The American public fears violent crime more than any other type of crime. We are afraid of being the victims of crimes like murder, assault, robbery and rape. While violent crime is usually viewed as a problem in the urban areas, these crimes are also committed in the less populous suburban and rural areas.

This report contains information on violent crime in rural and suburban areas of Kentucky that was reported to Kentucky State Police. The information is based on data from the Uniform Offense Report (UOR), compiled by the local jurisdictions and reported to the Kentucky State Police, Information Services Branch.

The information on violent crime from the UOR provides a detailed description of these crimes in rural and suburban areas of Kentucky. This information can be utilized for a variety of purposes by law enforcement and other criminal justice agencies. It can also be useful for agencies and individuals interested in crime trends as well as public information and education.

## VIOLENT CRIME IN KENTUCKY

Violent crime as reported in this study includes the crimes of homicide, assault and related offenses, kidnapping and related offenses, robbery, and sex offenses such as rape. There were 244 violent crimes per 100,000 Kentucky residents, reported in rural and suburban areas of the Commonwealth during 1988. This same year, there were 316 arrests for violent crime per 100,000 residents. The rate of arrest per 100,000 residents never is exactly equal to the rate of crime per 100,000 residents because of incidents involving multiple offenders and arrests for crimes in previous years that may have been made, in this case, in 1988.

### VIOLENT CRIME — UOR DATA

The violent crime reported most often in rural and suburban Kentucky was the crime of assault. Sixty-seven (67) percent of all reported violent crime was assault. Other violent crimes reported in order of frequency were: sex offenses (21 percent), robbery (7 percent), homicide (3 percent) and kidnapping (2 percent).

## UNIFORM OFFENSE REPORT VIOLENT CRIME - TOTAL

### Homicide in Kentucky

Homicide includes the crimes of murder, manslaughter and reckless homicide. There were seven (7) reported homicides per 100,000 residents and eight (8) arrests per 100,000 residents in rural/suburban Kentucky in 1988.

Most of the reported homicides were acts of murder (79 percent), that is, intentionally causing the death of another person. This includes the operation of a motor vehicle in such a way that shows extreme indifference to human life, i.e. drunken driving can be included as an act of murder.

# UNIFORM OFFENSE REPORT

## CRIMINAL HOMICIDE

Most of the victims of murder were not related to the offender as family members (57 percent). However, almost one-quarter of the crimes involved a victim and offender who were family members.

# UNIFORM OFFENSE REPORT

## CRIMINAL HOMICIDE - VICTIMS

Types of Victims

Murders were committed most often in the summer months and on weekends. These are times of the year and the week when individuals are in contact with one another at a high rate. Frequent contact and socializing can lead to an argument or heated exchange that can result in murder.

Murder and other homicides also peaked in frequency slightly during the holiday months of November, December and January. These are also times of increased social contact as well as times of high stress and tension.

## UNIFORM OFFENSE REPORT HOMICIDE BY MONTH

## UNIFORM OFFENSE REPORT CRIMINAL HOMICIDE BY DAY

The typical homicide offender was a young, white, male. Offenders who committed reckless homicide and manslaughter were slightly younger than murderers but still fit within this general profile.

