Catalog of
Personal Computer Software
Developed within the Federal Courts

Compiled by

The Federal Judicial Center
Innovations & Systems Development Division

Edition 1 February 1989

INTRODUCTION

Purpose

This catalog was compiled by the Federal Judicial Center to facilitate the sharing of court-developed personal computer software among the federal court community. Hopefully it will enable courts to save software development effort by adopting software that has already been developed by another court office. At the least, it should provide a directory that will facilitate the exchange of ideas among court software developers, and between courts that are considering software development and those that have already completed the task.

Source

The information was compiled from responses to a *PC Usage Survey* which was sent to all federal courts in the summer of 1988. The survey asked, "Have you or your staff developed software that you would make available to other courts?", and asked for a brief description of any such systems.

The brief descriptions presented in this catalog were provided by the "sponsor courts" in response to that question. More than 130 systems were reported and many of those were designed to serve the same functions (e.g., 10 Property Inventory systems). Therefore, we sent a follow-up letter to the software developers inviting them to submit more detailed descriptions of their systems and to fill out feature checklists. Only a few developers responded to the follow-up letter, and therefore most of the descriptions remain very brief.

The sponsor courts and the software developers are commended for their efforts and for their willingness to share their products with other courts.

How to Use the Catalog

The catalog entries should be accessed through one of the indexes located at the beginning of the catalog. Four indexes are provided:

Index by Class - groups the entries by their classifications (e.g., Case Mgt or Property).

Index by Court Type - groups the entries by the type of court for which they were developed (e.g., Court of Appeals or District Court). Within those groups, the entries are further grouped by class.

Index by Author - groups the entries by the author or developer of the software.

Court-Developed Software

Index by Sponsor Court - groups the entries by the name of the court that sponsored the system's entry into the catalog.

New Submissions, Updates and Error Corrections

We welcome new catalog submissions and updates or corrections to entries that currently appear in the catalog. Please direct any materials to:

I&SD PC Software Catalog
Federal Judicial Center
1520 H. Street, NW
Washington, DC 20005

Electronic Catalog Version

The catalog is available in the form of a FoxBASE+ database which can be obtained from the Innovations & Systems Development Division's electronic bulletin board (phone number as of February 1989: FTS/202 633-6256).

Disclaimer

The Federal Judicial Center has placed no restrictions on catalog entry submissions and has performed no evaluation or testing of the systems. The Center, therefore, neither endorses nor warrants any of the listed court-developed software.

Court-Developed Software

<i>Class:</i> Property	<i>Title:</i> Furniture Inventory	<i>Court Type:</i> all
<i>Hardware:</i> IBM PC/XT, AT	<i>Operating System:</i> DOS	<i>Software Base:</i> dBASE III+

Brief Description:

Designed to make maintenance of a furniture inventory easier, this database system allows for entry, editing, and deletion of inventory information. Federal stock number, room number, furniture description, acquisition cost and date, disposition date, person responsible for furniture, and condition of the furniture is entered for each piece of furniture in inventory.

A computer generated version of AO Form 260(6/76), the official Perpetual Inventory Record and a Capital Value Report (subtracting total disposition value from total acquisition cost) are available.

This program also offers the option of entering furniture inventory for multiple courts.

Court- Developed Software

<i>Class:</i> Calendar	<i>Title:</i> Civil & Criminal Case Calendar	<i>Court Type:</i> DC
<i>Hardware:</i> IBM PC/XT, AT	<i>Operating System:</i> DOS	<i>Software Base:</i> dBASE III+

Brief Description:

This Civil and Criminal Case Calendaring system is integrated with our Civil and Criminal Case Management system. The system incorporates information stored on civil and criminal cases into a daily calendar which may be printed by date range.

Upon entering the case number, date and time for the setting, the information is automatically pulled from the case management databases and placed into a calendar format on the screen. If the setting is acceptable, it is placed into the calendar. If not, the user may edit all of the information; the edits will be reflected in the case management databases.

Civil settings for the calendar include the plaintiff and plaintiff attorney(s), whether or not the plaintiff will be listed as "et al.", versus the defendant and defendant attorney(s) and whether or not the defendant will be listed as "et al.", the proceeding, time, date, judge, and courtroom. There may be multiple plaintiffs and defendants.

Criminal settings include the plaintiff and plaintiff attorneys, versus the defendant, defendant attorneys, defendant's bail status, charging document, cites and charges, time, date, judge, and courtroom. There may be multiple defendants and charges.

