Profile of jail inmates.

## Preface

The 1978 Survey of Inmates of Local Jails was one of a series of data-gathering efforts undertaken during the 1970's to assist policymakers in assessing the Nation's correctional institutions and in formulating measures to overcome any deficiencies. During that decade, an unprecedented growth in the number of people subject to custody imposed increasingly heavier demands on already strained institutions. Intensified by overcrowding, the deterioration in living conditions among the incarcerated spurred public authorities, especially the judiciary, to take remedial action. Decisions rendered by State and Federal courts have required the adoption of measures to alleviate overcrowding and otherwise improve living conditions in correctional facilities.

Prisons have been the main objects of court rulings defining prisoner rights and minimum living standards, but conditions in local jails—many of which are “warehousing” some of the overflow of inmates under State jurisdiction—came under increased scrutiny towards the end of the decade. These developments contributed to a heightened awareness of the interdependence of State and local confinement facilities and to an increased level of policy attention accorded the latter. Against this background, and under the terms of the Crime Control Act of 1976, the Law Enforcement Assistance Administration (LEAA) was authorized by the U.S. Congress to survey existing and future needs in Federal, State, and local correctional facilities. Partly in response to this law, the 1978 Survey of Inmates of Local Jails was conducted to improve and expand baseline data collected on that population in 1970 and 1972 and to identify changes over the intervening period.

Conducted by the U.S. Bureau of the Census concurrently with the Census of Jail Facilities, the 1978 survey gathered extensive information on the demographic and socioeconomic background, criminal history, and adjudication experience of a representative sample of jail inmates. Within these broad areas, detailed data were obtained on such subjects as prearrest employment, alcohol and drug use, offense for which confined, length of sentence, and experience with bail, counsel, and pleading. All data were provided by inmates who participated in personal interviews on a voluntary basis. In a procedure differing from that of

earlier surveys, the sample was designed to assure that statistical reliability of data on female inmates was generally comparable to that for male inmates. Preliminary findings from both the inmate survey and facility census were published in a brief release entitled *Census of Jails and Survey of Jail Inmates, 1978: Preliminary Report* in February 1979.

This report is an overview of the demographic and socioeconomic characteristics of inmates held in the Nation's local jails. Basic findings on the use of drugs and alcohol are also presented. It is the first in a series based on the 1978 Survey of Inmates of Local Jails to be published by the Bureau of Justice Statistics. Reports dealing with the inmates' experience with the adjudication process and bail, a detailed examination of drug and alcohol usage, and other specialized topics will be included in the series.

Most of the data on which this report is based can be found in the tables in Appendix I, although some results are displayed only in tables or footnotes within the text. All data items gathered in the survey may be identified by examining the questionnaire (Appendix II). Data for 1978 on inmates held because of overcrowding in other facilities and on juveniles in jail are derived from the 1978 Census of Jail Facilities rather than from the survey. Pre-1978 data used to develop trend analyses were derived from the 1970 National Jail Census and the 1972 Survey of Inmates of Local Jails, both conducted by the Bureau of the Census under LEAA sponsorship. Appendix III contains definitions and technical notes designed to assist users in the interpretation of survey results.

All data in this report are estimates subject to both sampling and nonsampling errors. Sources of error and technical information on sample design and estimation procedure are discussed in Appendix IV. Most statements in the report involving comparisons met statistical tests that the differences were equivalent to or greater than two standard errors; in other words, the chances were at least 95 out of 100 that each difference described did not result solely from sampling variability. Those few statements of comparison in which the chances were 90 out of 100 that sampling variability did not cause the difference were qualified by the expression “some indication.” Estimates below 300 for male inmates, or for inmates of both sexes, and below 100 for female inmates, were considered to have been based on too few sample cases to be statistically reliable.

## Summary

An estimated 158,000 persons were held in the country's 3,500 local jails at the time of a nationwide survey conducted in February 1978.<sup>1</sup> This total represented a 12-percent increase in that recorded by a comparable survey taken in 1972. Not only were convicted criminals held in jails but also a sizable minority—4 of every 10—charged with but not convicted of a crime. Against the background of two factors unique to the 1970's—the backlogging of convicted felons in local jails to relieve overcrowded State prisons and the entry of the baby-boom generation into the prime offender-age bracket (18-34)—the increase between the two survey years was lower than might have been anticipated. Indeed, the number of persons confined in prisons rose approximately 40 percent over the same period. Certain major criminal justice reforms—such as exclusion of juveniles from adult detention facilities, reduced incarceration rates for nuisance-type offenses, and imposition of probation instead of confinement for some crimes—contributed to the difference in the relative increase of the two populations.

<sup>1</sup>Generally speaking, *jails* are locally administered confinement facilities authorized to hold persons awaiting adjudication and/or those committed after adjudication to serve sentences usually of 1 year or less. By contrast, *prisons* are State or Federal confinement institutions, chiefly for holding convicted felons serving sentences of more than a year.