Sex and Race

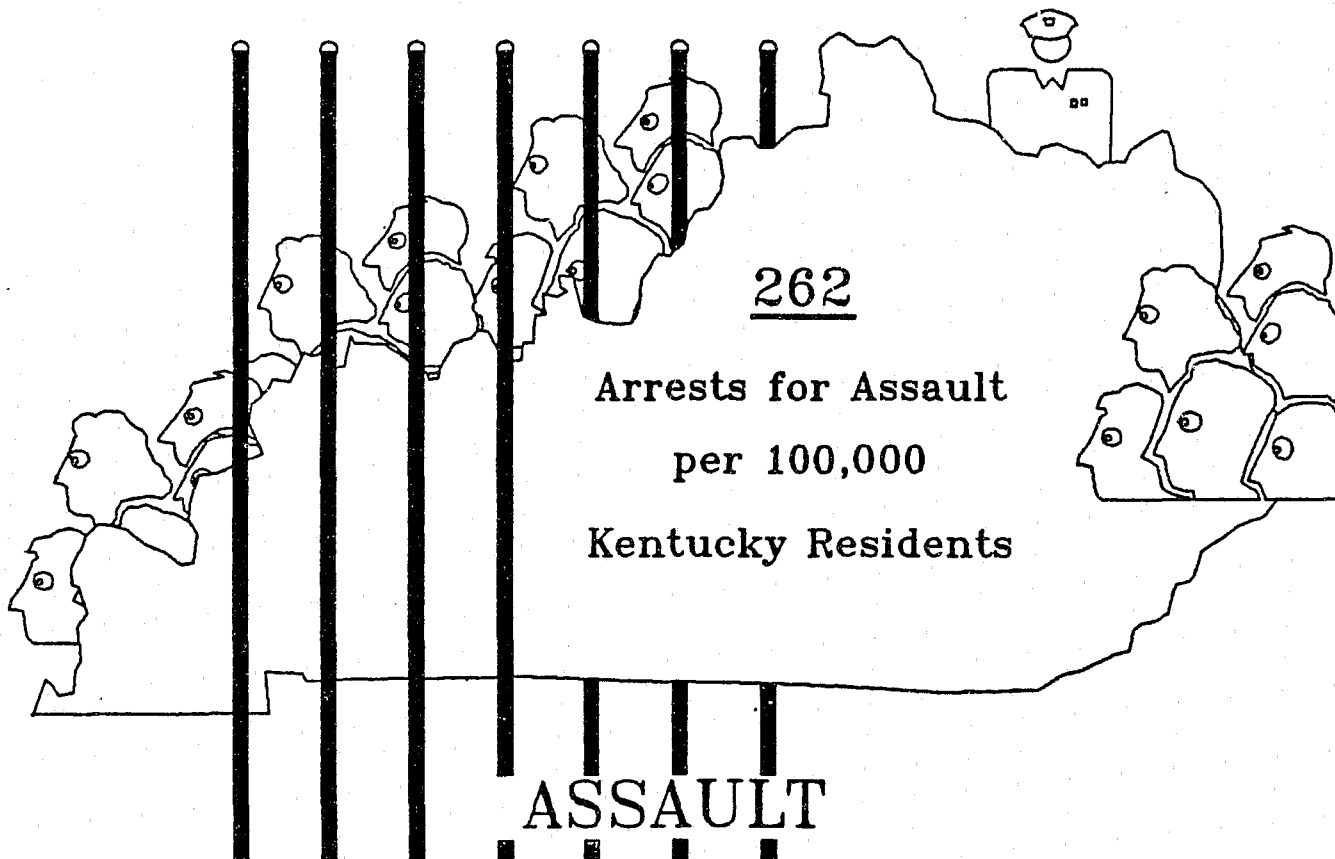

# Assault

There were 164 reported assaults and 262 arrests per 100,000 residents in rural/suburban Kentucky during 1988.

