INTRODUCTION

The West Virginia Dataset is a study developed as a project of the West Virginia Statistical Analysis Center in preparation for the Southeastern States Violent Crime Summit (July, 1992) of the U.S. Department of Justice. The purpose of this data collection is to identify the four violent crimes (murder, rape, robbery and felonious assault) trends over a five year period (1985-1989). The results presented are in graph (Section One) and chart (Section Two) forms.

For an understanding, one page number has been assigned to each county and city. Each county and city appears on that same page in both Section One and Section Two. For example, Cabell County can be found on page seven in both sections.

The Crime Rate Index is a widely used crime statistic. It refers to the number of a particular crime committed per 1,000 inhabitants of the given area. In this report, the Crime Rate Index was calculated as follows:

$$\frac{\text{Number of Crime Index Offenses}}{\text{Population}} \times 1{,}000 = \text{Crime Rate Index}$$

For example, in Pendleton County, there were four felonious assaults in 1986. The county has a population of 7,934.

$$\frac{4}{7{,}825} \times 1{,}000 = 0.51118$$

Therefore, the Crime Rate in Pendleton County for felonious assaults in 1986 is 0.51118. In the calculations of the Crime Rate for the state of West Virginia in its entirety, the number 100,000 was used as a multiplier instead of 1,000.

West Virginia Violent Crime Trends

1985-1989

Statewide Trends

- West Virginia has seen a decrease in population during the designated five year trend analysis.
- Some overall indicators in Violent Crime have increased during this same time period:
