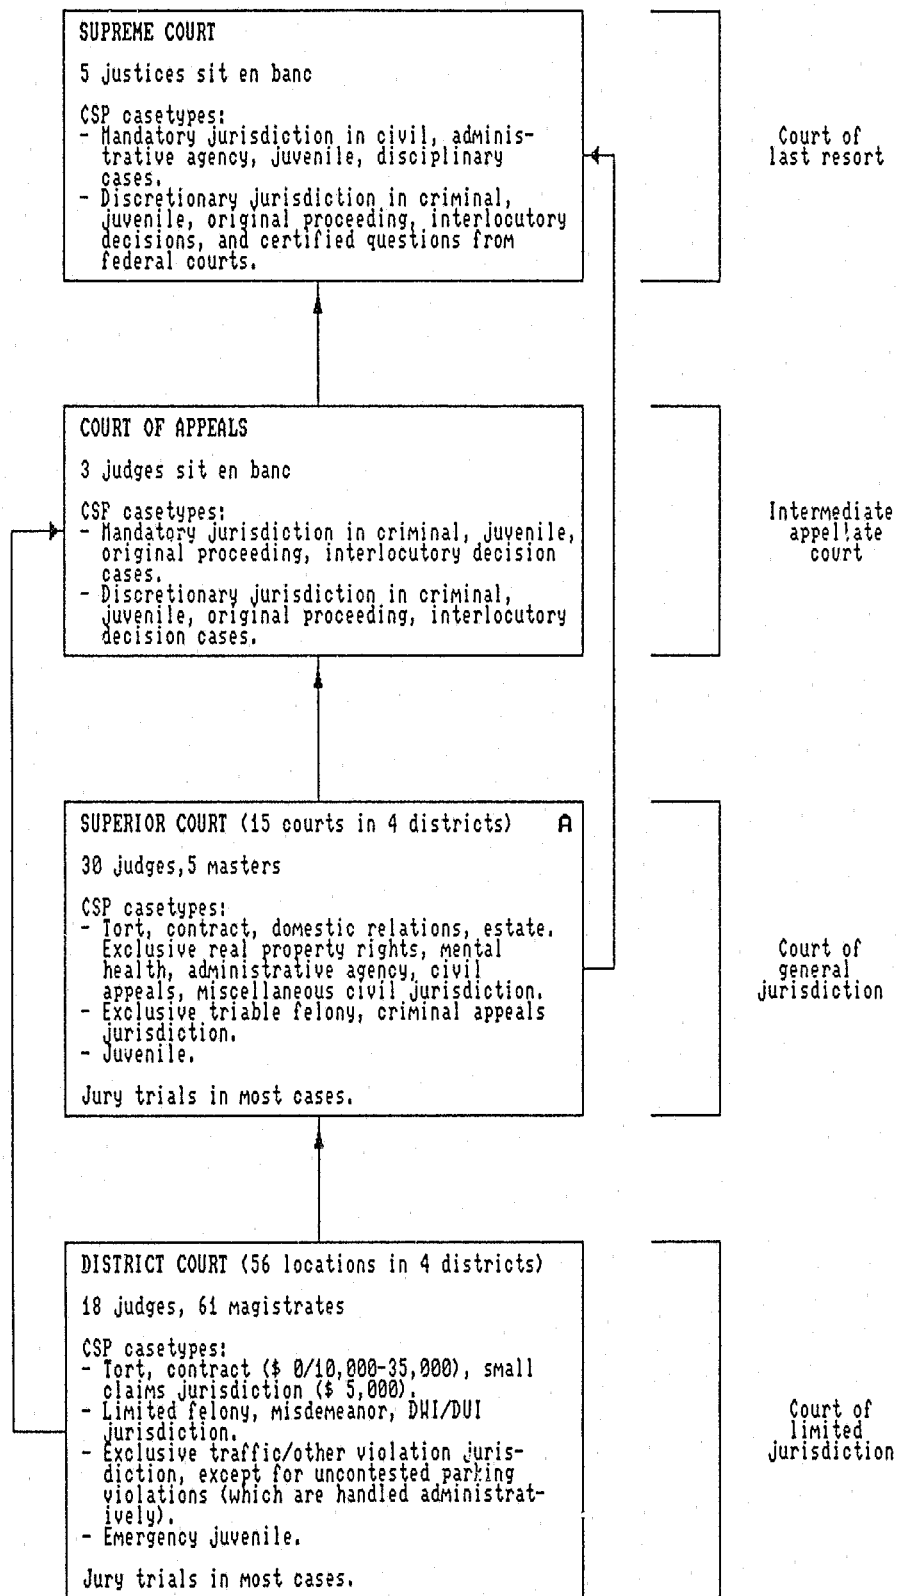

STATE COURT STRUCTURE PROTOTYPE, 1988

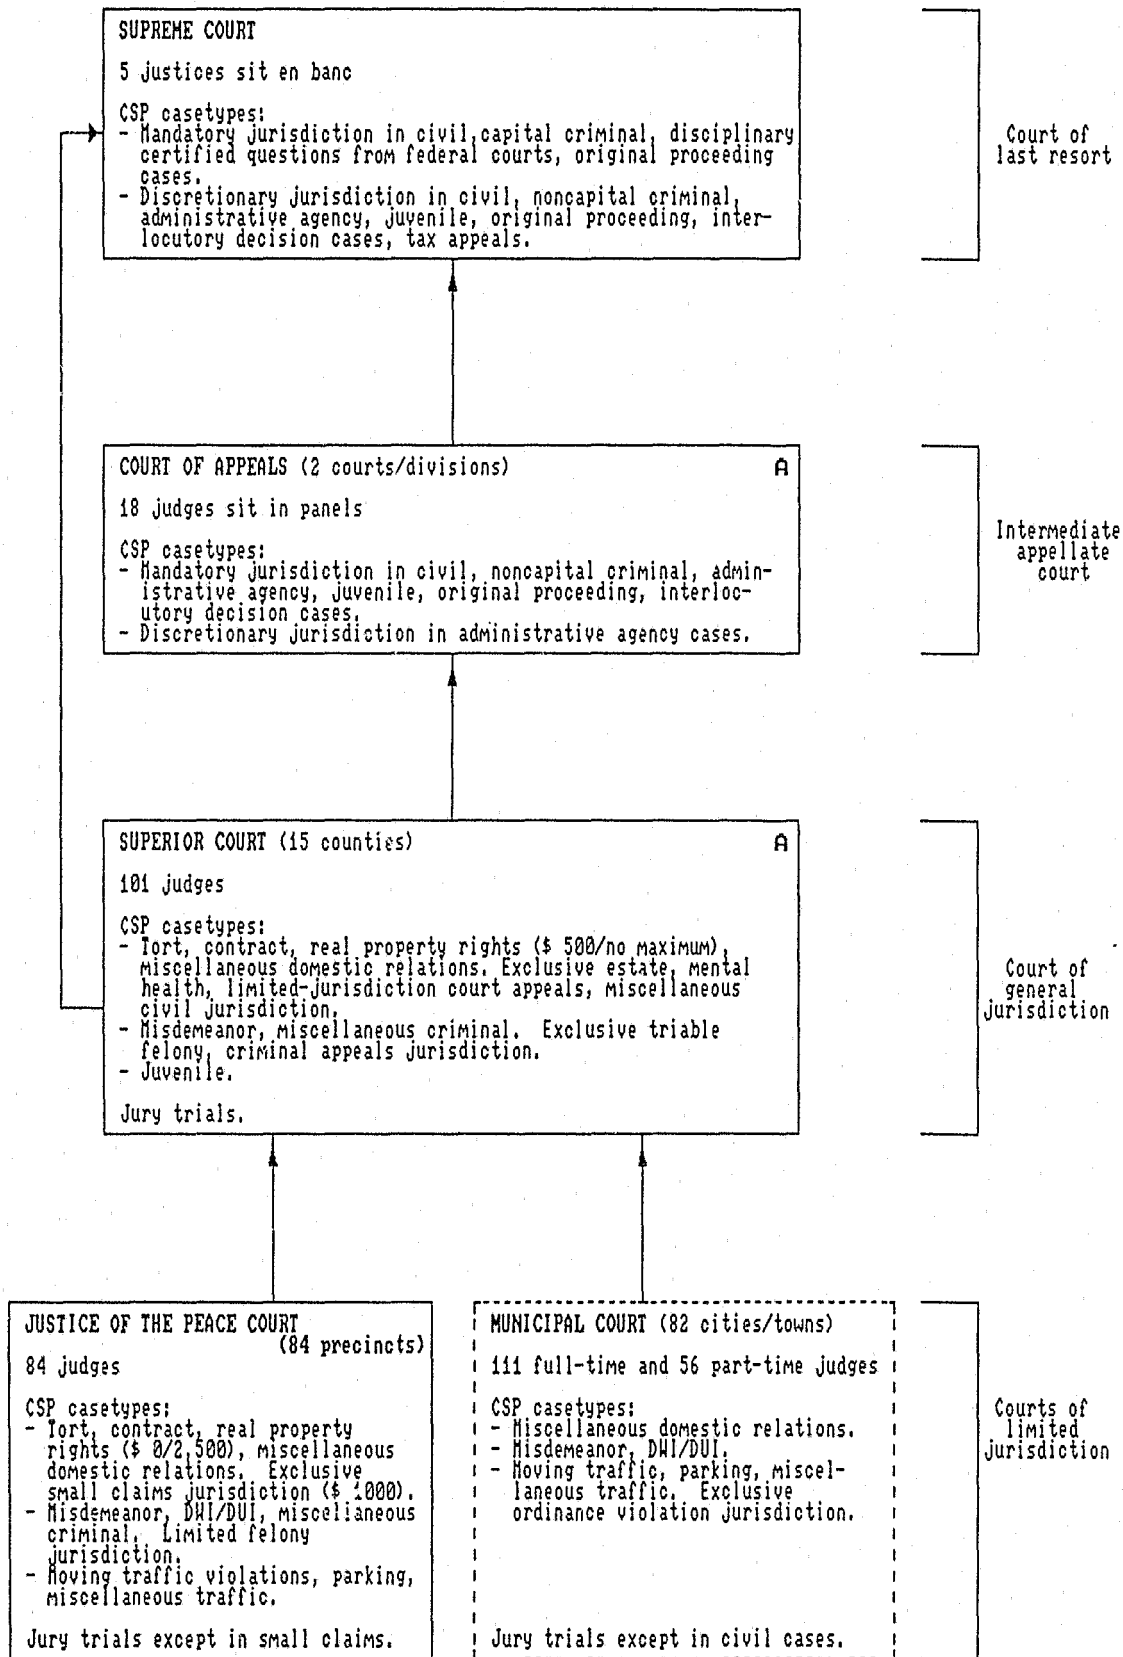

ALABAMA COURT STRUCTURE, 1988

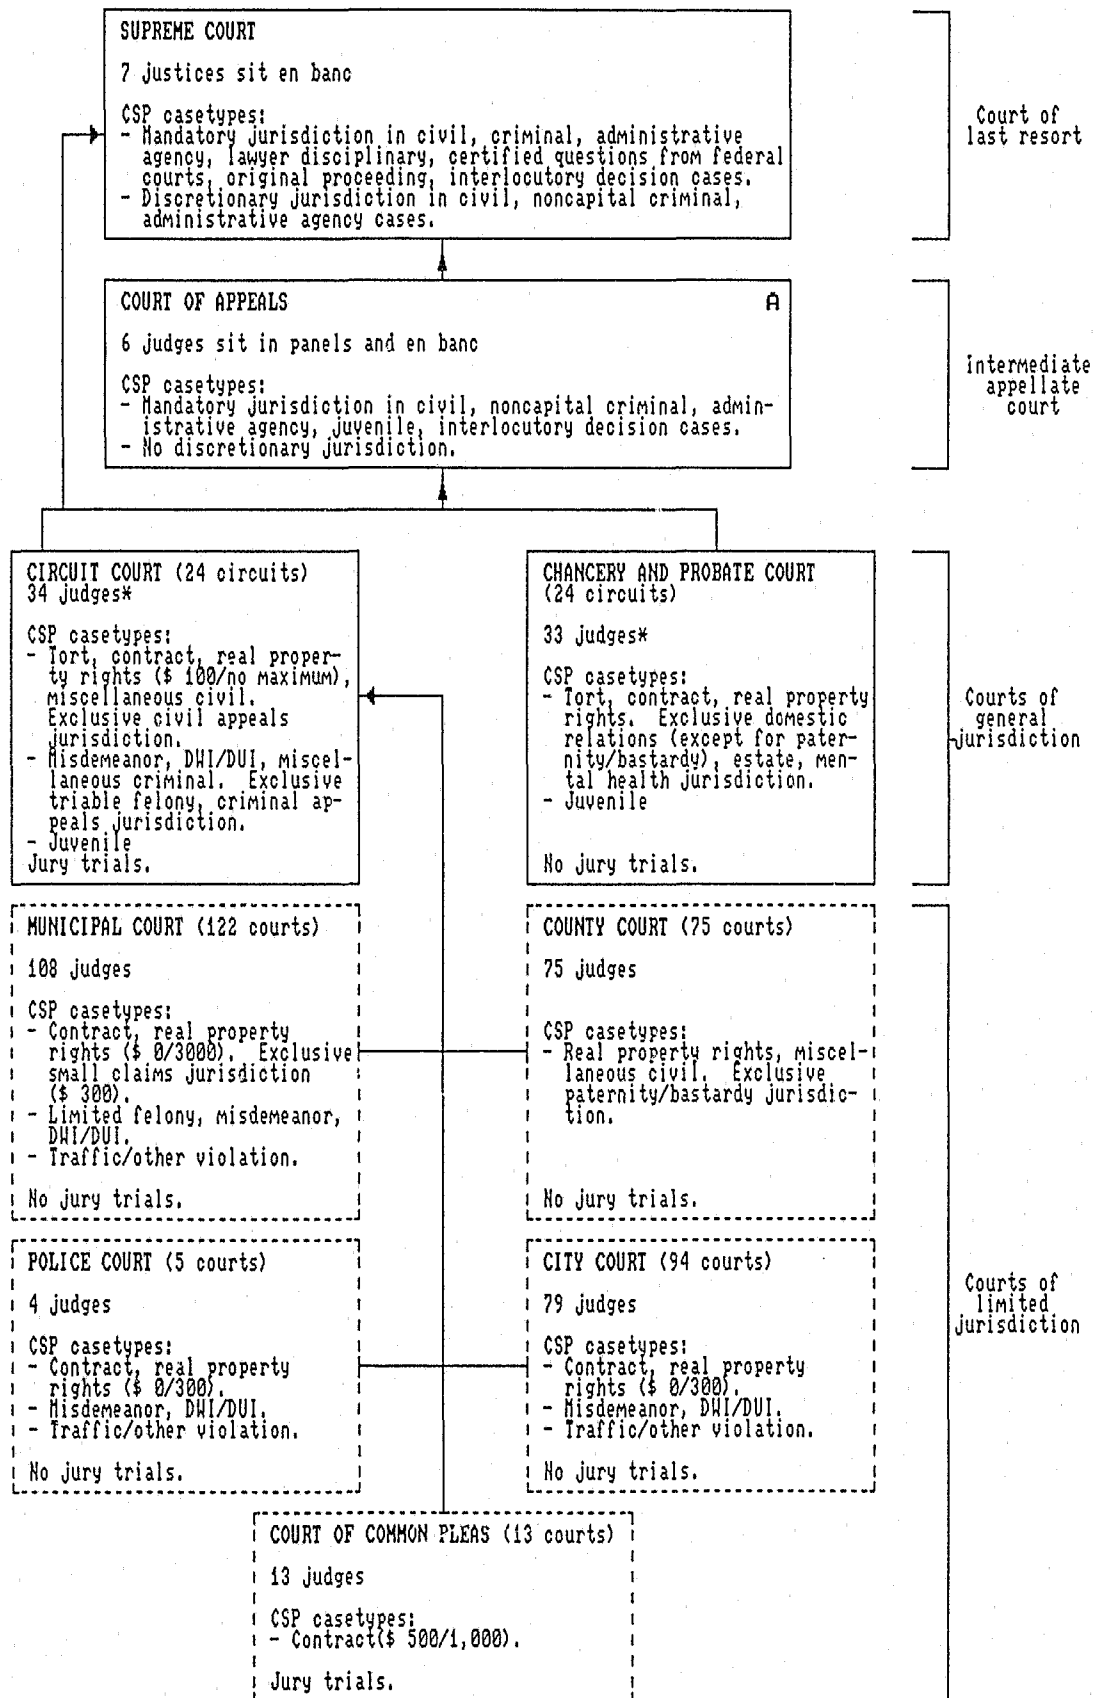

ALASKA COURT STRUCTURE, 1988

ARIZONA COURT STRUCTURE, 1988

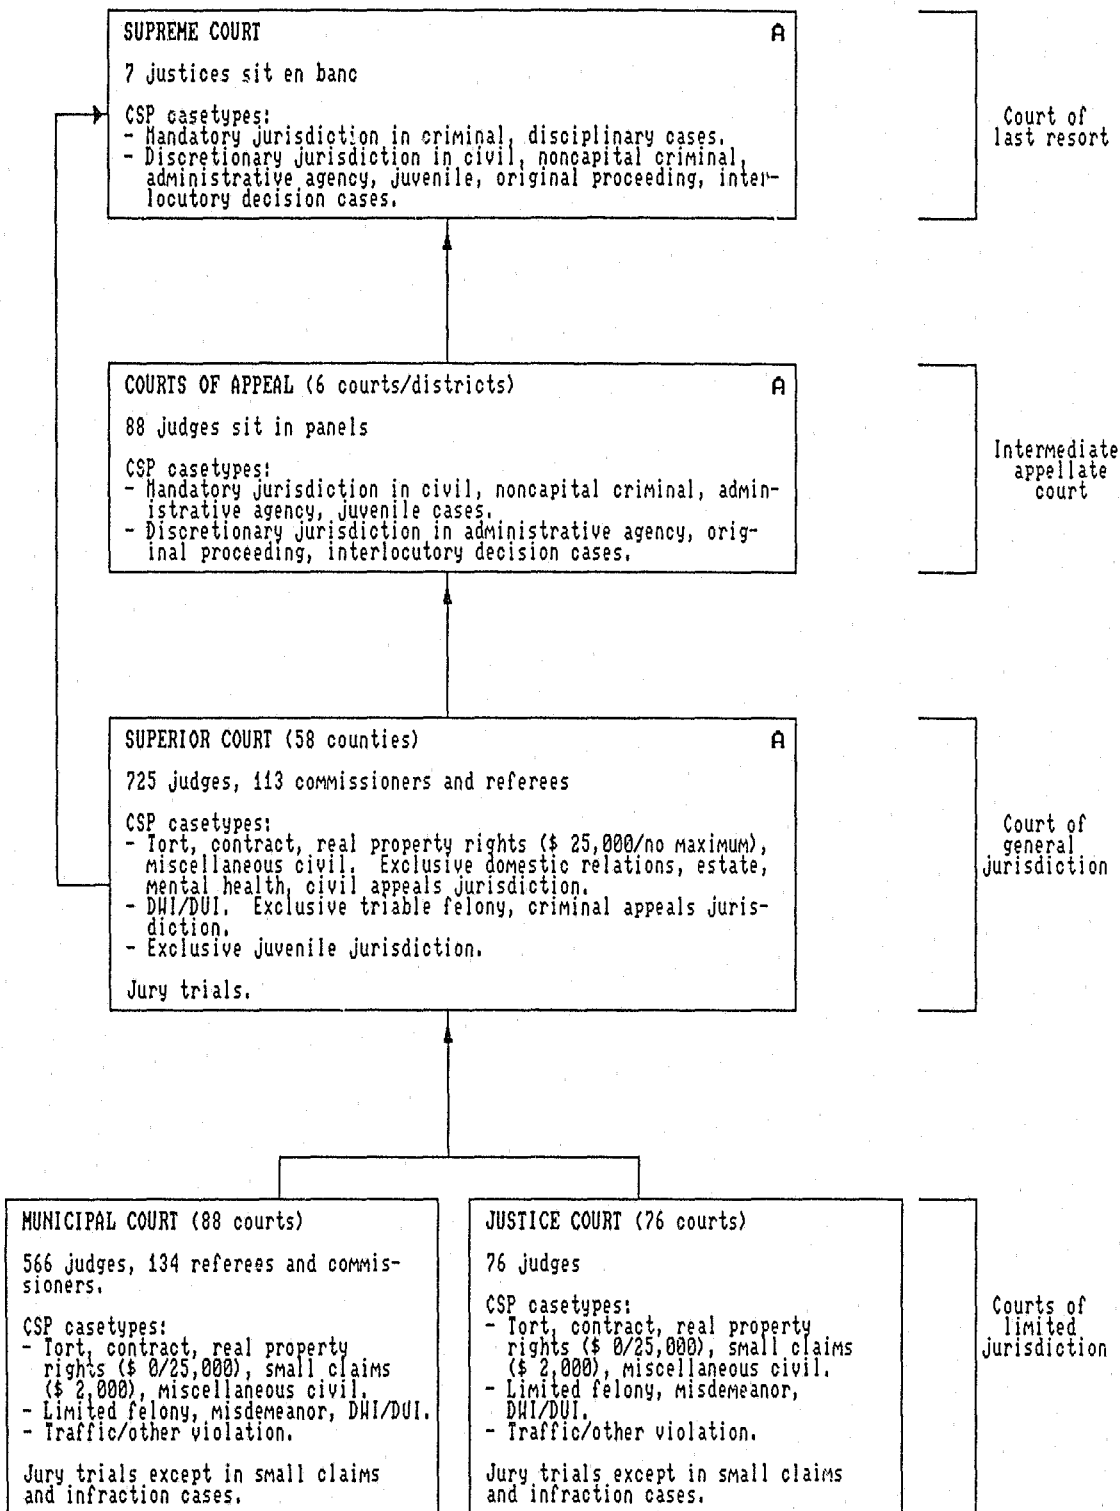

ARKANSAS COURT STRUCTURE, 1988

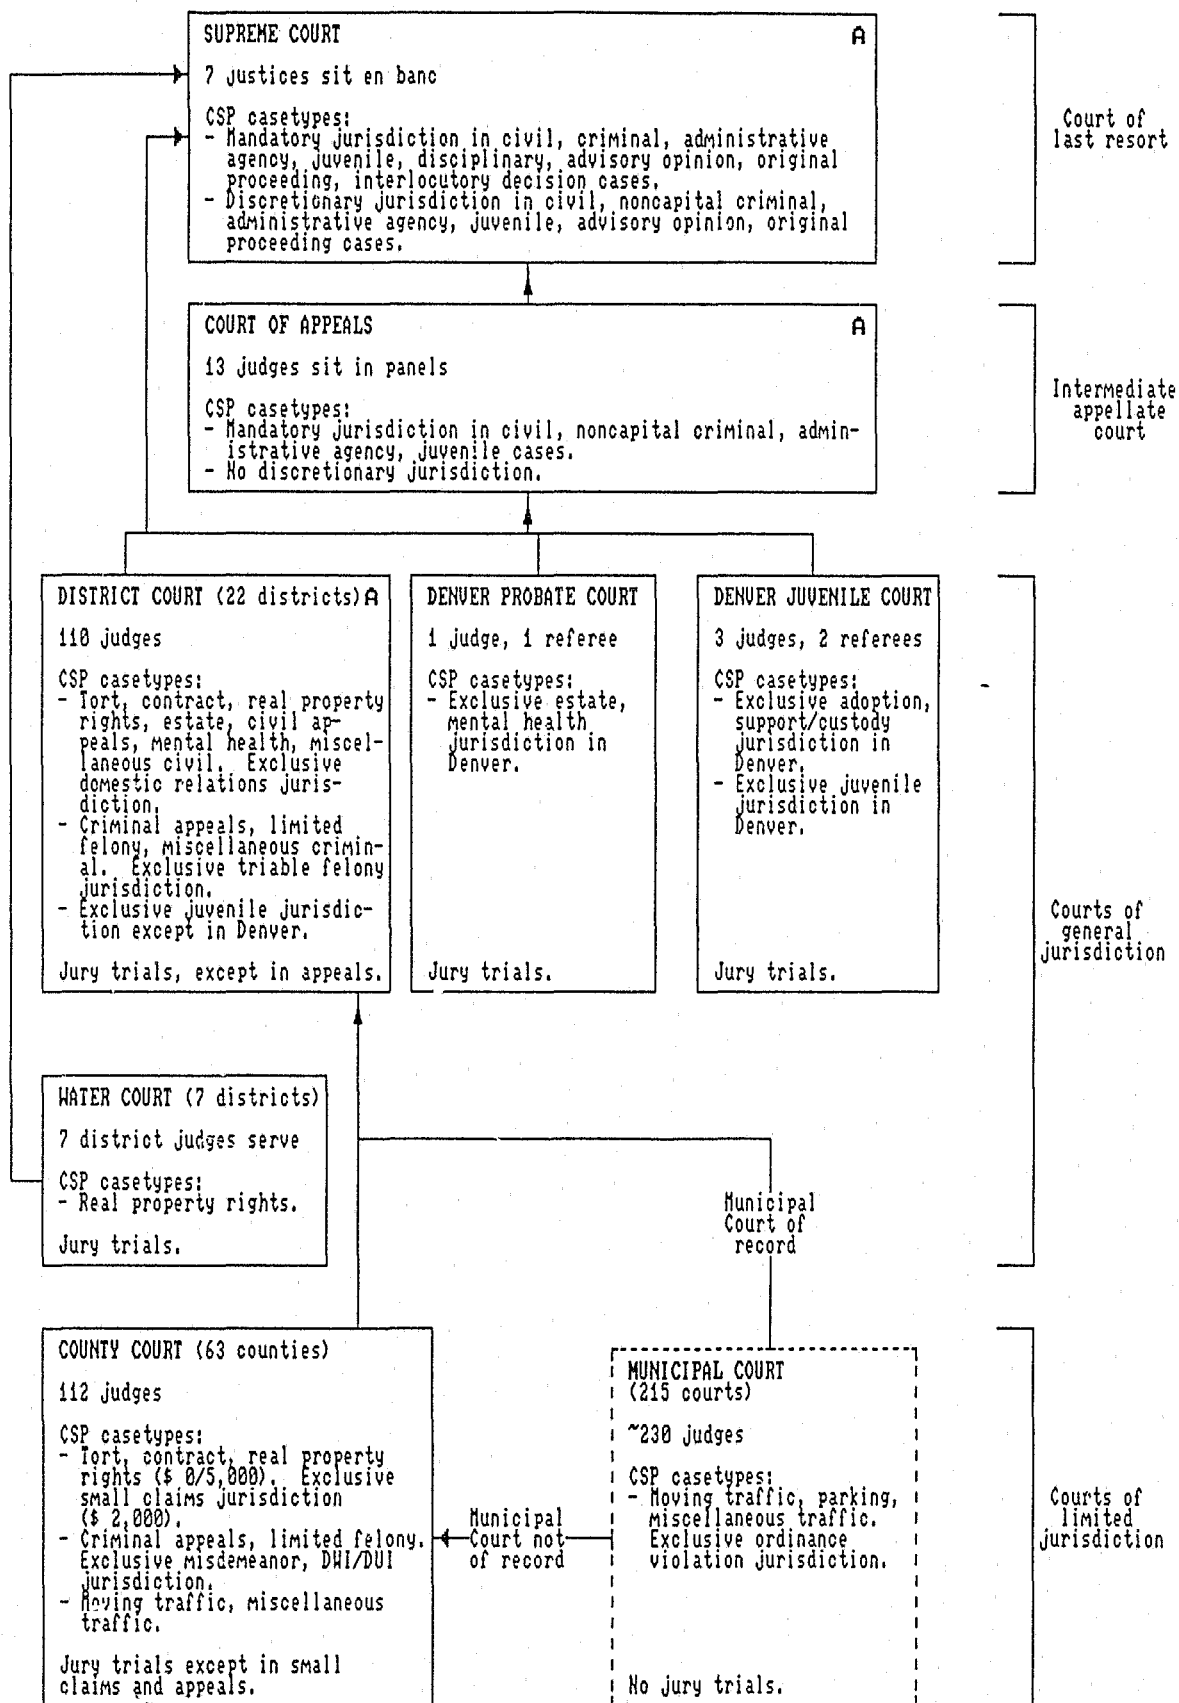

* Twenty-seven additional Judges serve both Circuit and Chancery Courts. Seventeen of these twenty-seven also have primary responsibility for the juvenile division of Chancery Court.