As in 1972, males predominated overwhelmingly in the 1978 jail population, while the proportion of women was unchanged. Blacks and young persons continued to be represented disproportionately; in fact, the jail population in 1978 was more youthful than in 1972. The number of juveniles held in jails dropped sharply, however, reflecting legislation prohibiting the joint housing of adult and juvenile offenders.

Single persons—those who had never married or were divorced or separated—made up about three-fourths of the inmate total, as contrasted with only a third in the U.S. population as a whole. The relatively low educational level of the jail population was evidenced by the fact that 3 of every 5 inmates lacked a high school diploma, compared with only 1 of every 4 persons in the general population. Military veterans were relatively less numerous in the jail population than in the national population.

People experiencing economic hardships contributed disproportionately to the jail population. Predetention annual income averaged only \$3,700, and the percentage of those employed was much lower than the corresponding share in the U.S. population. At least 1 in every 4 inmates had been financially dependent on welfare, social security, unemployment benefits, and/or borrowing from family or friends, rather than on a wage or salary. The proportion of female inmates who had been subject to these disadvantages was particularly high and, to some extent, the same could be said for blacks as compared with whites. Not surprisingly, therefore, black female inmates were the most likely of the four largest race-sex groups to have been living in poverty.

Drug and alcohol abuse had played a significant role in the lives of many inmates. About 4 out of every 10 had used some drug daily. A fourth of all women inmates had been heroin addicts—far more than the proportion for men. About a fifth of the convicted inmates were under the influence of drugs at the time of their offense. With respect to alcohol abuse, a fourth of the convicted inmates had been drinking heavily just before they committed their offense, and the proportion of whites who had was more than twice that of blacks.

## Demographic characteristics

The profile of jail inmates revealed by the 1978 survey featured a predominantly male population in which the shares of young persons and of blacks were markedly higher than those in the Nation as a whole. Since the 1972 jail survey, the youthfulness of the inmate population increased as the bulk of the post-War baby-boom generation entered the age groups that historically have been most active in punishable activities. The retention of convicted persons in local jails because of overcrowding in the State prison systems also contributed to the rise in the jail population. The female proportion of the jail population did not, however, change greatly between 1972 and 1978, in contrast with the sharp increase in the number of women held in the State and Federal prisons during that period (Figure 1).

### Baby-boom generation adds to jail population

Between 1972 and 1978, the number of persons age 18-34 in the U.S. population—the principal age group from which the incarcerated are drawn—rose by 15 percent. The increase by this age group, far greater than that for the population as a whole, was a major factor in the rise in the number of jail inmates during the 1970's. For males, however, the proportion of the 18-34 age group in jails actually was smaller in 1978 than in 1972, 499 vs. 511 per 100,000. For females, the ratio was the same each year—31 per 100,000.

### Increase also reflects prison backlog

Since the early 1970's, correctional authorities in many States have been forced to keep more prisoners in local jails because of severe overcrowding and associated problems in their own facilities. As of 1978, 1 out of every 19 jail inmates was being held as the direct result of overcrowding in State and, to a lesser degree, Federal prisons, and about 1 of every 8 of the Nation's jails held such inmates (Figure 2).

### Number of juveniles declined sharply

Reflecting a national policy emphasis on segregating juvenile delinquents from adult criminals, less than half as many persons subject to juvenile courts were being held in jails in 1978—approximately 1,600—than in 1970 (approximately 3,900). Among the 46 jurisdictions that

had distinct local jail systems in both 1970 and 1978, 42 reduced the total number of juveniles held, while only four (Maine, Nevada, Arkansas, and New Hampshire) reported increases in the number of juveniles confined. The most substantial decrease occurred in New York, where the number of jailed juveniles fell from 607 to 84. In 1978, local jails in three States—California, Indiana, and Virginia—accounted for about a fourth of all juveniles in jail.<sup>2</sup>

### Proportion of women remained unchanged

In contrast to the comparatively rapid growth observed in recent years in the number of women within Federal and State prisons, their relative increase in jails between 1972 and 1978 was only slightly greater than that of males (Figure 3). In each of those years, women made up approximately 6 percent of the total jail population.

### Disproportion of blacks persisted

Blacks, although numbering only about 1 of every 10 persons in the general population age 18-54, accounted for roughly 4 of every 10 male, and 5 of every 10 female, inmates.<sup>3</sup> Whites, slightly under nine-tenths of the general population, comprised relatively low proportions of both male and female inmates—57 and 49 percent, respectively. Inmates other than white or black approximated 2 percent for both males and females in the jail and general populations.<sup>4</sup> The racial distribution of inmates in 1972 and 1978 was roughly similar.

Persons of Hispanic origin constituted a higher proportion of the jail than of the general population. Numbering only 1 in 20 persons in the population at large, Hispanics accounted for about 1 of 10 males and 1 of 14 females confined in jail.