Calendar entries may be added, edited and deleted. A full calendar may be printed listing the above information. A condensed calendar is also available, including the case number, title, proceeding, date and time for each setting. Both are printed by date range.

See Civil & Criminal Case Management -- #61.

Court- Developed Software

<i>Class:</i> Calendar	<i>Title:</i> Court Calendar Menu	<i>Court Type:</i> BC
<i>Hardware:</i> IBM PC/XT, AT	<i>Operating System:</i> DOS	<i>Software Base:</i> dBASE III+

Brief Description:

The court calendar menu maintains all cases set for hearing grouped by date and time. It is used for initial input of a hearing or trial and used to track hearings stricken from the calendar or reset for another day.

The court's anticipated calendar and daily public calendar are generated through the menu as well as an anticipated calendar for staff use and worksheets for each calendared matter.

The menu also enables the judge and staff members to locate hearings by case number and archives calendar information for future reference.

Information printed on the calendars and worksheets is pulled from the calendar database as well as an attorney list and caseload information database.

Court- Developed Software

<i>Class:</i> Calendar	<i>Title:</i> Court Calendar System	<i>Court Type:</i> BC
<i>Hardware:</i> IBM PC/XT, AT	<i>Operating System:</i> DOS	<i>Software Base:</i> Fox/dBASE

Brief Description:

The Court Calendar System is a simple and easy to use court calendaring system that allows you to Input, Update, Settle, Display and Print Calendars of Judges, Debtors, and Attorneys.

Court actions are added and edited by entering the case number. The system works in conjunction with the NIBS system and eliminates the repetition of data entry.

The system will display calendars by the day or by the week for viewing and editing. The system can also display calendars for a specific Attorney. Attorneys clients hearings; responses; objections; and answers can all be viewed.

Some of the printed calendars are:

1. Judges Calendar (by Date, Time, and Case)
2. Attorneys Calendar (a short version of the Judges Calendar)
3. Debtors Calendar (a complete listing of all actions against a debtor).

This has been a brief description of the Court Calendar System. Included with the system is a complete Manual of Operation.

Court- Developed Software

<i>Class:</i> Financial	<i>Title:</i> Financial Mgt - Judicial Conf	<i>Court Type:</i> CA
<i>Hardware:</i> IBM PC/XT, AT	<i>Operating System:</i> DOS	<i>Software Base:</i> dBASE II

Brief Description:

This database includes a record for each conferee invited to attend the Judicial Conference. Each record reflects the registration status and the number of social tickets purchased.

From the database, the following reports can be generated:

Social Event Status and Ticket Summary - lists each event, the number of tickets sold and the cash total.

Registration Summary - indicates the total number invited, total fee paid, total not attending, total refunded and total registered.

Check Book Summary - indicates the total funds received for socials, registration and other deposits. This also reflects registration and social refunds and all withdrawals.

With the use of a list generator, special reports can be processed according to selected criteria.

See Records Mgt - Judicial Conf - #119.

Court- Developed Software

<i>Class:</i> Financial	<i>Title:</i> Check Disbursement System	<i>Court Type:</i> all
<i>Hardware:</i> IBM PC/XT, AT	<i>Operating System:</i> DOS	<i>Software Base:</i> dBASE III+

Brief Description:

This system was designed to aid the financial deputy in the completion of the OCR Check Issue Transmittal form, and issuance of checks.

The payee's name, address, check number, voucher number, check amount, payment date, and appropriation fund number(s) are entered for each check to be included on the OCR Check Issue Transmittal form. Check numbers are automatically increased with each new payee, to reduce operator error. There is also an option to repeat payee name and address information to the next check, which reduces entry of duplicate information, and thus, operator entry time. All records entered above may be edited or deleted at any time.

Mailing labels for the above payees may be printed by entering a check number range. The records are automatically selected from the database.

Two reports are included in the system. The OCR Check Issue Transmittal form may be printed by specifying a date range and the beginning check number. The total of all checks on the form is printed at the top of the report, as is the total number of checks. The report program checks the data for check numbers which are out of sequence, and reports any that are found

The appropriation fund report was designed as a cross check to the OCR Check Issue Transmittal form. The user enters the beginning and ending voucher numbers for checks included on the OCR Check Issue Transmittal form. The program automatically totals amounts charged to different appropriation numbers for the vouchers. Any appropriation numbers found which are not on file are printed on the report in an error message. Each appropriation number and its total for the vouchers is printed on the report. A grand total for vouchers included in the report is printed at the bottom.