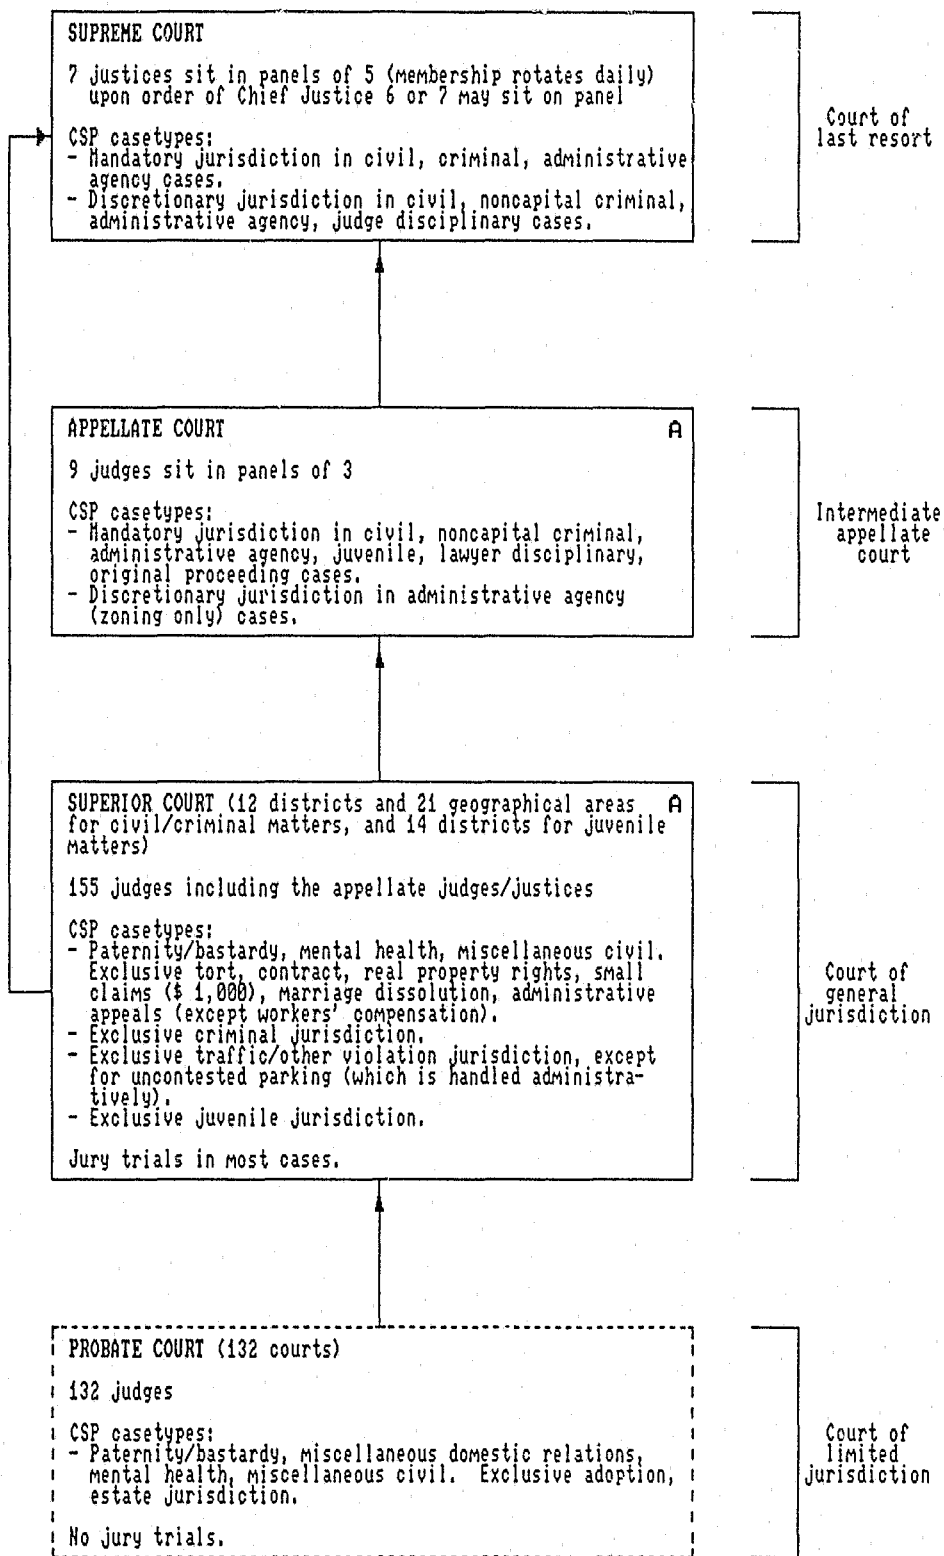

CALIFORNIA COURT STRUCTURE, 1988

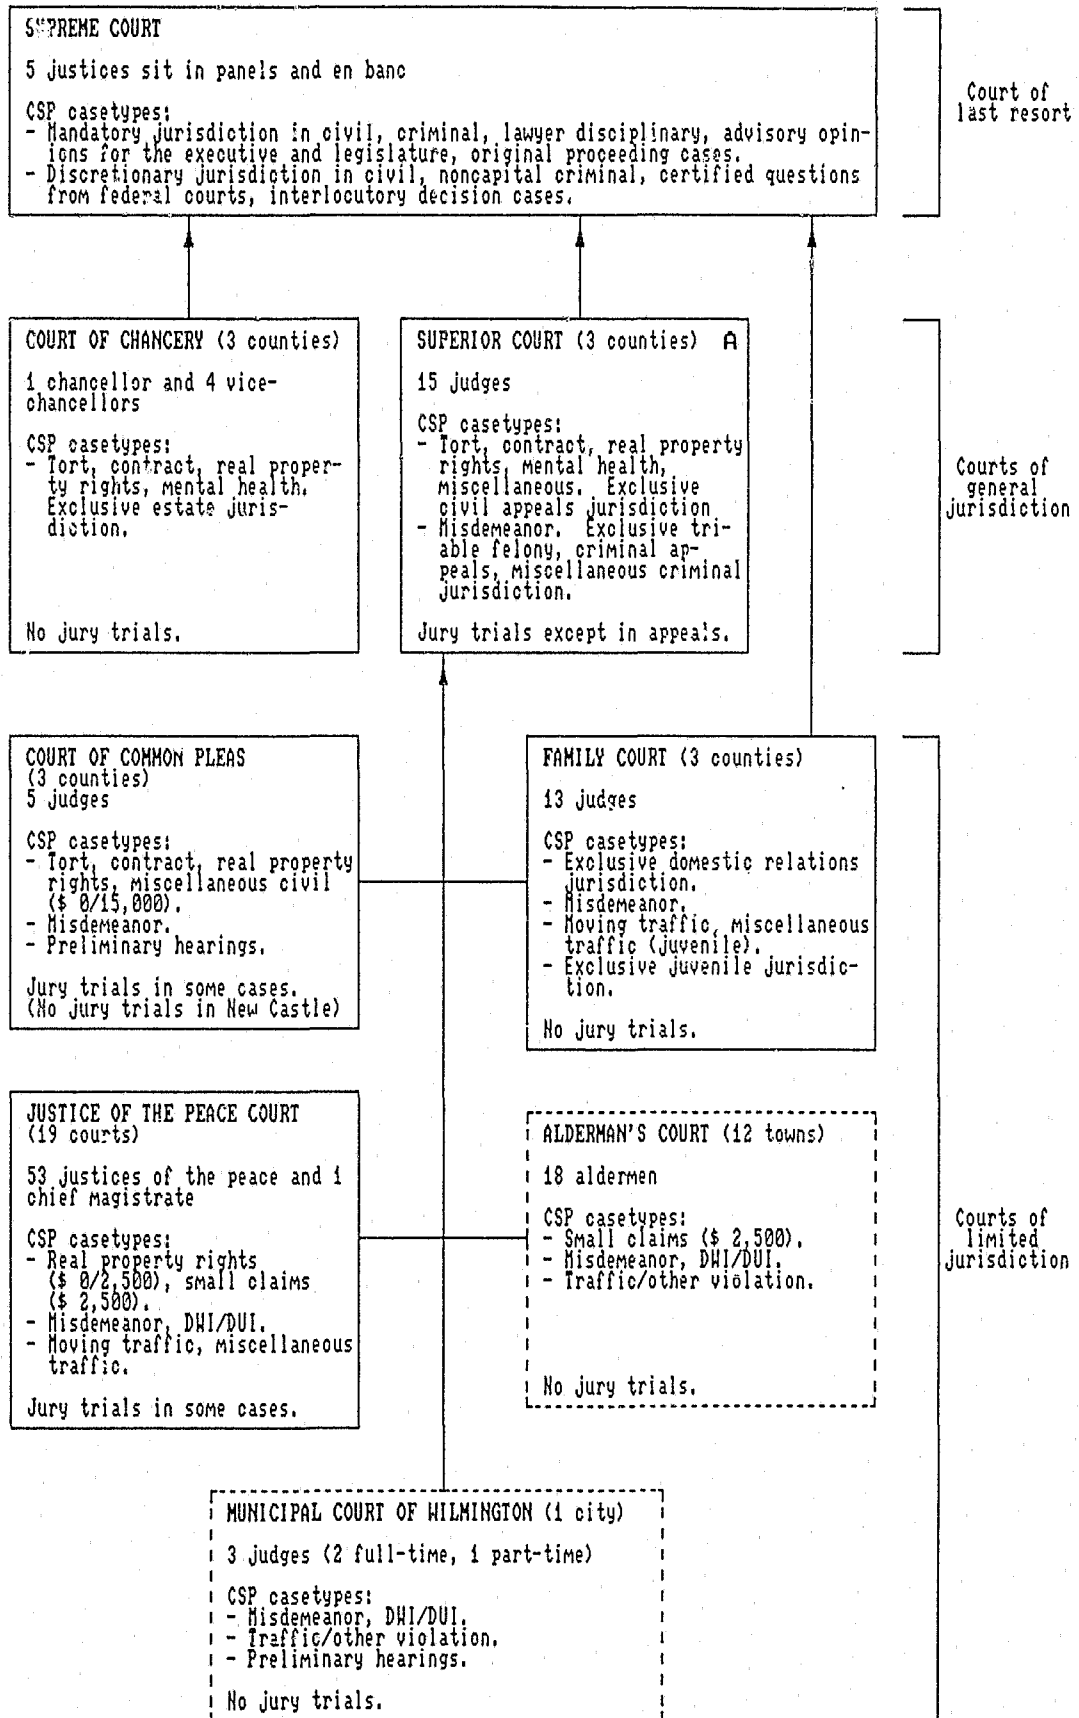

COLORADO COURT STRUCTURE, 1988

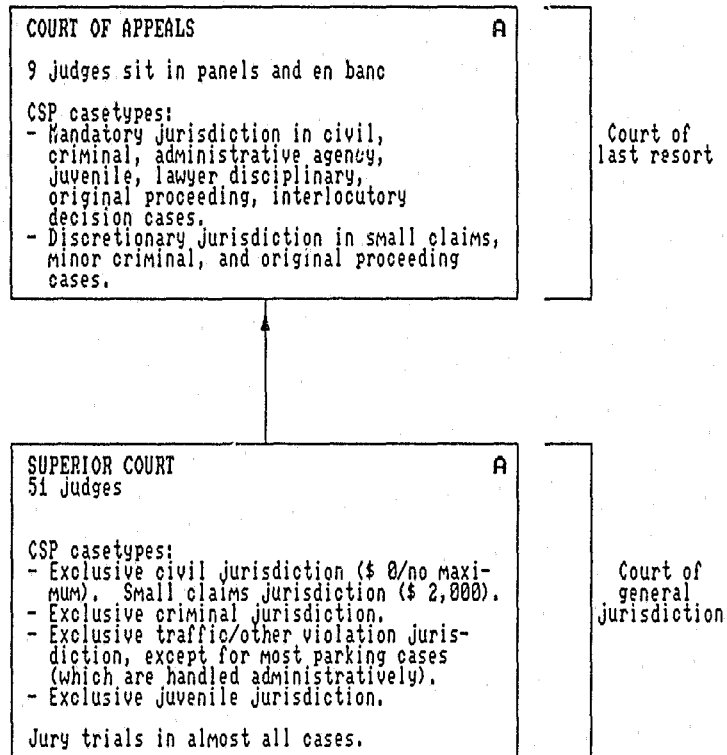

CONNECTICUT COURT STRUCTURE, 1988

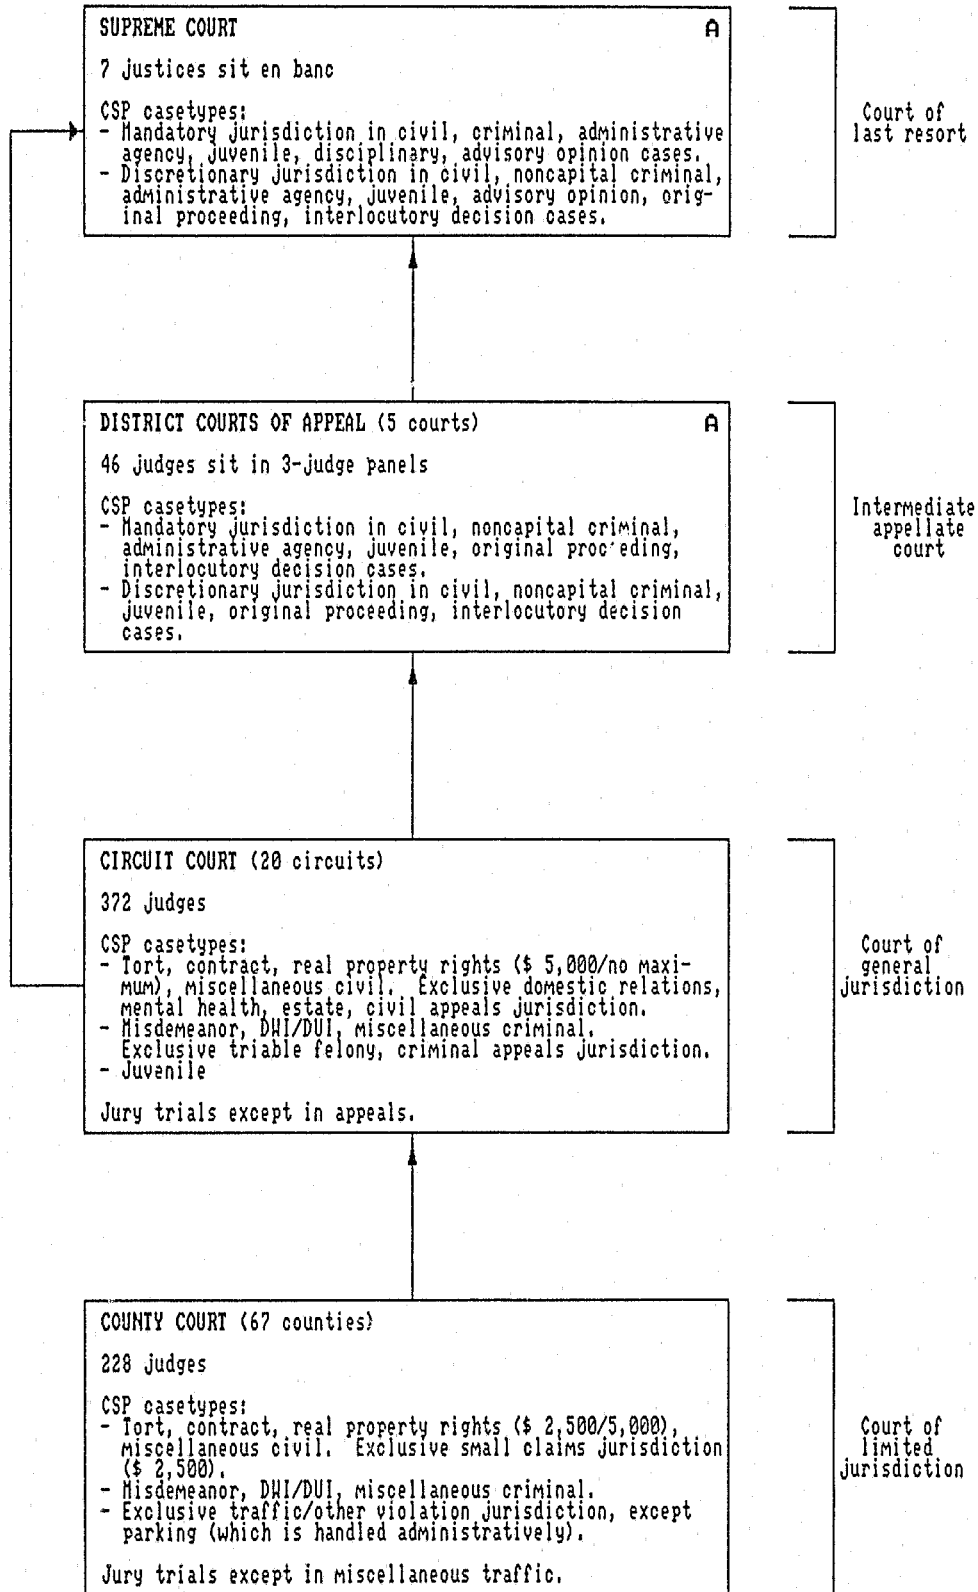

DELAWARE COURT STRUCTURE, 1988

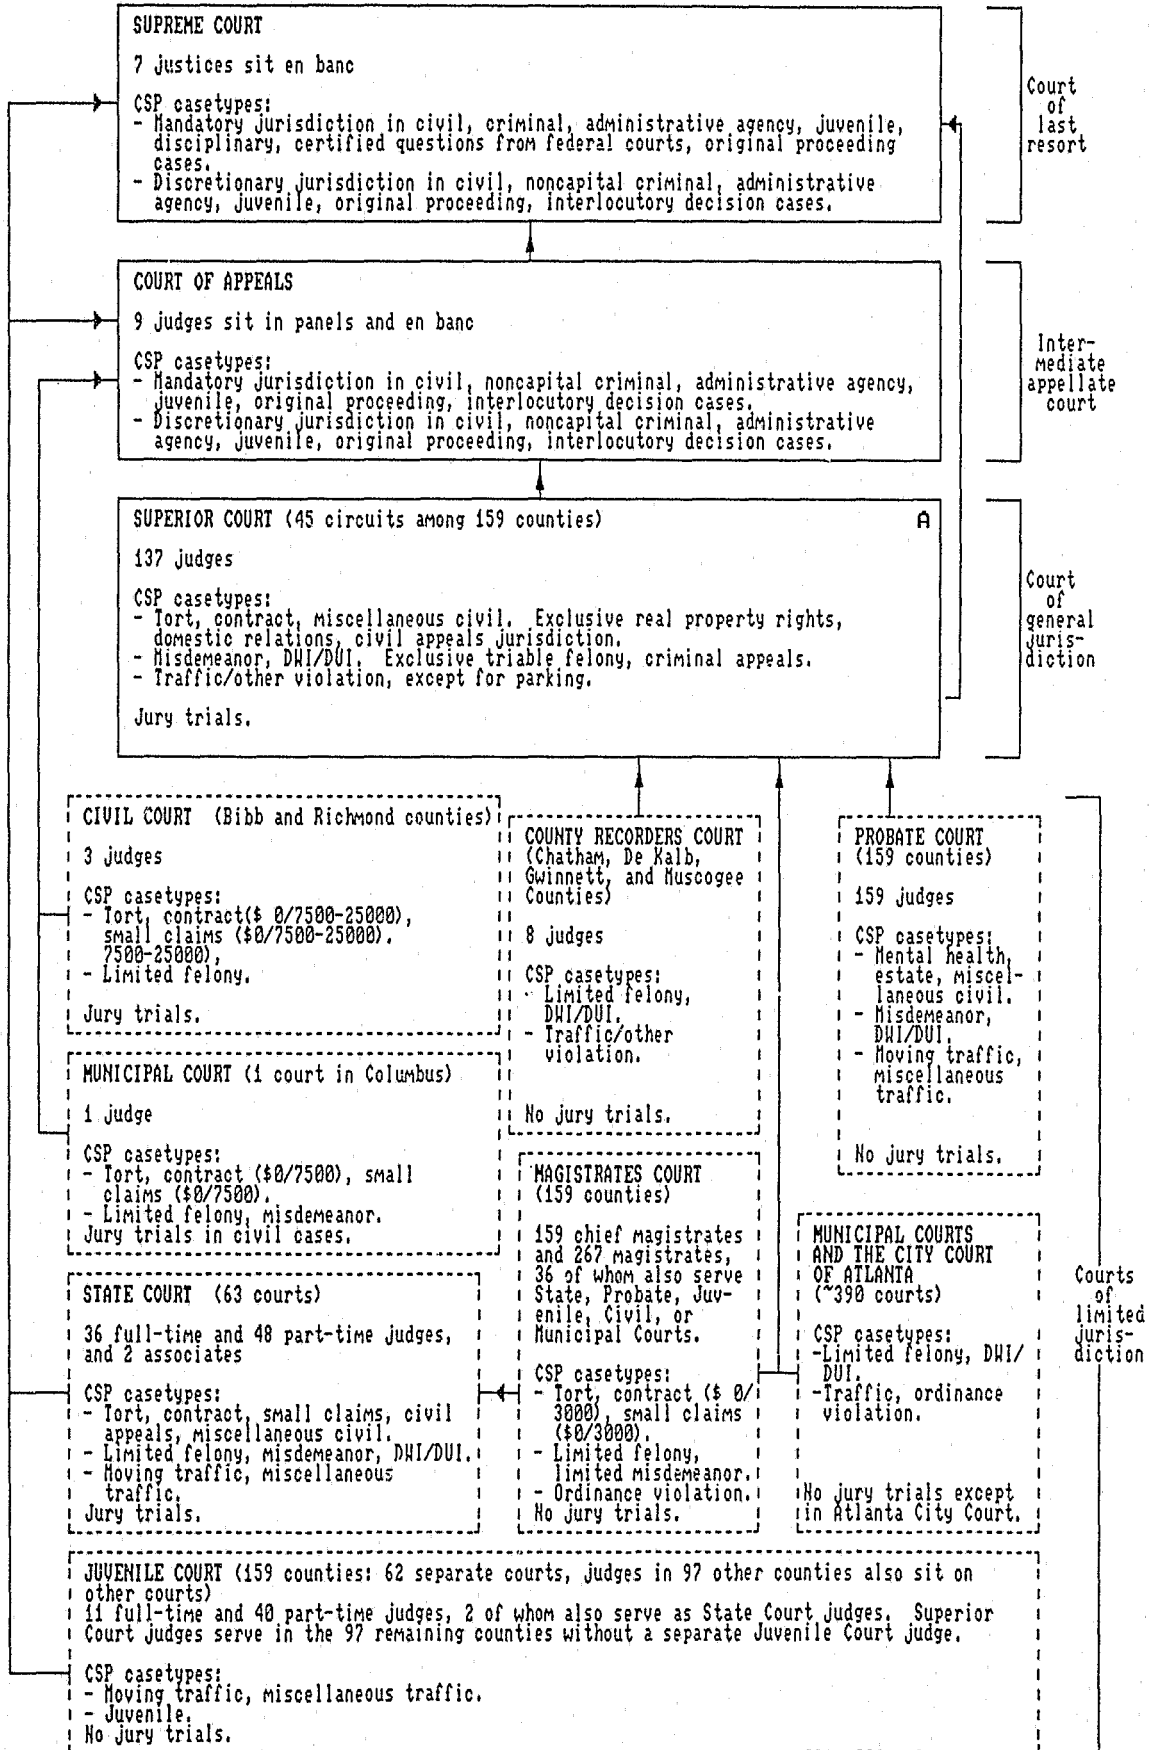

DISTRICT OF COLUMBIA COURT STRUCTURE, 1988

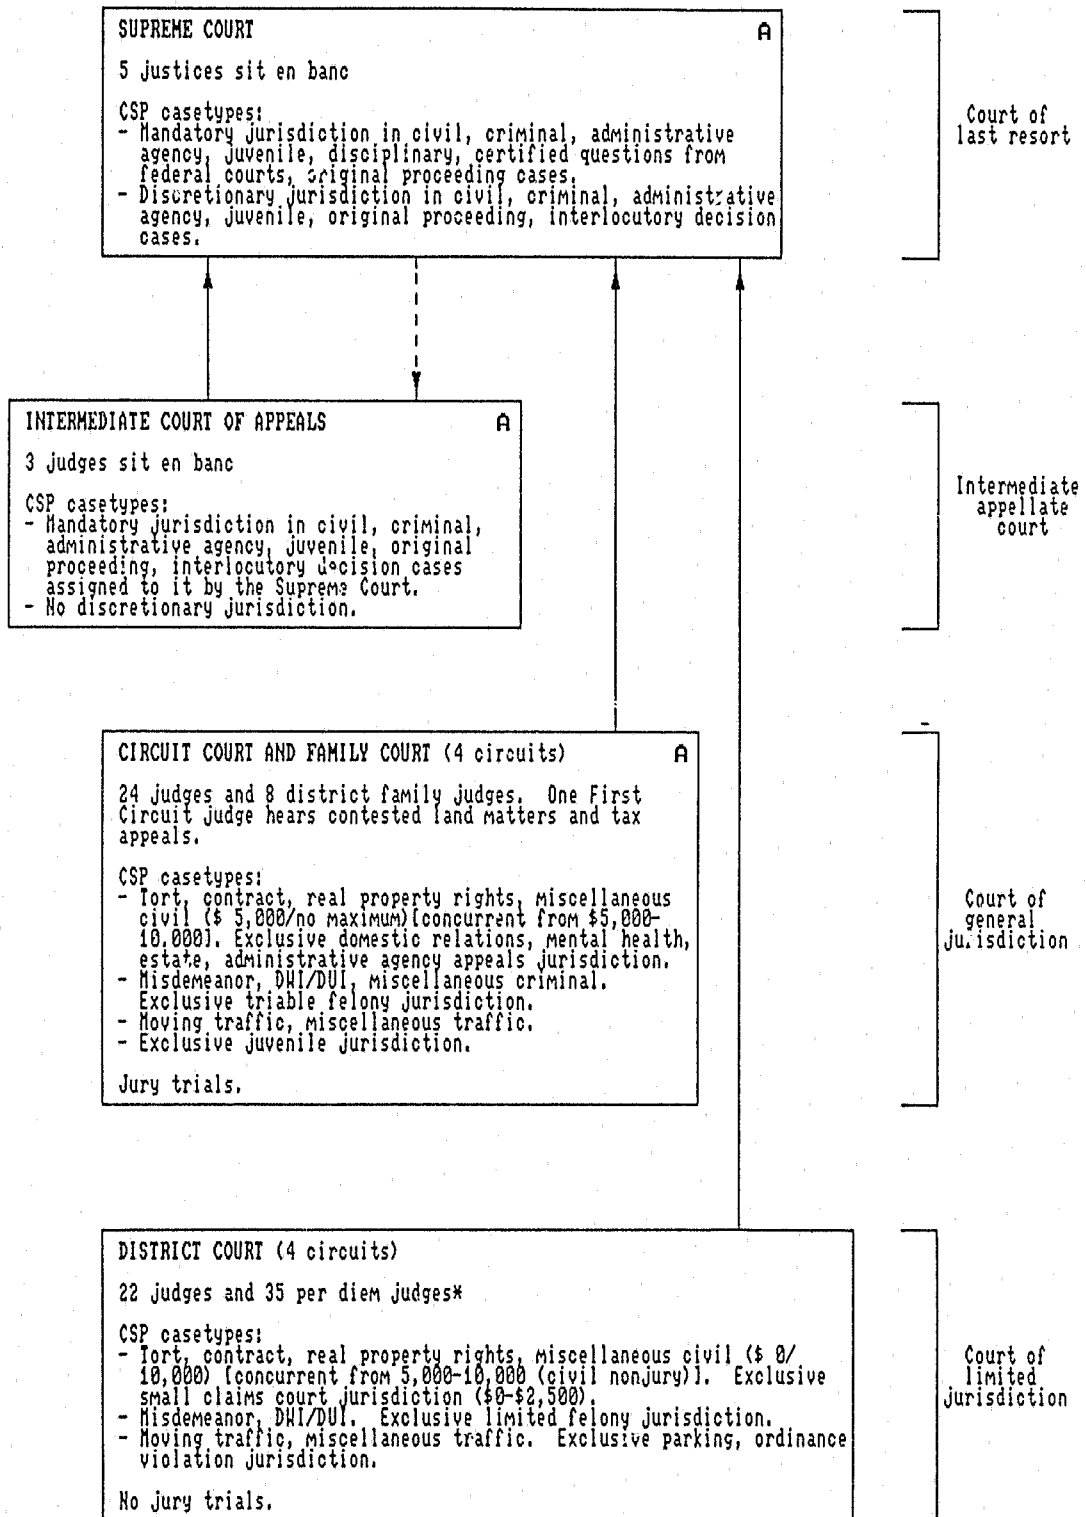

FLORIDA COURT STRUCTURE, 1988

GEORGIA COURT STRUCTURE, 1988

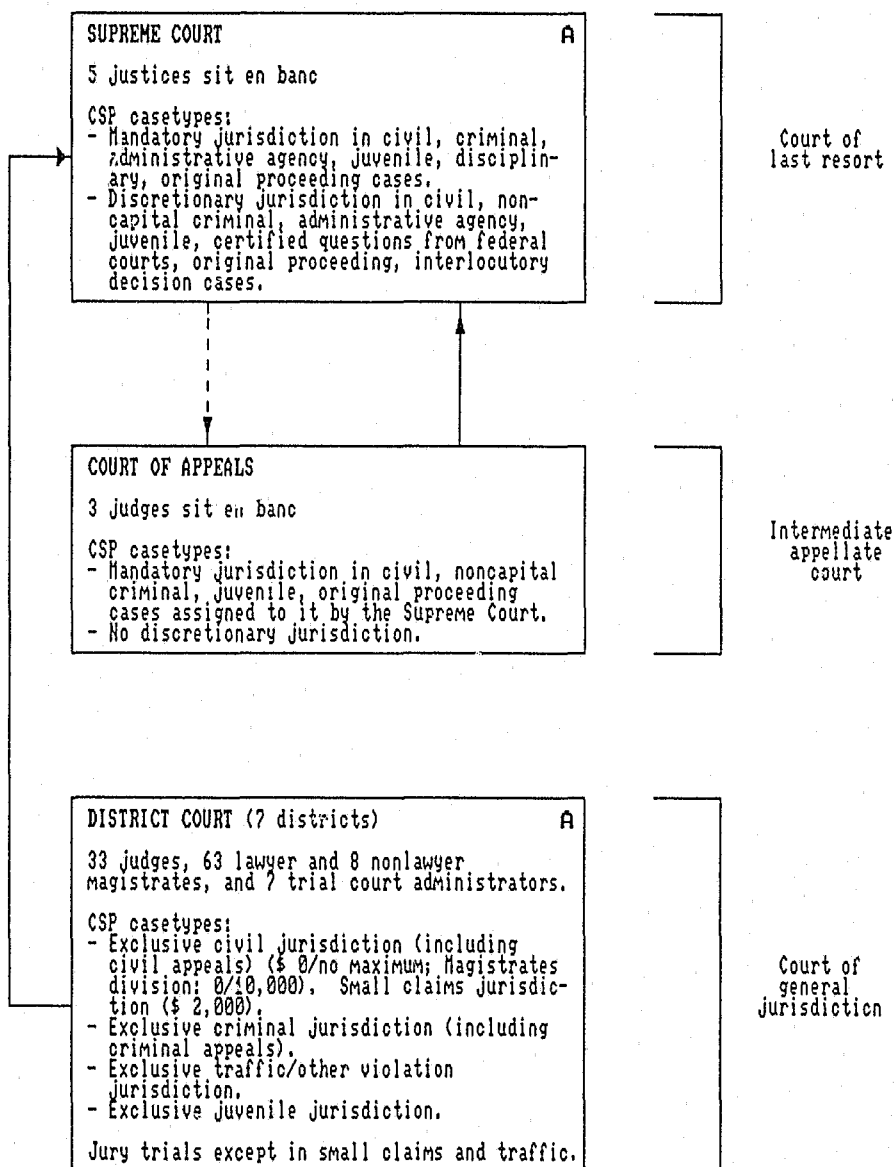

HAWAII COURT STRUCTURE, 1988

---- Indicates assignment of cases.

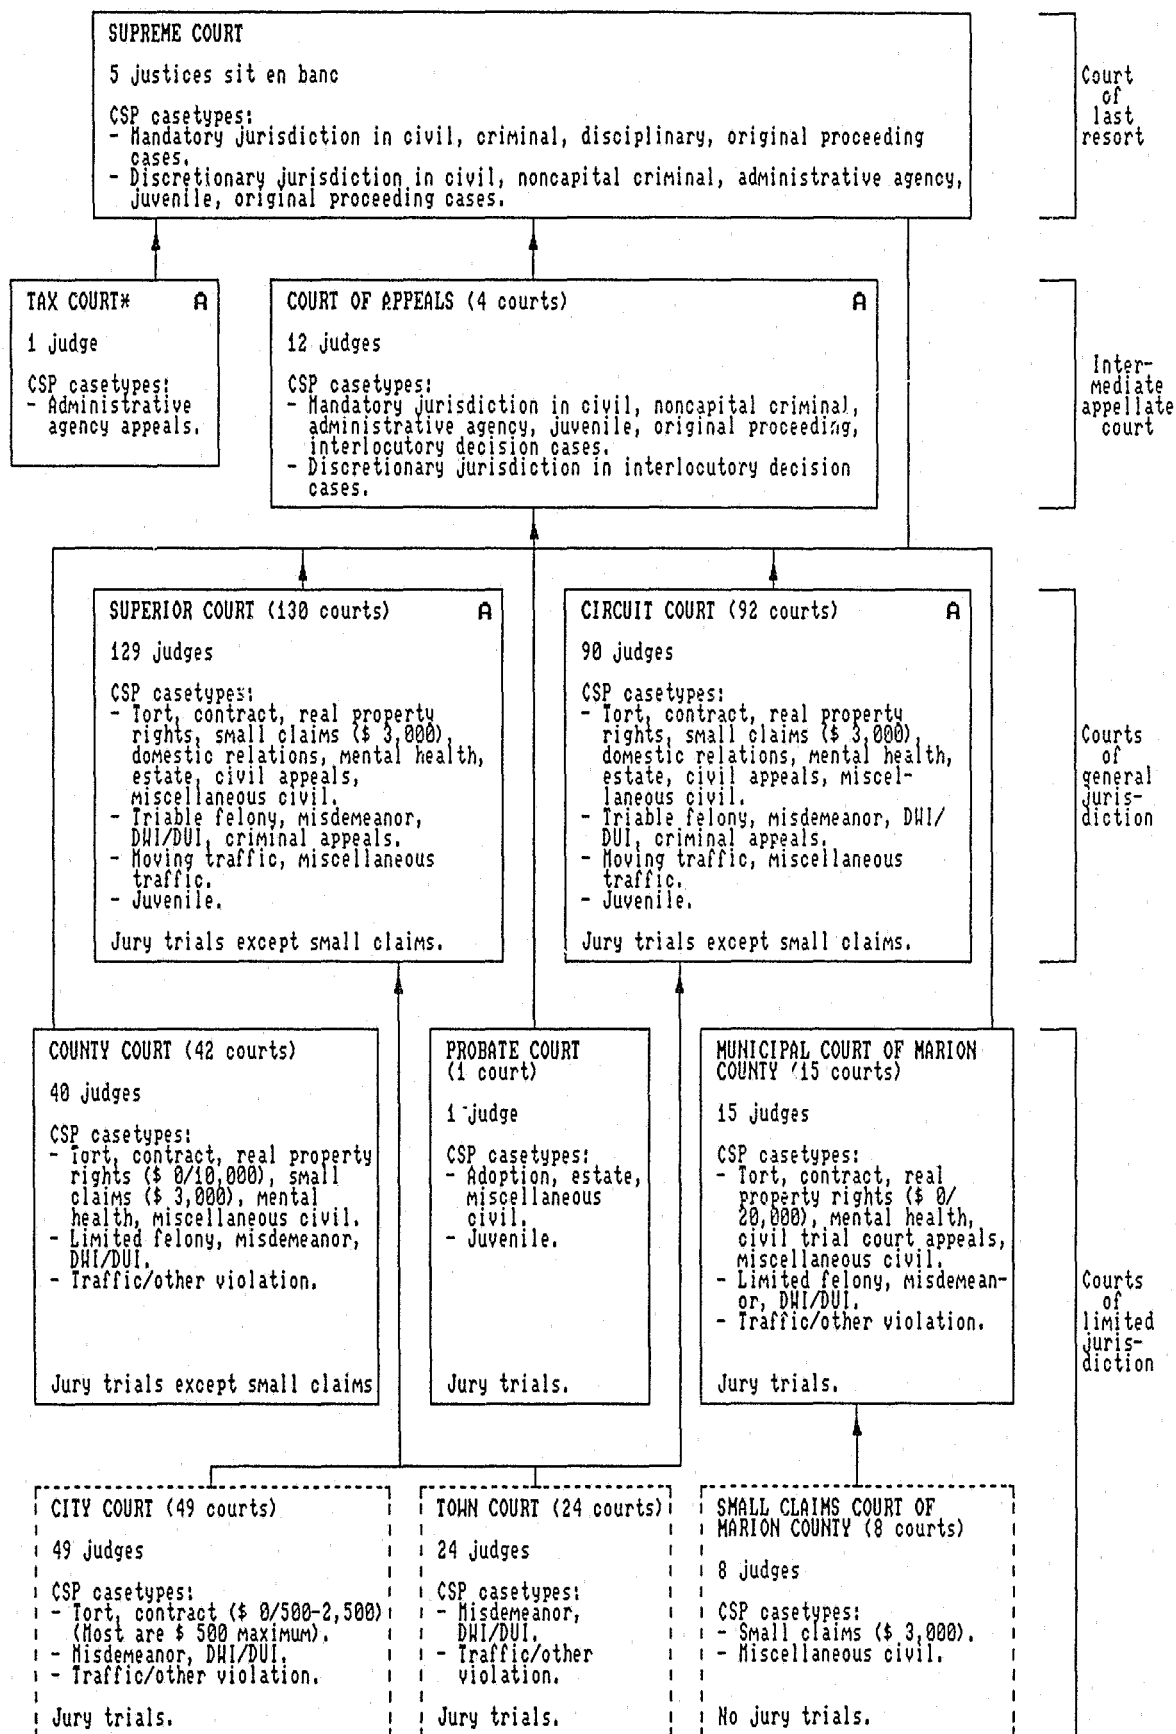

* Some per diem judges are assigned to serve as per diem District & Family Court judges in the First Circuit.

IDAHO COURT STRUCTURE, 1988

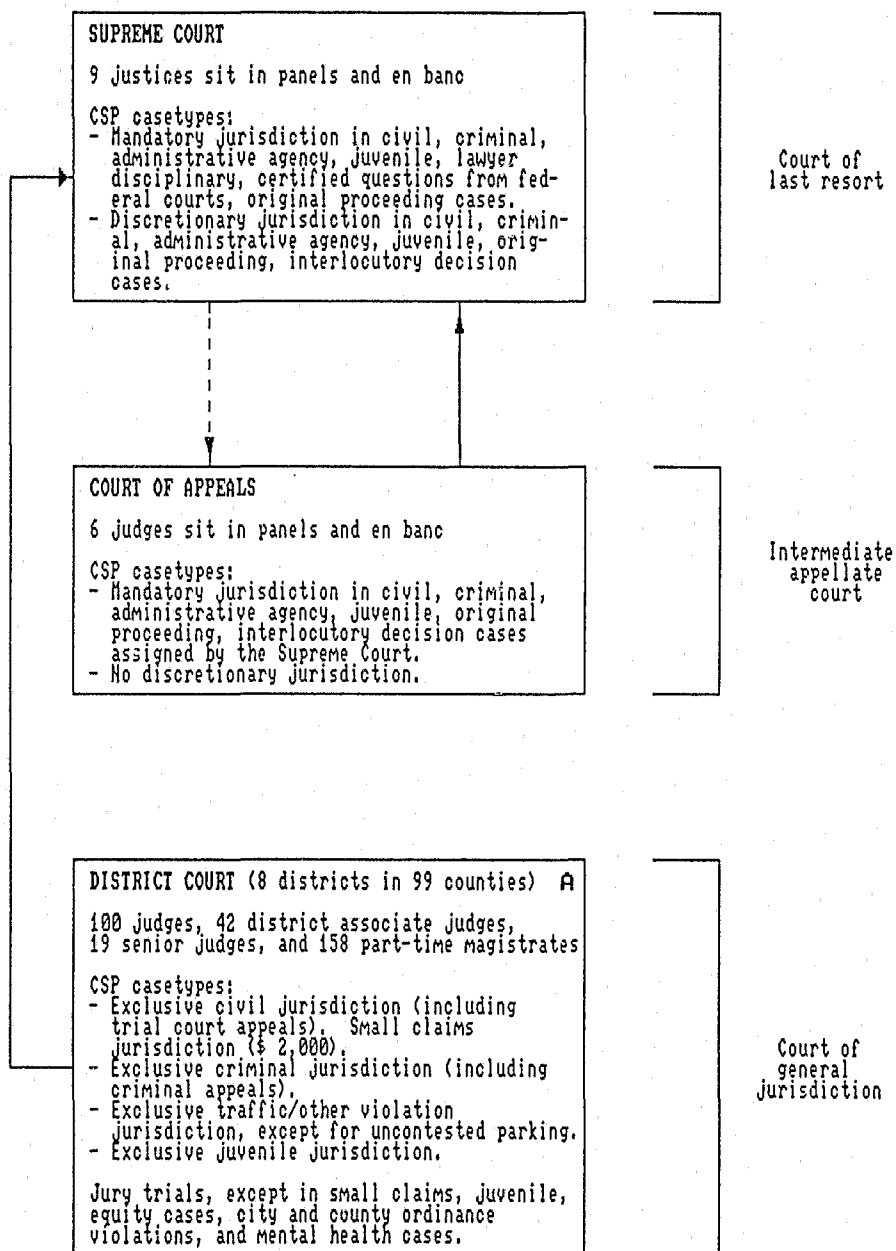

---- indicates assignment of cases.

INDIANA COURT STRUCTURE, 1988

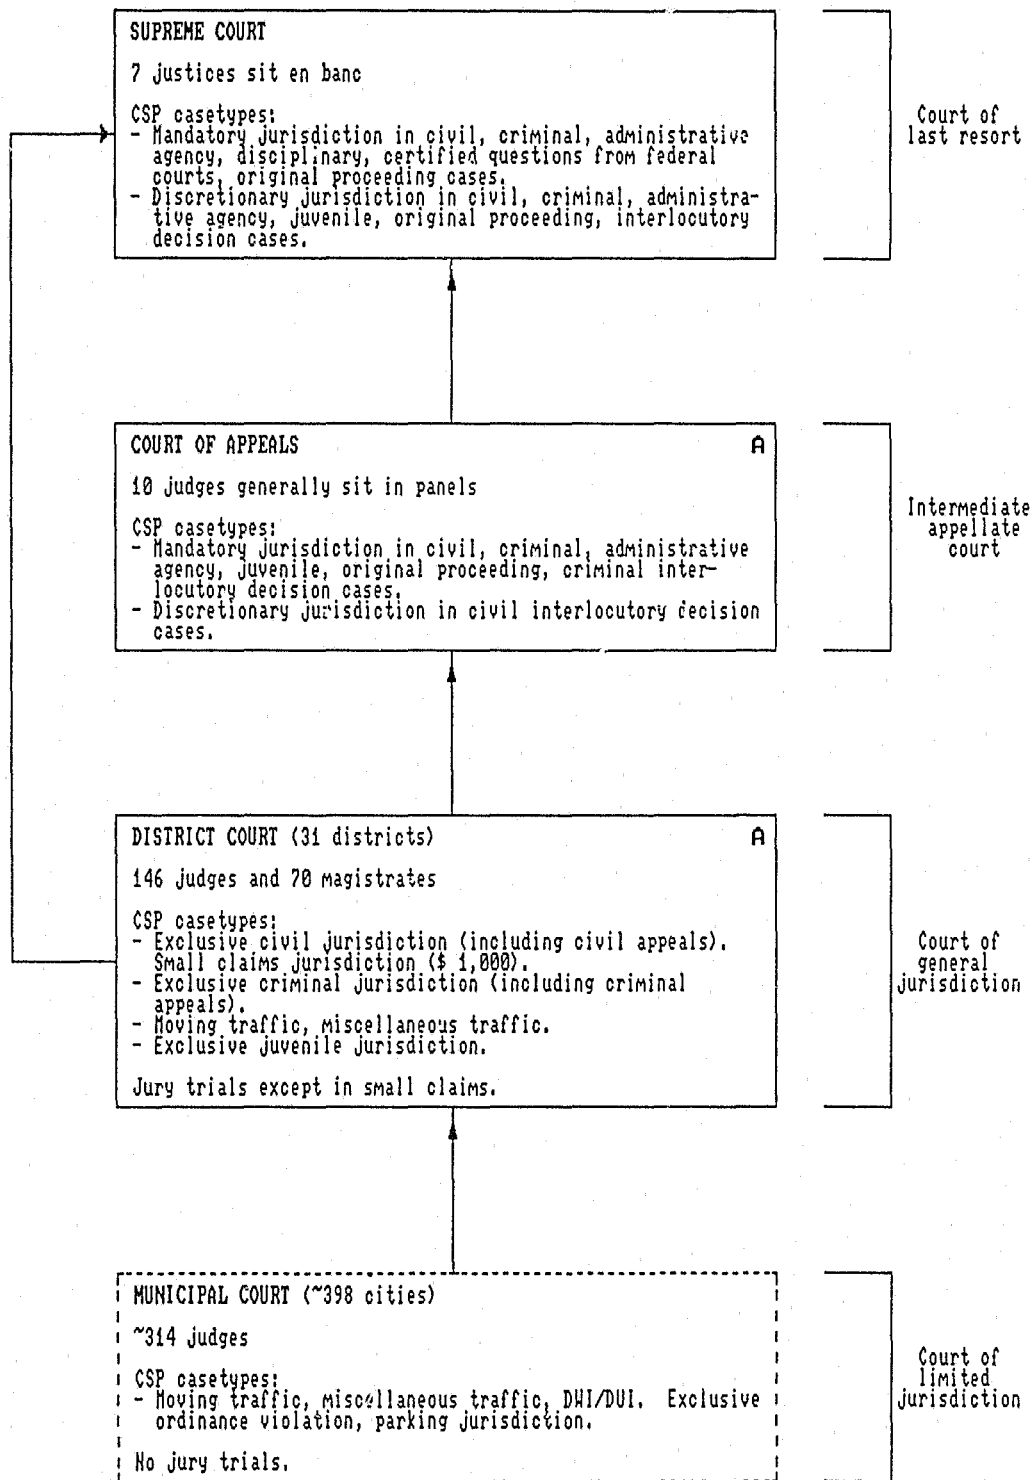

* The Tax Court was established in 1986.

IOWA COURT STRUCTURE, 1988

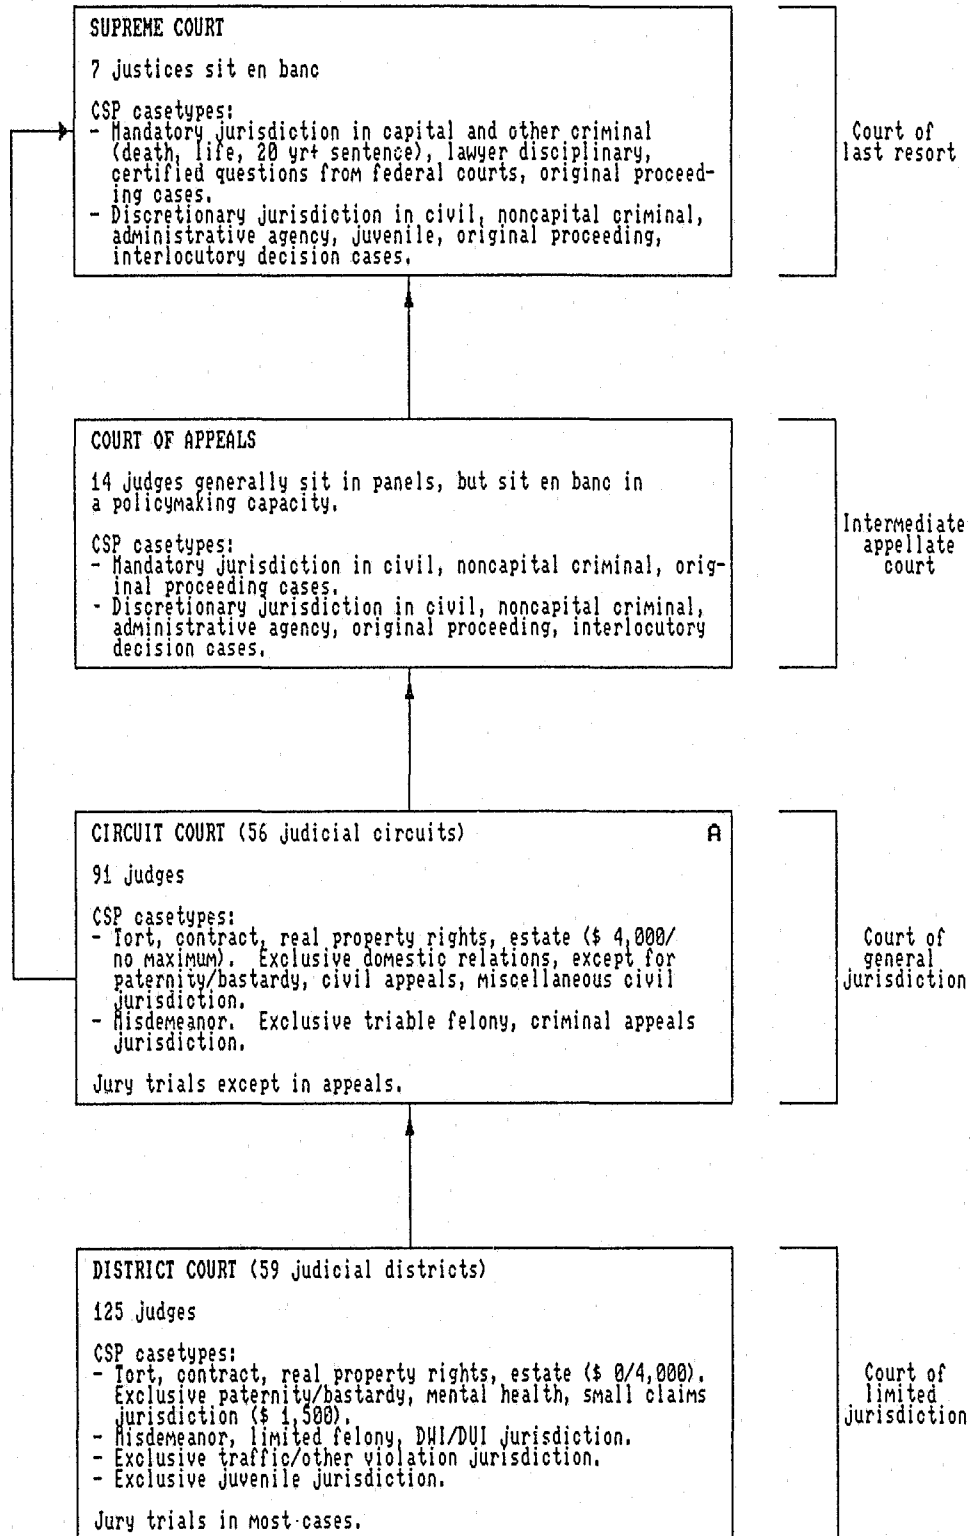

---- Indicates assignment of cases.