<sup>2</sup>Data on the number of juveniles held in local jails in 1970 and 1978 are drawn from two national censuses of jail facilities, not from inmate surveys. For a State distribution of juveniles confined in jails at the time of each census, see Appendix III, Table A.

<sup>3</sup>Owing to the small representation of older persons in correctional institutions, the general population referred to throughout this report for comparison purposes is limited, except as otherwise noted, to persons in the 18-54 age bracket.

<sup>4</sup>The inmate population was divided into three groups on the basis of race: white, black, and all other races, the latter consisting of American Indians, Alaskan Natives, Asians, and Pacific Islanders.

### Jail inmates much younger than general population

Jail inmates were decidedly younger than the general adult population, even more so than in 1972.<sup>5</sup> In that year, 64 percent of the inmates, compared with 39 percent of the general population, were under 30; in 1978, the corresponding figures were 70 and 39 percent, respectively. At both junctures, the difference in the median age of the two populations was roughly 10 years—about 25 for the inmates and 35 for the general population.

By far the highest concentration of 1978 jail inmates fell into the 20-24 age bracket—fully a third of each sex—as compared with approximately 1 out of 7 persons in the general population (Figure 4). Also, the proportion of 18- and 19-year-olds (either male or female) was about twice as large in the jail as in the general population. At the upper reaches of the age pyramid, the reverse situation prevailed: about 2 percent of the inmates were age 55-64, as compared with 15 percent of the overall population.

The proportion of blacks below age 30 was somewhat greater than that of whites—72 vs. 68 percent—corresponding to the situation in the general population. Considering members of those two races, there was some indication that black female inmates made up the relatively largest under-30 age group.

<sup>5</sup>In order to provide detail on the youngest inmates, the range 16-64 is used as the basis for comparing the age structure of the jail and the general populations. In 1978, about 19,900 inmates were age 18-19 and 4,700 were 16-17, while only 300 were under 16; at the other extreme, some 2,600 inmates were age 55-64 and 900 were 65 and over.

### Profile of the jail population, 1972 and 1978

Figure 1

### The effects of prison overcrowding: State and Federal inmates held in jails

	Number	Percent of total
Jails holding State or Federal prisoners	463	13
State or Federal prisoners held in jails	8,483	5

Note: See Appendix III for source of data on State and Federal prisoners in local jails.

### Age structure of inmate and U.S. populations, by sex

Note: Detail may not add to 100% because of rounding.

Figure 4

## Socioeconomic characteristics

Jail inmates were predominantly poor and undereducated. Their income prior to arrest was very low. An appreciable number were without work and dependent on welfare, social security, unemployment benefits, and/or borrowing from family or friends. Most lacked a complete high school education. Only about 2 of every 10 inmates were married, but more than 4 out of 10 supported one or more dependents. Only a fourth were military veterans, compared with about two-fifths of all U.S. males age 18 and over.

**Marital status of inmates and U.S. population, by sex**

Male inmates  
U.S. males age 18-54  
Female inmates  
U.S. females age 18-54

Figure 5

### Most were not married

More than three-fourths of the inmates either had never married (54 percent of the men and 46 percent of the women) or were separated or divorced (23 percent of the men and 30 percent of the women). Only 1 in every 5 was married. In sharp contrast, a large majority of the general population age 18-54 (2 of every 3 persons) was married, and only 9 percent (7 percent of the males and 11 percent of the females) were separated or divorced (Figure 5).

Among inmates who had never married, the proportions were much higher for black than for white males (62 to 49 percent) and for black than for white females (57 to 36 percent). The separation/divorce rate for black inmates, whether male or female, resembled that of their civilian counterparts, but that for both male and female white inmates was much higher (Figure 6). The proportion of white female inmates who were separated or divorced was higher than that of the other race-sex groups examined.

### More than half of black females had dependents

As detailed later in the report, a large number of inmates had not been gainfully employed prior to arrest. Among those with incomes, the median amount was near the poverty level. Despite low incomes and a seemingly high degree of economic insecurity among jail inmates, some 4 out of every 10 had supported one or more dependents prior to confinement.

Median number	2.5	2.0	2.7	2.3

Figure 7

Slightly more black than white inmates and more females than males had dependents (Figure 7). In relative terms, black females made up the largest group of inmates having dependents (58 percent); white females comprised the smallest (37 percent). Among all inmates with dependents, the median number of dependents was 2.5.

### Majority lacked a high school diploma

The educational attainment of jail inmates was markedly lower than that of the general population age 18-54. Three-fourths of the latter had completed high school, whereas only two-fifths of the inmates had done so; there was some indication that the proportion was slightly higher for female than for male inmates (Figure 8). The proportion of high school dropouts (i.e., those with 9-11 years of school) was almost 3 times larger within the jail than the general population. At a higher level, only about 1 in 10 inmates—again, relatively more females than males—had completed at least a year of college, compared with 3 of 10 females and 4 of 10 males within the adult population as a whole. Overall, the inmates had a median of about 10 years of school, as against 13 years for adults in general.