# ASSAULT

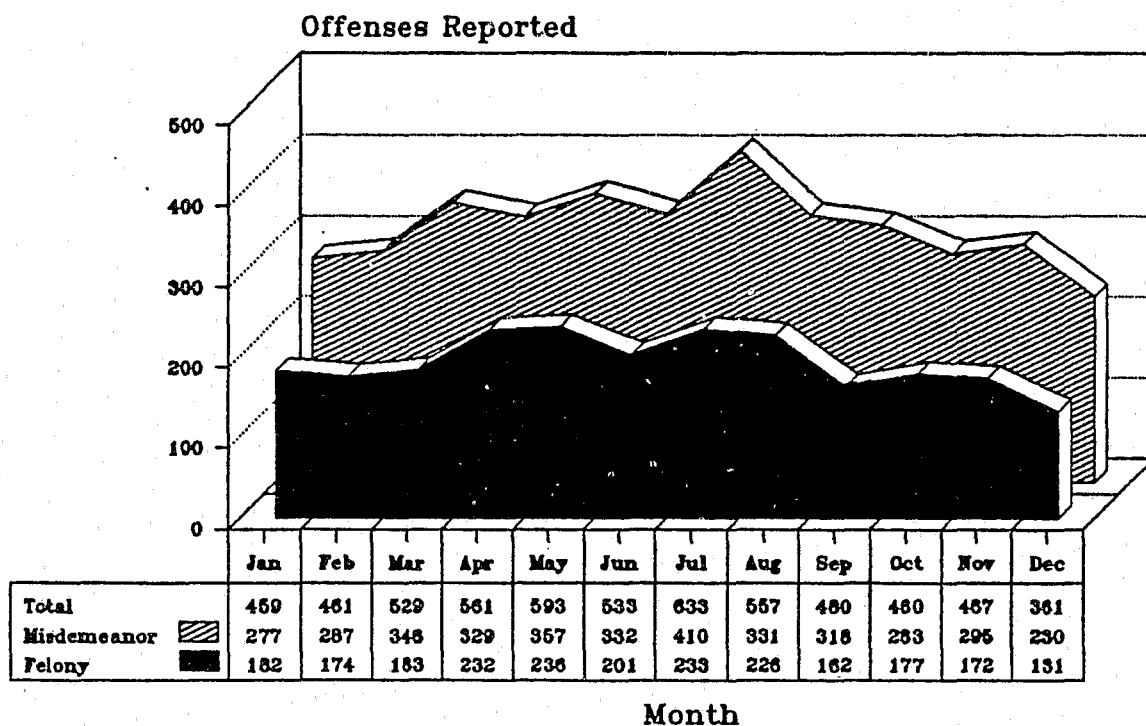

# ASSAULT

Most of the assaults were misdemeanor, less serious, assaults. These misdemeanor assaults outnumbered the more serious felony assaults by 3 to 2. But, whether a misdemeanor or a felony, most assaults occurred during the summer months and on weekends. Again, the times of the year and week when people are most likely to be in contact with others.

### Race

# UNIFORM ARREST CITATION

## OFFENDER PROFILE - ASSAULT

### Race

The profile of an offender who commits assault was a young, white, male. However, it is interesting to note that while the ages and race of offenders who committed felony and misdemeanor assault were similar, women were most likely to commit misdemeanor than felony assault. Sixteen percent of the offenders who committed misdemeanor assault were women compared to 10 percent of the felony assault offenders.