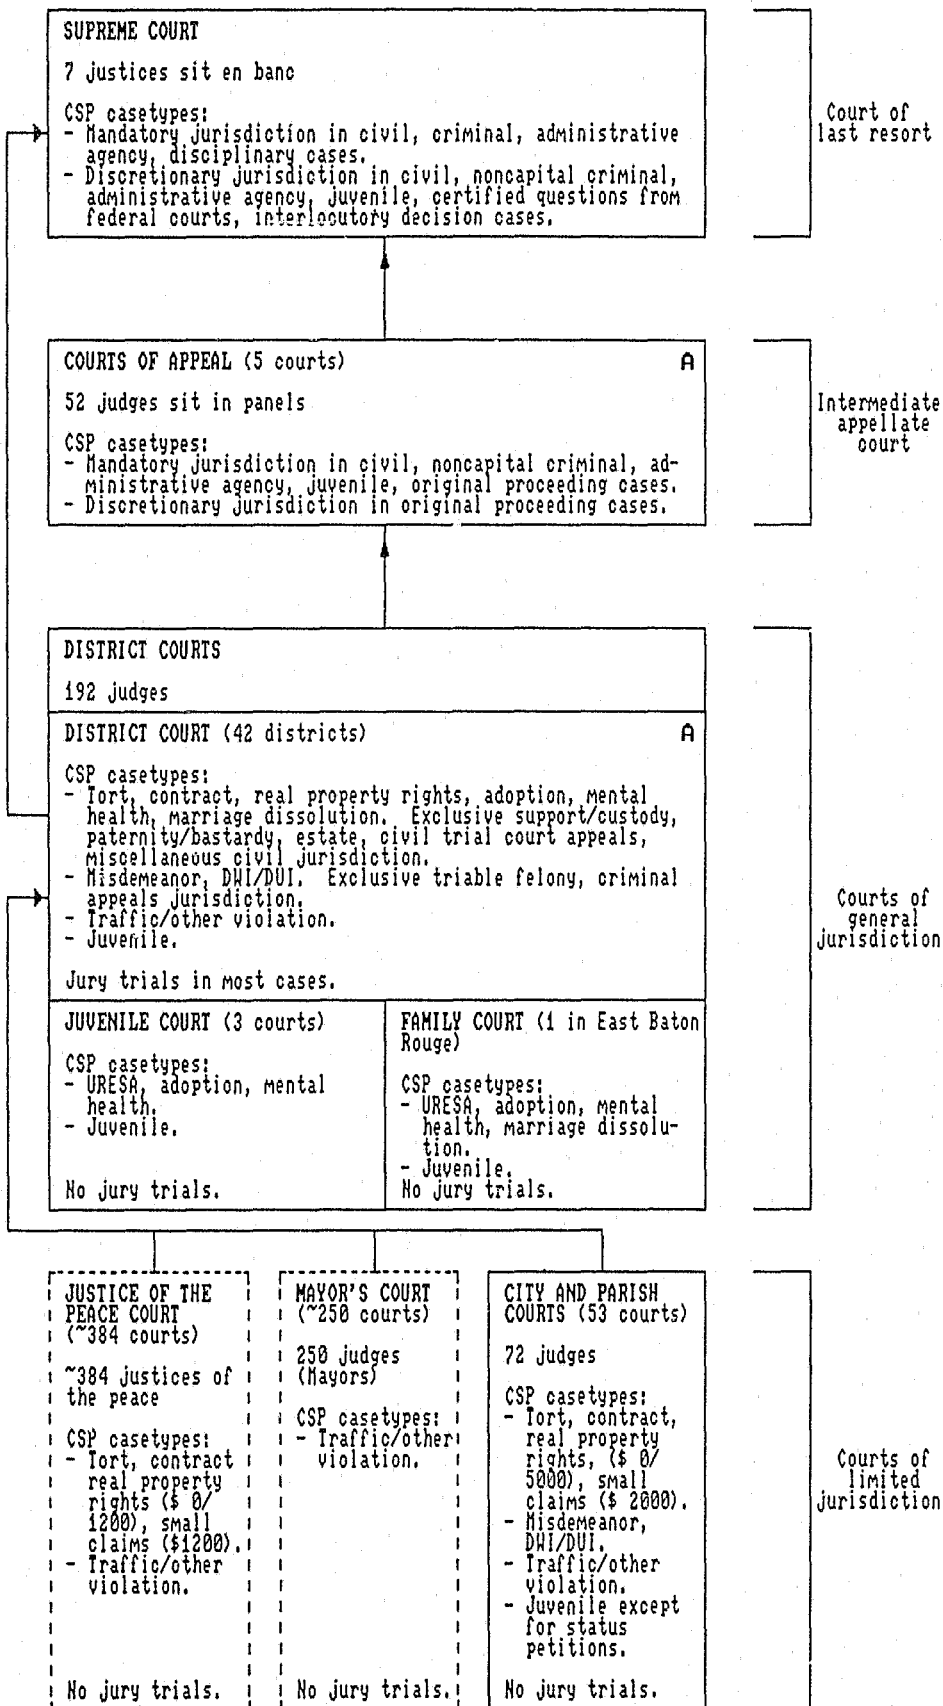

KANSAS COURT STRUCTURE, 1988

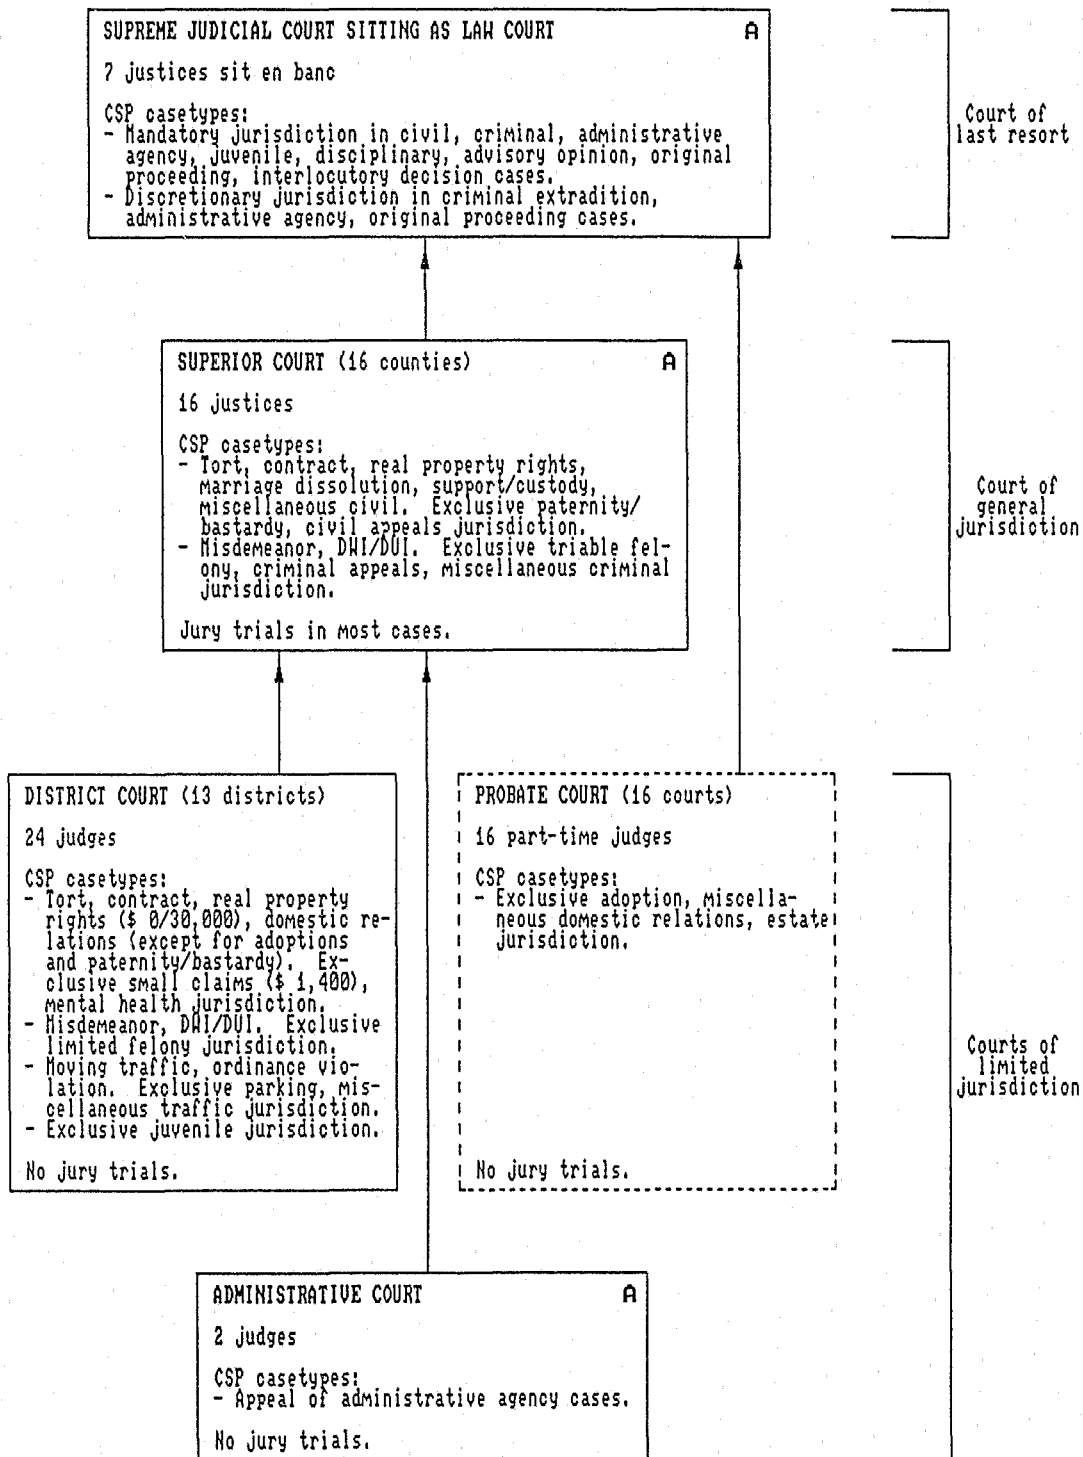

KENTUCKY COURT STRUCTURE, 1988

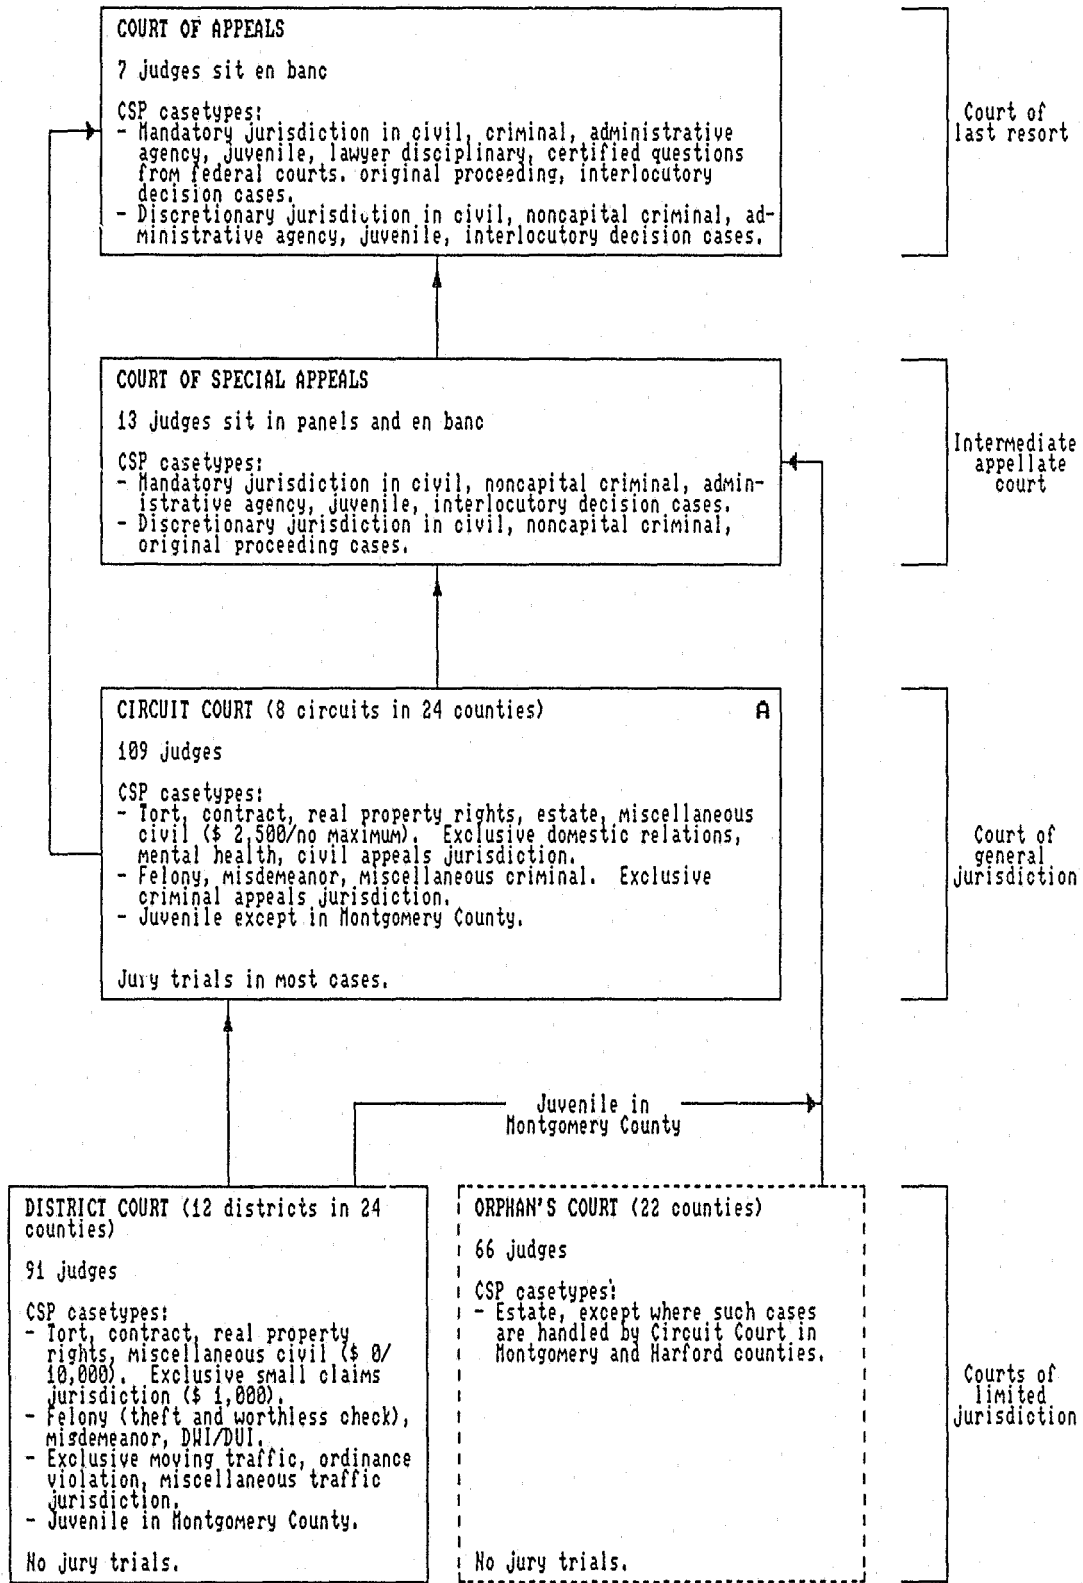

LOUISIANA COURT STRUCTURE, 1988

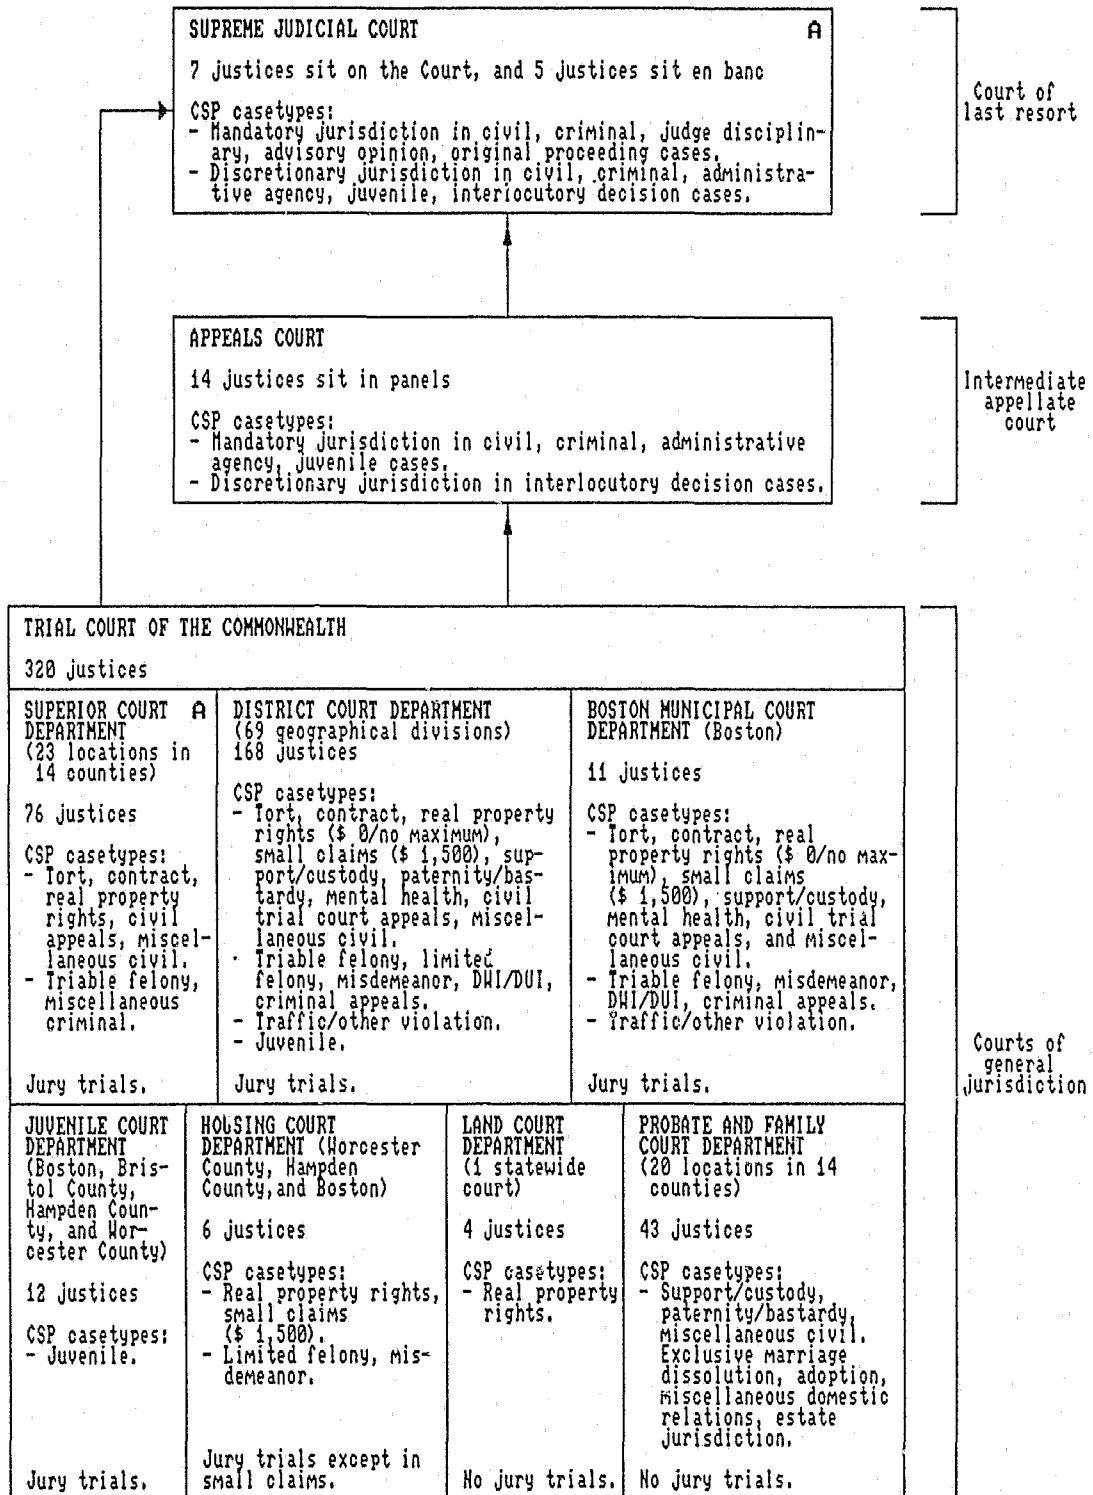

MAINE COURT STRUCTURE, 1988

MARYLAND COURT STRUCTURE, 1988

MASSACHUSETTS COURT STRUCTURE, 1988

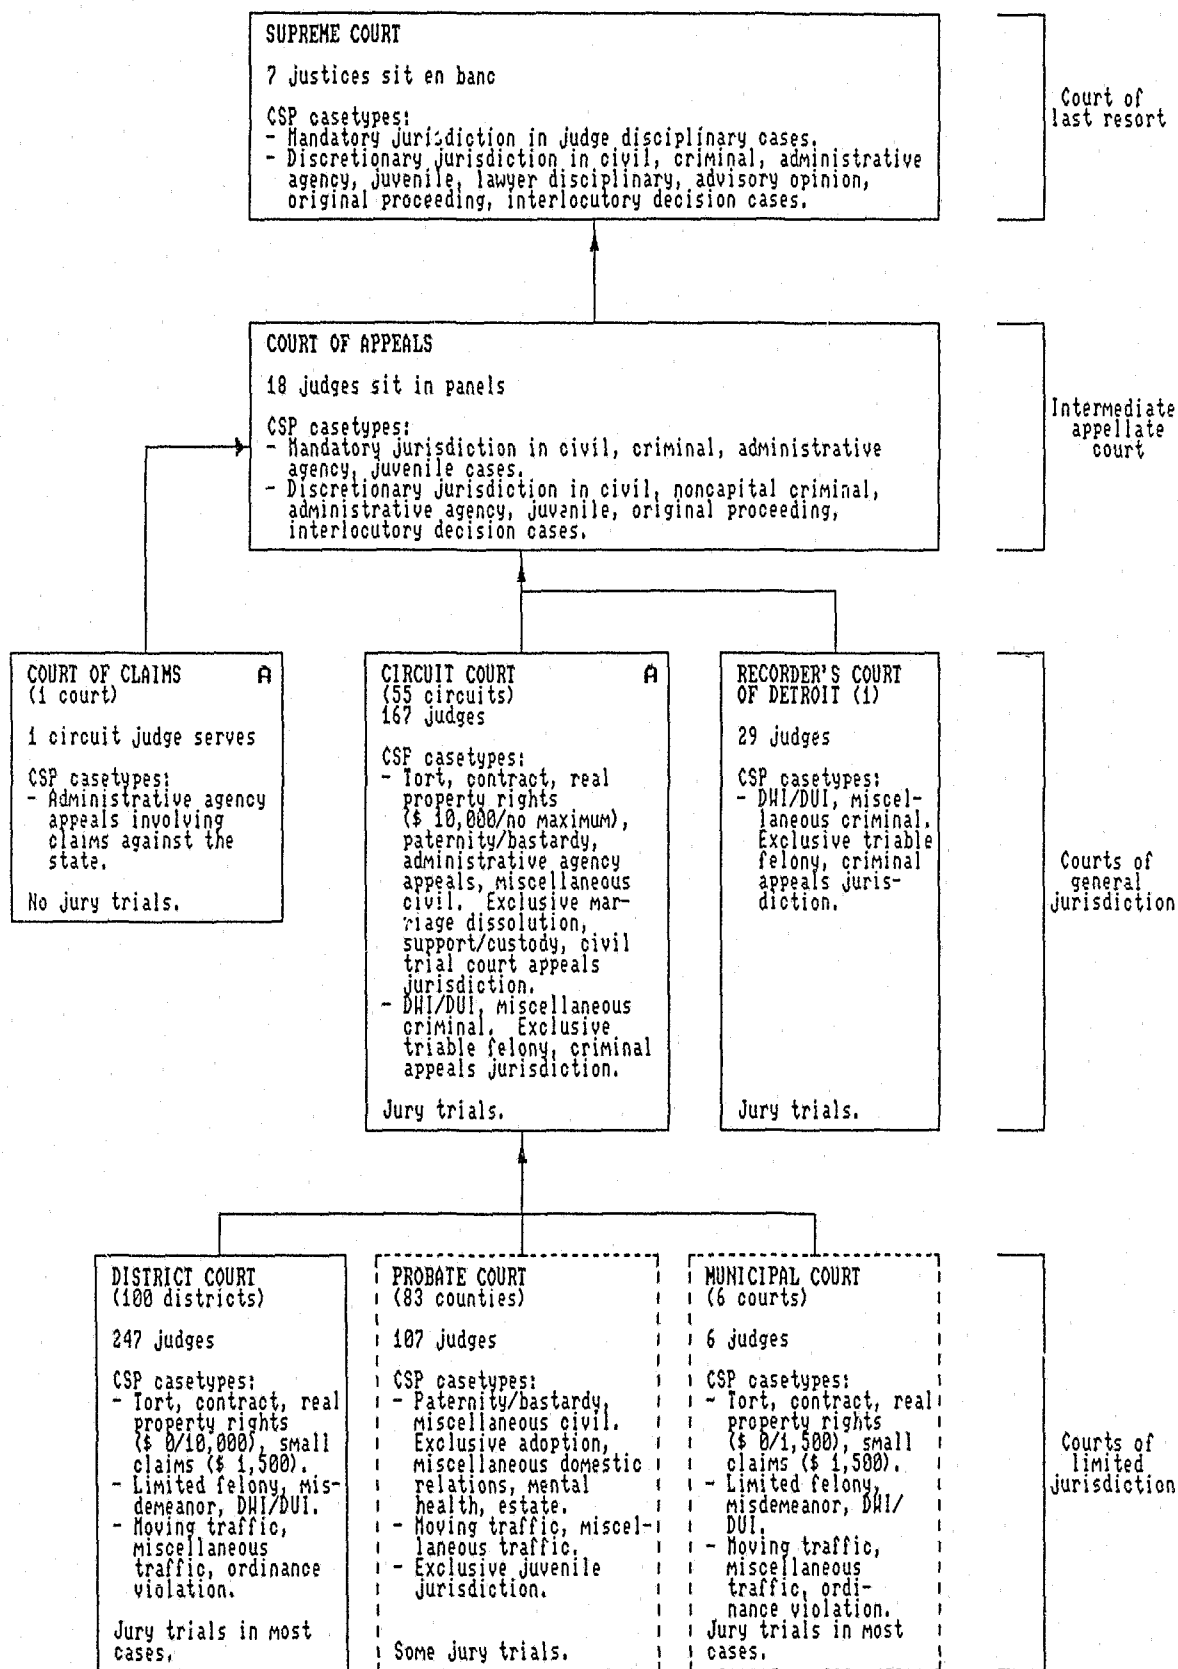

Court of last resort

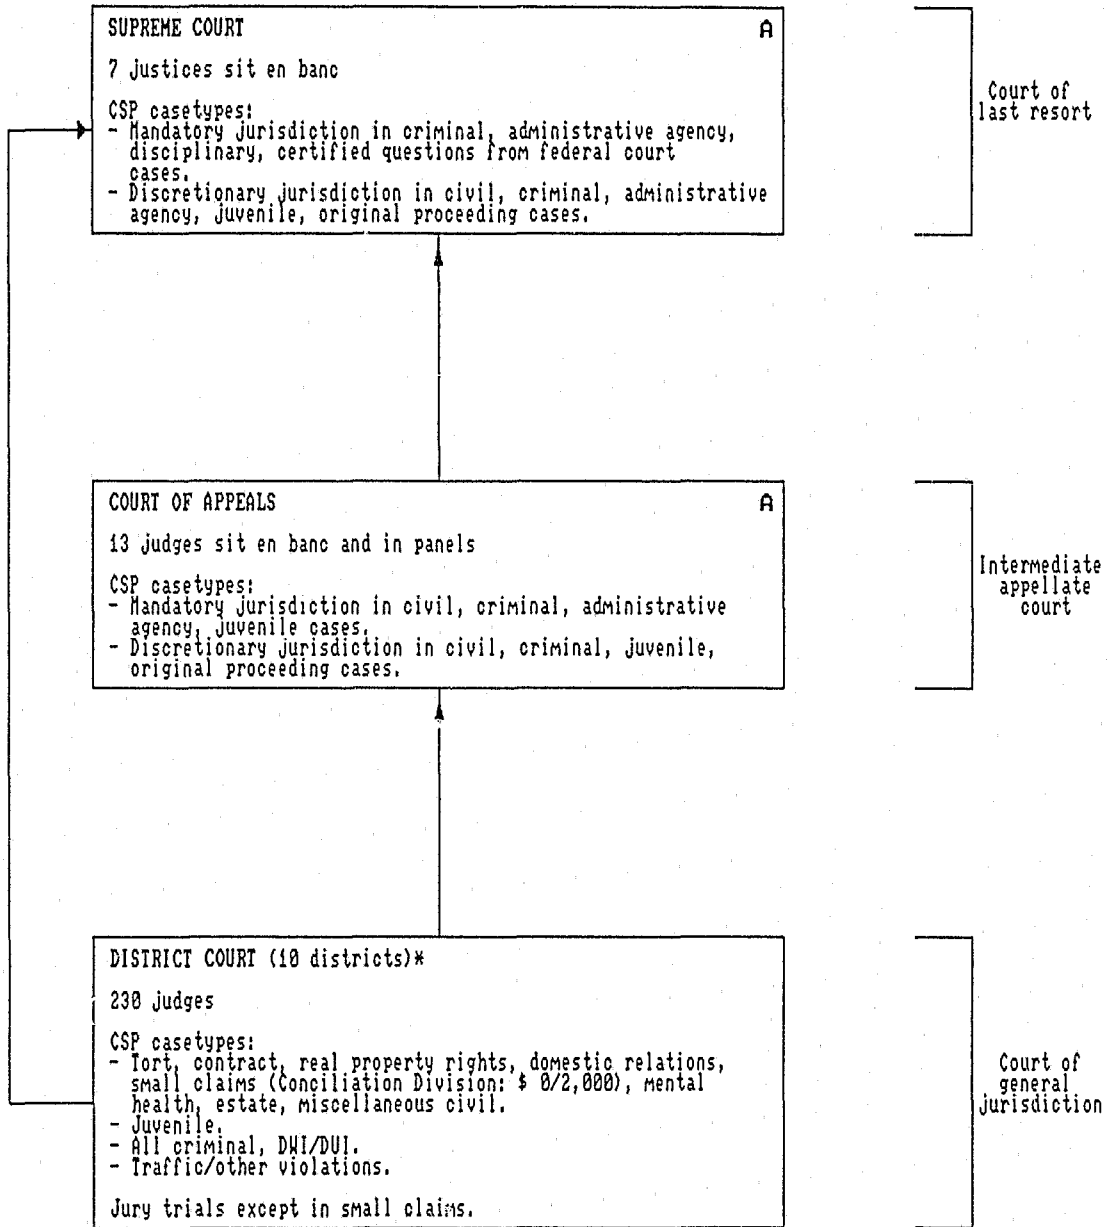

Intermediate appellate court

Courts of general jurisdiction

MICHIGAN COURT STRUCTURE, 1988

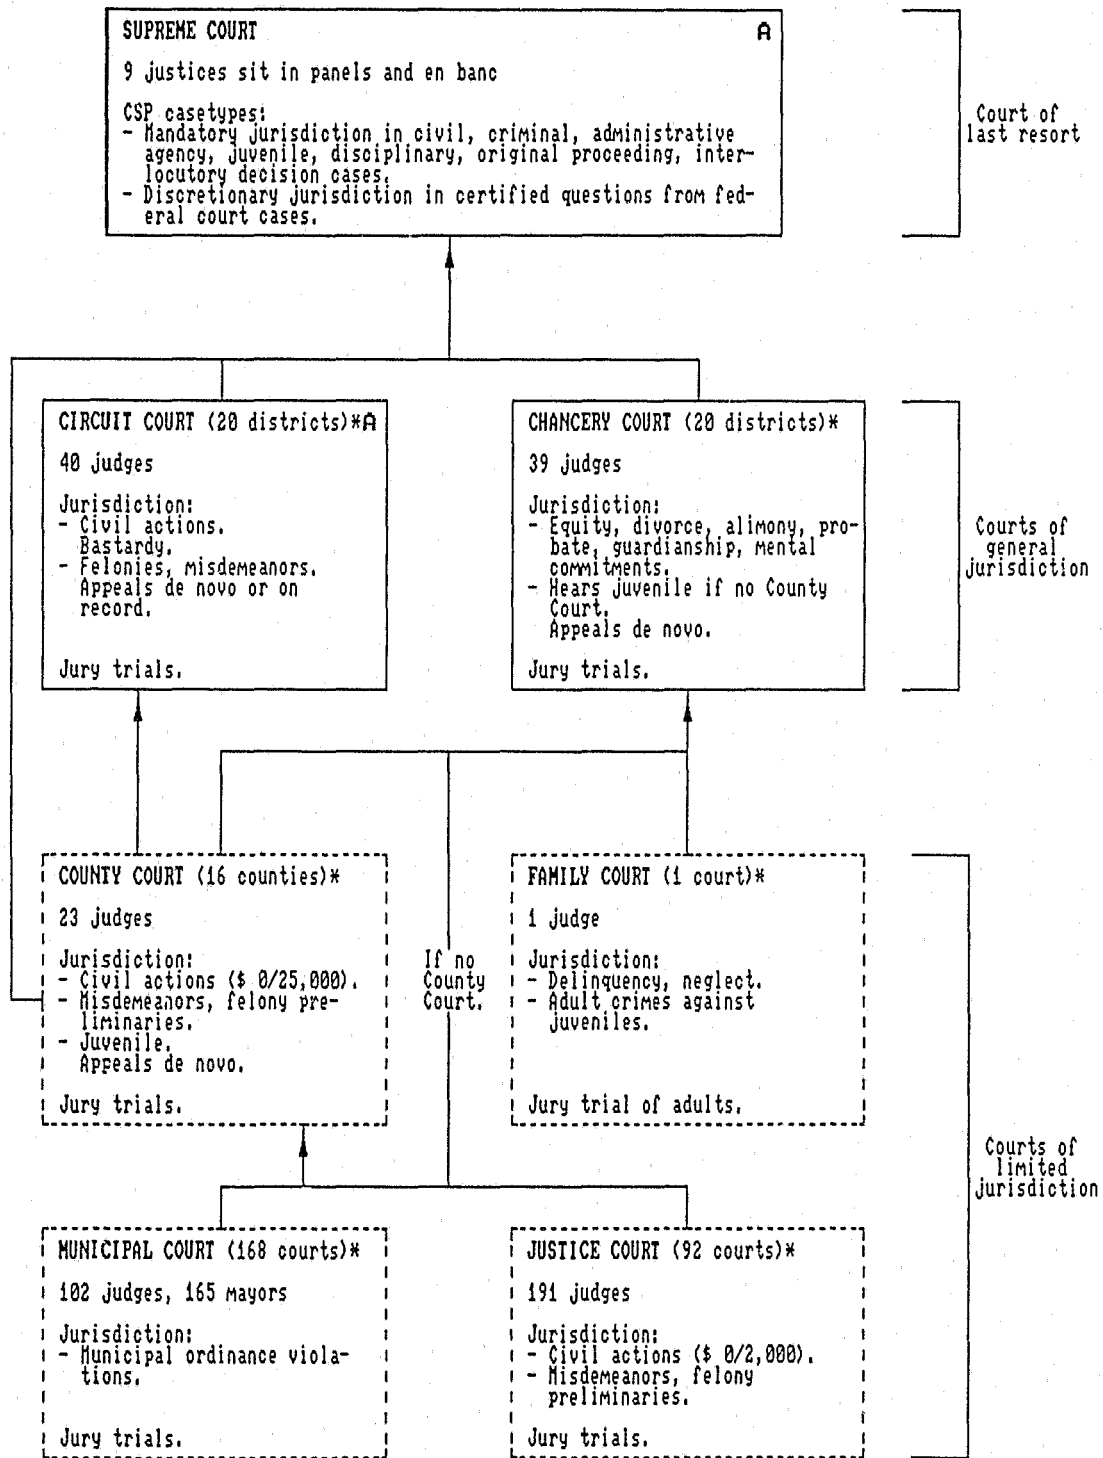

MINNESOTA COURT STRUCTURE, 1988

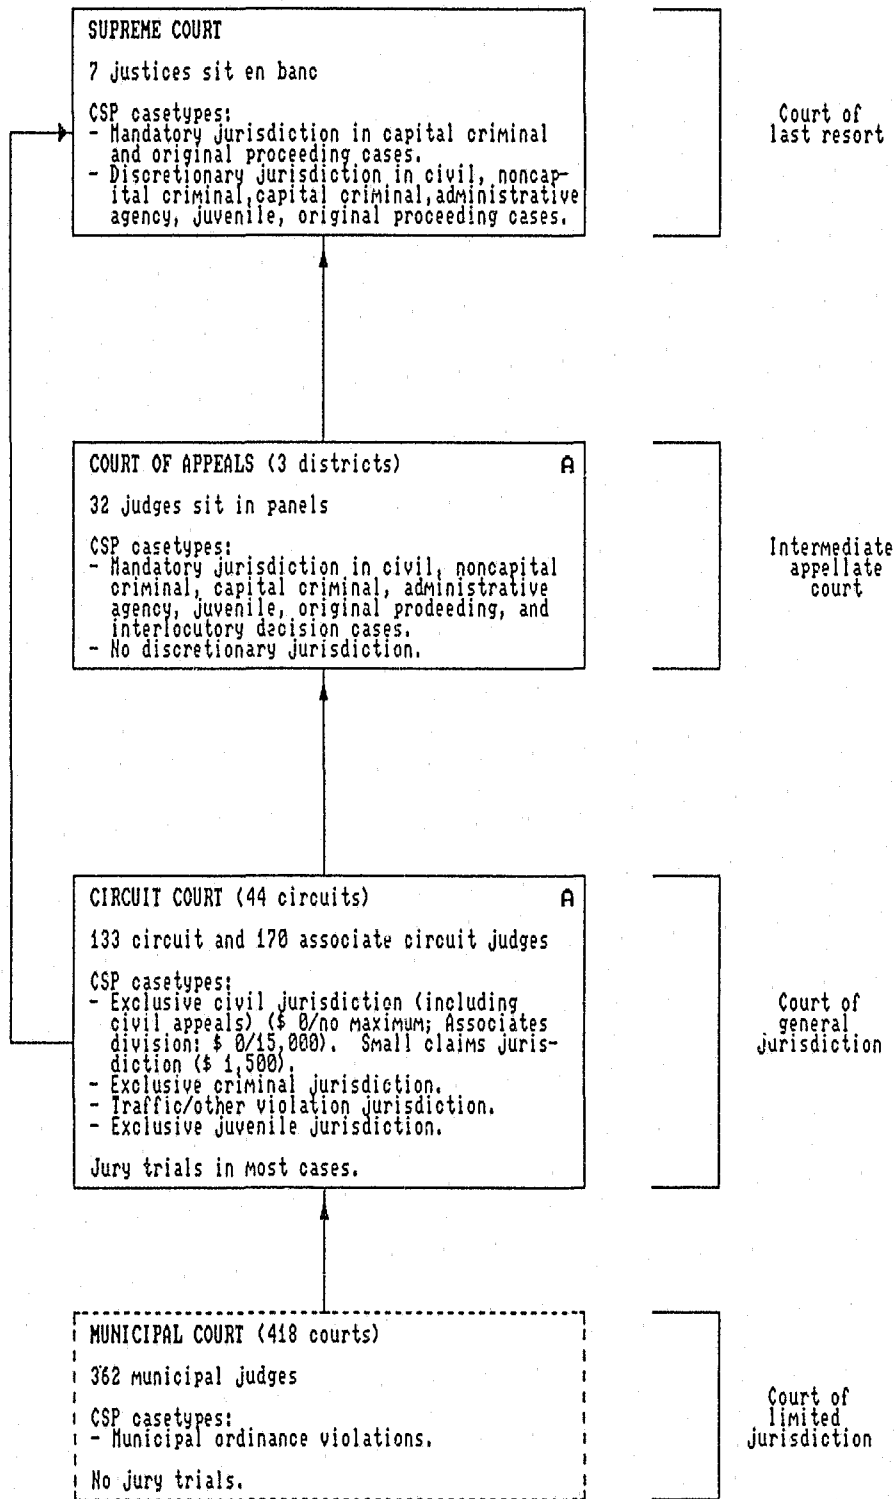

* The District Court was consolidated in September, 1987.

MISSISSIPPI COURT STRUCTURE, 1988

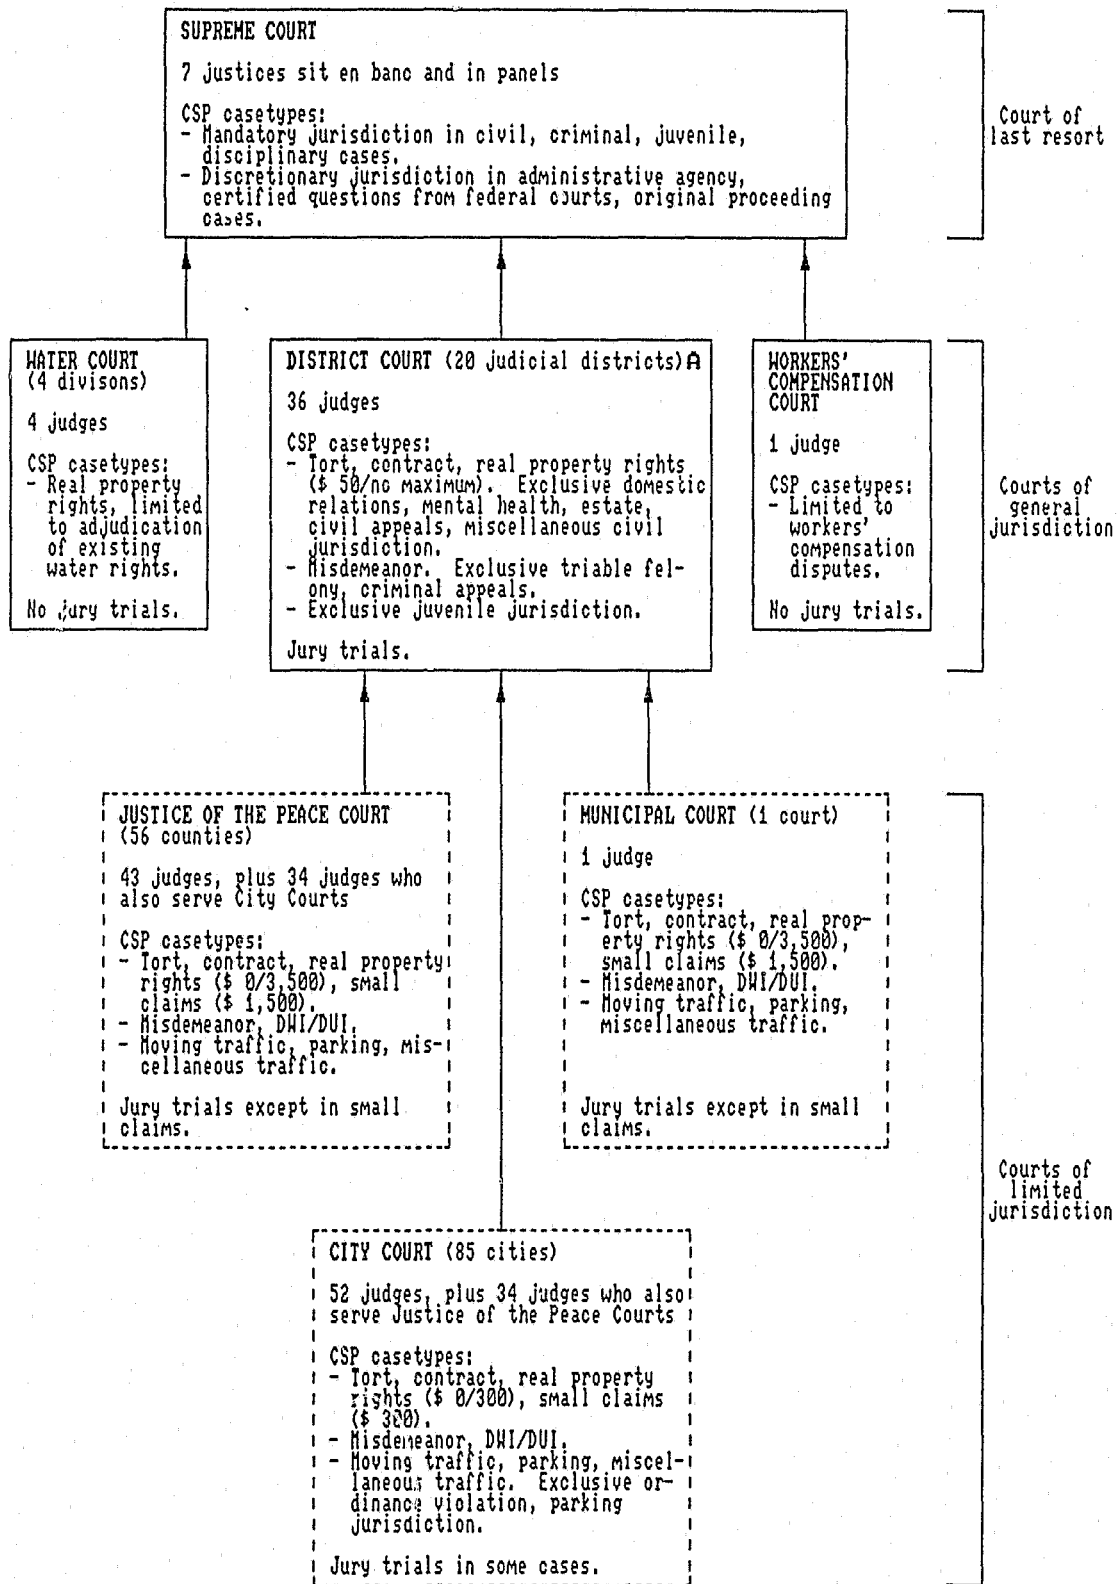

* A trial court jurisdiction guide was never completed by Mississippi, and data are unavailable for the trial courts; therefore, the trial court terminology reported in this court structure chart does not reflect CSP model reporting terms.

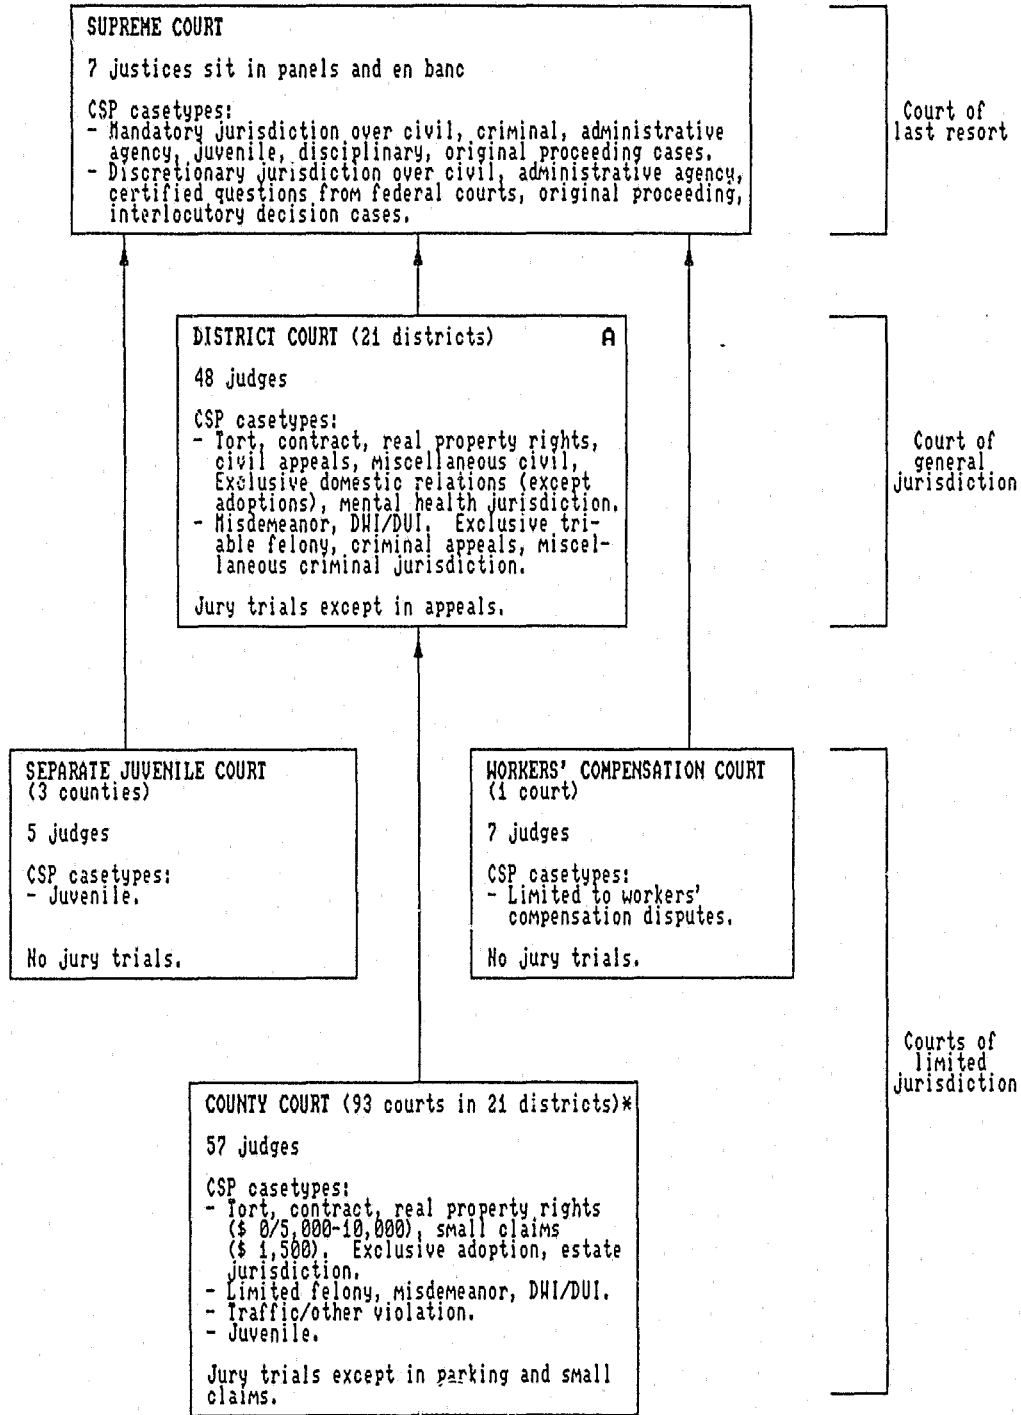

MISSOURI COURT STRUCTURE, 1988

MONTANA COURT STRUCTURE, 1988

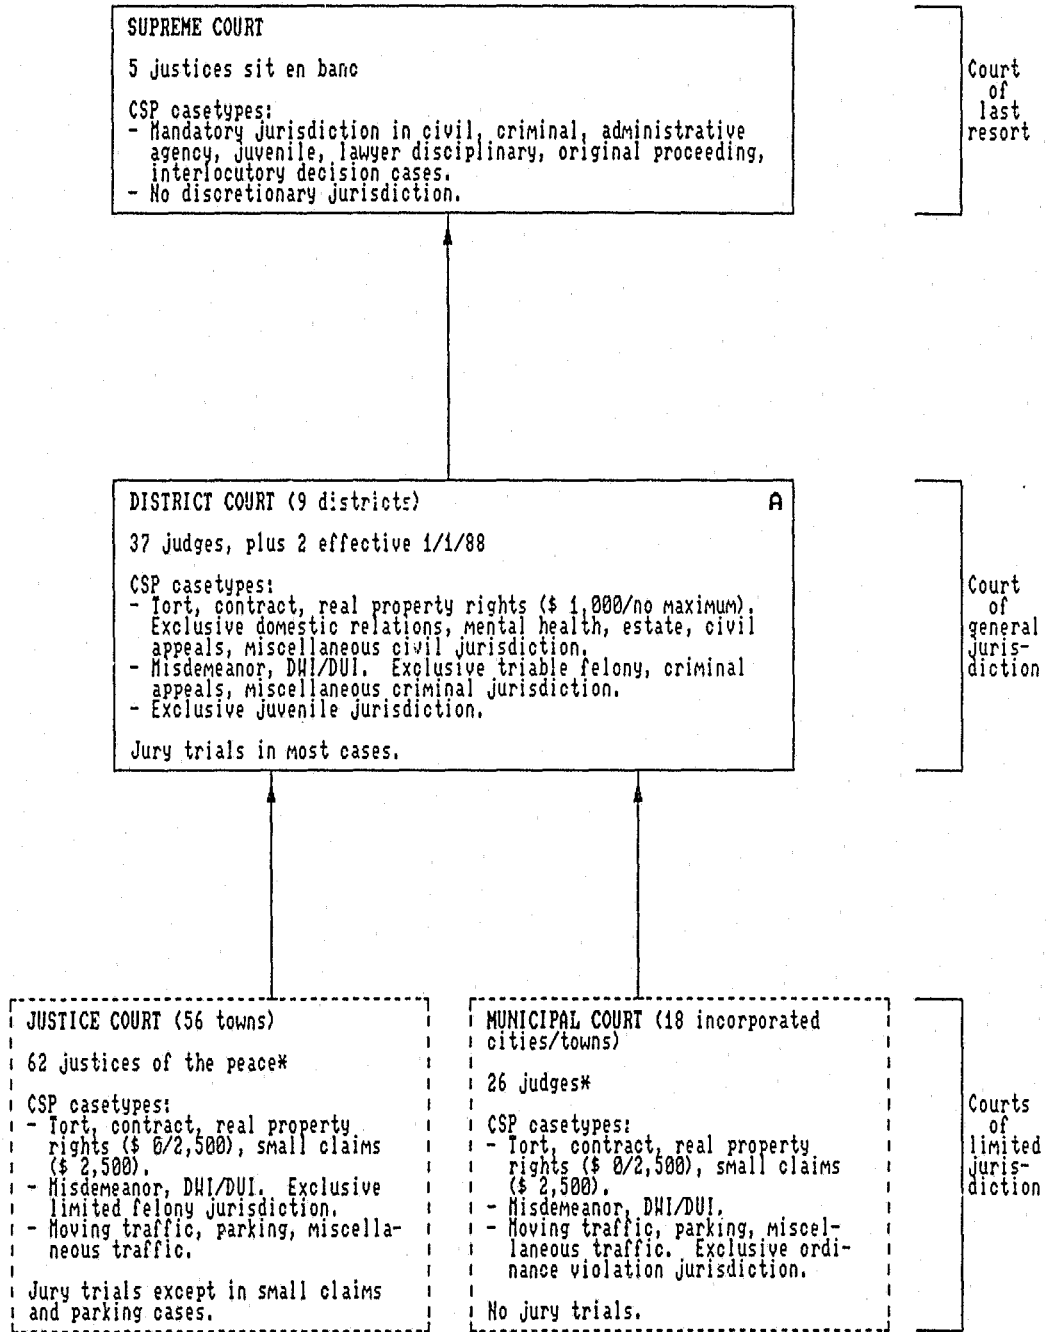

NEBRASKA COURT STRUCTURE, 1988

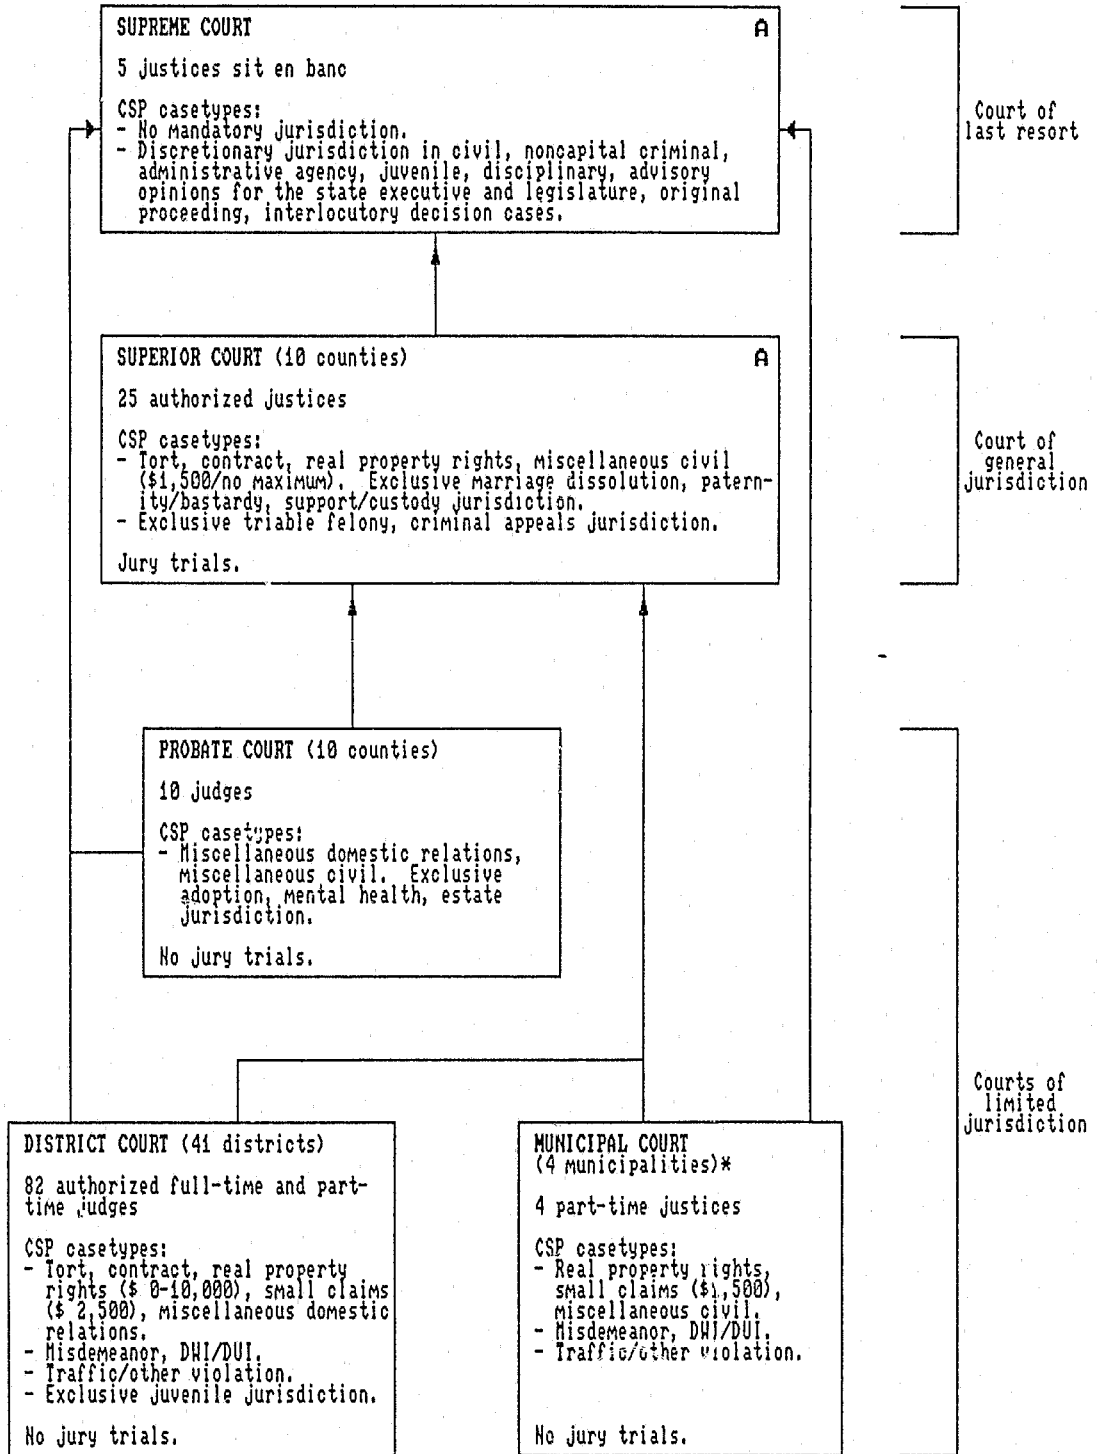

* In July 1985, the Municipal Courts were merged with the County Courts.