There was some indication that white inmates had a higher level of education than blacks, the proportions with at least a high school education being 40 and 37 percent, respectively. Of the four largest race-sex groups in the inmate population,

Figure 9

white females had the highest concentration of persons with at least high school diplomas (Figure 9).

### A fourth were military veterans

One-fourth of the inmates—virtually all of them male—were veterans of the Armed Forces, a proportion well below the two-fifths representation of military veterans age 18 and over in the U.S. male population, but the proportions varied markedly by specific age group (Figure 10). Between 18 and 24 years of age, the proportion of veterans was about twice as high in the inmate population as in the general population, but it was much lower for inmates age 25 and over. Thus, the age group that showed an overrepresentation of veterans in jail was composed largely of those who had joined the Armed Forces as volunteers after the end of the draft and the end of U.S. military involvement in Vietnam.<sup>6</sup> Black inmates were less likely than white inmates to be veterans: 2 in every 10 black inmates, compared with 3 out of every 10 white inmates, had served in the military.

### Most women had not worked

Among inmates—particularly women—the lack of gainful employment prior to arrest was very high. About 2 of every 5 males were not working at the time of their admission to jail; the 3 out of 5 who were working included 12 percent with only a part-time job. Among the general male population, 84 percent in the 18-54 age group were employed, including only 3

<sup>6</sup>Statements on veterans, whether in jail or in the general population, are based on figures pertaining solely to males, because only 1 percent of the female inmates were veterans.

<sup>7</sup>See Appendix III, under the entry "military service," for an explanatory note on Vietnam service.

percent limited to part-time work (Figure 11). Nearly two-thirds of the inmates without jobs were actively seeking work, compared with a little over a third of the corresponding group of U.S. males.

The proportion of women inmates without a job prior to being jailed was particularly high—fully 2 of every 3, compared

with less than half the general female population. Among black women in jail, 71 percent had been without work (Figure 12). The proportion of nonworking female inmates looking for a job was higher for blacks than whites—about a half to two-fifths. In the general population, only 1 in 10 nonworking women had been seeking work.

**Very low incomes prevailed**

A markedly poor income for the year prior to arrest was linked to high unemployment among inmates. Among the estimated 45 percent of male inmates who had an annual income under \$3,000, 7 per-

Figure 12

cent said they had no income<sup>8</sup> (Figure 13). In contrast, all U.S. males age 18-54 had only 15 percent in the under-\$3,000 bracket, including 3 percent with no income. For male inmates with income, the median amount was roughly a third of that for the general population—about \$3,800 to \$11,700. The median for all inmates—\$3,714—was near “poverty level” as defined by the U.S. Government.<sup>9</sup>

The income gap between women in jail and women in general was not as great as in the case of males. The proportion of women with an income under \$3,000 or with no income was roughly three-fifths for female inmates and one-half for women in general. In both segments, the proportion that had received no income was larger than that of males, but it was much higher for civilian women than for those in jail—24 vs. 9 percent. Among females with any income, the median was \$2,400 for those in jail vs. about \$5,000 for the general female population.

In jails as in the general population, blacks had lower incomes than whites. Among male inmates, about half the blacks, compared with two-fifths of the whites, had incomes under \$3,000 or no income (Figure 14). Apparent differences between the income distribution of white and black female inmates were not statistically significant.

An important factor related to the low income of jail inmates was their relative youthfulness. The preadmission median income of men in jail was about two-fifths that for males age 18-34 in the general population; for female inmates it was about half that of their civilian counterparts in that age group.

<sup>8</sup>Statements on the income of inmates are based upon the estimated 95 percent who responded to the income question.

<sup>9</sup>The 1977 “poverty level” annual income was \$3,147 for unrelated individuals age 14-64; for a 2-person family it was \$4,054. For figures pertaining to larger family groups, see Appendix III under “poverty level.”

Figure 16

**High degree of economic insecurity**

Roughly 1 in every 4 inmates had no source of income prior to admission or was dependent on payments from welfare, social security, or unemployment benefits. Another 4 percent reported that their main source of income was illegal. For the remaining 7 out of every 10 inmates the main source of income was either a wage or salary. For women, the proportion depending mainly on welfare, unemployment, or social security benefits was far greater than for men (30 vs. 11 percent); relatively more women than men (25 vs. 14 percent) depended mainly on resources provided by family or friends, or on loans. A slightly larger proportion of women than men admitted that their main income was from illegal activities. In relative terms, only about half as many women as men received a wage or salary.

Generally, black women showed a higher dependence than white women on income other than wages or salaries, almost twice as high in the case of unemployment or social welfare funds. The proportion of females dependent on illegal income was not significantly different for the two races (Figure 15).