## Sex

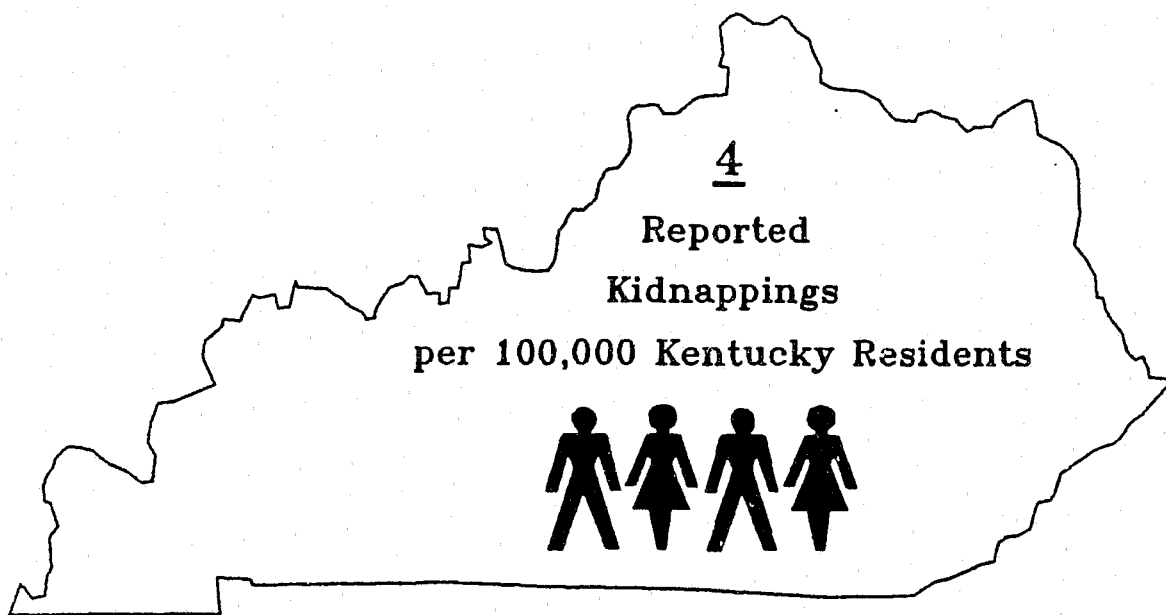

Sex of Misdemeanor Offenders

## Kidnapping

Kidnapping is one of the violent crimes which occurs only infrequently. However, it is a crime which creates considerable fear among the public. In suburban/rural Kentucky in 1988, 4 kidnappings were reported and 7 arrests were made per 100,000 residents. While these numbers are small, it is still possible to establish certain offense patterns.

Unlike other violent crime, kidnappings were not more likely to occur during the summer, the holiday season or on the weekends. However, like other violent crimes, kidnapping is committed primarily by young, white males.

Race

## Sex Offenses

Sex offenses include the crimes of rape, sodomy, sexual assault and other related offenses. There were 51 reported sex offenses and 28 arrests for sex offenses per 100,000 residents in rural/suburban Kentucky in 1988.

## SEXUAL OFFENSES

These types of crimes, like other violent crime, were committed most often during the warmer months and on weekends.

## UNIFORM OFFENSE REPORT SEXUAL OFFENSES BY MONTH

Sexual Offenses	■	130	119	142	128	134	99	169	548	158	112	89	42
-----------------	---	-----	-----	-----	-----	-----	----	-----	-----	-----	-----	----	----

## UNIFORM OFFENSE REPORT SEXUAL OFFENSES BY DAY OF WEEK

Sexual Offenses	■	128	154	117	154	121	521	135
-----------------	---	-----	-----	-----	-----	-----	-----	-----

The victims of rape were all female. However, there were 128 adult males and 77 juvenile males who were the victims of sodomy during this time period. The usual sex offender was older than other types of violent offenders but was, like other violent offenders, most often a white, male.