If the OCR Check Issue Transmittal form and Appropriation Fund Report are both run on the same checks (as indicated by date range, beginning check number and voucher number range), the grand totals from both reports will match. This indicates that the check amount on each check in the batch was correctly assigned to one or more appropriation funds.

Court- Developed Software

<i>Class:</i> Financial	<i>Title:</i> Financial & Budget Management	<i>Court Type:</i> all
<i>Hardware:</i> IBM PC/XT, AT	<i>Operating System:</i> DOS	<i>Software Base:</i> dBASE III+

Brief Description:

The program is designed to track budgets, purchase orders, and disbursements for four separate departments, Clerk's Office, Probation, Bankruptcy and Pretrial Services, and two divisions within each department, Phoenix and Tucson, plus combined totals for the district. The program also makes projections on yearly spending for each FCN and CAN number based on monthly expenditures and compares them to the revised budget allocation from the AO.

The program prints reports for each department and each division within the departments. The system prints purchase order and voucher reports, budget summary reports, end of month budget reports, purchase orders not paid reports, quarterly summary reports, and quarterly cumulative budget reports.

Court- Developed Software

<i>Class:</i> Financial	<i>Title:</i> OCR Check Issue Transmittal	<i>Court Type:</i> all
<i>Hardware:</i> IBM PC/XT, AT	<i>Operating System:</i> DOS	<i>Software Base:</i> dBASE III+

Brief Description:

This program was developed to generate the weekly OCR Check Issue Transmittal report required by the U.S. Treasury. The report is prepared on the last day of the week and includes an itemized listing of checks issued for the week. The figures for "TOTAL DOLLAR AMOUNT" and "TOTAL NUMBER OF CHECKS" blocks on the front page of the report form are automatically calculated and printed from the database entries.

Disbursements are entered into the computer on a daily basis in the following format:

- (1) Date of issue
- (2) Check number
- (3) Amount of check

At the end of each week, once the report has been prepared, the file is cleared for entry of the next week's items.

An OCR-A font cartridge is used with the Hewlett-Packard LaserJet printer and escape codes for this configuration are included in the program.

Court- Developed Software

<i>Class:</i> Financial	<i>Title:</i> Cash Receipts Ledger System	<i>Court Type:</i> all
<i>Hardware:</i> IBM PC/XT, AT	<i>Operating System:</i> DOS	<i>Software Base:</i> dBASE III+

Brief Description:

The automated Cash Receipts Ledger System eliminates the need for manual posting of receipts to the appropriate CAN numbers. Deposit amounts for total receipts and receipts by CAN number are automatically calculated and presented in month-end reports. The source documents for data entry are the recap of receipts by CAN number (which are manually prepared by intake clerks) and AO 215 (Deposit Ticket).

Reports generated by this system include:

- (1) Listing by Deposit Date
- (2) Listing by CAN sequence

Total dollar amount of receipts is provided at the end of each report.

<i>Class:</i> Financial	<i>Title:</i> Cash Disbursements Ledger	<i>Court Type:</i> all
<i>Hardware:</i> IBM PC/XT, AT	<i>Operating System:</i> DOS	<i>Software Base:</i> dBASE III+

Brief Description:

The Automated Cash Disbursements Ledger System eliminates the need for manual posting of disbursements to the appropriate CAN numbers. Dollar amounts for total disbursements and disbursements by CAN number are automatically calculated and presented in the month-end reports described below. Data entered into the computer for each disbursement includes:

- (1) Voucher number
- (2) Check number
- (3) Amount of check
- (4) Check issue date
- (5) CAN number

Reports available with this system include:

- (1) Listing by Voucher Number Sequence
- (2) Listing by CAN Number Sequence

Court- Developed Software

<i>Class:</i> Financial	<i>Title:</i> Trustee Ledger/Payment	<i>Court Type:</i> all
<i>Hardware:</i> Datapoint Vista PC	<i>Operating System:</i> CTOS	<i>Software Base:</i> RBASE 5000

Brief Description:

ICORS (Individual Court Office Reporting System) is used to gather case data from BANS (Bankruptcy Automated Noticing System). This data is transferred to the CTOS operating system on the Datapoint Vista PC, then loaded to the R:Base 5000 database.

The database now contains all the information needed for the trustee ledger except the receipt number, which is entered by the user. The time consuming job of typing all of the case data from the receipt onto the blank trustee ledger is eliminated. Partial payments are also entered at this time.