NEVADA COURT STRUCTURE, 1988

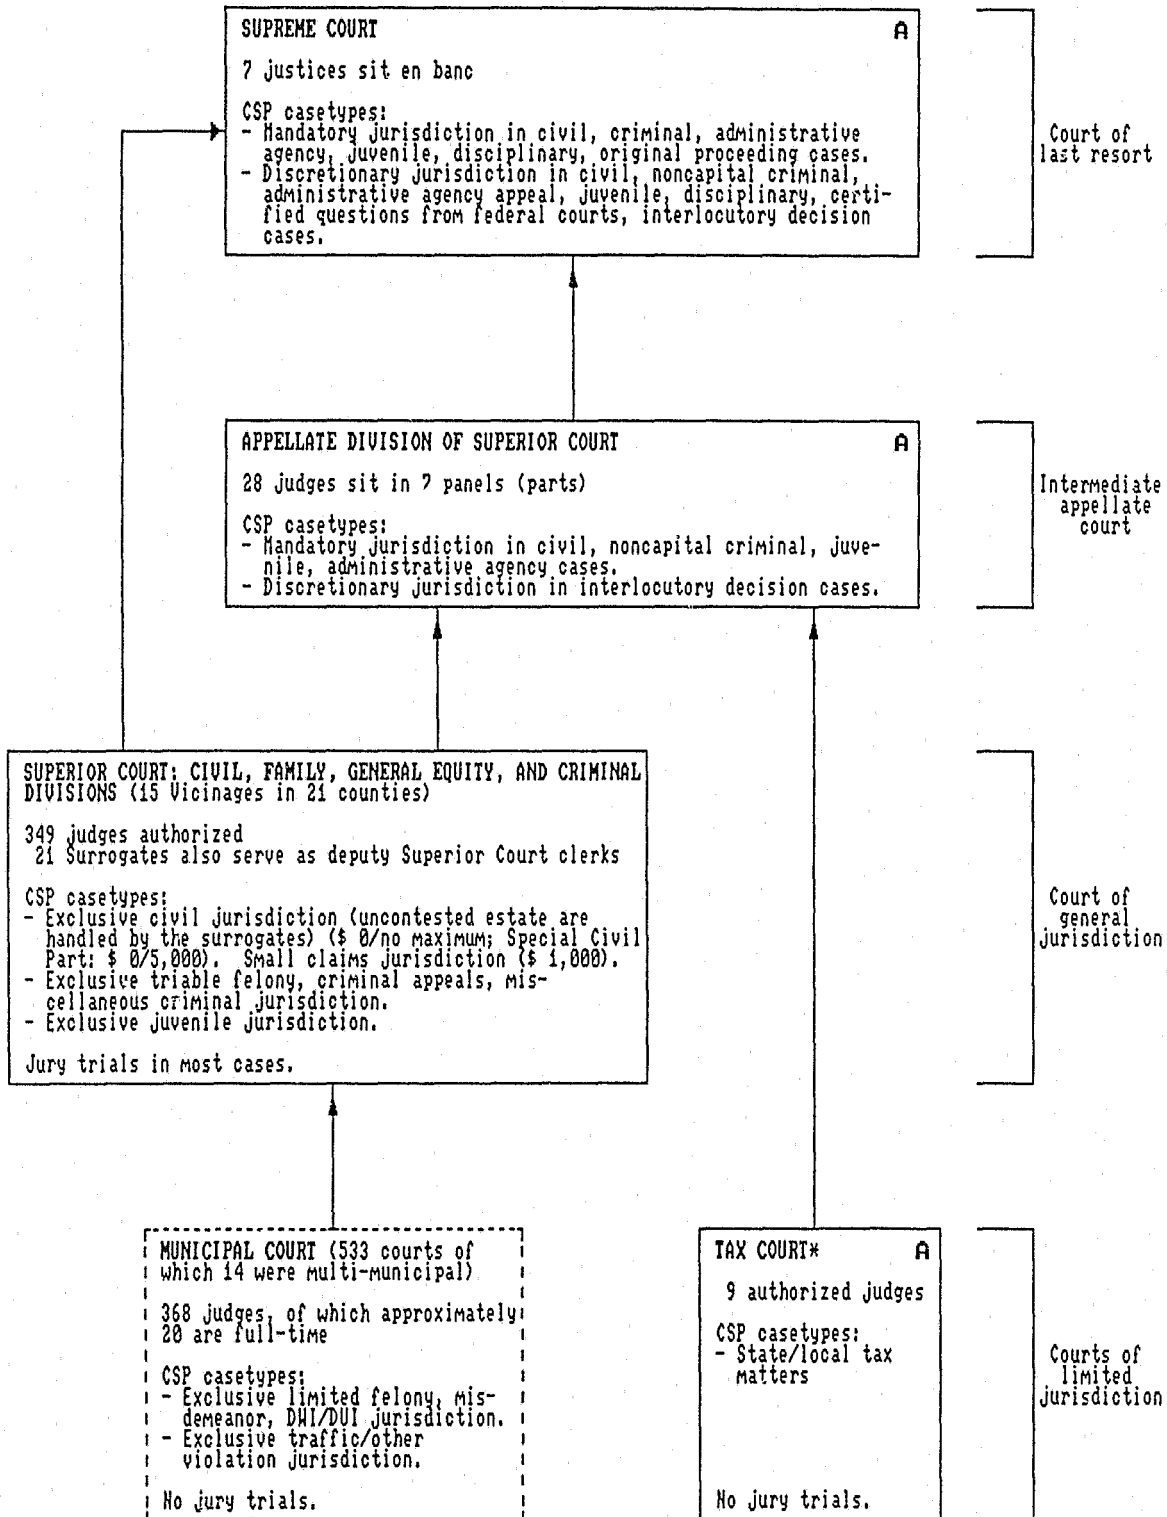

* Eight justices of the peace also serve as Municipal Court judges.

NEW HAMPSHIRE COURT STRUCTURE, 1988

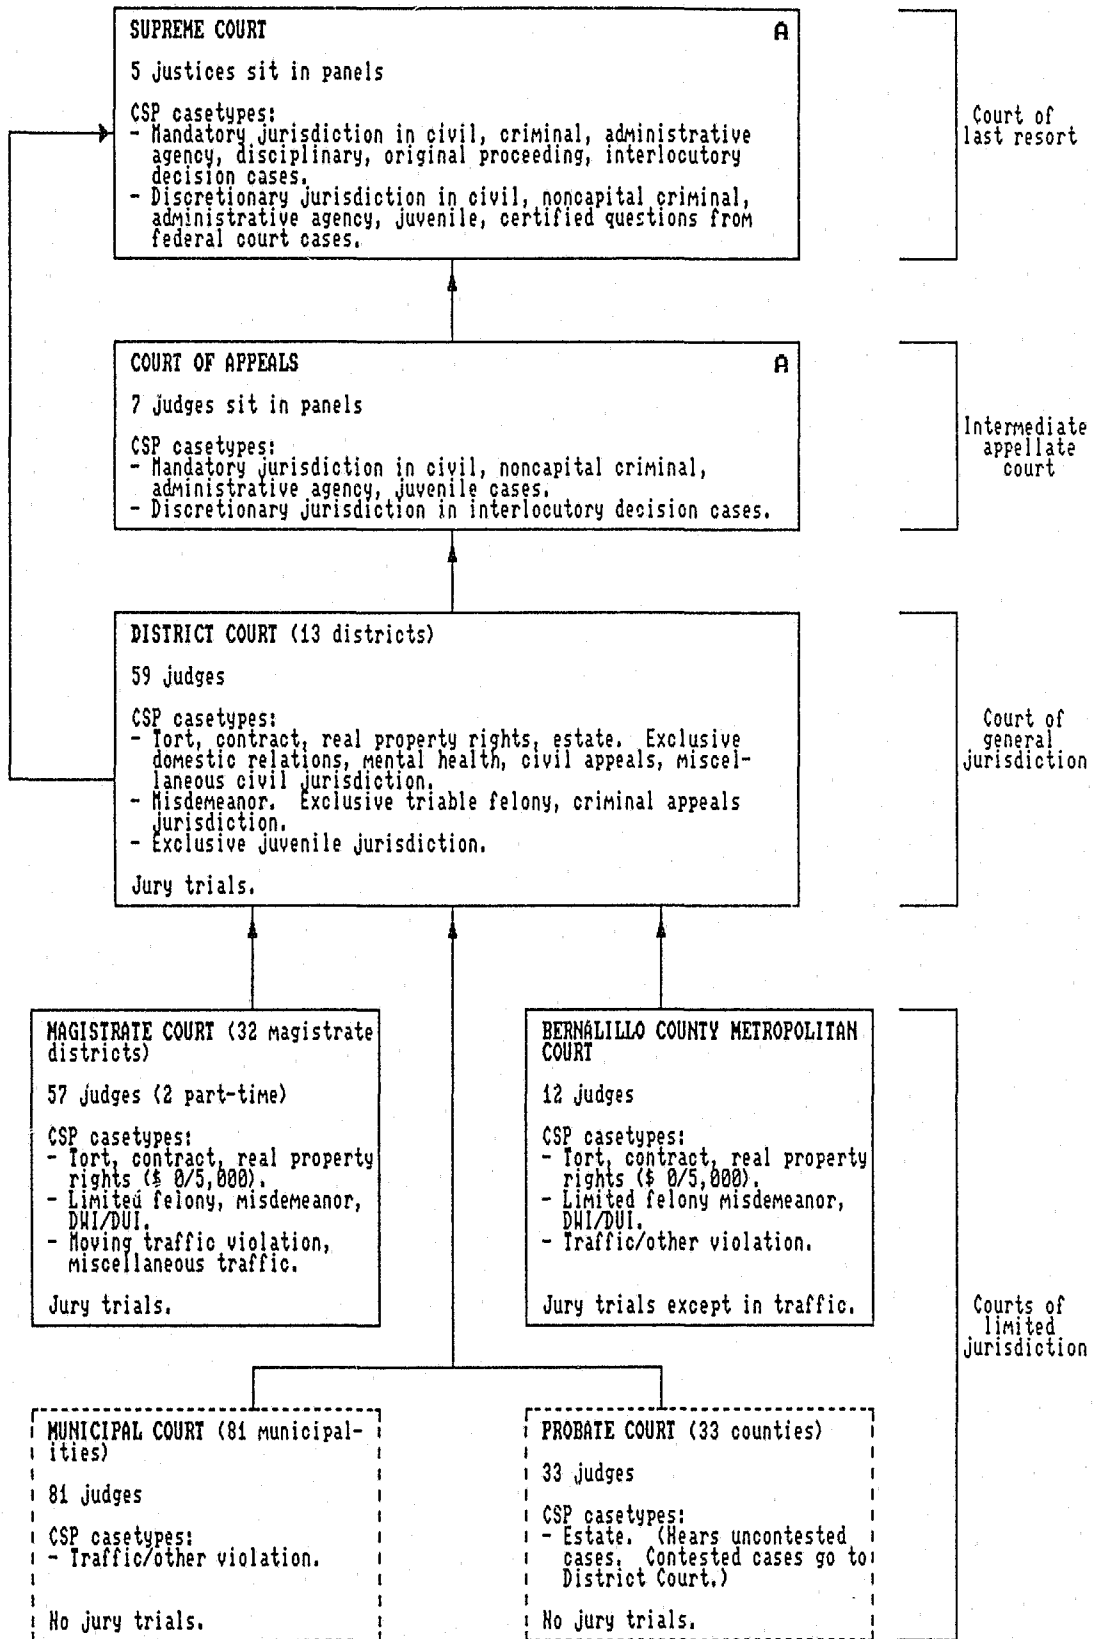

* The Municipal Court is being phased out (by statute) upon retirement and/or resignation of sitting justices.

NEW JERSEY COURT STRUCTURE, 1988

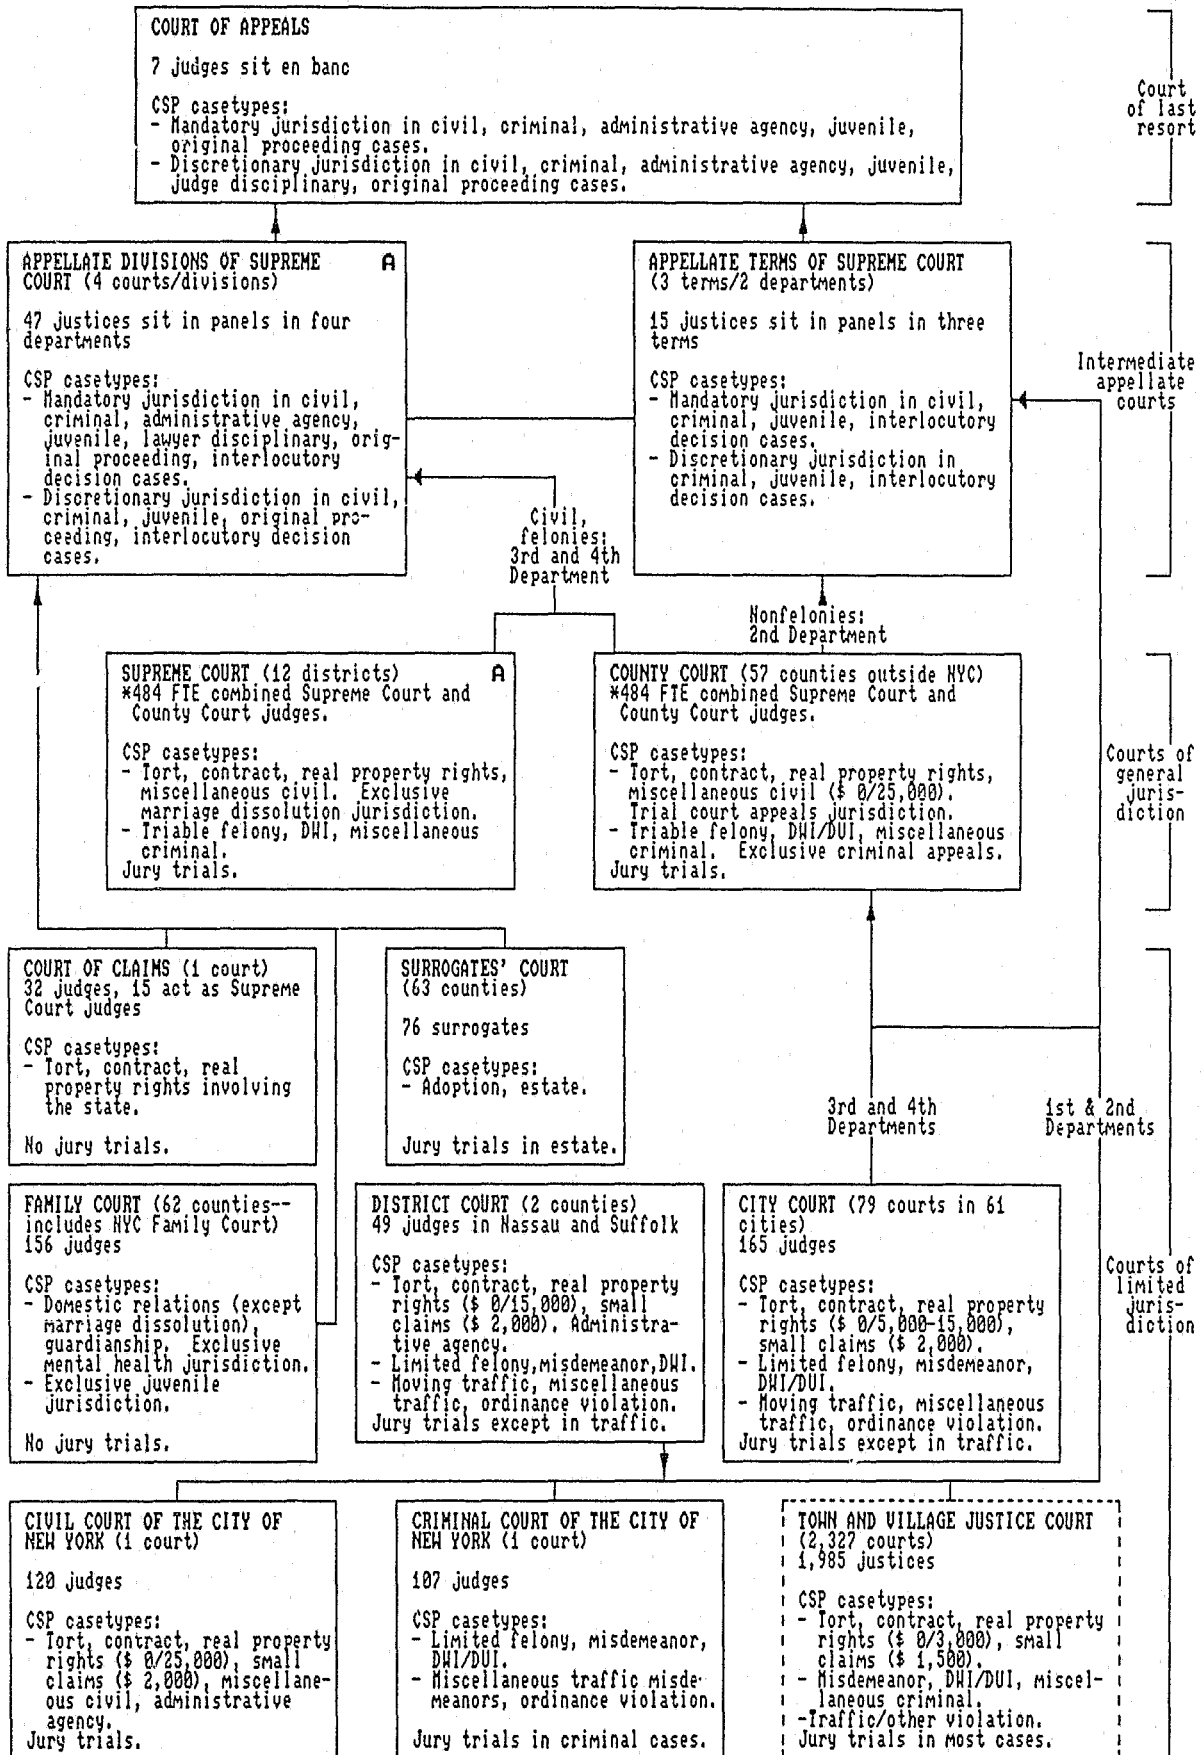

* Tax Court is considered a limited jurisdiction court because of its specialized subject matter. Nevertheless, it receives appeals from administrative bodies and its cases are appealed to the intermediate appellate court. Tax Court judges have the same general qualifications and terms of service as Superior Court judges and can be cross assigned.

NEW MEXICO COURT STRUCTURE, 1988

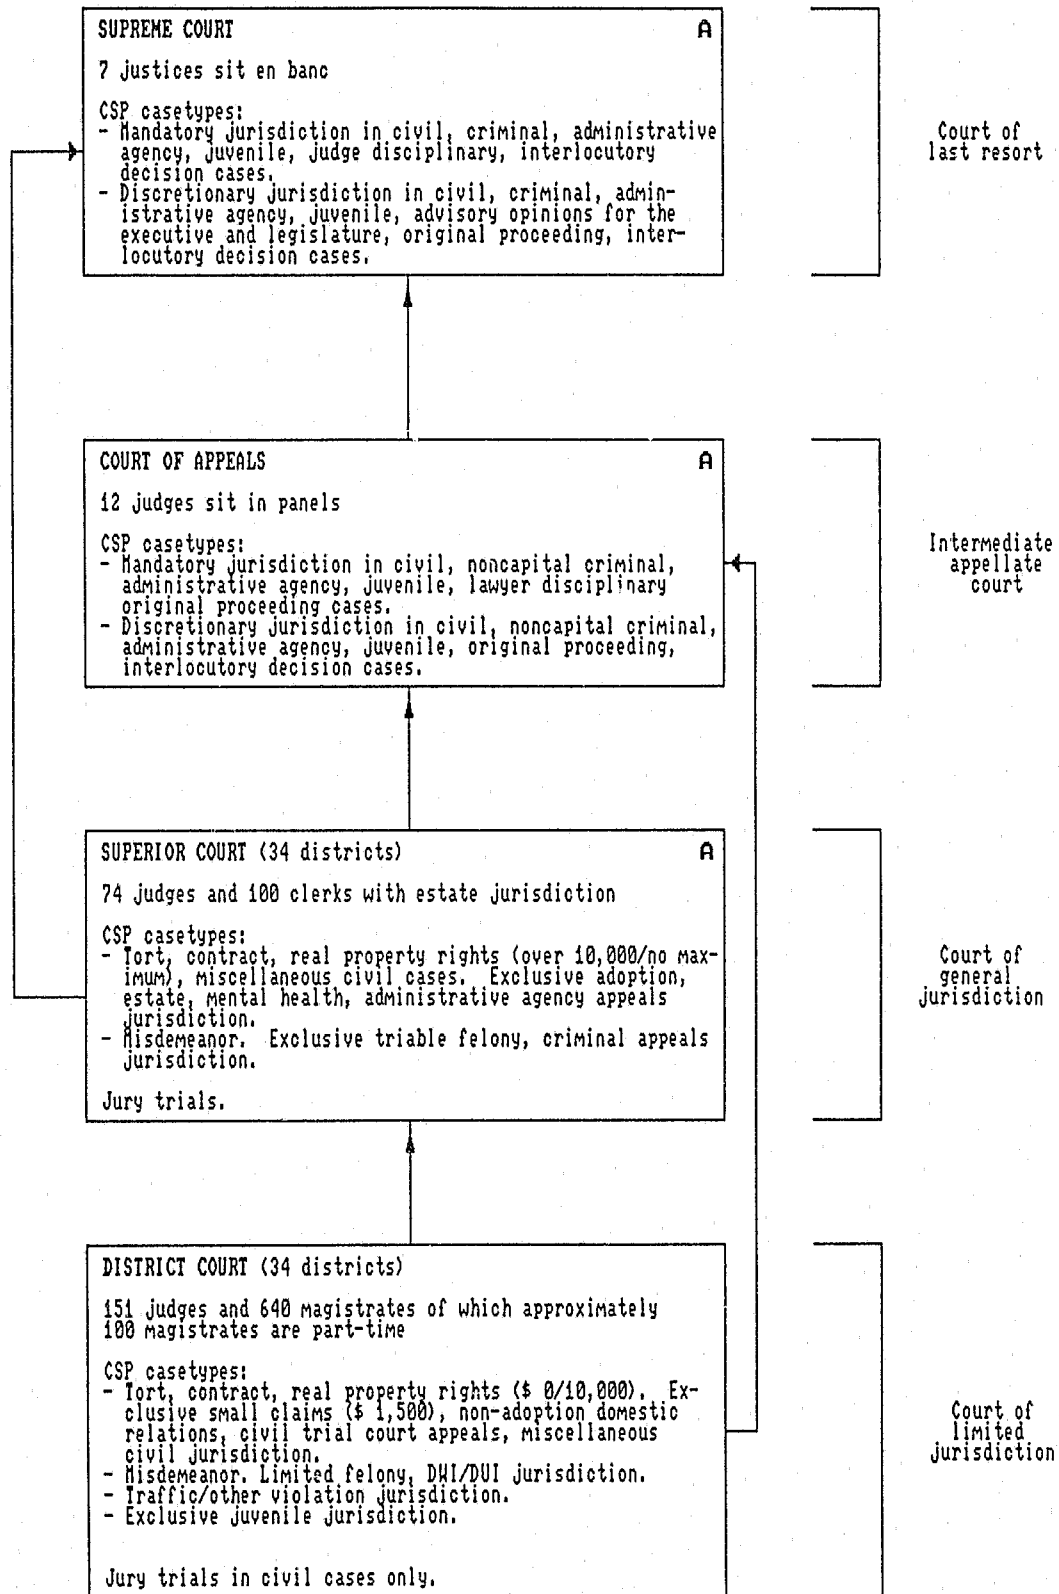

NEW YORK COURT STRUCTURE, 1988

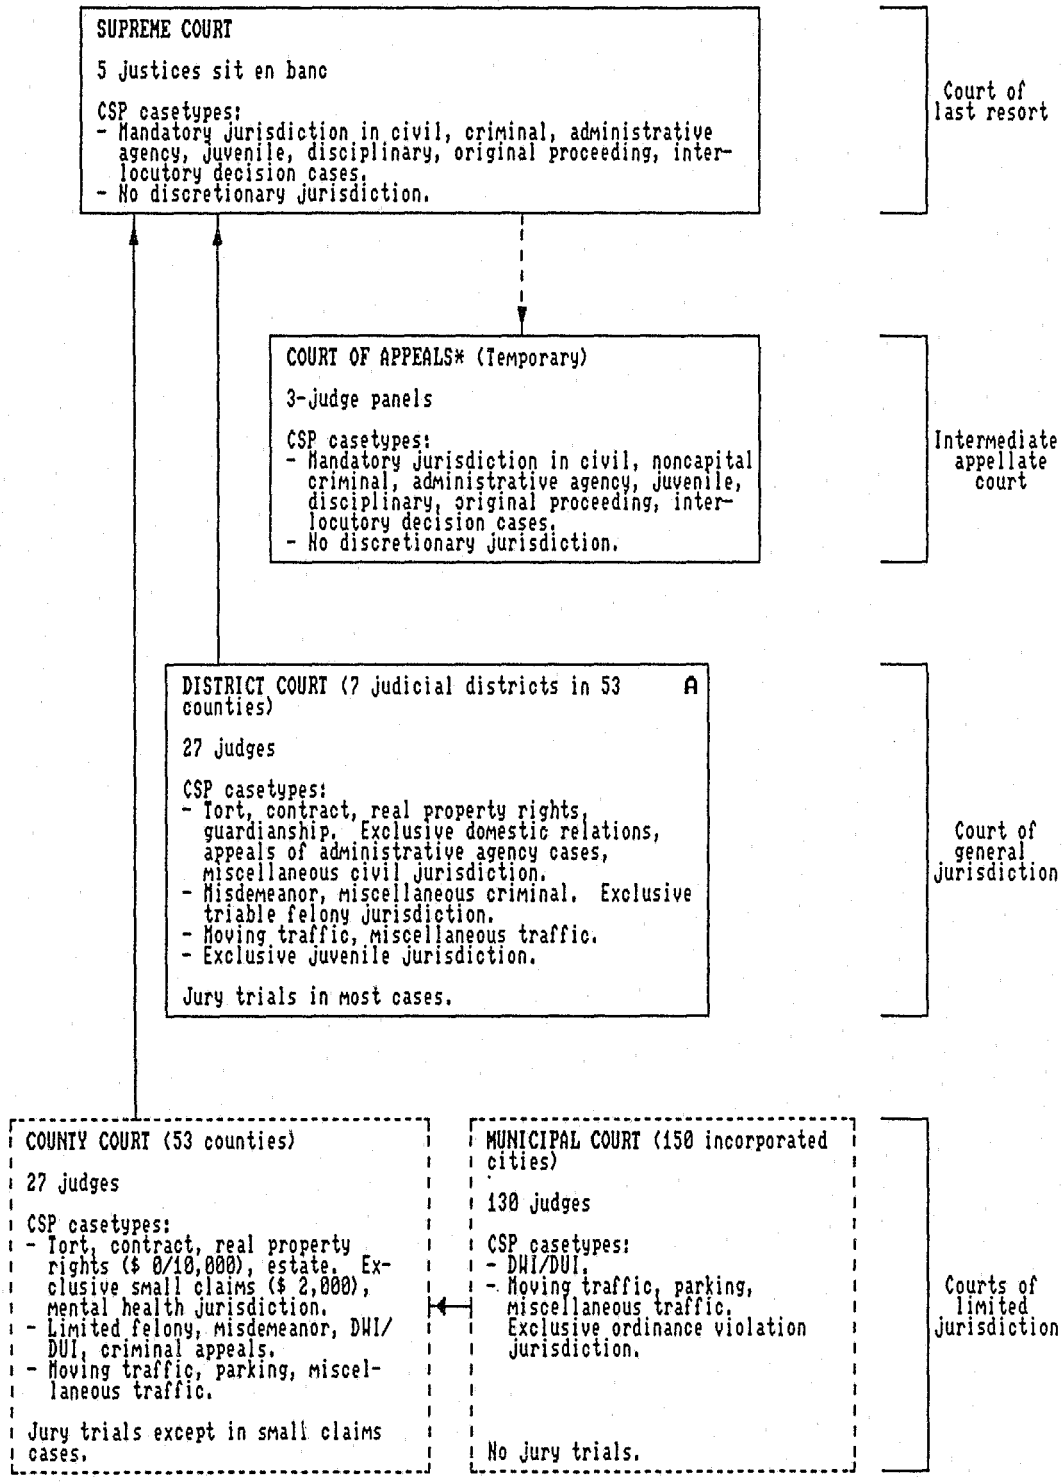

* Includes Acting Supreme Court Justices assigned administratively.