# Robbery

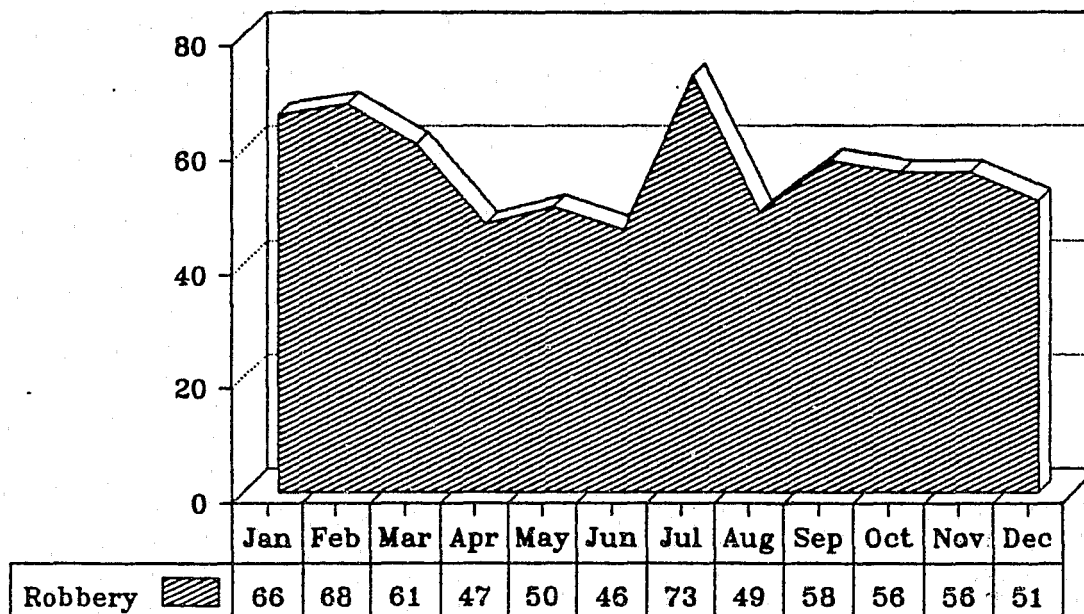

Robbery is the violent crime which includes not only harm to the individual but also elements of a property crime. This crime occurred at a rate of 18 per 100,000 rural/suburban residents in 1988.

## ROBBERY

This crime was committed most often during the mid-summer months but also peaked during the months of January and February. Robberies also increased toward the end of the week, occurring most often on Saturdays.

### UNIFORM OFFENSE REPORT ROBBERY BY MONTH

# UNIFORM OFFENSE REPORT

## ROBBERY BY DAY OF WEEK

Approximately half (42 percent) of the robberies in rural/suburban Kentucky were robberies of businesses. Of these, only 5 percent were bank robberies. The typical offender was under 30, male and white. However, proportionately more black offenders were involved in this crime than any other violent crime.