All other transactions related to the trustee ledger such as AO283 transfer vouchers, SF1166 voucher and schedule of payments, TR4 trustee payment vouchers, debit vouchers and conversions are also posted using the database.

The quarterly deposit fund (CAN 110) balance is now calculated by the database. This eliminates the very time consuming task of manually adding the trustee ledger balances. The quarterly report preparation time is also greatly reduced by the ability to balance the ledgers monthly.

The trustee payment vouchers are also generated via the database. After the closed dockets are checked against the list of closed cases, the trustee payment vouchers and the trustee voucher report are printed. It is no longer necessary to compare each docket with the trustee ledger, sort the dockets by trustee and type each individual payment voucher manually.

When the confirmed (paid) trustee payment vouchers are received back from the Administrative Office they are posted to the database. A report by schedule number is printed to verify against the vouchers.

-----------------------------------	---	----------------------------------

<i>Hardware:</i> IBM PC/XT, AT	<i>Operating System:</i> DOS	<i>Software Base:</i> dBASE III+
-----------------------------------	---------------------------------	-------------------------------------

Brief Description:

This menu-driven financial system is used by the Financial Deputy Clerk to maintain and print trial balance reports. Data is entered from cash receipts written by the intake clerk. The software separates fee payments into appropriate CANs and disburses to trustees. It allows for fund transfers between CANs. It compiles CAN totals and prints reports. The software is capable of printing AO forms containing report data, but the computer generated forms have not been submitted to the Administrative Office for approval.

-----------------------------------	--	----------------------------------

Hardware:
IBM PC/XT, AT

Operating System:
DOS

Software Base:
dBASE III+

Brief Description:

This is an independent, menu-driven system used by the Clerk's purchasing assistant. It tracks funding allocations for the Clerk's office by category (i.e., consumable supplies, reportorial service, furniture, etc.). It reports funds allocated, encumbered, expended, the unencumbered balance, and the actual fund balance. The databases store information for other reports such as type of consumable supply, vendor, purchases per judge. This is useful in budget preparation.

<i>Class:</i> Personnel	<i>Title:</i> Personnel System	<i>Court Type:</i> all
<i>Hardware:</i> IBM PC/XT, AT	<i>Operating System:</i> DOS	<i>Software Base:</i>

Brief Description:

The personnel program was developed to eliminate a lot of the paperwork being done by the personnel officer. It is capable of keeping track of leave records of staff, maintaining updated personnel records--which consists of personal data as well as work-related information, e.g., position title, salary, grade/step, persons holding a particular position from the time the position was established. It also keeps track of the employee's job history in the court.

The system is still in the final stages of completion (as of August 1988).

Court- Developed Software

<i>Class:</i> Case Mgt	<i>Title:</i> Civil Case Management System	<i>Court Type:</i> DC
<i>Hardware:</i> IBM PC/XT, AT	<i>Operating System:</i> DOS	<i>Software Base:</i> dBASE III+

Brief Description:

Using case number, filing date, judge number, style, jury demand, issue joined date, pretrial conference date, trial date, settle date, closing date and status provides the data for the civil monthly reports, prepares pretrial conference notices. Provides a Pending Case List. Major case management reports are Filed but not At Issue, At Issue but no Trial, and Settled but not Closed.

Emphasis is on ease of use, minimum keystrokes, and accuracy of entries. Proof sheets and audit trails are provided for all entries. On screen instructions make operator instructions unnecessary. A file maintains the current status (opens, reassignments, closings) for each judge and this file is printed after each updating session as well as a "physical inventory" of the pending cases for each judges. Monthly filings and closings are transferred to an annual archive file for future statistical use.

Menu driven. Menus are also available for most computer functions as well as those for daily, weekly, monthly, quarterly and annual backup.

Court- Developed Software

Class: Case Mgt	Title: Civil & Criminal Case Management	Court Type: DC
Hardware: IBM PC/XT, AT	Operating System: DOS	Software Base: dBASE III+

Brief Description:

The civil and criminal case management system provides complete tracking of civil cases and tracking of motions and matters under advisement for criminal cases. This system was designed to contain case management information for one judge, but could easily be modified for multiple judges.

Main case information, including the case number, title, judge, category, cite, filing and closing dates, matters under advisement, motions, parties and attorneys are maintained on civil cases as well as tickler dates for different actions to be taken on the case (90 day status check date, date service is due regarding Minute Order of Rule 4, status report due date, date of scheduling conference, date discovery closes, etc.).