NORTH CAROLINA COURT STRUCTURE, 1988

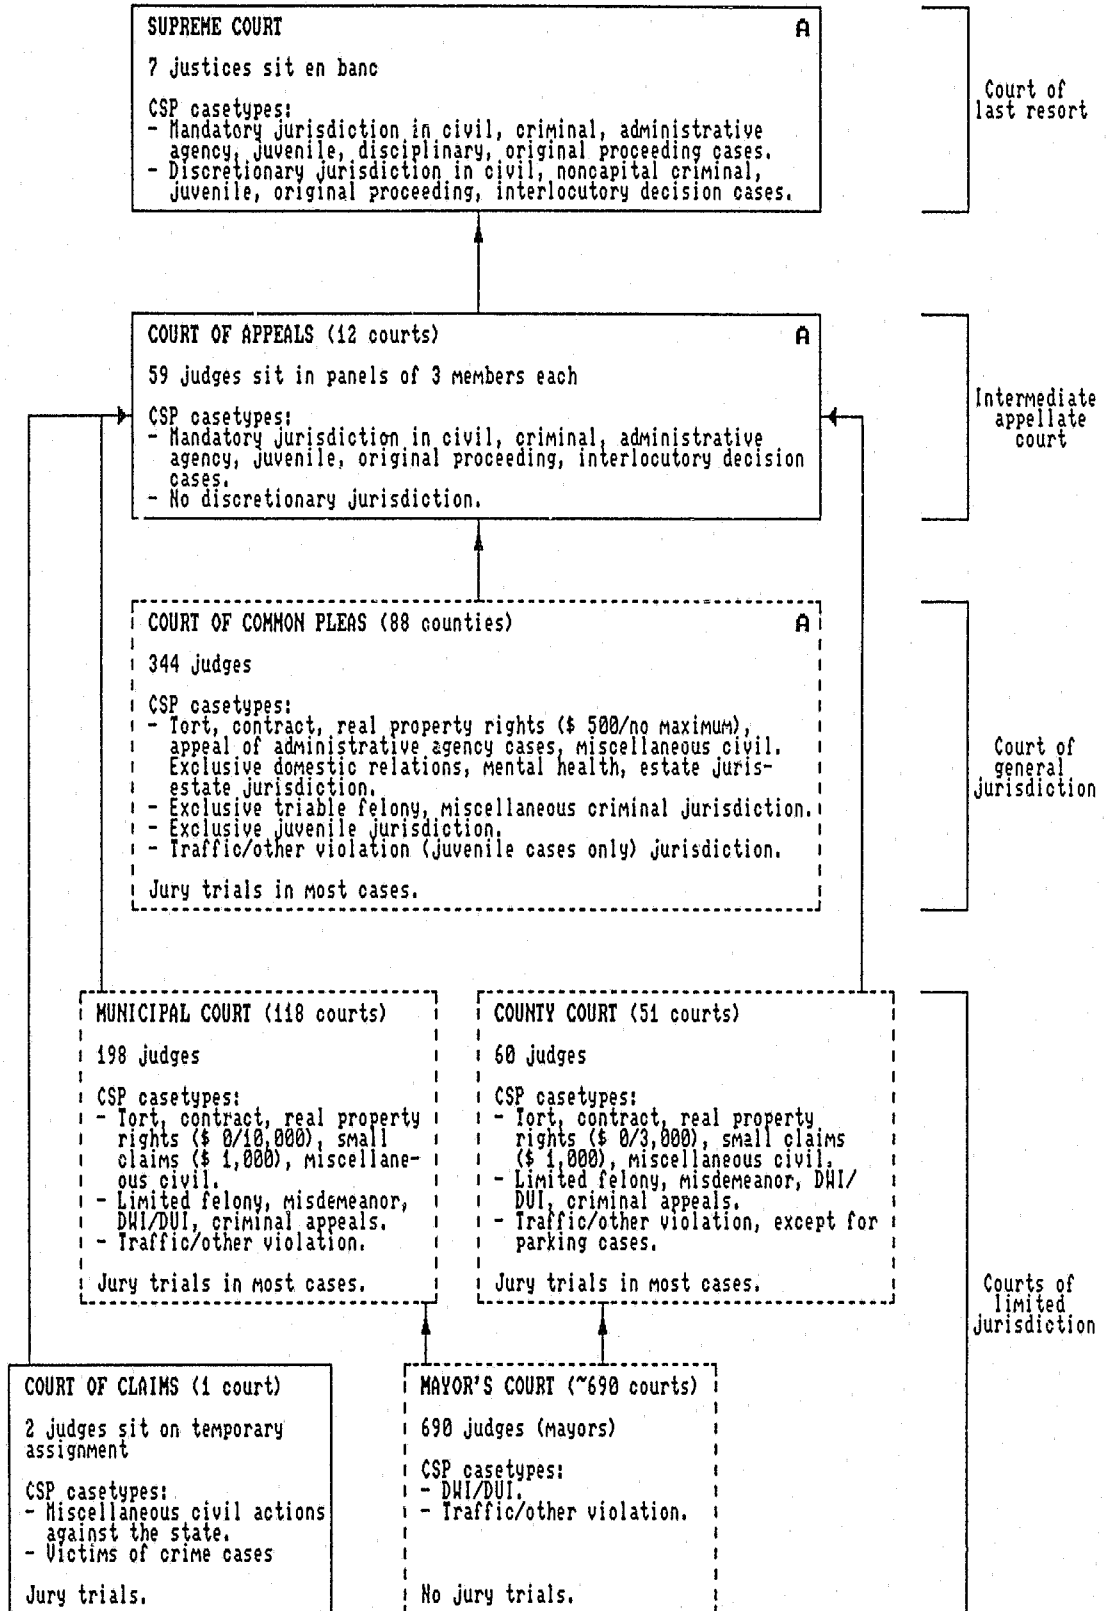

NORTH DAKOTA COURT STRUCTURE, 1988

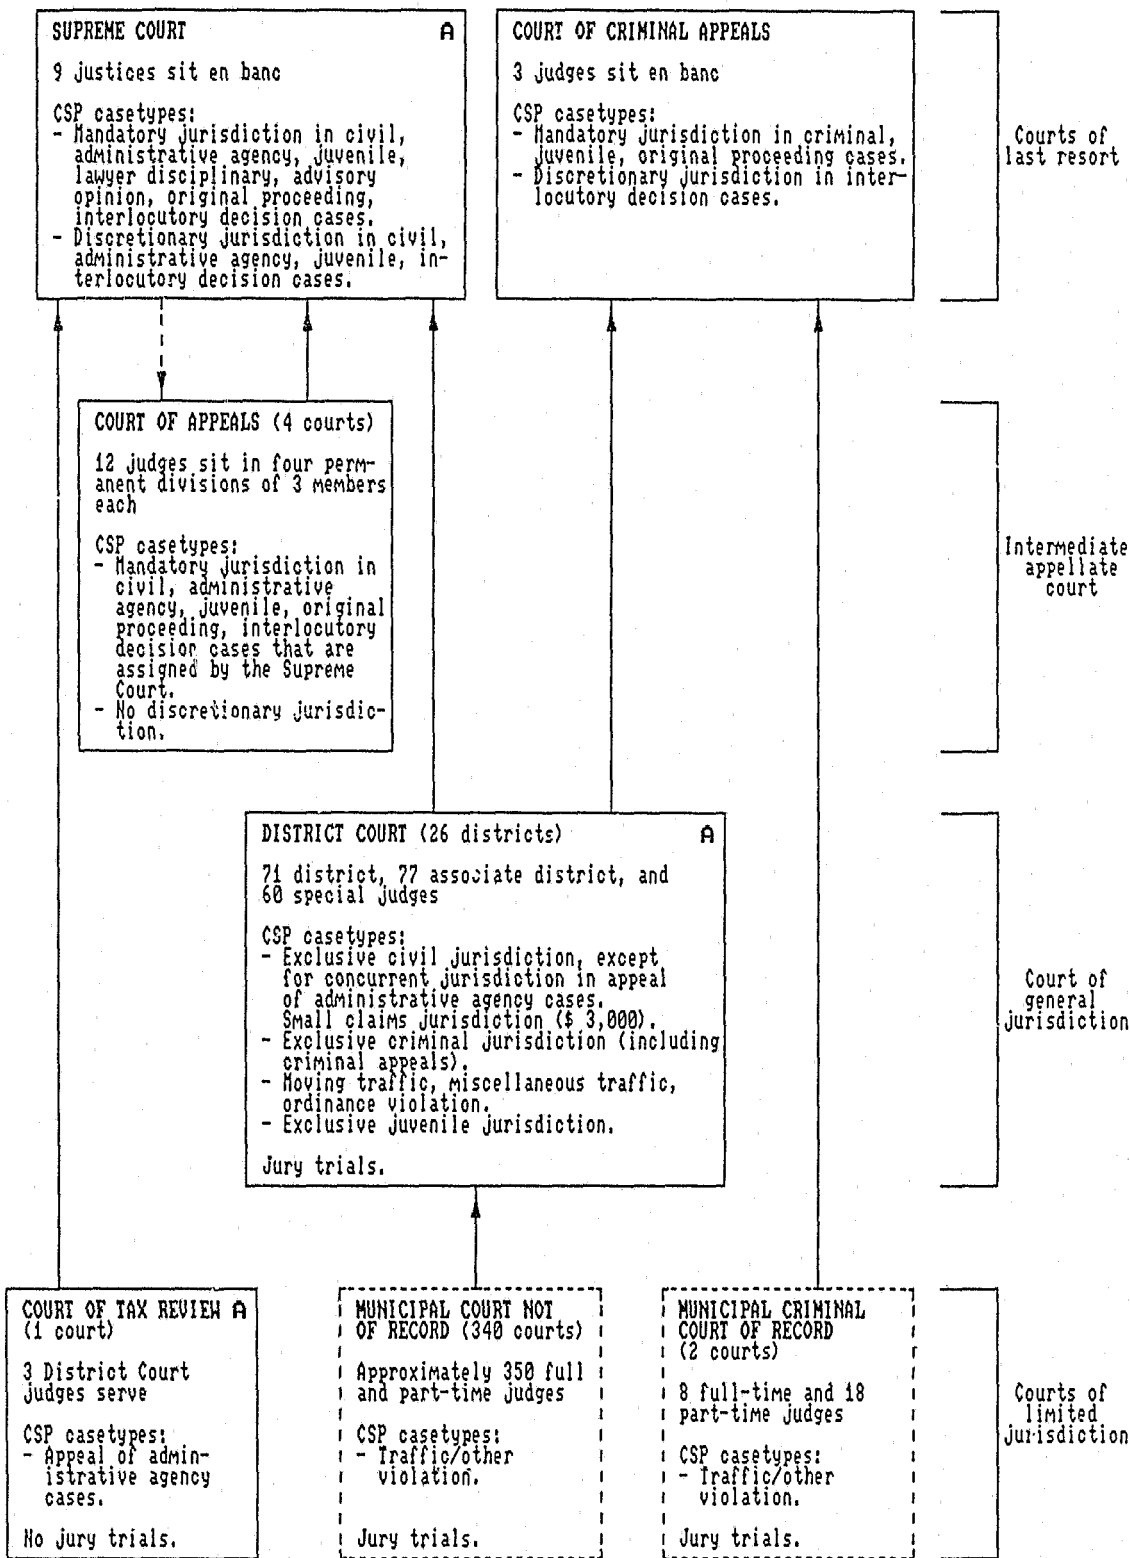

---- Indicates assignment of cases.

* Effective July 1, 1987 through January 1, 1990, a temporary Court of Appeals is established to exercise appellate and original jurisdiction as delegated by the Supreme Court.

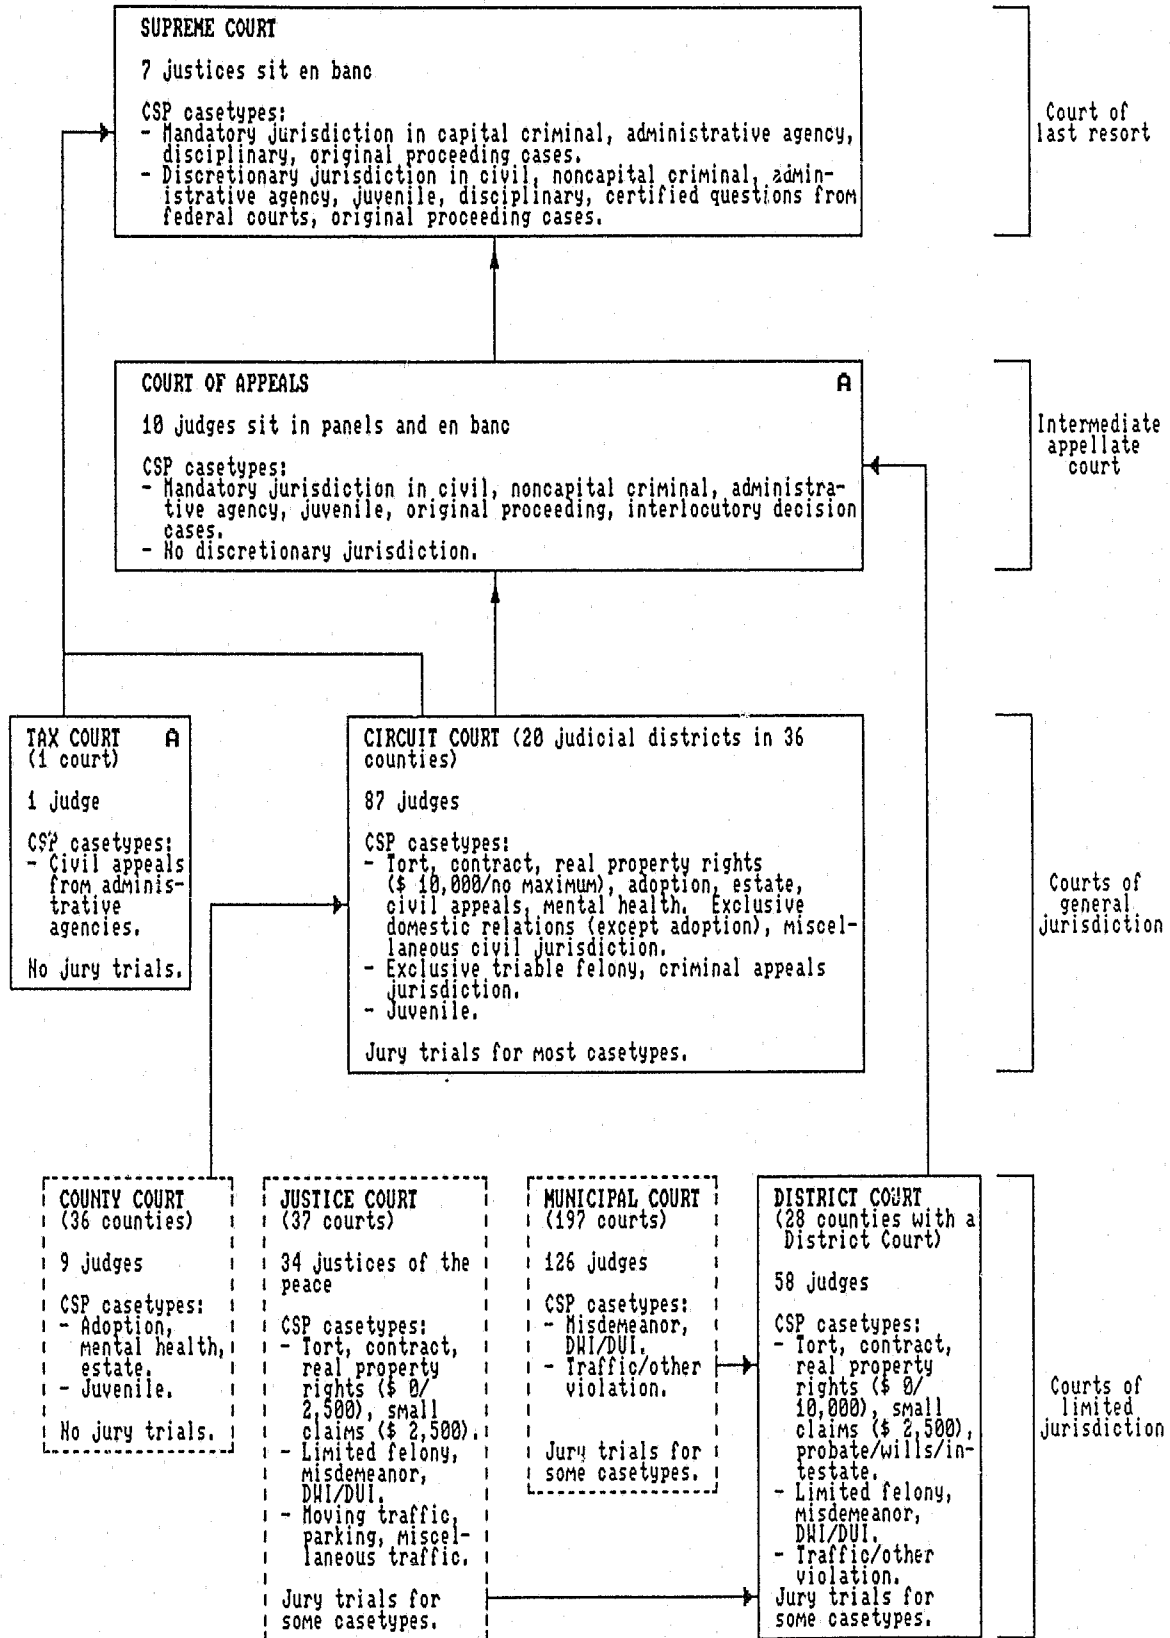

OHIO COURT STRUCTURE, 1988

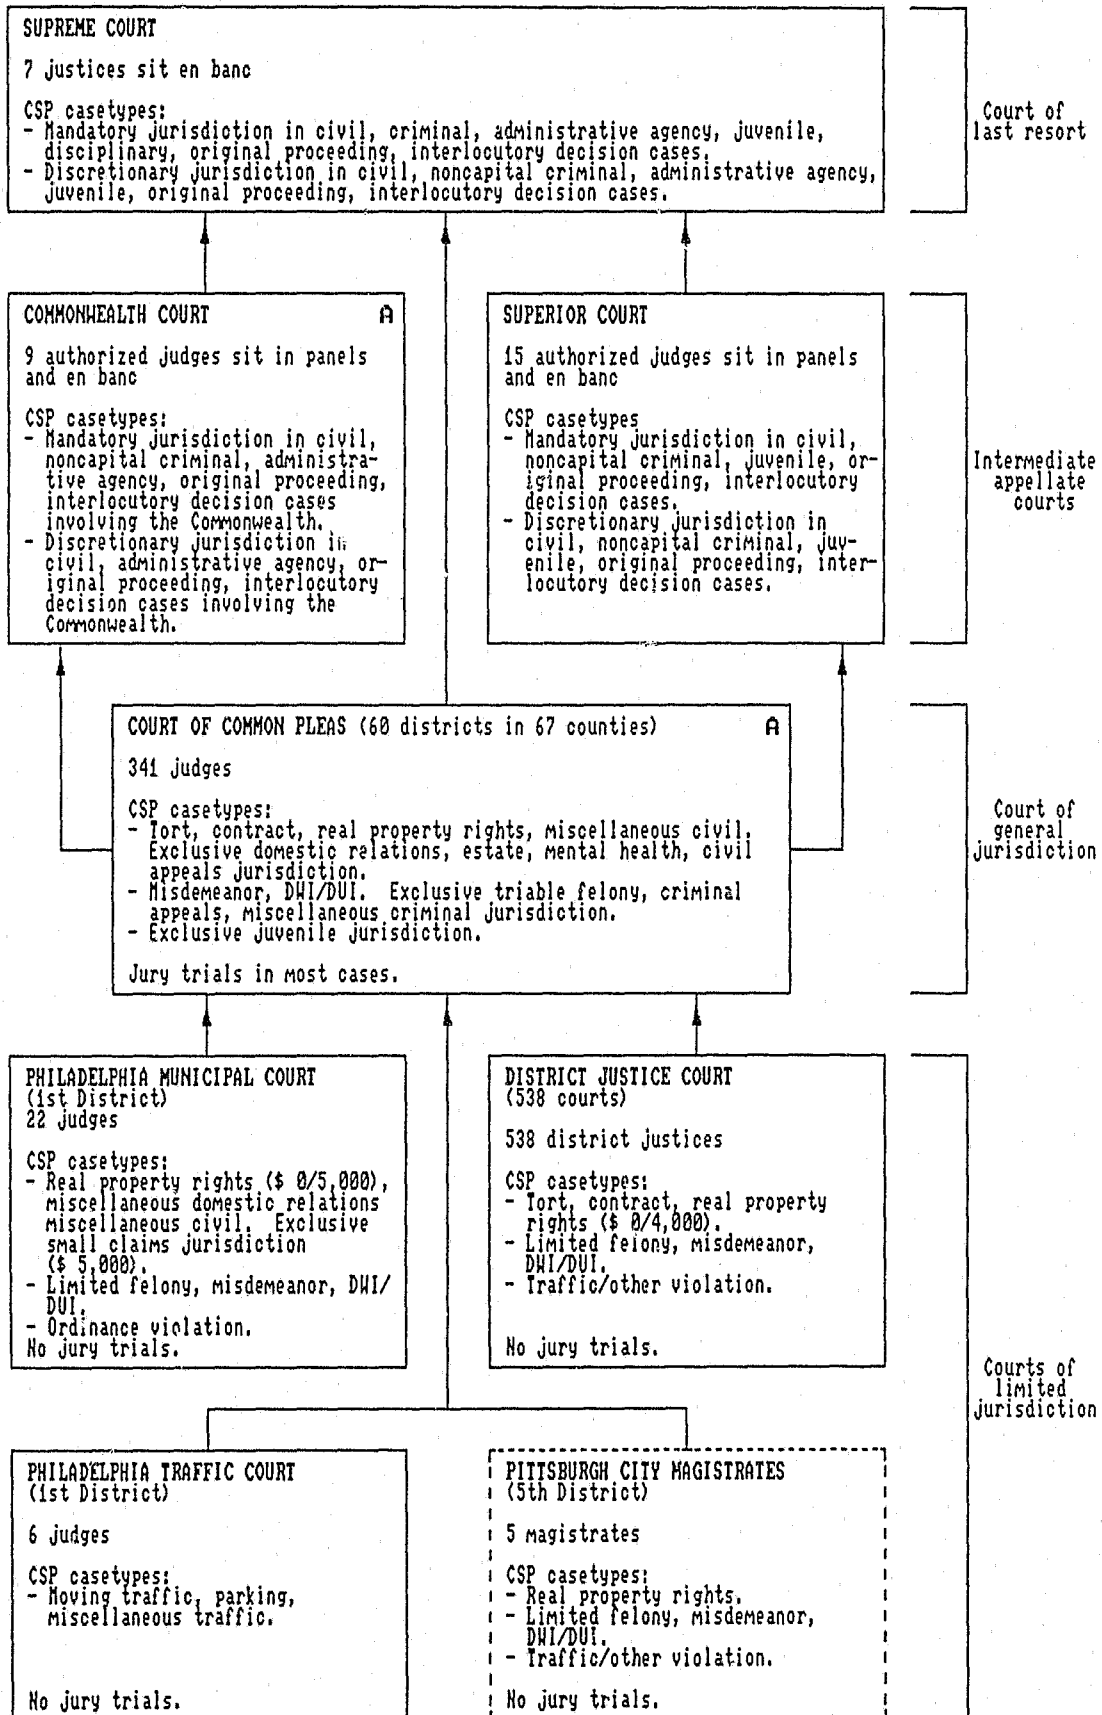

OKLAHOMA COURT STRUCTURE, 1968

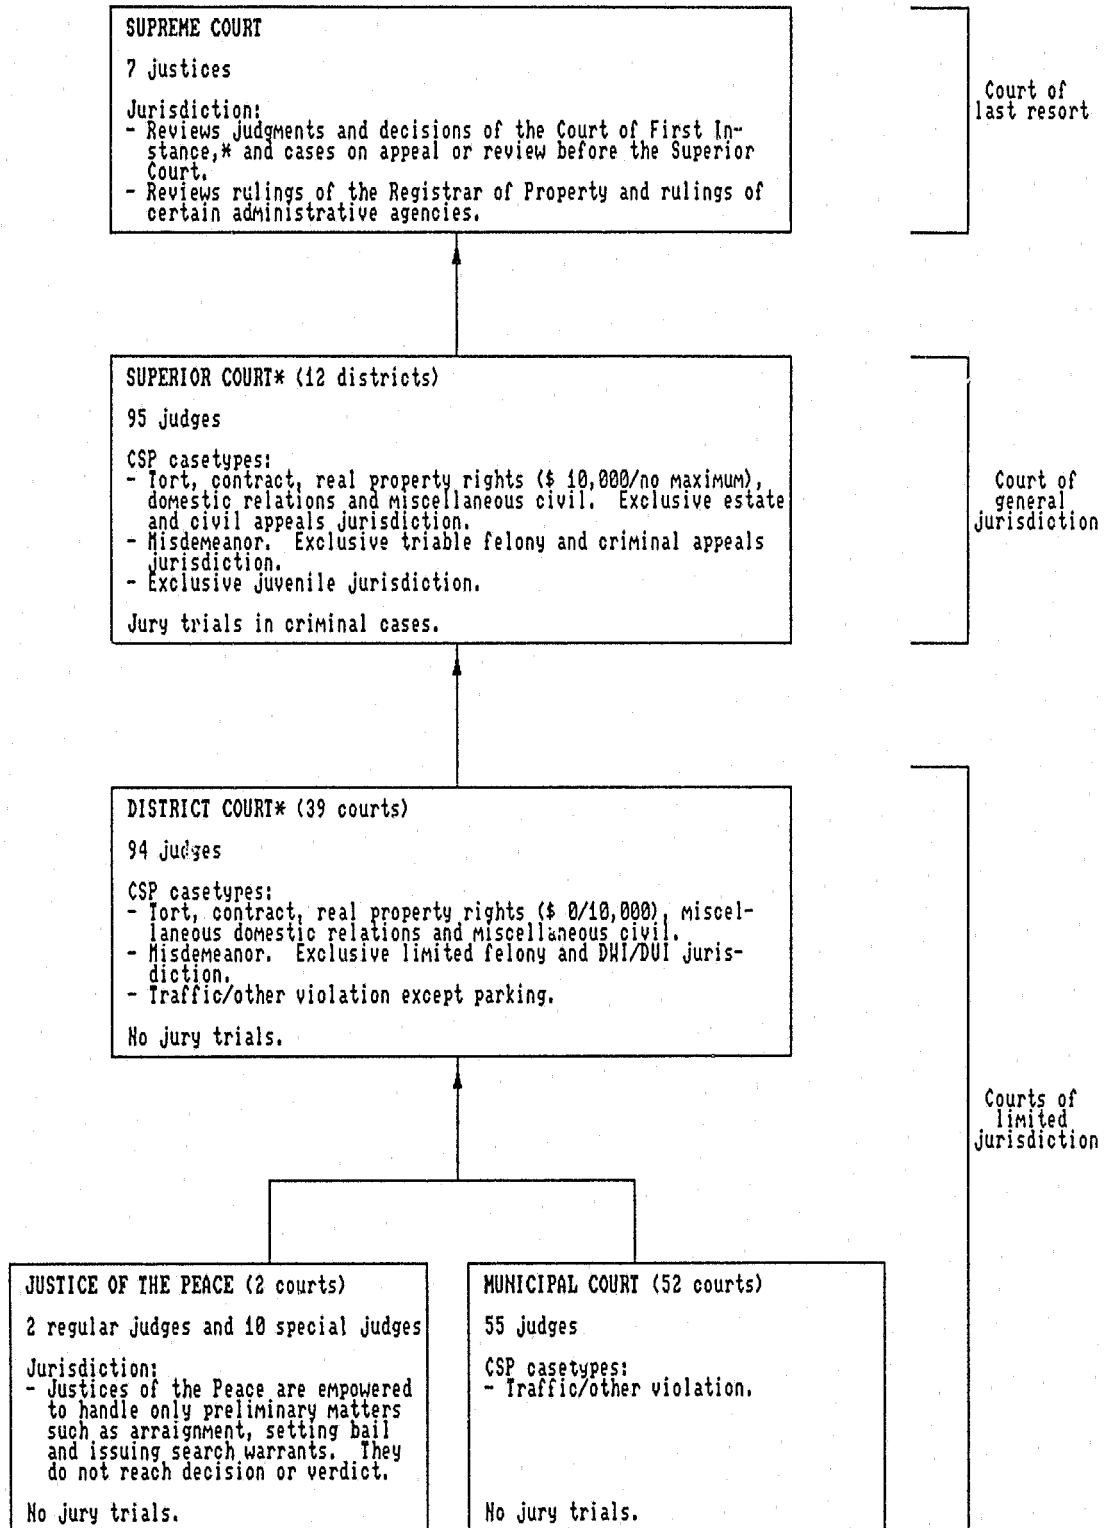

OREGON COURT STRUCTURE, 1988

PENNSYLVANIA COURT STRUCTURE, 1988

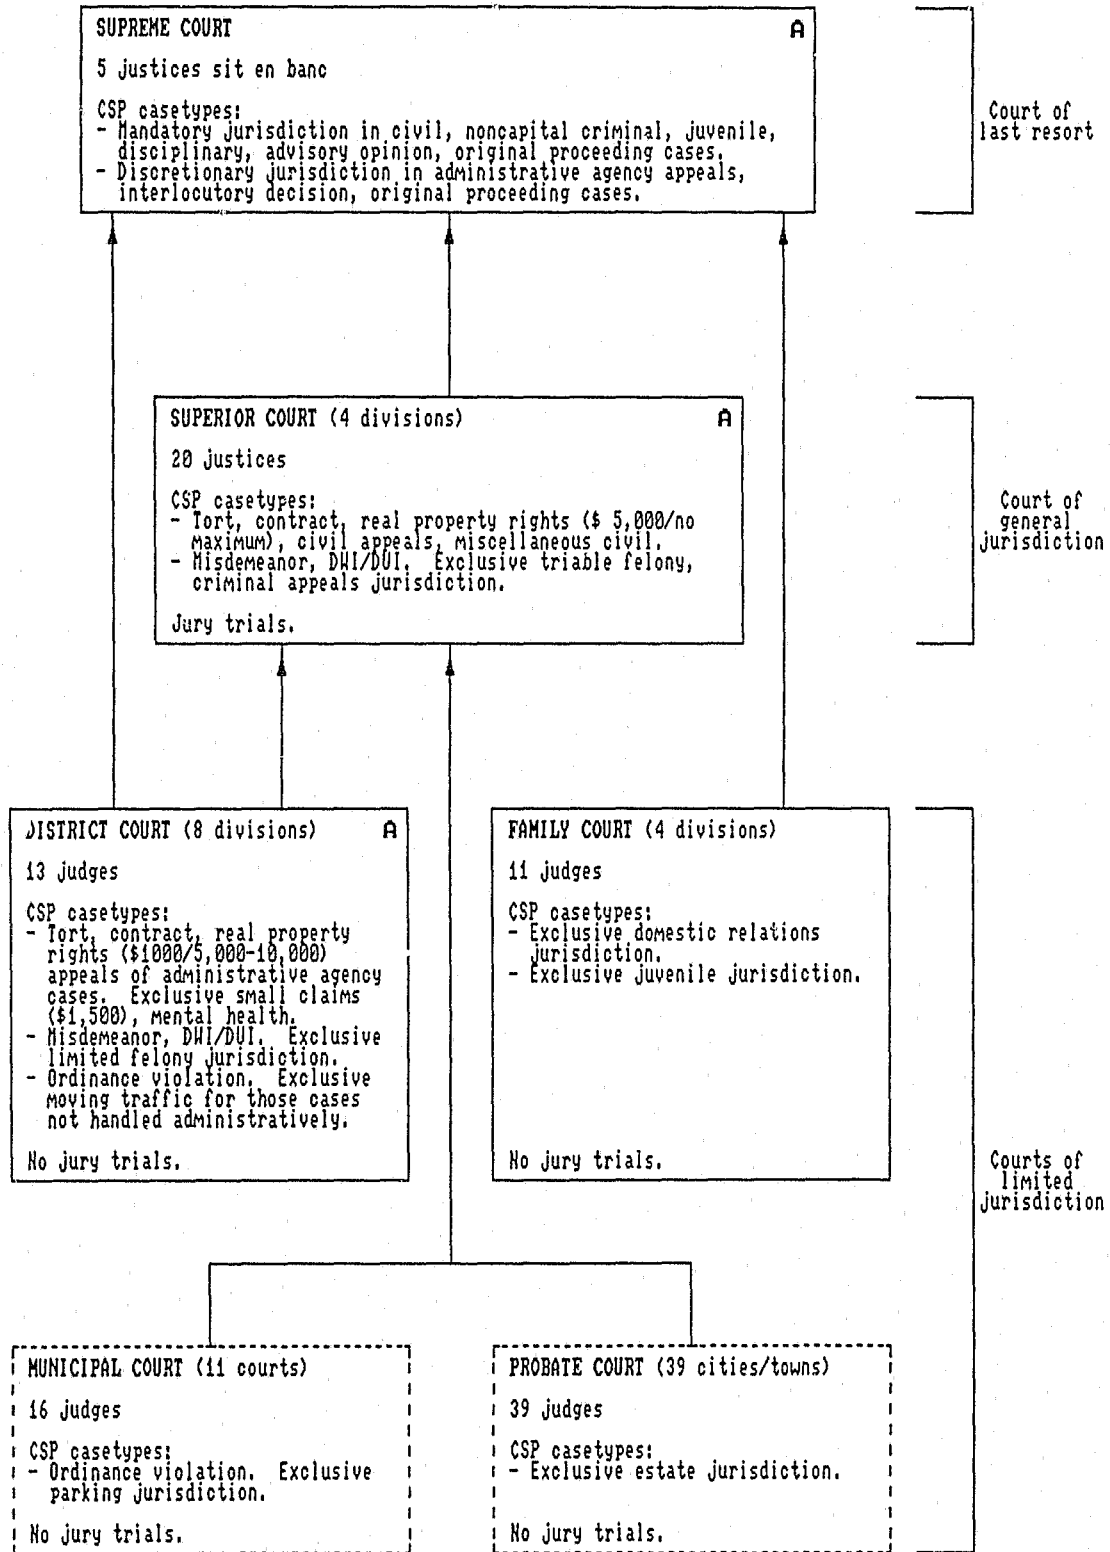

PUERTO RICO COURT STRUCTURE, 1988

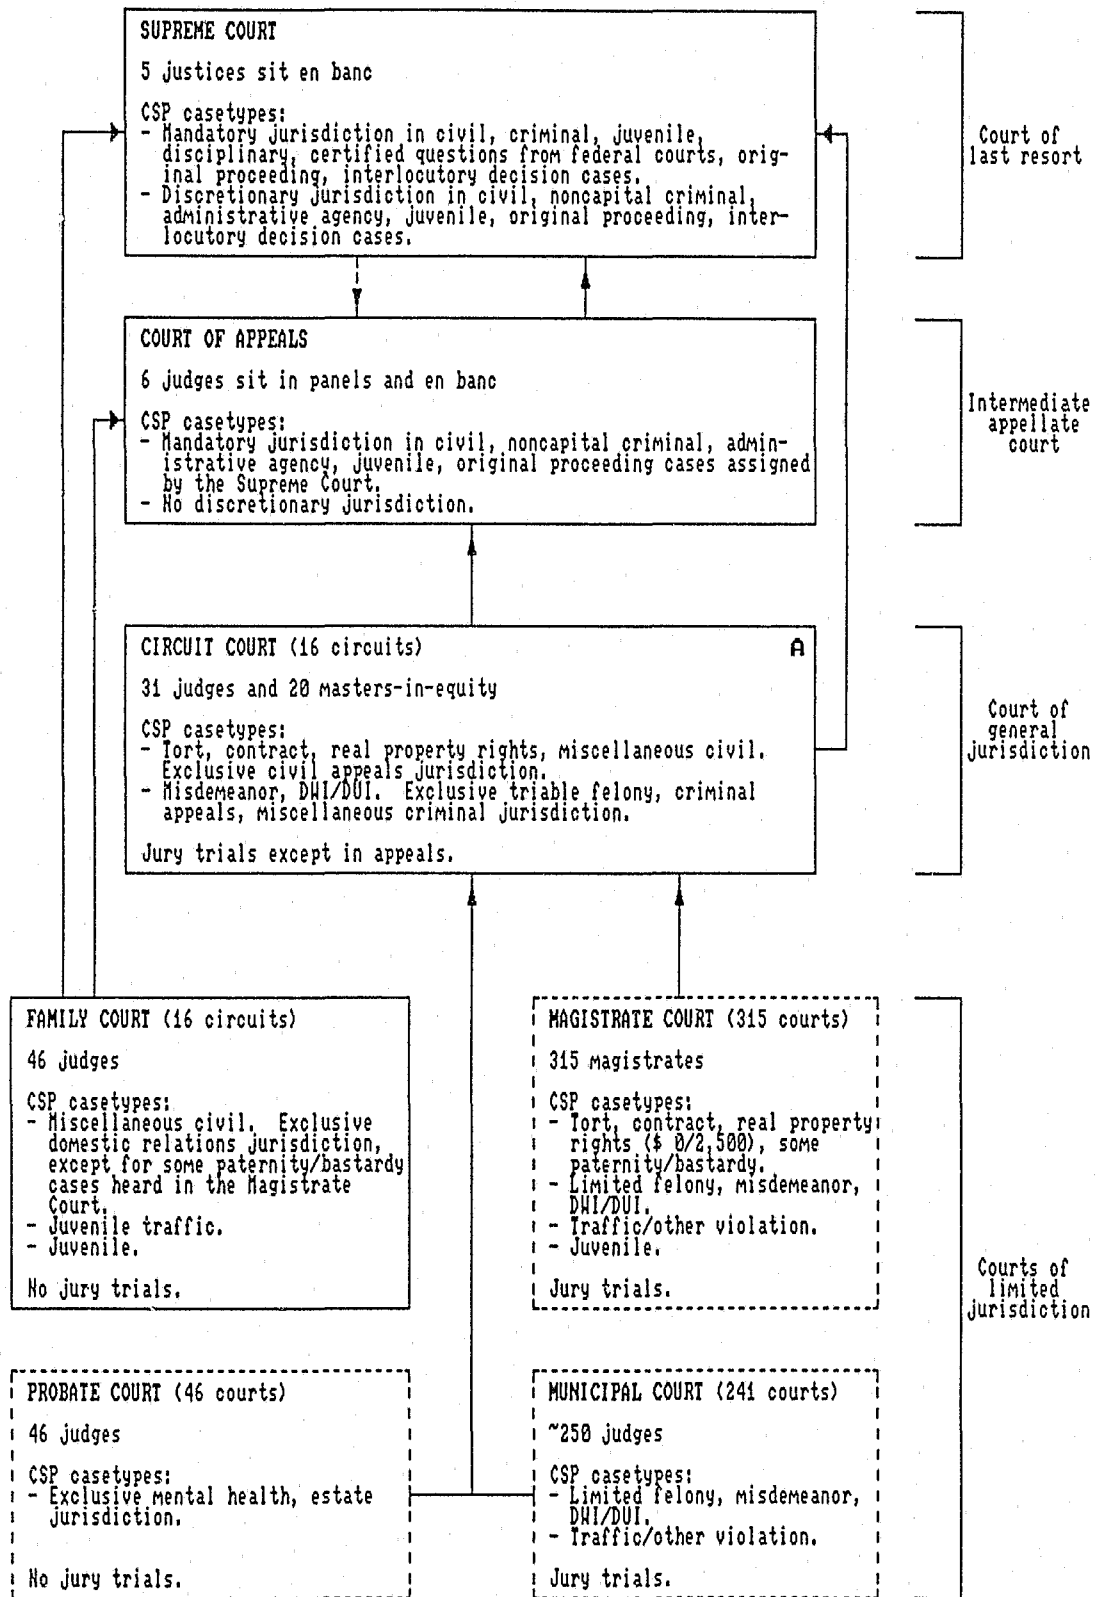

* The Court of First Instance consists of two divisions: the Superior Court and the District Court.