Predictably, dependence on resources other than wages or salaries was highest among persons below the poverty level. About 44 percent of all inmates with incomes below \$3,000 (including those with no income) were chiefly dependent on welfare, social security, or unemployment benefits (17 percent) or were supported by family or friends (27 percent). Among females in the under-\$3,000 category, the number with income from these sources was strikingly high: 7 in every 10. Over \$3,000, the proportion of inmates who had been dependent on welfare or other social benefits and on loans/donations approximated 8 percent for males and 33 percent for females.

The main source of income for the overwhelming majority of men in the highest income bracket—\$10,000 or more—was salary or wages, but only about half the women in this bracket derived their income chiefly from those sources (Figure 16). There was some indication that a lower proportion (37 percent) of the women in this bracket admitted that their income was chiefly from illegal activities. Only 7 percent of the men said they had relied mainly on illegal income.

Figure 15

## Drug and alcohol abuse

About a fifth of the Nation's 91,400 convicted jail inmates had been under the influence of drugs at the time they committed the crime that led to their incarceration, and 28 percent had consumed heavy amounts of alcoholic beverages.<sup>10</sup> During their lifetimes, however, some two-thirds of all inmates had taken drugs at least once, including about 40 percent who had been addicts, or *daily* users; 8 percent who had used drugs *less than daily* but at least weekly; and about a fifth who had taken drugs *less than weekly*. Heroin had been taken on a daily basis more widely than any substance except marijuana. The sharpest contrasts in the patterns of drug use among persons of the opposite sex or differing race were associated with heroin.

### Women inmates more likely heroin addicts

One-fourth of the women confined in local jails had been addicted to heroin at some time in their lives. This addiction rate notably exceeded that for male inmates, only 14 percent of whom said they had used heroin daily. The rate for black women was somewhat higher than that for white women, 29 vs. 22 percent (Figure 17). However, the apparent difference between the addiction rates for white and black males was not statistically significant. The overall heroin addiction rate for all inmates was 15 percent, but about 1 in every 4 had tried the drug at least once.

Within each race, the use of heroin on a weekly or more frequent basis was more prevalent among women than men. However, the higher rate of daily/weekly drug use by women inmates was true only of heroin. For methadone (outside a treatment program), cocaine, amphetamines, LSD, PCP, and other drugs, the proportion of males who had been weekly or daily users either did not differ from or exceeded that among females (Figure 18).

<sup>10</sup>The proportions cited include an estimated 6,300 inmates, or 7 percent of the total convicted population, who had used both drugs and heavy amounts of alcoholic beverages simultaneously.

### Marijuana used most widely

Other than heroin, marijuana was the only substance that a relatively high proportion of inmates had used on a weekly or daily basis. As might be expected, it was used far more widely than the other drugs, tried at least once by some two-thirds of all jail inmates and used at least weekly by 2 of every 5. Proportionately more males than females had used marijuana on a weekly or daily basis.

Cocaine and barbiturates each had been tried at least once by about 3 of every 10 inmates, with males and females involved at rates that did not differ. LSD had been tried by 21 percent of the inmates, PCP by 16 percent, and illicit methadone by 7 percent. The numbers of inmates who had taken any of these drugs on a weekly or daily basis were generally far lower than for occasional users.

The proportions of whites and blacks who had taken heroin at least once did not differ significantly, but relatively more blacks used it at least weekly, though by only a slight margin. For each of the other drugs, whites were somewhat more likely than blacks to have used the substances at least once in a lifetime. Marijuana, amphetamines, barbiturates, LSD, and PCP each had been used at least weekly by relatively more whites than blacks, while the rate of daily or weekly usage of cocaine and methadone did not differ for each race.

### One in five under drug influence at time of crime

Among convicted inmates, women were more likely than men to have been under the influence of heroin at the time they committed the offense that led to their jailing. About 1 in every 8 women said that they were under the influence of heroin, whether alone or in combination with one or more other substances (Figure 19). For males, the ratio was roughly 1 in 17.

Considering drugs of all types, roughly a fifth of all convicted inmates said that they were under the influence of drugs when committing their crime. This overall proportion did not differ for men and women, but it is somewhat higher for whites than for blacks—23 vs. 18 percent.

### Drinking more prevalent among white males

Roughly a fourth of all convicted inmates had consumed heavy amounts of alcoholic beverages—the equivalent of 8 cans of beer, 7 glasses of wine, or 9 ounces of liquor—just before committing their offense.<sup>11</sup> An additional 16 percent had consumed smaller amounts.

The proportion of whites who had been drinking heavily at the time of their offense was almost 2.5 times greater than that of blacks. About half of all white males had consumed some alcohol at the time, including 37 percent who had imbibed heavily. By contrast, 17 percent of the black females indicated they had been drinking, including only 4 percent who had reached the heavy drinking stage (Figure 20).

<sup>11</sup>Although the amounts described are excessive, the respondents were *not* asked the length of time involved. It is likely that in at least some cases the liquor was consumed over a period of many hours or even more than one day.