Criminal case information includes the case number, title, judge, charging document, filing date, U.S. attorneys, defendants, bail status, matters under advisement, advisement date, defendant attorneys, defendant charges, and motions.

Eleven reports are provided. Civil cases are included in all reports, and criminal cases in the Motions, Matters Under Advisment, Alphabetical Party Index and Numerical Case Index reports. Other reports include All Cases Pending, All Cases Referred to the U.S. Magistrate, 90 Day Status Check, Pull Date Check, Cases At Issue, Cases with Trial Date Set, and Cases with Category 2 Matters.

Although this system can stand alone, it is integrated with our Calendaring System, which pulls data from these databases to be used in an automated calendar.

<i>Hardware:</i> Wang Professional	<i>Operating System:</i> Wang	<i>Software Base:</i> Wang ProDB

Brief Description:

This database system helps us manage our civil cases by keeping track of: status of cases by use of an assigned two-digit case number, date of last action, judge reassignments, pending motions and response due dates or any other action due to occur on a certain date. We can create virtually any kind of caseflow management report for use by courtroom deputies and judges' staffs such as: three year old cases assigned to a particular judge, pending motions for a particular judge, pending cases assigned to a particular judge, pending motions with responses due on a daily basis, cases eligible for status conference, cases eligible for dismissal for lack of prosecution, etc.

Court- Developed Software

<i>Class:</i> Case Mgt	<i>Title:</i> Caseload Menu	<i>Court Type:</i> BC
<i>Hardware:</i> IBM PC/XT, AT	<i>Operating System:</i> DOS	<i>Software Base:</i> dBASE III+

Brief Description:

Main case information is maintained for use with the calendaring menu and general information of interest to the judge and judge's staff. Eventually it is hoped that this information will be transferred from computer in clerk's office. Information as to case number, debtor name, chapter of filing, attorney, trustee are maintained. In addition, information required by quarterly report of matters under advisement is maintained.

Court- Developed Software

<i>Class:</i> Utilities	<i>Title:</i> Mailing List Program	<i>Court Type:</i> all
<i>Hardware:</i> IBM PC/XT, AT	<i>Operating System:</i> DOS	<i>Software Base:</i> WordPerfect Multimate

Brief Description:

A mailing list program designed for merging of letters and other correspondence with Word Perfect, Versions 4.2 or 5.0, or Multimate, Version 3.5 or later, and for simplified printing of envelopes and/or mailing labels up to six rows deep on an HP Laser or compatible printer, all with limited query functions.

Although the program uses dBASE III structures, the program was compiled with Clipper, and the program is portable without the necessity of the user also having dBASE III.

All of the functions and uses to which the program may be put to use are described in the documentation forwarded to the Federal Judicial Center. It is currently used in the District of Massachusetts for, among other things, repetitive mailings in connection with the selection of law clerks on a yearly basis.

Court- Developed Software

<i>Class:</i> Jury	<i>Title:</i> Automated Jury Program	<i>Court Type:</i> DC
<i>Hardware:</i> IBM PC/XT, AT	<i>Operating System:</i> DOS	<i>Software Base:</i> dBASE III+

Brief Description:

The program allows for the entering of up to 100,000 names, addresses, county, sex/race, qualification code, beat and box data from registered voter listings, thereby creating jury master wheel. It also allows for the manipulation of this data for editing, the adding to or deleting from this data base and the printing of all needed juror statistical data. The program allows for the printing of juror qualification questionnaires, the disqualification and removal of names, thereby leaving only qualified jurors in data base. The program allows for the random drawing of jury venire, printing of summonses, sub-vouchers, vouchers, checks, and numerous miscellaneous correspondence that is necessary for the maintenance of the jury process.

<i>Class:</i> Statistics	<i>Title:</i> Statistical Report of Filings	<i>Court Type:</i> BC
<i>Hardware:</i> IBM PC/XT, AT	<i>Operating System:</i> DOS	<i>Software Base:</i> NIBS

Brief Description:

This software consists of two optional packages. One asks the user to enter daily filings counts onto a data entry screen. The other obtains some of this data from the bankruptcy case database. The second option requires that all cases filed on one date be opened in the computer prior to running the daily report.

The statistical program compiles the day's statistics into monthly and yearly data. It contains information grouped by filing location, chapter, number of cases, number of estates, number of business cases, adversary proceedings and motions. It runs within the NIBS software. The program is used by the intake clerk.

*** This is highly localized software, and would require numerous changes if used by another court. The statistics are reported per filing location.

Court- Developed Software

<i>Class:</i> Index	<i>Title:</i> Attorney Roll Index	<i>Court Type:</i> all
<i>Hardware:</i> IBM PC/XT, AT	<i>Operating System:</i> DOS	<i>Software Base:</i> dBASE III+

Brief Description:

The Attorney Roll Index provides an alphabetical listing of all attorneys admitted to practice in this district after November, 1985 and all of those attorneys currently on the district's Criminal Justice Act Panel, Pro Bono Panel and Special Masters Panel.

Data entry is completed after every new admission and includes all those attorneys admitted pro hac vice. This index has become an invaluable tool to the Clerk's Office and to the court in that it can easily identify and group all those attorneys on any one of the given panels. The index is updated monthly and distributed to the divisional offices as well as to the Court.

Several reports have been developed to identify the following: CJA Roll of Attorneys, Pro Bono Panel Roll of Attorneys, Special Master Roll of Attorneys, Roll of Attorneys Admitted Pro Hac Vice, and a general roll of all attorneys admitted currently in the database. Information in the database includes name, address, firm, telephone, courtseat of admission, date of admission, whether the admission was pro hac vice or regular, languages spoken and participation on the various panels.

<i>Class:</i> Miscellaneous	<i>Title:</i> Space & Project Management	<i>Court Type:</i> all
<i>Hardware:</i> IBM PC/XT, AT	<i>Operating System:</i> DOS	<i>Software Base:</i> Fox/dBASE

Brief Description:

This system will provide any and all space or project reports which might be requested by the AO, FJC, GSA or for any internal management purpose. We are identifying and defining every possible data field which pertains to space and projects. Some of the reports will include: current projects status, current single project status, project funding status, project priority, SLUC tracking, etc. In addition to the primary active project database, there will be a separate database containing current space information for all locations and a separate historical archive database for completed projects. Another goal of this project will center around the electronic distribution of data (via telephone/modem) to and from the space planners at the AO. We may also experiment with sharing site specific data files with each court location at each clerk's office via modem link. In the future, we would like to link graphical floorplans to individual records (projects or spaces) in the database. We may link DBASE with an inexpensive CAD software system to allow us to view or print basic floorplans and to make basic modifications.

Court- Developed Software

<i>Class:</i> Utilities	<i>Title:</i> Menu System	<i>Court Type:</i> all
<i>Hardware:</i> IBM PC/XT, AT	<i>Operating System:</i> DOS	<i>Software Base:</i>

Brief Description:

A menu system for DOS systems providing a Main Menu providing nine (9) major selections, each of which presents a secondary menu of nine (9) more selections, all of which provides for menu selection of some 81 various application and/or DOS functions with two keystrokes. Additionally, each of the selections presented on each of the submenus provides for a maximum of five (5) user-defined prompts by which parameters may be passed to the application or function selected.

The program is written in assembly language, and its speed is enhanced by direct screen writes to the video buffer. No incompatibility has been observed in PCs, XTs, ATs [and compatibles], or the PS/2 series in which the program has been installed.

The program operates not unlike typical menu programs. Using the menu numbers selected, the program writes a batch file which, in turn, calls a predefined batch file which, in turn, executes the function or application [with or without parameters] requested. The menu may be user-defined using the editing program included with the menu program.

Court- Developed Software

<i>Class:</i> Utilities	<i>Title:</i> WAMPUM	<i>Court Type:</i> all
<i>Hardware:</i> IBM PC/XT, AT	<i>Operating System:</i> DOS	<i>Software Base:</i>

Brief Description:

A free menu-driven, dBASE III-compatible data base management system for development of virtually any kind of data base desired. Includes standard input functions to add, edit, delete, undelete, pack, reindex, and display records. Supports output of dBASE compatible reports, labels, lists and customized form letters. Up to 7 indexes may be developed to support any dBASE data base. Comprehensive import and export utilities permit assimilation of data from other data bases.

All applications can be multi-user with automatic file and record locking so long as the units are networked with a NetBIOS-compatible network.