RHODE ISLAND COURT STRUCTURE, 1988

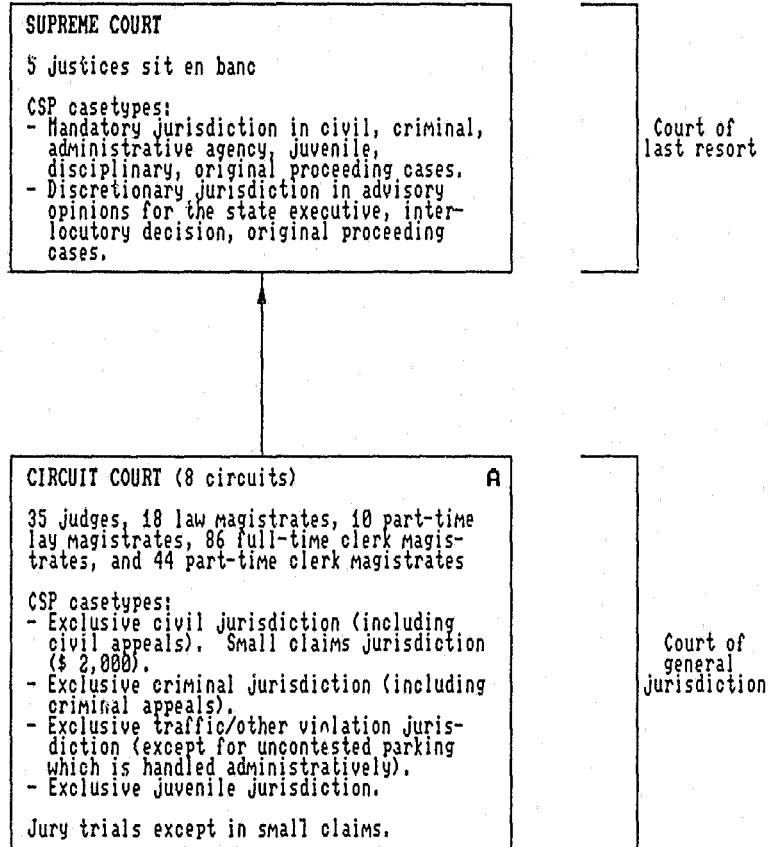

SOUTH CAROLINA COURT STRUCTURE, 1988

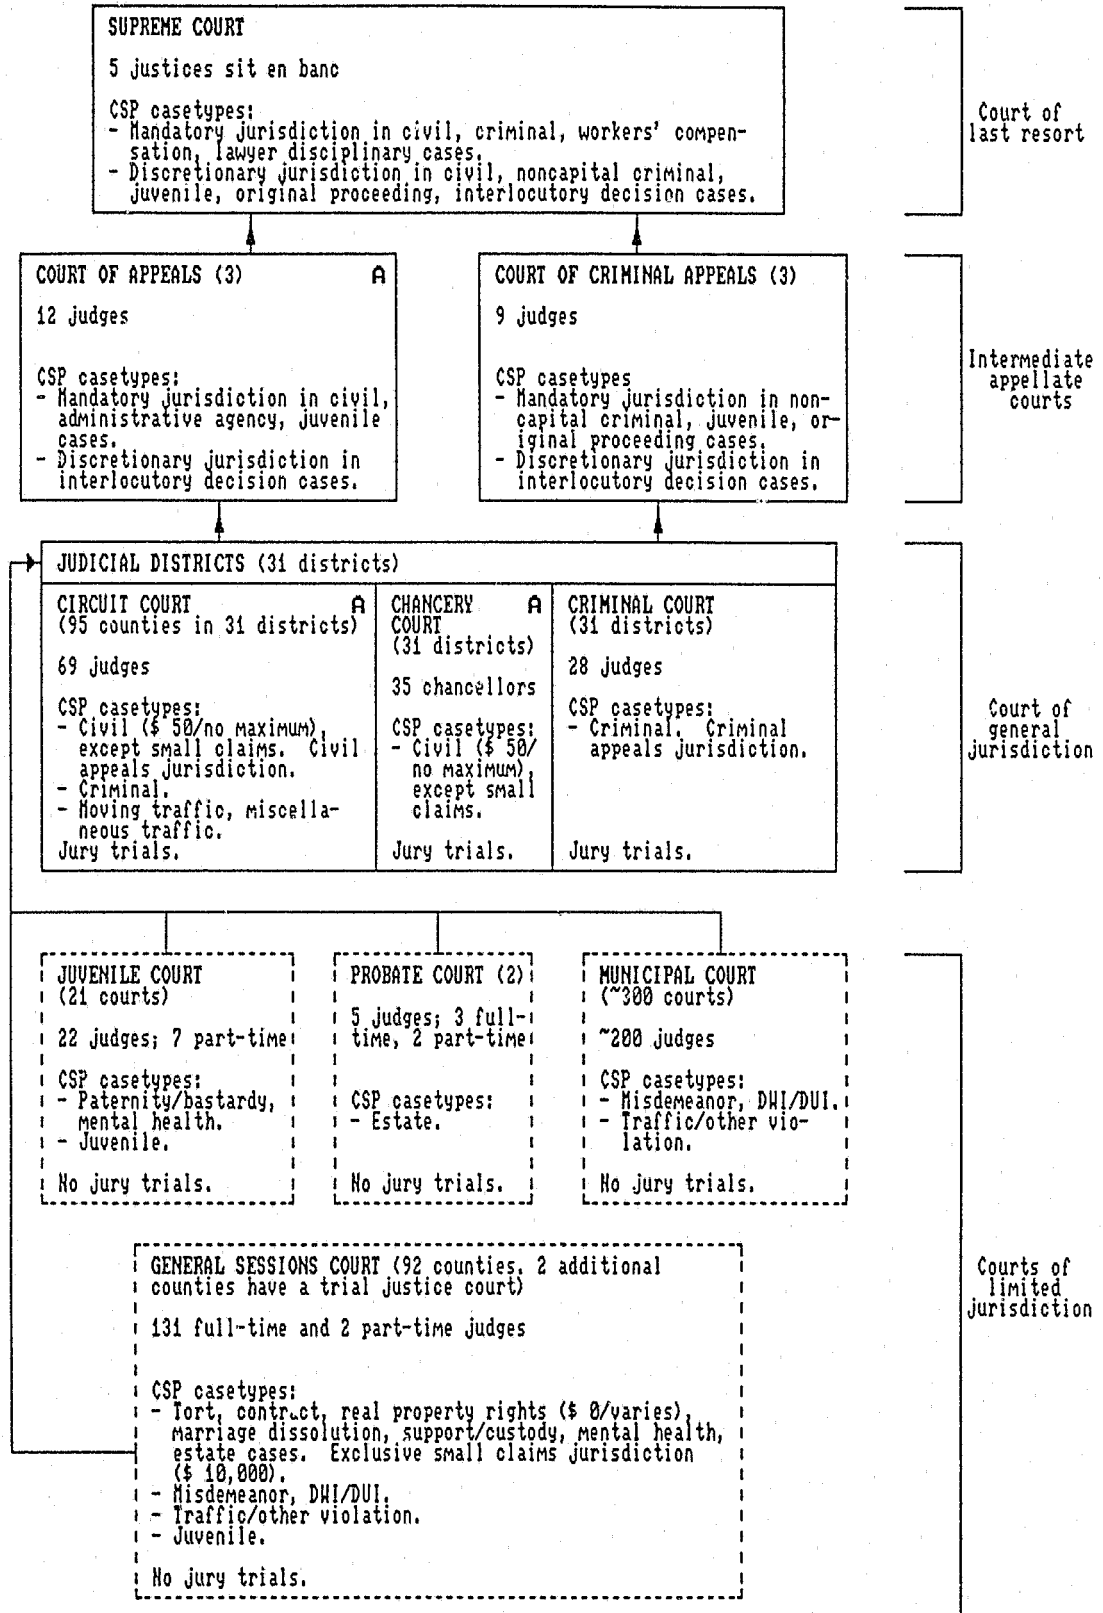

---- Indicates assignment of cases.

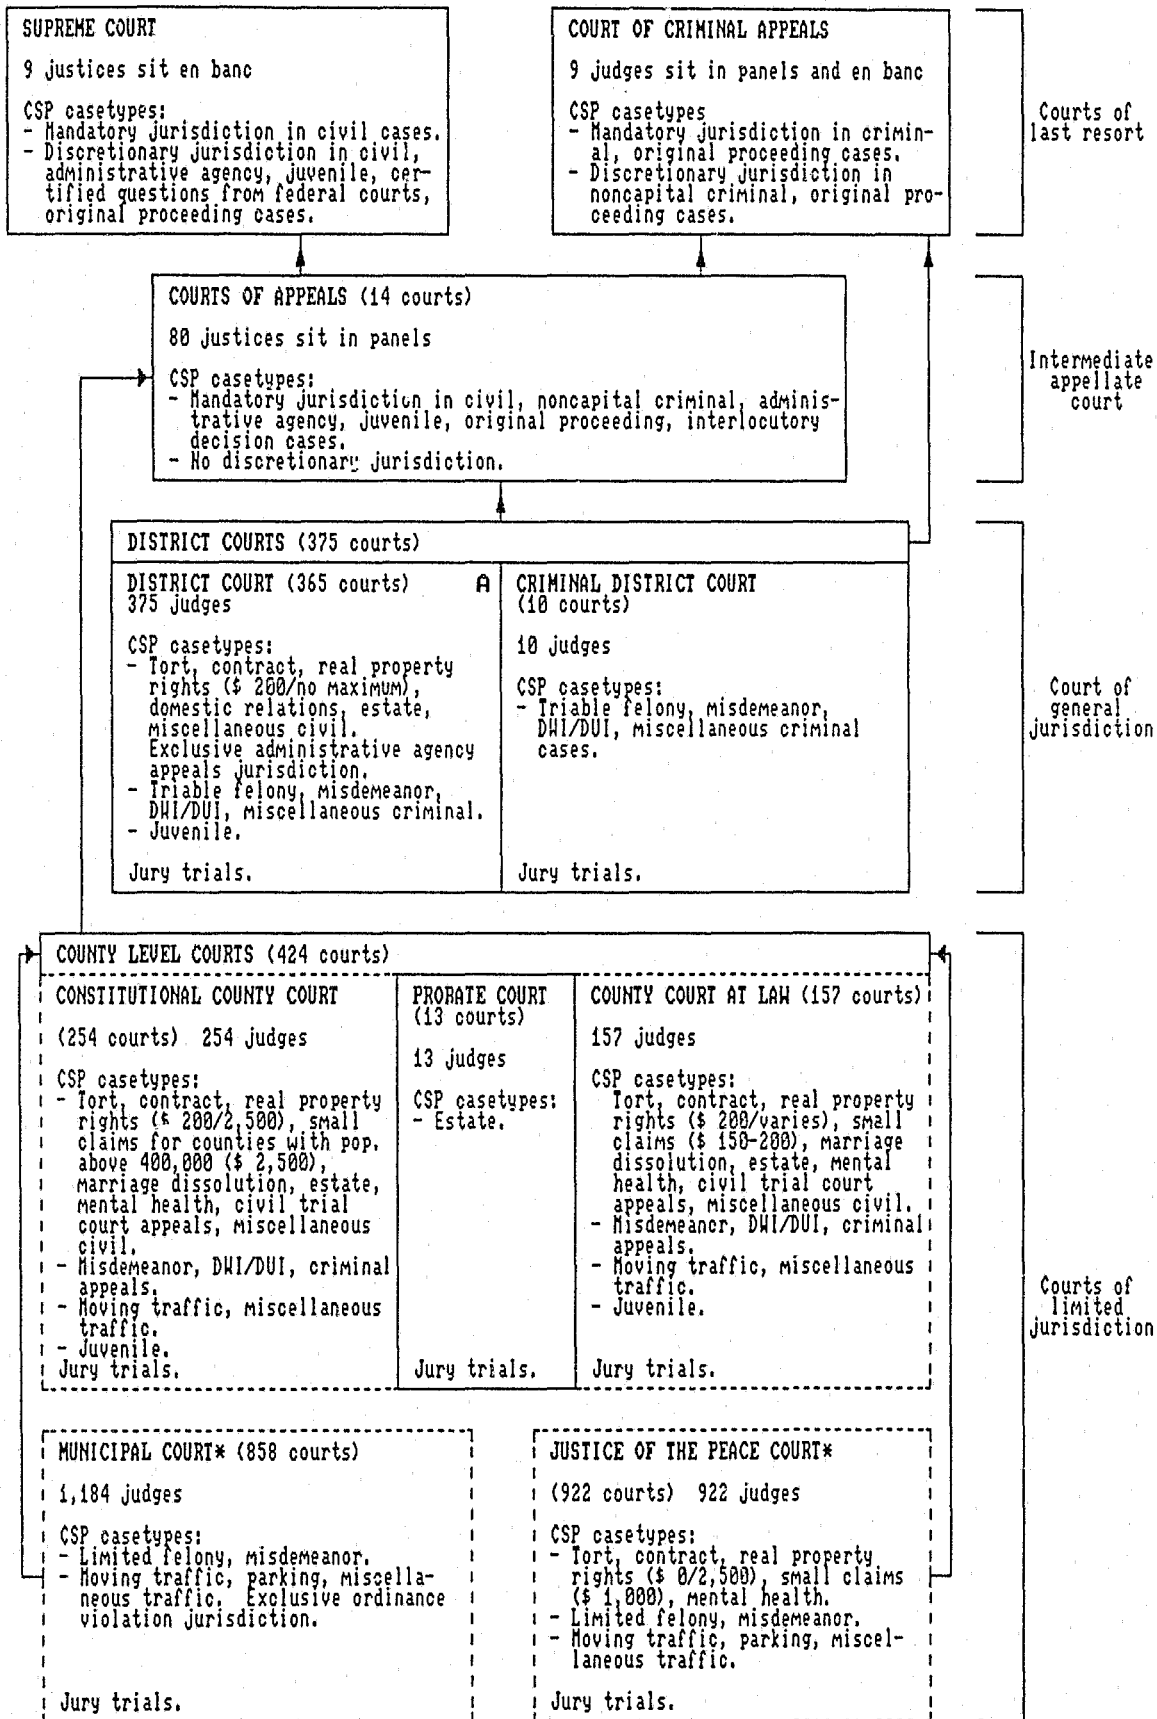

SOUTH DAKOTA COURT STRUCTURE, 1988

TENNESSEE COURT STRUCTURE, 1988

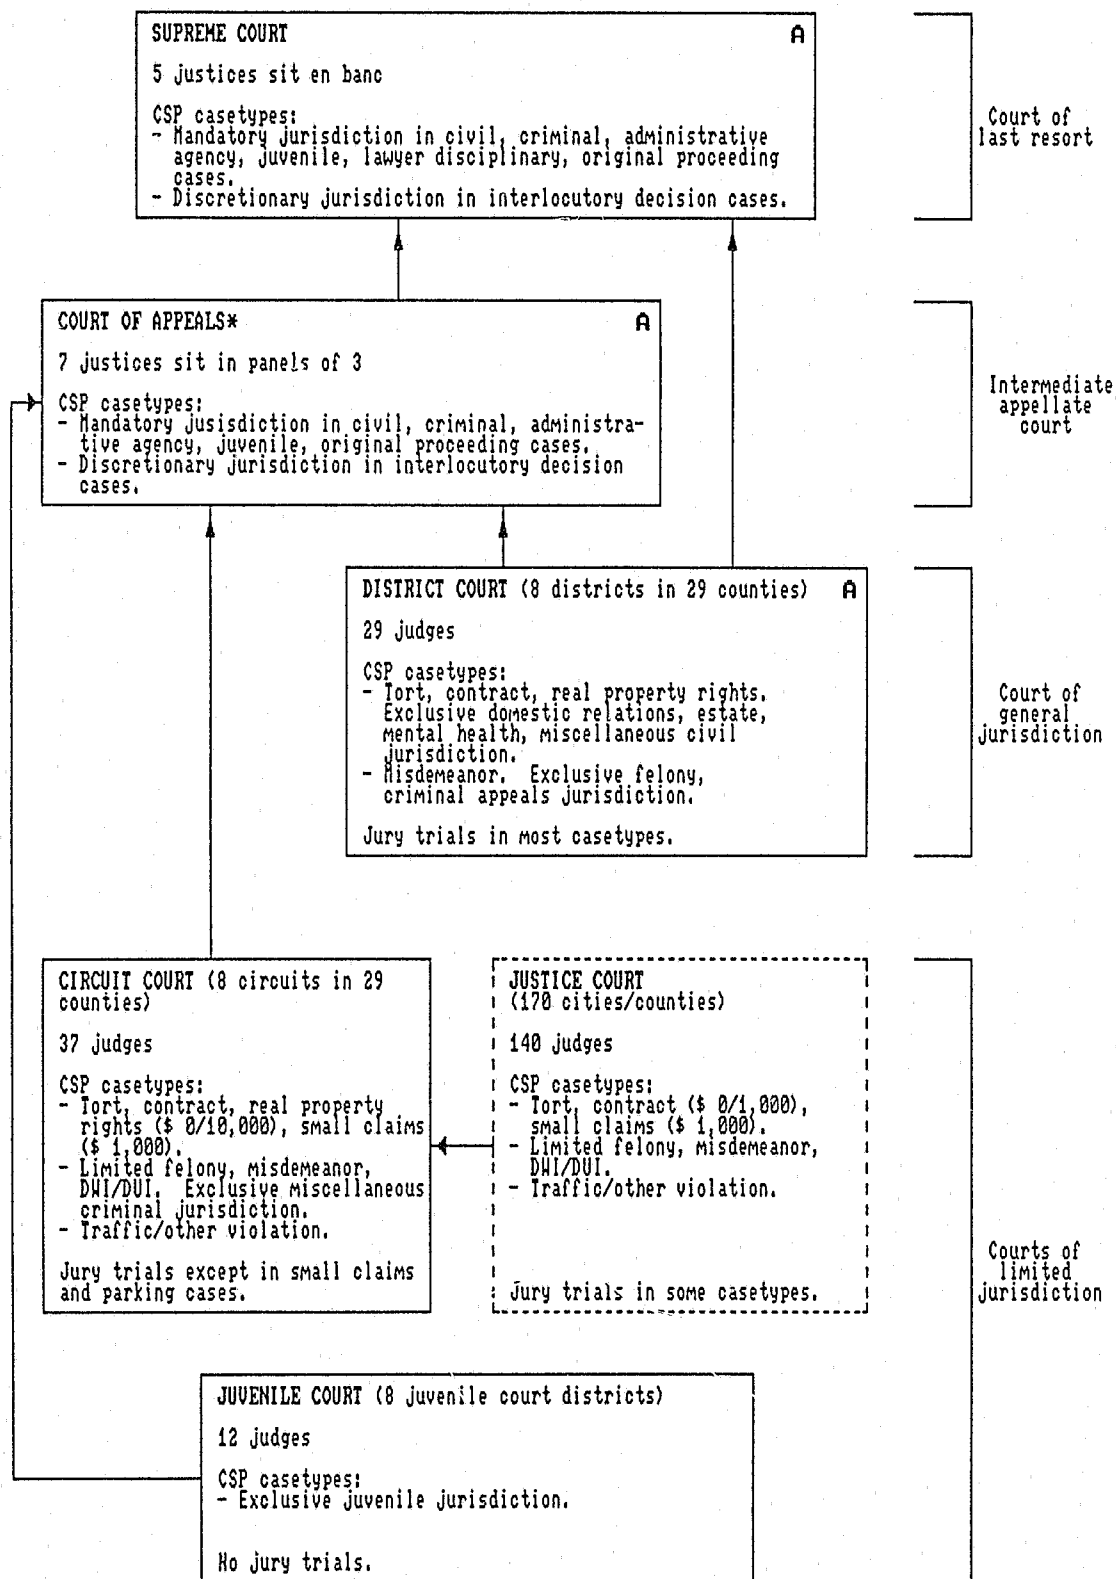

TEXAS COURT STRUCTURE, 1988

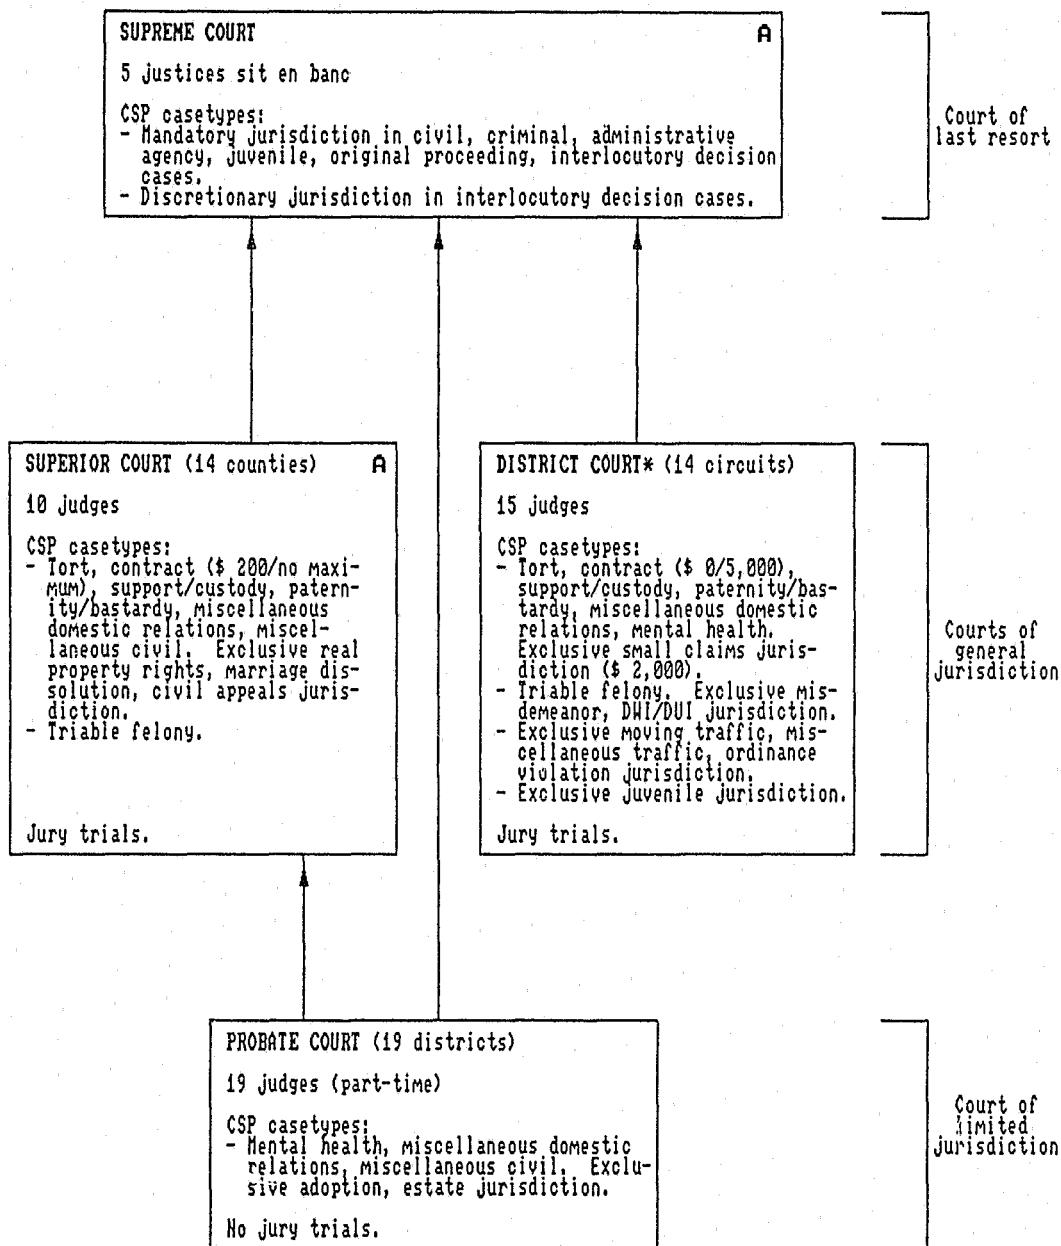

* Some Municipal and Justice of the Peace Courts may appeal to the District Court.

UTAH COURT STRUCTURE, 1988

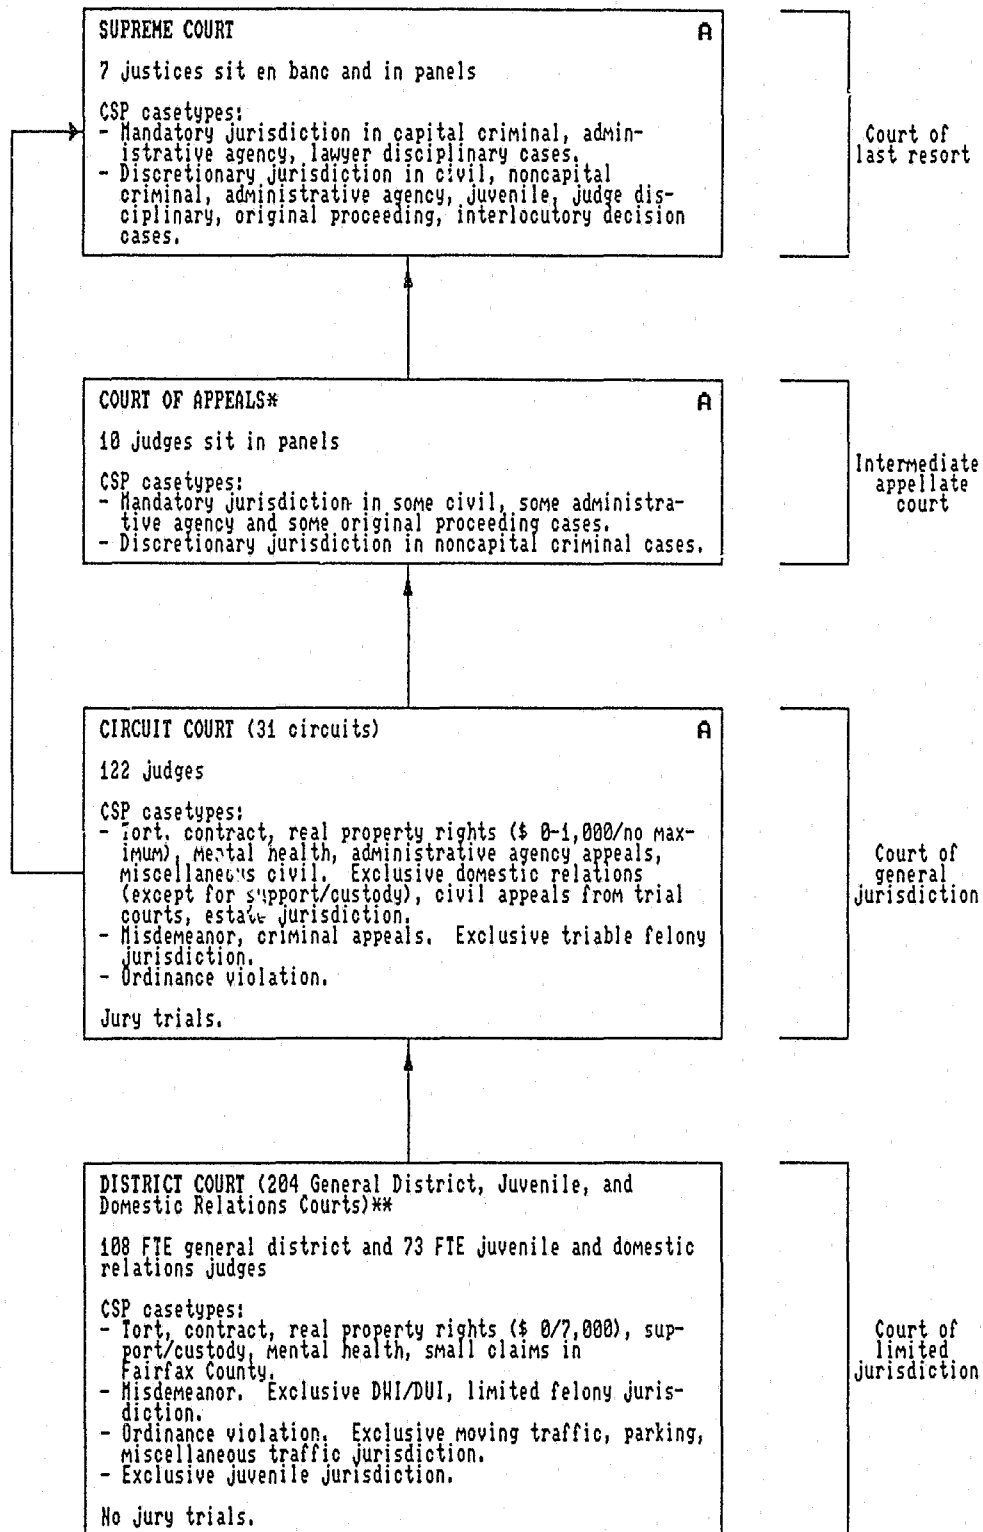

* The Court of Appeals became operational on February 1, 1987.

VERMONT COURT STRUCTURE, 1988

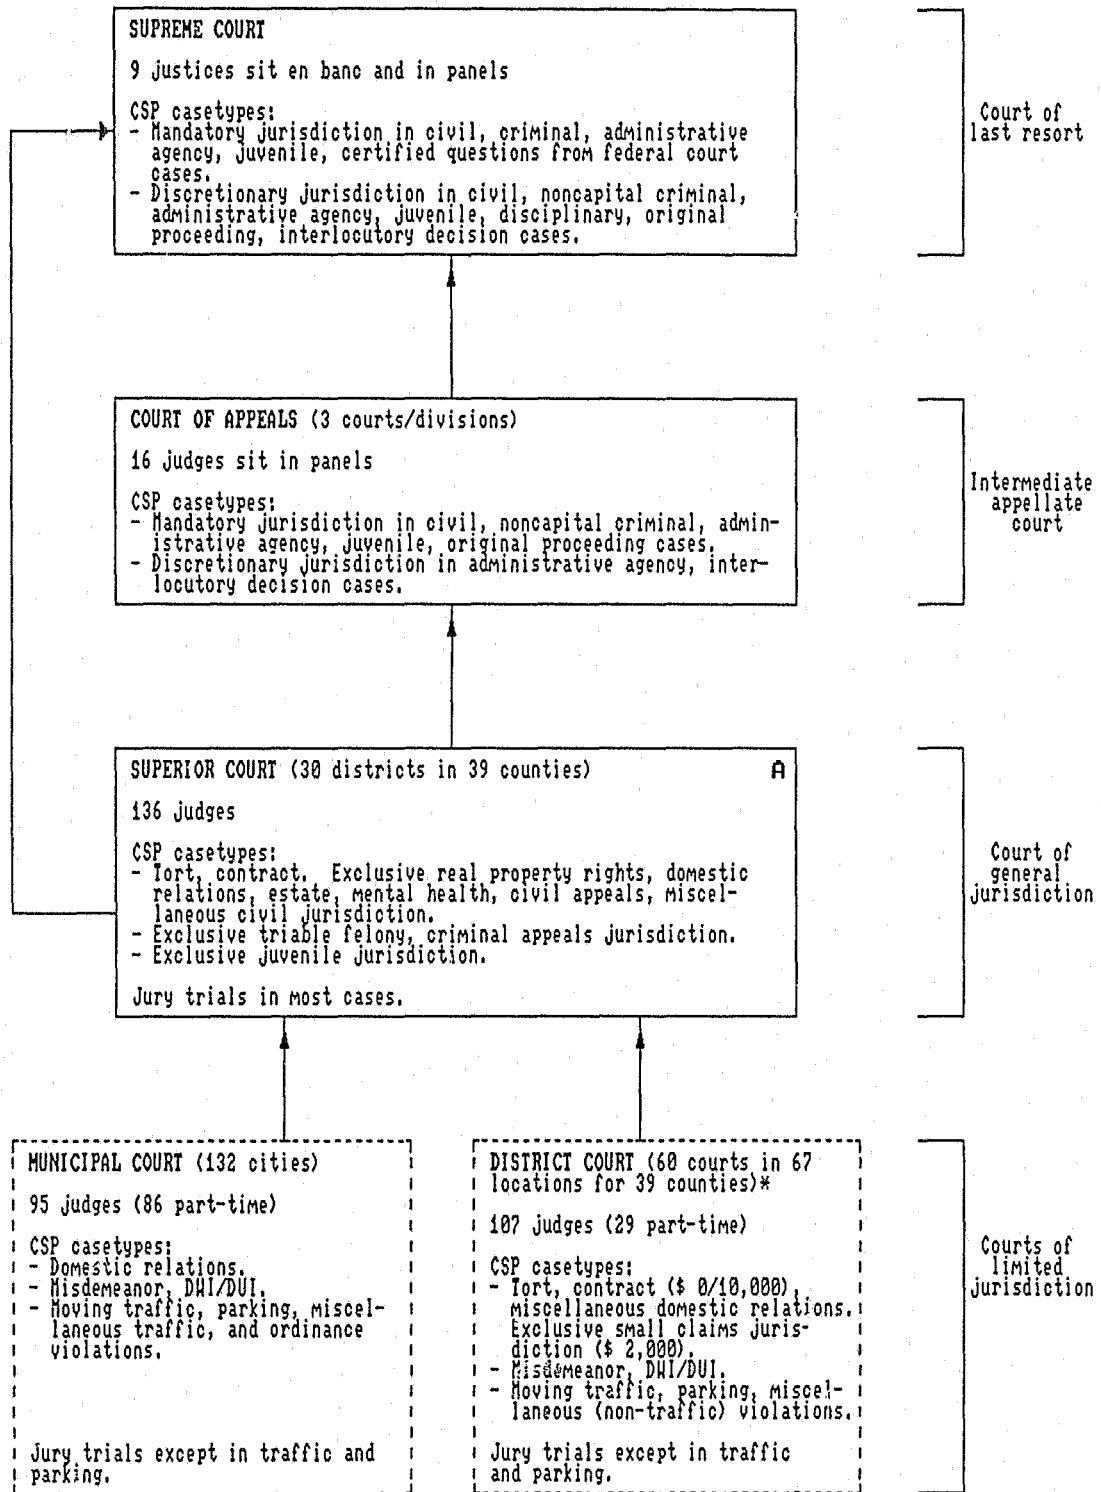

* The District Court, although created as a court of limited jurisdiction, has steadily increased its scope to include almost all criminal matters. In 1983, the District Court was granted jurisdiction over all criminal cases, and has become the court of general jurisdiction for most criminal matters. A small number of appeals go to the Superior Court.