<p><b>INTRODUCTION</b> - Hello. My name is (your name). I am an interviewer for the United States Bureau of the Census. The Census Bureau is trying to learn more about local jails and is asking the following questions of about 6,000 inmates across the country. Your cooperation in this survey is voluntary. There are no penalties for not answering all or part of the questions. We would appreciate your helping us. Authority to collect this information is granted by law (43 USC, section 3761). Also by law all information which would permit identification of the individual will be held strictly confidential (13 USC, section 9) and will be used only for statistical purposes.</p>	
<p>Notes</p>	

**INTERVIEWER REFERENCE ITEM**

Current offense(s):

002

003

004

Date admitted to jail for above offense(s): 005

Month      Day      Year

Notes

1. Sex 006 1  Male  
2  Female

2a. What is your origin or descent?  
Show inmate flashcard (A). Enter code number in box and origin from flashcard in space provided. 007

b. Race - Fill by observation if possible 008 1  White  
2  Black  
3  American Indian or Alaskan Native  
4  Asian or Pacific Islander  
5  Other - Specify \_\_\_\_\_

3. What is your date of birth? 009       Age  
Month      Day      Year

4. Are you now married, widowed, divorced, separated, or never married?  
Married includes common law, separated does NOT include separations due to imprisonment. 010 1  Married  
2  Widowed  
3  Divorced  
4  Separated  
5  Never married

5. What is the highest year of regular school you have completed? 011 0  Never attended or kindergarten  
Elementary  
1  2  3  4  5  6  7  8   
High (if GED mark 12)  
9  10  11  12   
College  
21  22  23  24  25  26+

6a. Did you ever serve in the U.S. Armed Forces? 012 1  Yes  
2  No - Skip to 7

b. What type of discharge did you receive? 013 1  Honorable  
2  General (Honorable conditions)  
3  Undesirable/General (Under other than honorable conditions)  
4  Bad conduct  
5  Dishonorable  
6  Other - Specify \_\_\_\_\_

7. Now I am going to ask you some questions about why you are now in jail. 014 Yes - Which?  
1  Probation violation  
2  Parole violation  
3  Escape/flight  
4  Bail jump  
5  No } Skip to 8

a. Are you in jail today because of a probation violation, a parole violation, an escape, or a bail jump?

b. For what offense or offenses are you in jail?  
Anything else?  
INTERVIEWER REMINDER: Be sure to probe for sufficient detail for larceny/theft, drug, or assault offenses. 015    
016    
017    
018    
019

c. When were you first admitted to a jail for (Read offense(s) in 7b)? 020        
Month      Day      Year  
021 x  Don't know

<b>CHECK ITEM A</b>	Transcribe entries in 7b current offense(s) and 7c date admitted to jail for the offense(s) to Interviewer Reference Item, page 2 - Skip to 9a	
8a. When were you first admitted to an institution for this (probation violation, parole violation, escape, flight, bail jump)?	(022) <input type="text"/> <input type="text"/> <input type="text"/> Month Day Year	(023) <input checked="" type="checkbox"/> Don't know
b. For what offense(s) were you (on probation, on parole, being held prior to your escape, being held prior to bail)? Any others? INTERVIEWER REMINDER: Be sure to probe for sufficient detail for larceny/theft, drug, or assault offenses.	(024) <input type="text"/> (025) <input type="text"/> (026) <input type="text"/> (027) <input type="text"/> (028) <input type="text"/>	
c. When were you first admitted to a jail for (Read offense(s) from 8b)?	(029) <input type="text"/> <input type="text"/> <input type="text"/> Month Day Year	(030) <input checked="" type="checkbox"/> Don't know
d. Have you been tried and found guilty or have you pled guilty to all or any of the offense(s) you just mentioned? Read offense(s) from 8b if necessary.	(031) 1 <input type="checkbox"/> Yes - Skip to 8f 2 <input type="checkbox"/> No	
e. Is this (are these) charge(s) still pending, that is will you have to stand trial for the charge(s) you just mentioned? Read offense(s) from 8b if necessary.	(032) 1 <input type="checkbox"/> Yes 2 <input type="checkbox"/> No	
f. When you were returned to jail after the (probation violation, parole violation, escape, flight, bail jump) on (Read date from 8a), were you charged with any offense(s) which you were alleged to have committed while you were (on probation, on parole, on flight, out on bail)?	(033) 1 <input type="checkbox"/> Yes 2 <input type="checkbox"/> No - Skip to Check Item B	
g. What other offense(s) were you charged with? Any others? INTERVIEWER REMINDER: Be sure to probe for sufficient detail for larceny/theft, drug, or assault offenses.	(034) <input type="text"/> (035) <input type="text"/> (036) <input type="text"/> (037) <input type="text"/> (038) <input type="text"/>	
<b>CHECK ITEM B</b>	(See item 8f) <input type="checkbox"/> Yes - Transcribe current offense(s), item 8g and date admitted to jail, item 8a to Interviewer Reference Item, page 2 - Ask 9a <input type="checkbox"/> No - Transcribe current offense(s), item 8b and date admitted to jail, item 8c to Interviewer Reference Item, page 2 - Ask 9a	
9a. Are you now sentenced to serve time for (Read current offense(s) from Interviewer Reference Item, page 2)?	(039) 1 <input type="checkbox"/> Yes 2 <input type="checkbox"/> No - Skip to 14a	
b. When were you sentenced?	(040) <input type="text"/> <input type="text"/> <input type="text"/> Month Day Year	(041) <input checked="" type="checkbox"/> Don't know
c. Were you judged guilty or did you plead guilty?	(042) 1 <input type="checkbox"/> Judged 2 <input type="checkbox"/> Pleased	

9. Continued	(043) 1 <input type="checkbox"/> Yes 2 <input type="checkbox"/> No 3 <input type="checkbox"/> Don't know } Skip to 10a
d. Were any of the original charges changed or dropped through plea-bargaining?	
e. To what charge(s) did you plead guilty? INTERVIEWER REMINDER: Be sure to probe for sufficient detail for larceny/theft, drug, or assault offenses.	(044) <input type="text"/> (045) <input type="text"/> (046) <input type="text"/>
<b>INTERVIEWER INSTRUCTION</b>  The offense(s) in 9e should agree with the offense(s) you have already listed in the Interviewer Reference Item on page 2. If not, determine why and correct the Interviewer Reference Item if necessary. The offense(s) for which the inmate was convicted take precedence over the offense(s) with which the inmate was originally charged.	
10a. Did you spend time in jail prior to sentencing for (Read offense(s) from Interviewer Reference Item, page 2)?	(047) 1 <input type="checkbox"/> Yes 2 <input type="checkbox"/> No - Skip to 11
b. Was any of this time applied to your sentence?	(048) 1 <input type="checkbox"/> Yes 2 <input type="checkbox"/> No 3 <input type="checkbox"/> Don't know } Skip to 11
c. How much time was applied to your sentence?	(049) <input type="text"/> Days (050) <input type="text"/> Months (051) <input type="text"/> Years (052) <input checked="" type="checkbox"/> Don't know
11. What is the maximum length of your sentence?	(053) <input type="text"/> Days (054) <input type="text"/> Months (055) <input type="text"/> Years (056) 1 <input type="checkbox"/> Life 2 <input type="checkbox"/> Death 3 <input type="checkbox"/> Unspecified
12a. Will you serve all of the incarceration time remaining on this sentence in this jail or somewhere else?	(057) 1 <input type="checkbox"/> Yes, in this jail - Skip to 13 2 <input type="checkbox"/> No, somewhere else 3 <input type="checkbox"/> Don't know - Skip to 13
b. Where will you serve your time?	<input type="text"/> <input type="checkbox"/> Don't know
c. Is the facility where you will serve your time run by the State, County, or someone else?	(058) 1 <input type="checkbox"/> State 2 <input type="checkbox"/> County 3 <input type="checkbox"/> Other - Specify <input type="text"/> 4 <input type="checkbox"/> Don't know

13. Are you awaiting appeal from this sentence? That is, are you going to go to court again for this sentence?	(059) 1 <input type="checkbox"/> Yes 2 <input type="checkbox"/> No } Skip to 19
14a. Have you been tried in court for (Read offense(s) from Interviewer Reference Item, page 2) and are now waiting for a sentence?	(060) 1 <input type="checkbox"/> Yes 2 <input type="checkbox"/> No - Skip to 15
b. Were you judged guilty or did you plead guilty?	(061) 1 <input type="checkbox"/> Judged 2 <input type="checkbox"/> Plead
c. Were any of the original charges changed or dropped through plea-bargaining?	(062) 1 <input type="checkbox"/> Yes 2 <input type="checkbox"/> No 3 <input type="checkbox"/> Don't know } Skip to 19
d. To what charge(s) did you plead guilty? INTERVIEWER REMINDER: Be sure to probe for sufficient detail for larceny/theft, drug, or assault offenses.	(063) <input type="text"/> (064) <input type="text"/> (065) <input type="text"/>
INTERVIEWER INSTRUCTION  The offense(s) in 14d should agree with the offense(s) you have already listed in the Interviewer Reference Item on page 2. If not, determine why and correct the Interviewer Reference Item if necessary. The offense(s) in 14d for which the inmate was convicted take precedence over the offense(s) with which the inmate was originally charged. Skip to 19	
15. Is your trial for (Read offense(s) from Interviewer Reference Item, page 2) currently in progress?	(066) 1 <input type="checkbox"/> Yes - Skip to 19 2 <input type="checkbox"/> No
16. Have you been arraigned and bound over for trial, that is, have you been formally charged by a judge with (Read offense(s) from Interviewer Reference Item, page 2) and are now waiting for your trial to begin?	(067) 1 <input type="checkbox"/> Yes - Skip to 18a 2 <input type="checkbox"/> No
17a. Have you appeared before a judge, magistrate, or commissioner in regard to the charge(s) of (Read offense(s) from Interviewer Reference Item, page 2)?	(068) 1 <input type="checkbox"/> Yes 2 <input type="checkbox"/> No - Skip to 18a
b. What was the date of your first appearance?	(069) <input type="text"/> <input type="text"/> <input type="text"/> Month Day Year (070) x <input type="checkbox"/> Don't know
18a. Will you be tried in this jurisdiction?	(071) 1 <input type="checkbox"/> Yes - Skip to 19a 2 <input type="checkbox"/> No 3 <input type="checkbox"/> Don't know - Skip to 19a
b. Where will you be tried?	(072) 1 <input type="checkbox"/> Another city 2 <input type="checkbox"/> Another county 3 <input type="checkbox"/> Another State 4 <input type="checkbox"/> Don't know