Court- Developed Software

<i>Class:</i> Probation	<i>Title:</i> Probation Officer's Caseload	<i>Court Type:</i> PROB
<i>Hardware:</i> DECmate	<i>Operating System:</i> WPS	<i>Software Base:</i>

Brief Description:

This Probation Officer's Caseload database produces these reports:

1. CASELOAD LIST: List with subject's name, address, key map code, supervision level, received date, expiration date, type case, special conditions, and comment section (limited to 25 characters). It is necessary to print on a single line in order for DECmate to total high and low activity cases. Two additional sections of the report provide the same information for courtesy supv. cases and cases on bond supv. pending probation revocation. A third section lists contract and non-contract drug and alcohol cases.

2. REPORTS DUE FOR THE MONTH: The following is printed in four sections on one page:

Case Reviews and Parole Forms F-3: Name, sex, race, dob, type case, received and expiration dates, and type report due are listed.

Expirations: Name, type case, received and expiration date are listed.

Initial Supv. Classification Reports: Name, type case, received date and date assigned to officer are listed.

Special Reports: Name, type case, received and expiration date, and type of report are listed. (Used mainly for YCA early terminations and 5-year F-3s.)

<i>Class:</i> Probation	<i>Title:</i> Caseload Manager	<i>Court Type:</i> PROB
<i>Hardware:</i> IBM PC/XT, AT	<i>Operating System:</i> DOS	<i>Software Base:</i> Fox/dBASE

Brief Description:

Provides online caseload information for active and inactive cases, hard copy printouts of all caseloads with expiration, status, fines, restitution and special conditions noted. Also provides quarterly lists of expirations due and case counts. Integrated into the same structure are subprograms that provide caseload identification, i.e., by providing a zipcode, officer name, or caseload number the program responds with the other two pieces of information.

<i>Class:</i> Miscellaneous	<i>Title:</i> Court Interpreter System	<i>Court Type:</i> DC
<i>Hardware:</i> IBM PC/XT, AT	<i>Operating System:</i> DOS	<i>Software Base:</i> COBOL

Brief Description:

The Court Interpreter programs may be used to select, schedule, and pay the interpreters. As a Language code is selected, a list of qualified interpreters will display. When an interpreter is selected, any other case activity for that interpreter on that day will appear. Activity types will display and the selected activity will determine the proper category for statistics. From a one-time entry of the information, the programs will produce Calendars, Vouchers, Statistics, and Earnings reports.

Court- Developed Software

<i>Class:</i> Judicial Conf	<i>Title:</i> Judicial Conf. & Membership	<i>Court Type:</i> CA
<i>Hardware:</i> IBM PC/XT, AT	<i>Operating System:</i> DOS	<i>Software Base:</i> Fox/dBASE

Brief Description:

This system links at least three separate database files. One module maintains a membership database which is controlled by the specific membership rules of the Fourth Circuit Judicial Conference. Another module provides for the annual management of the Judicial Conference meeting. Many program routines from Ward Mundy's Judicial Conference database program have been modified and enhanced for this module. The third module maintains an archive file for each annual conference and provides historical and statistical data on such things as attendance and membership category profiles for future planning and management of the conference.

The program is integrated with the membership rules established by the Fourth Circuit Judicial Conference so its usefulness for other circuits would only be as an example or guide for the creation of a customized system.

Court- Developed Software

<i>Class:</i> Judicial Conf	<i>Title:</i> Records Mgt - Judicial Conf.	<i>Court Type:</i> CA
<i>Hardware:</i> IBM PC/XT, AT	<i>Operating System:</i> DOS	<i>Software Base:</i> dBASE II

Brief Description:

Database includes a record for each conferee invited to attend the conference. Each record contains the following information: Name, position, address and telephone number, name of their spouse/guest if any, code number for invitation letter sent, category, district in which they reside, status of conference registration and hotel and social reservations, name of judge or district which invited the conferee.

By transferring data from PC to word processing, invitation letters, mailing labels and a roster of conferees may be produced. Reports may be generated for attendees by district, total by category, total no response, total not attending, total spouses, total invited and total attending. Various lists can be produced by select criteria which may include any one or all fields of the data.

This database and conference financial management database may be verified through this program.

Packet labels and badges can also be printed from the database.

Court- Developed Software

<i>Class:</i> Miscellaneous	<i>Title:</i> Asset Case Assignment	<i>Court Type:</i> BC
<i>Hardware:</i> IBM PC/XT, AT	<i>Operating System:</i> DOS	<i>Software Base:</i> dBASE III+

Brief Description:

This software is used by the Chapter 7/11 Dept. Supervisor for assigning asset cases to deputy clerks for management. Reports printed from the database include lists of asset cases by case number, clerk assignment, record number, or trustee. It separates lists by clerk when requested. It is a menu-driven independent system.