VIRGINIA COURT STRUCTURE, 1988

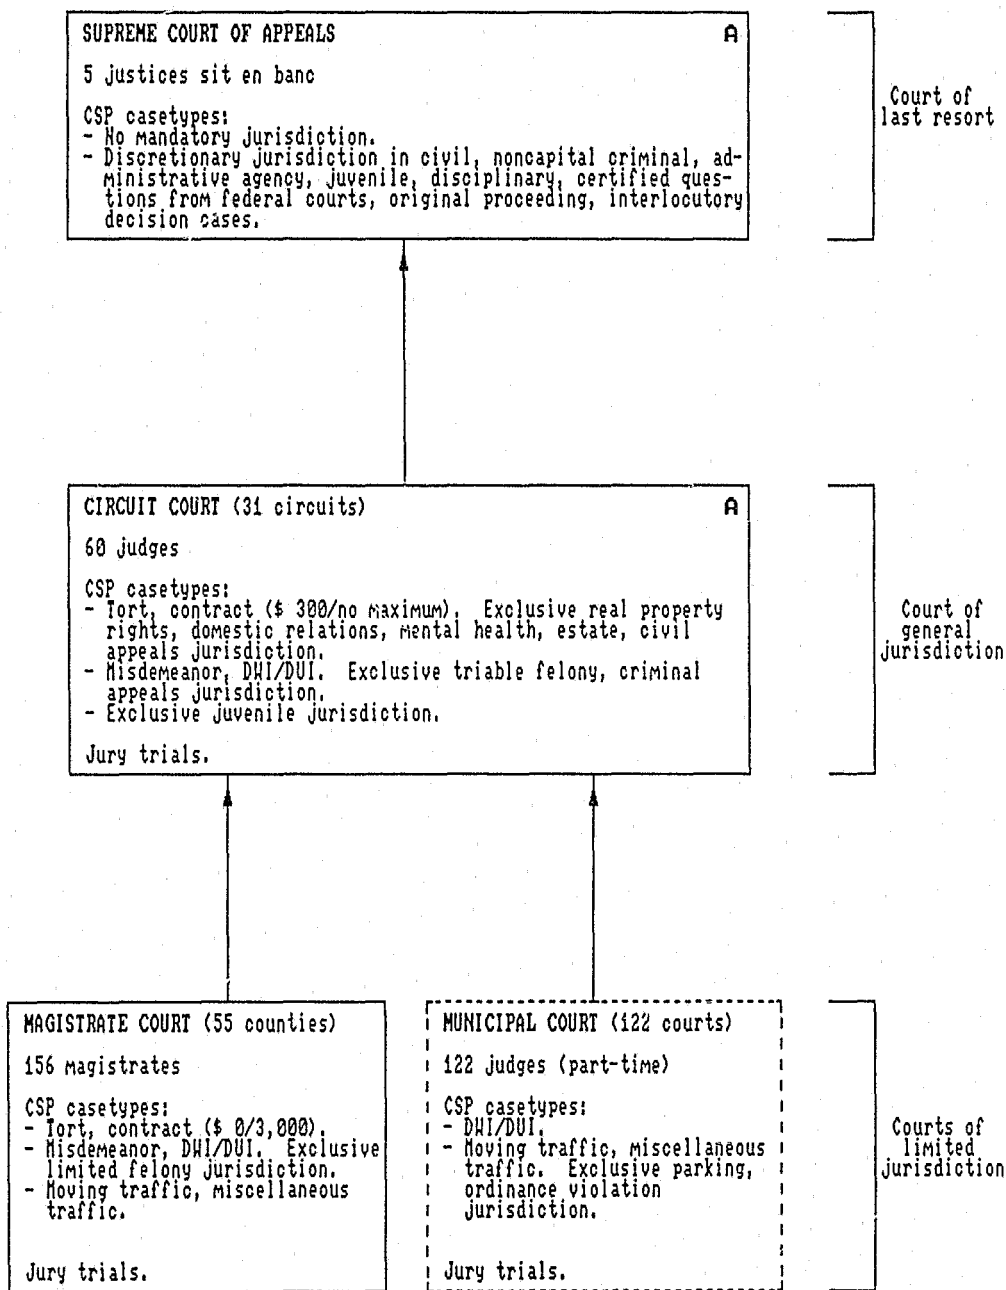

* The Virginia Court of Appeals became operational on January 1, 1985.
 ** The District Court is referred to as the Juvenile and Domestic Relations Court when hearing juvenile and domestic relations cases, and as the General District Court for the balance of the cases.

WASHINGTON COURT STRUCTURE, 1988

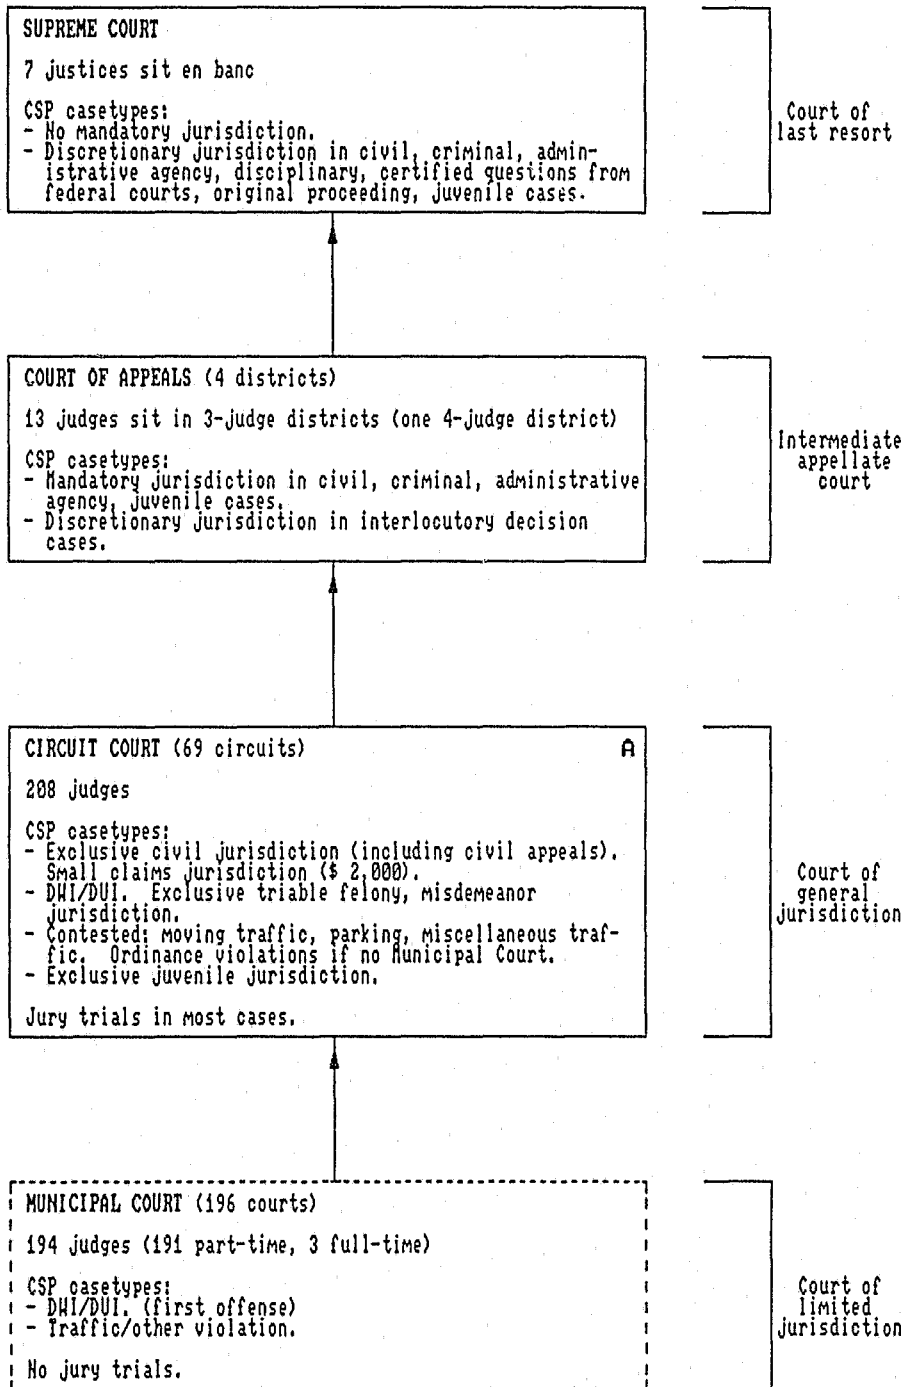

* District Court provides services to municipalities that do not have a Municipal Court.

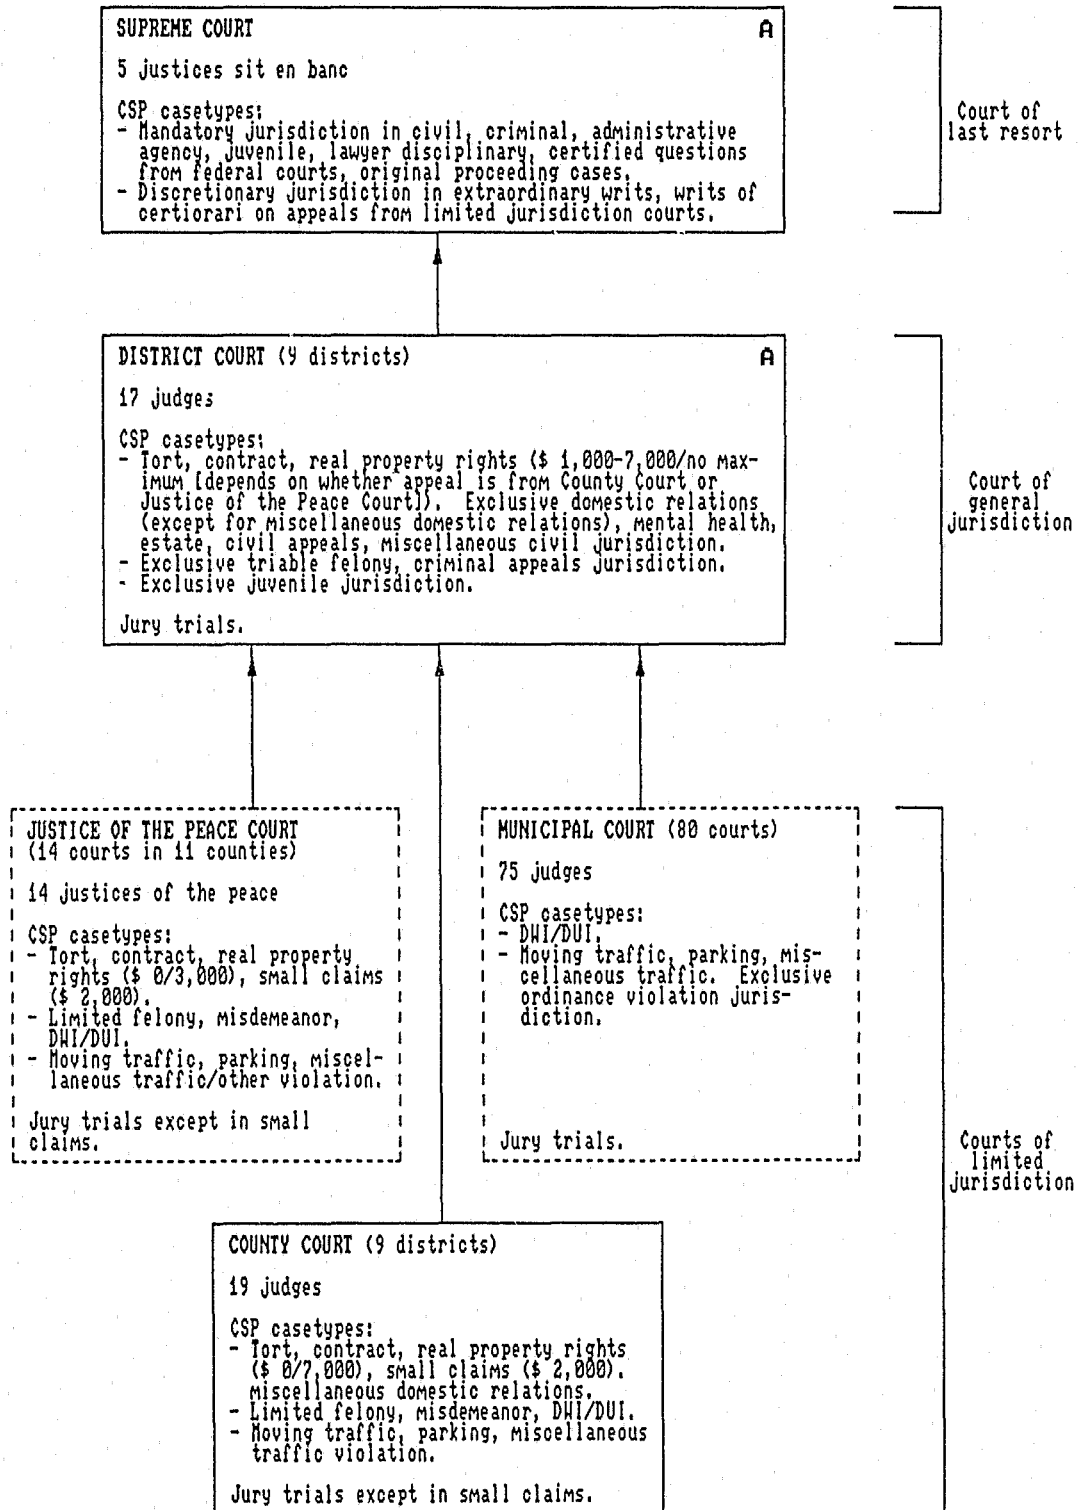

WEST VIRGINIA COURT STRUCTURE, 1988

WISCONSIN COURT STRUCTURE, 1988

WYOMING COURT STRUCTURE, 1988

 DP = Death penalty cases only.
 COLR = Court of last resort.
 IAC = Intermediate appellate court.

FOOTNOTES

Arizona--Supreme Court: Civil cases: A case is counted when the fee is paid within 30 days after trial record is filed.

Arizona--Court of Appeals: Civil cases: A case is counted when the fee is paid within 30 days after trial record is filed. For juvenile/industrial/habeas corpus cases, a case is counted at receipt of notice or at receipt of the trial record.

California--Supreme Court: Cases are counted at the notice of appeal for discretionary review cases from the IAC.

Kansas--Cases are counted at the docketing, which occurs 21 days after a notice of appeal is filed in the trial court.

Kentucky--Cases are counted at either the filing of the brief or request for intermediate relief.

Ohio--Court of Appeals: The clerk of the trial court is also the clerk of the Court of Appeals.

Oklahoma--The notice of appeal refers to the petition in error. The courts do not count reinstated cases as new filings, but do count any subsequent appeal of an earlier decided case as a new filing.

Pennsylvania--Supreme Court: Mandatory cases are filed with the trial court, and discretionary cases are filed with the appellate court.

Utah--Supreme Court: Mandatory appeals are no longer in effect as of 1/1/86; an intermediate court of appeals was established on 1/1/87.

G = General jurisdiction court.
 L = Limited jurisdiction court.

FOOTNOTES

*Arizona--Varies in limited jurisdiction courts. Prosecutor can file either long or short form. Long form can involve one or more defendants and/or charges; short form involves one defendant and a single charge.

**Wisconsin--Municipal Court--The court has exclusively civil jurisdiction, but its caseload includes first offense DWI/DUI cases. The State Court Model Statistical Dictionary treats all DWI/DUI cases as a subcategory of criminal cases.

JURISDICTION CODES:

- G = General jurisdiction court.
- L = Limited jurisdiction court.
- = Information not available.

Definitions of types of appeal:

- de novo: An appeal from one trial court to another trial court that results in a totally new set of proceedings and a new trial court judgment.
- de novo on the record: An appeal from one trial court to another trial court that is based on the record and results in a new trial court judgment.
- on the record: An appeal from one trial court to another trial court in which procedural challenges to the original trial proceedings are claimed, and an evaluation of those challenges are made--there is not a new trial court judgment on the case.

Methodology

Methodology

Court Statistics Project: Goals and Organization

The Court Statistics Project of the National Center for State Courts compiles and reports comparable court caseload data from the 50 states, the District of Columbia, and Puerto Rico and encourages greater uniformity in how individual state courts and state administrative court offices collect and publish caseload information. Progress toward these goals should result in more meaningful and useful caseload information at the disposal of judges, court managers, and state court administrators.

The *State Court Caseload Statistics* series is a cooperative effort of the Conference of State Court Administrators (COSCA) and the National Center for State Courts (NCSC). Responsibility for Project management and staffing is assumed by the NCSC's Court Statistics Project, formerly called the National Court Statistics Project (1977-83) and the Court Statistics and Information Management Project (1983-87). COSCA, through its Court Statistics Committee, provides policy guidance and review for the Project. The Court Statistics and Technology Committee is composed of representatives from COSCA, COSCA's staff, the National Conference of Appellate Court Clerks, the National Association for Court Management, and a representative from the academic research community. The preparation of the 1988 caseload report was funded by a grant from the State Justice Institute (SJI-88-O7X-067) to the NCSC.

In addition to preparing publications, the Court Statistics Project responds to about 500 requests for information and assistance each year. These requests can be grouped into four basic categories: requests for caseload data, requests for court jurisdictional information, requests for information on data collection and reporting procedures, and requests for statistical analysis of the caseload data. The requests come from a variety of sources, including state administrative offices of the courts, local courts, individual justices and judges, federal agencies, legislators, the media, academic researchers, and NCSC staff. The composition of the requests received by the Project is taken into consideration when topics are selected for emphasis in the caseload statistics report series.

Evolution of the Court Statistics Project

During compilation of the *State of the Art* and the *1975 State Court Caseload Statistics: Annual Report*, the Court Statistics Project's original data compilation efforts, classification problems arose from the multitude of categories and terms used by the states to report their caseloads.¹ This suggested the need for a model annual report and a statistical dictionary of terms for court usage.

The *State Court Model Annual Report* outlines the basic management data that should, at a minimum, be included in state court annual reports.² The *State Court Model Statistical Dictionary* provides common terminology, definitions, and usage for reporting appellate and trial court caseload inventory. Terms for use in reporting data on the method of case disposition are also provided in the dictionary and in other Project publications.³ The classification structure and definitions serve as model framework for the purpose of developing comparable and useful data. A new edition of the *State Court Model Statistical Dictionary* was published in 1989, consolidating and revising the original 1980 version and the 1984 *Supplement*.

The *Court Case Management Information Systems Manual*, which was produced jointly with the State Judicial Information Systems Project, is another publication through which the Court Statistics Project seeks to enhance the usefulness of court statistics.⁴ This manual provides a methodology for building court information systems that provide the data needed for both daily court operations and long-term case management, resource allocation, and strategic planning.

¹ National Court Statistics Project, National Center for State Courts, *State Court Caseload Statistics: The State of the Art* (Washington, D.C.: U.S. Government Printing Office, 1978).

² National Court Statistics Project, National Center for State Courts, *State Court Model Annual Report* (Williamsburg, VA: National Center for State Courts, 1980).

³ National Court Statistics Project, National Center for State Courts, *State Court Model Statistical Dictionary* (Washington, D.C.: U.S. Government Printing Office, 1980); *Supplement* (Williamsburg, VA: National Center for State Courts, 1984).

⁴ Clifford and Jensen, *Court Case Management Information Systems Manual* (Williamsburg, VA: National Center for State Courts, 1983).

Once a set of recommended terms was adopted, the focus shifted to assessing the comparability of caseload data as reported by the courts to those terms. It became particularly important to detail the subject matter jurisdiction and methods of counting cases in each state court. This effort was undertaken in two stages. The first stage addressed problems related to the categorizing and counting of cases in the trial courts and resulted in the *1984 State Trial Court Jurisdiction Guide for Statistical Reporting*.⁵ Information from the jurisdiction guide was incorporated into the caseload database for 1981 and is updated annually.

The second stage involved preparation of the *1984 State Appellate Court Jurisdiction Guide for Statistical Reporting*, which was used to compile the 1984 appellate court database.⁶ The introduction to the 1981 report contains a complete description of the impact of the *Trial Court Jurisdiction Guide* on the Court Statistics Project data collection and the introduction of the 1984 report provided a complete description of the impact of the *Appellate Court Jurisdiction Guide*.

Much of the court jurisdiction information contained in the 1987 report is the result of research done for *State Court Organization, 1987*, another Project publication. *State Court Organization, 1987* is a source book which describes the organization and management of state appellate and trial courts.⁷

The first caseload report presented 1975 caseload data for state appellate courts, trial courts of general jurisdiction, and for selected categories (juvenile, domestic relations, probate, and mental health) in limited jurisdiction courts. The second report (1976) again presented available data for appellate courts and courts of general jurisdiction and also included all available caseload data for limited jurisdiction courts. The 1979 and 1980 reports eliminated repetitiveness in the summary tables and reorganized the data in the summary tables based on completeness and comparability. The 1981 volume, incorporating the reporting structure detailed in the *1984 Trial Court Jurisdiction Guide*, organized the caseload data by comparable jurisdictions. In order to make the series current with the publication of the 1984 volume, the Court Statistics Project did not publish caseload data for 1982 and 1983.

Sources of Data

Information for the national caseload databases comes from published and unpublished sources supplied

⁵ Clifford and Roper, *Trial Court Jurisdiction Guide for Statistical Reporting* (Williamsburg, VA: National Center for State Courts, 1985).

⁶ Roper, *1984 State Appellate Court Jurisdiction Guide for Statistical Reporting* (Williamsburg, VA: National Center for State Courts, 1985).

⁷ Court Statistics Project, National Center for State Courts, *State Court Organization, 1987* (Williamsburg, VA: National Center for State Courts, 1988).

by state court administrators and appellate court clerks. The published data are usually found in official state annual reports. State annual reports assume a variety of forms and vary widely in detail. They represent the most reliable and valid data available at the state level. The data, however, are the product of statistical reports, often filed monthly or quarterly, from numerous local jurisdictions and, in most states, several trial court systems. The caseload statistics are used by the states to manage their own systems and are not prepared specifically for inclusion in the NCSC caseload statistics series.

Some states either do not publish an annual report or publish only limited caseload statistics for either trial or appellate courts. The Court Statistics Project receives unpublished data from those states in a wide range of forms, including internal management memos, computer generated output, and the Project's statistical and jurisdictional profiles, which were sent to state court administrative offices for updating.

Telephone contact and follow-up correspondence are used to collect missing data, confirm the accuracy of available data, and determine the legal jurisdiction of each court. Information is collected concerning the number of judges per court or court system (from annual reports, offices of state court administrators, and appellate court clerks); the state population (based on Bureau of the Census revised estimates);⁸ and special characteristics regarding subject matter jurisdiction and court structure. Appendix B lists the source of each state's caseload statistics for 1988.

Data Collection Procedures

The following outline summarizes the major tasks involved in collecting the 1988 caseload data reported in this volume:

A. The 1988 state reports were evaluated to note changes in the categories and terminology used to report the data, changes in the range of available data, and changes in the state's court organization or jurisdiction. This process involved a direct comparison of the 1988 material with the contents of individual state 1987 annual reports. Project staff used a copy of each state's 1987 trial and appellate court statistical profile(s), trial and appellate court jurisdiction guides and the state court organization chart as worksheets for gathering the 1988 data. Use of the previous year's profiles provides the data collector with a reference point to identify and replicate the logic used in the 1987 data collection and ensure consistency over time in the report series. The caseload data were then taken from the state caseload report and entered onto the 1988 profiles. The caseload terminology used on the profiles are defined in the statistical dictionary. Prototypes of the appellate and trial court statistical profiles can be found in Appendix C.

⁸ U.S. Bureau of the Census, *Press Release*, CB 89-72, May 4, 1989.

B. Caseload numbers were screened for significant changes from the previous year. A formal record that documents, and, where possible, explains such changes is maintained. This process serves as another reliability check by identifying statutory, organizational, or procedural changes that potentially have an impact on court caseload. During the data collection process, a check is conducted to ensure compatibility between the information supplied on the jurisdiction guide profiles and the casetypes identified on the statistical profiles.

C. The data were then transferred from the handwritten copy to computer databases (codebooks are available upon request). The data entry program used (SPSS's Data Entry) automatically checks for certain data entry errors. The software allows the programmer to establish a range of acceptable values for each variable. If a value was entered that fell outside the parameters, SPSS will not incorporate the number within the database until several attempts were made to enter the value. After the data were entered, a batch error-detection program checked for other user-specified logic violations, usually through mathematical checks on the consistency of subtotals and totals. The reliability of the data collection and data entry process was verified through an independent review of all decisions made by the original data collector.

D. After the data were entered and checked for data entry errors and internal consistency, individual spreadsheets were generated for each state trial court system using EXCEL software. The spreadsheets replace the statistical profiles previously generated manually. The generation of appellate court statistical profiles will be automated during 1990.

E. Finally, the caseload tables in Part III and the smaller tables supporting the text of Part I were generated using either EXCEL spreadsheet or SPSSPC Report software. A special database was created to contain method of case disposition data for presentation in Part II of the report.

Variables

There are four basic types of data elements collected by the Court Statistics Project: (1) trial court caseload statistics, (2) trial court jurisdictional/organizational information, (3) appellate court caseload, and (4) appellate court jurisdictional/organizational information. An individual court profile is prepared for each of these data elements. These data collection instruments are approved by COSCA's Court Statistics and Technology Committee and consist of data elements defined in the *State Court Model Statistical Dictionary*.

There are four main trial court casetypes: civil, criminal, juvenile, and traffic/other violation. Each major casetype can be reduced to several specific caseload categories. For example, the civil casetype consists of tort, contract, real property rights, small claims, mental health, estate, and domestic relations cases. In some circumstances, these casetypes can be further refined;

for example, domestic relations cases can be divided into marriage dissolution, URESA, support/custody, and adoption cases.

Currently, only filing and disposition numbers are entered into the database for each of these casetypes. Data on pending cases were routinely collected by the project until serious comparability problems were identified when compiling the 1984 caseload report. Some courts provided data that included active cases only, while others included active and inactive cases. The COSCA Court Statistics and Technology Committee recommended that the collection of pending caseload be deferred until a study determined whether the data can be made comparable across states.

The trial court jurisdictional profile collects an assortment of information relevant to the organization and jurisdiction of each trial court system. The main purpose of the profile is to translate the terminology used by the states when reporting statistical information into generic terms recommended by the *State Court Model Statistical Dictionary*. In addition, the profile collects information on the numbers of courts, the number of judges, methods of counting cases, the availability of jury trials, the dollar amount jurisdiction of the court, and the method of case disposition.

There are also statistical and jurisdiction guide profiles for each state appellate court. Two major casetypes are used on the statistical profile: mandatory cases (those cases that the court must hear on the merits—appeals of right) and discretionary petitions (those cases that the court has discretion on whether to accept and then reach a decision on the merits). The statistical profile also contains the number of petitions granted, although many states do not report this. Mandatory and discretionary cases are further differentiated by whether the case is a review of a final trial court judgment or some other matter, such as interlocutory or postconviction relief. Where possible, the statistics are classified according to subject matter, mainly civil, criminal, juvenile, disciplinary, and administrative agency appeal.

As with the trial court jurisdiction guide, the primary task of the appellate court guide is to translate the terminology and categories used by each state appellate court into the generic ones recommended by the *State Court Model Statistical Dictionary, 1989 Edition*. The guide also contains information about each court, including the number of court locations, the number of justices/judges, the number of legal support personnel, the point at which appeals are counted as a case, the procedures used to review discretionary petitions, and the use of panels.

Graphics as a Method of Displaying Caseload

The 1985 and 1986 caseload reports used maps to summarize the data presented in table form. The 1988 report also uses maps as a method of displaying information, however, their use is limited to summarizing court

structure and jurisdictional information rather than caseload data.

The 1988 report uses pie charts and bar graphs to illustrate and summarize the caseload data presented in table form. The states are arranged by filing rate, from lowest to highest, so that a mid-point can be easily determined. The contents of each graph is limited to those states providing the relevant data to the Project. It is incorrect to conclude that a state omitted from the graph did not report caseload to the Project. The definitive statement of data availability can be found in the detailed caseload tables in Part III.

Footnotes

Footnotes indicate the degree to which a court's statistics conform to the Court Statistics Project reporting categories defined in the *State Court Model Statistical Dictionary*. Footnoted caseload numbers are either overinclusive in that they contain casetypes other than those defined for the term in the dictionary, or are underinclusive in that some casetypes defined for the term in the dictionary are not included. It is possible for a caseload number to contain inapplicable types, while omitting applicable ones, making the subtotal or total simultaneously overinclusive and underinclusive. The 1988 report introduces a simplified system of footnotes. An "A" footnote indicates that the caseload number for a statewide court system does not include some of the recommended case types; a "B" footnote indicates that the number includes some extraneous casetypes; a "C" footnote indicates that the number is both incomplete and overinclusive. The text of the footnote explains for each court system how the caseload numbers differ from the reporting category recommended in the *State Court Model Statistical Dictionary, 1989 Edition*. Caseload numbers

that are not qualified by a footnote conform to the dictionary's definition.

Reported case filings and dispositions are also affected by the unit and method of count used by states, differing subject matter and dollar amount jurisdictions, and different court system structures. Most of these differences are described in the figures found in Part V of this volume and summarized in the court structure chart for each state in Part IV.

Variations in Reporting Periods

As indicated in Figure A (Part V), most states report data by fiscal year, others by calendar year, and a few appellate courts report data by court term. Therefore, the 12-month period covered in this report is not the same for all courts.

This report reflects court organization and jurisdiction in 1988. Since 1975, new courts have been created at both the appellate and trial level, new courts report data to the Court Statistics Project, courts may have merged, and changed counting or reporting methods. The dollar amount limits of civil jurisdiction in many trial courts also vary. Great care is therefore required when comparing the 1988 data to previous years. The trend analysis in Part I of this report offers a model for undertaking such comparisons.

Final Note

Finally, comments, corrections, and suggestions by readers are a vital part of the work of the Court Statistics Project and should be sent to the Director, Court Statistics Project, National Center for State Courts, 300 Newport Avenue, Williamsburg, Virginia, 23187-8798.

Prototype of state appellate court statistical profile

Boldface headings indicate the classifications used by the Court Statistics Project.

N/A = The casetype is handled by the court, but the data are unavailable.

X = The data for this casetype are known to be included in the total but are unavailable by category.

-- = Data element is not applicable.

() **NOTE:** Begin pending data filed outside the parentheses, disposed data outside the parentheses, and end pending data reported as discretionary jurisdiction cases represent petitions/motions for review. Filed figures inside the parentheses represent those newly filed petitions/motions that were granted during the time period covered on this profile. For those interested, filed figures inside the parentheses can then be added to total mandatory jurisdiction cases filed to arrive at the number of new cases that the court will ultimately consider "on the merits." Disposed figures inside the parentheses represent the number of discretionary petitions granted that were disposed of "on the merits." This number is rarely available, and is usually included in either the total discretionary petitions disposed, or the mandatory jurisdiction cases. The number of disposed petitions inside the parentheses can be added to total mandatory jurisdiction cases disposed to arrive at the number of cases that the court disposed of "on the merits."

Qualifying Footnotes:

A = The data element is complete with no footnotes.

B = The data element is complete and represents some double counting.

C = The data element is overinclusive.

D = The data element is overinclusive and represents some double counting.

i (enter as lower case) = The data element is at least 75% complete.

J = The data element is at least 75% complete, and represents some double counting.

P = The data element is incomplete and overinclusive.

Q = The data element is incomplete, overinclusive and represents some double counting.

V = The data element is less than 75% complete.

W = The data element is less than 75% complete, and represents some double counting.

X = The data element is less than 75% complete, and overinclusive.

Y = The data element is less than 75% complete, overinclusive, and represents some double counting.

Z = The data are missing for this data element.

R = Judge information.

S = Figure was computed.

T = Additional information.

U = The data element is included in the unclassified category.

Prototype of State Trial Court Statistical Profile Used In 1988 Data Collection

Boldface headings indicate the classifications used by the Court Statistics Project (CSP).
N/A = This casetype is handled by the court, but the data are unavailable.
X = The data for this casetype are known to be included in the total but are unavailable by category.
-- = Not applicable.

Units of count:
 Civil unit of count.
 Criminal unit of count.
 Traffic/other violation unit of count.
 Juvenile unit of count.

Trial definitions:
 Jury trial definition.
 Nonjury trial definition.

Qualifying Footnotes:

A = The data element is complete with no footnotes.

C = The data element is complete and also includes more information than can be specifically identified in codes E-H below.

E = The data element is complete and also includes all postconviction remedy proceedings.

F = The data element is complete and also includes all ordinance violation cases.

G = The data element is complete and also includes all DWI/DUI cases.

H = The data element is complete and also includes all criminal appeals cases.

I (enter as lower case) = The data element is at least 75% complete, and is missing more information than can be specifically identified in codes K-N below.

K = The data element does not include any limited felony cases.

L = The data element does not include any DWI/DUI cases.

M = The data element does not include any criminal appeal cases.

N = The data element does not include any ordinance violation cases.

O = The data element is incomplete and overinclusive.

V = The data element is less than 75% complete.

X = The data element is less than 75% complete and overinclusive.

Q = Additional court information.

R = Judge information.

S = Figure was computed.

T = Additional information; reopened cases are added to the data element.

U = The data element is included in the unclassified category.

Z = The data are missing for this data element (i.e., the primary data element was coded a "-5" to a "-1").

-1Z = Data not available

-2Z = Casetype does not fall within the jurisdiction of the court.

-3Z = Data are represented in the total, but could not be separated by data element.

-4Z = Data are reported in the unclassified category of the same general casetype.

-5Z = Data are collapsed with another casetype and could not be identified by specific data element.

Other Publications from the Court Statistics Project

The following publications are available from the National Center for State Courts, 300 Newport Avenue, Williamsburg, VA 23187-8798:

State Court Caseload Statistics: Annual Reports 1976-1979

Each of these four volumes (1976-1979) has available caseload information from all appellate and trial courts. 1980-1984, paperback, \$3.00 each volume, plus shipping.

State Court Caseload Statistics: Annual Report 1980

Available caseload information from all appellate and trial courts are presented in this report. 1984, 496 pages, paperback, \$4.50, plus shipping.

State Court Caseload Statistics: Annual Report 1981

The 1981 Report is out of print. Photocopies are available from the Court Statistics Project.

State Court Caseload Statistics: Annual Report 1984

Available caseload information from all appellate and trial courts are presented in this report. 1986, 276 pages, 25 oz., paperback, \$6.25, plus shipping.

State Court Caseload Statistics: Annual Report 1985

Available caseload information from all appellate and trial courts are presented in this report. 1987, 312 pages, 28 oz., paperback, \$6.25, plus shipping.

State Court Caseload Statistics: Annual Report 1986

Available caseload information from all appellate and trial courts are presented in this report. 1988, 278 pages, 24 oz., paperback, \$6.95, plus shipping.

State Court Caseload Statistics: Annual Report 1987

Available caseload information from all appellate and trial courts are presented in this report. 1989, 266 pages, 21 oz., paperback, \$6.95, plus shipping.

Court Case Management Information Systems Manual

This manual reviews local and statewide case management information requirements and presents sets of model data elements, data collection forms and case management output reports for each level of court. 1983, 342 pages, 29 oz., paperback, \$15.00, plus shipping.

The Business of State Trial Courts

Defining courts business as cases filed, serious cases, and contested cases, this monograph tests six myths about courts, their work and decisions. 1983, 158 pages, 14 oz., paperback. Single copies are available free of charge.

State Court Organization 1987

Updates the 1980 reference guide to the organization and practices of all state appellate and trial courts. 1988, 420 pages, 43 oz., paperback, \$9.95, plus shipping.

State Court Model Annual Report

Suggested formats to be used in preparing state court annual reports. Discusses topics to be considered for inclusion in court reports. 1980, 88 pages. Single copies are available through the National Center for State Courts library.

1984 State Appellate Court Jurisdiction Guide for Statistical Reporting

Contains information on the organizations, jurisdiction, and time standards in the state appellate courts. 1985, 117 pages. Single copies are available for loan through the National Center for State Courts library.

State Court Model Statistical Dictionary

Contains definitions of terms used to classify and count court caseload. Gives the court statistical usage for each term. Merges the 1980 edition and 1984 *Supplement*, defines new terms. 1989, 90 pages, 11 oz., paperback, \$4.50, plus shipping.