# UNIFORM ARREST CITATION

### Sex and Race

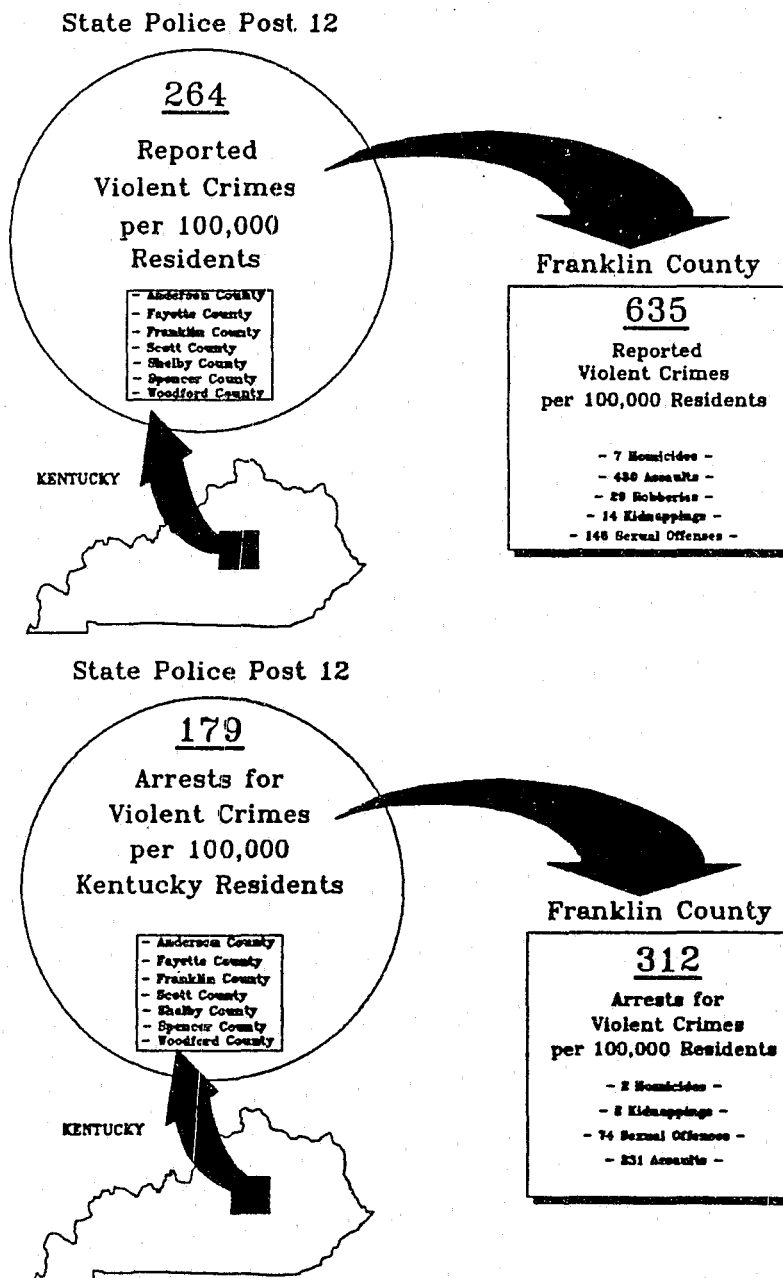

# Geographic Distribution

While data for the entire state is beneficial, more localized information can be drawn from this data. This data can be based on a variety of geographic/political units - cities, counties, Area Development Districts, or regions. Data based on geographic units that coincide with law enforcement jurisdictions may be especially useful in resource allocation for these agencies.

In order to illustrate the data analysis possible on smaller geographical units, a Kentucky State Police Post and a county within that post were selected for evaluation and demonstration. Specifically, Post 12 (Frankfort) and Franklin County were selected. Comparable data analysis could be performed on other Kentucky State Police Posts, other counties, or any number of geographic/political units. The objective in selecting units for analysis is to choose that unit or units which will provide the most applicable information.

## Kentucky State Police Post 12

There were 264 reported violent crimes per 100,000 residents in the counties that constitute KSP Post 12 during 1988. Franklin County had 635 reported violent crimes per 100,000 residents of this county during the same time period. There were 179 arrests per 100,000 residents for these crimes in the area covered by KSP Post 12 and 312 arrests per 100,000 residents in Franklin County.

Among the counties which comprise Post 12, Franklin County had the highest rate of reported violent crime per 100,000 residents while Anderson County had the highest rate of arrests per 100,000 residents for these crimes. While the violent crimes were fairly constant for all counties, Franklin County and Shelby County had proportionately more robberies than the other counties.

## UNIFORM OFFENSE REPORT VIOLENT CRIME - STATE POLICE POST 12

## UNIFORM ARREST CITATION VIOLENT CRIME - STATE POLICE POST 12

Within Franklin County, assault was the violent crime reported most often - 69 percent of all reported violent crimes. Almost one quarter (23 percent) of reported violent crimes involved sex offenses, while relatively few robberies (5 percent), kidnappings (2 percent) and homicides (1 percent) were reported.

# UNIFORM OFFENSE REPORT

## VIOLENT CRIME BY COUNTY

### SUMMARY

Violent crime in rural/suburban Kentucky is typically an act of assault committed by a young, white, male against a victim who is not a family member. It is most prevalent during the warm months of the year and on weekends.

Detailed assessments of violent crime in selected geographic areas can provide details that statewide data can not. This information can highlight similarities and differences between the smaller geographic unit and the state. These area-specific trends are especially important to agencies with limited jurisdiction.

The information from the Uniform Offense Report has the potential to greatly contribute to planning and policy development within criminal justice agencies as well as public education. This information can be extracted and analyzed for any number of geographic/political units. It can be used to identify crime trends, victim and offender profiles, and geographic distribution of crime. It has the potential to make the allocation of limited crime prevention and law enforcement resources more rational and calculated.

The quality and completeness of this information greatly affects the realization of its potential contribution to planning within criminal justice agencies. Whether the cause is incomplete reporting to the central repository or accurate input of information into computer files at the repository, missing or unavailable information was a serious limitation during the course of this study. While it is evident that this information is being reported and accurately input most of the time, efforts should be made to increase the completeness so that it can be utilized to its fullest potential.