*** This software is only useful in courts where cases are assigned to deputy clerks for complete administration. It would require modifications prior to use by another court.

Court- Developed Software

<i>Class:</i> Miscellaneous	<i>Title:</i> Claims Log	<i>Court Type:</i> BC
<i>Hardware:</i> HP VISTA	<i>Operating System:</i> CTOS	<i>Software Base:</i> RBASE 6000

Brief Description:

The program Claims Log was created in order to expeditiously list all those asset cases of either Chapter 7 or Chapter 11 in which claims have been or will be filed. At the intake process when the case is initially entered into the "BANS" system and determined to be an asset case it will be entered into the "Claims Log Program" as well. From this report we will periodically ascertain the current status as to number of claims entered into the "BANS" system per case as well as those cases in which the claims bar date has passed so that all claims can be entered up to date and assumed as completed and removed from the log.

This program allows us to sort these cases by case number, case name, chapter claims bar date, and update date. Advantage being particularly in Chapter 11 can be real ambiguous and because of their size should be kept up to date at all times.

For further information please contact the sponsor.

Court- Developed Software

Class:
NIBS

Title:
Proceeding Memorandums

Court Type:
BC

Hardware:
IBM PC/XT, AT

Operating System:
DOS

Software Base:
Fox/dBASE

Brief Description:

This program operates within the NIBS software. It prints proceeding memorandums for all discharge hearings and 341 meetings. The memo lists case number, style of case, chapter, counsel, trustee, and in chapter 13 cases, the debtor's employer. (It only prints the employer if the bankruptcy case opening program is modified to receive that information. It may be used, however, without that data.)

Class: Utilities	Title: WP Italics	Court Type: all
Hardware: IBM PC/XT, AT	Operating System: DOS	Software Base: WordPerfect

Brief Description:

As a standalone utility, the program, named WPITALICS, will convert all underlined words and/or phrases [or words and/or phrases set apart in italics or bold] to italics, bold, or underline, as the case may be. The nature of the change is controlled by parameters passed at the command line: WPITALIC SAMPLE.DOC U I will changes all underlinings [U] in SAMPLE.DOC to italics [I]; WPITALIC SAMPLE.DOC B U will change all bold [B] attributes in SAMPLE.DOC to underline [U] attributes, etc.

Alternatively, using the DOS Shell function [<CTRL><F1> 1] in Word Perfect 5.0, the document can be saved to disk and the program executed while in the shell without fully leaving Word Perfect 5.0.

<i>Class:</i> Utilities	<i>Title:</i> Diskette or Disk Cataloger	<i>Court Type:</i> all
<i>Hardware:</i> IBM PC/XT, AT	<i>Operating System:</i> DOS	<i>Software Base:</i>

Brief Description:

The Disk Cataloger catalogs and indexes to print all files [in terms of pathname, filename, size, date, and time of creation and/or last editing] of all files located on a diskette or on a logical drive on the fixed disk. Two lists are produced. One lists [alphabetically] all files which reside on a particular diskette or logical drive diskette [or logical drive] by diskette [or logical drive]. The other list reindexes the former list to alphabetically list all files previously cataloged, and the location [diskette or logical drive] on which that particular file resides.

Since location of a particular file is but a fingertip away, it encourages frequent backups and elimination of unneeded files from a fixed disk without fear that the document, once deleted, will never be found again.

For further information please contact the sponsor.

<i>Class:</i> Utilities	<i>Title:</i> Lexis to Word Perfect	<i>Court Type:</i> all
<i>Hardware:</i> IBM PC/XT, AT	<i>Operating System:</i> DOS	<i>Software Base:</i> WordPerfect LEXIS

Brief Description:

Using either the "Record" or "Print Document" mode in LEXIS [Version 5.0], cases or portions of cases may be directed to a disk file instead of a printer. As formatted by LEXIS, however, retrieval of the file written by LEXIS into Word Perfect requires rather tedious editing, since the lines are formatted for some 78 to 84 characters in length, and simple removal of all "hard returns" does not solve the problem.

This program, dubbed LEX2WORD, properly formats the lines, removes certain verbiage not needed for retrieval, makes a modest [although not complete for the reasons stated in the directions] of underlining [or setting out in italics or bold] all case citations, and certain key words such as Id., Ibid, supra, infra, and replaces LEXIS' @ character with the appropriate § character.

For further information please contact the sponsor.