19a. Was (has) bail (been) set for you for (Read offense(s) from Interviewer Reference Item, page 2)?	(073) 1 <input type="checkbox"/> Yes 2 <input type="checkbox"/> No - Skip to 19c 3 <input type="checkbox"/> Don't know - Skip to 20a
b. On what date was bail set?	(074) <input type="text"/> <input type="text"/> <input type="text"/> Month Day Year } Skip to 20a (075) x <input type="checkbox"/> Don't know
c. Why wasn't bail set?	(076) 1 <input type="checkbox"/> Release on own recognizance 2 <input type="checkbox"/> Non-bail offense 3 <input type="checkbox"/> Detainer pending/outstanding 4 <input type="checkbox"/> Not reached that stage in the proceedings 5 <input type="checkbox"/> Other - Specify } Skip to 23a
20a. What was (is) the amount of the bail originally set by the judge, magistrate, or commissioner?	(077) \$ <input type="text"/> . <input type="text"/> <input type="text"/> (078) x <input type="checkbox"/> Don't know
b. Was the amount of bail changed?	(079) 1 <input type="checkbox"/> Yes 2 <input type="checkbox"/> No - Skip to 21
c. What was the final amount of bail?	(080) \$ <input type="text"/> . <input type="text"/> <input type="text"/> (081) x <input type="checkbox"/> Don't know
21. How much would (did) you have to pay a bondsman to get out on bail?	(082) \$ <input type="text"/> . <input type="text"/> <input type="text"/> OR (083) <input type="text"/> Percent x <input type="checkbox"/> Don't know
22a. Were you released on bail?	(084) 1 <input type="checkbox"/> Yes 2 <input type="checkbox"/> No - Skip to 22c
b. How long were you out on bail?	(085) <input type="text"/> Days (086) <input type="text"/> Months } Skip to 23a (087) <input type="text"/> Years
c. Why didn't you get released on bail?	(088) 1 <input type="checkbox"/> Still trying to make arrangements 2 <input type="checkbox"/> Couldn't (can't) afford 3 <input type="checkbox"/> Didn't (don't) want to get out 4 <input type="checkbox"/> Couldn't (can't) be released 5 <input type="checkbox"/> Bondsman not found 6 <input type="checkbox"/> Detainer(s) pending from another jurisdiction 7 <input type="checkbox"/> Other - Specify

<b>NOTE</b> - Ask all categories in 23a before proceeding to 23b		<b>NOTE</b> - Ask 23b only for those categories in 23a which were answered "Yes"	
<b>23a. Have you spent any time out of jail since you were first admitted on (Read date from Interviewer Reference Item, page 2) on:</b>		<b>b. How long were you away from jail on (Read categories from 23a)?</b>

<b>CHECK ITEM F</b>		(See item 14a, page 6)	
		<input type="checkbox"/> Yes or not answered - Ask item 57 <input type="checkbox"/> No - Skip to item 63	
57. Had you been drinking just before the (Read offense(s) from Interviewer Reference Item, page 2) for which you have been convicted?		447 1 <input type="checkbox"/> Yes 2 <input type="checkbox"/> No - Skip to 63	
NOTE - Ask ALL categories in 58a before proceeding to 58b		NOTE - Ask 58b only for those categories in 58a which were answered "Yes"	
58a. At the time were you drinking:		b. About how much . . . would you say you drank at that time?	
(1) Beer? . . . . .	448 1 <input type="checkbox"/> Yes 2 <input type="checkbox"/> No	452 _____ Quarts	
		453 _____ Six-packs	
		454 _____ Cans/bottles	
(2) Wine? . . . . .	449 1 <input type="checkbox"/> Yes 2 <input type="checkbox"/> No	455 _____ Fifths	
		456 _____ Pint bottles	
		457 _____ Glasses	
(3) Liquor? . . . . .	450 1 <input type="checkbox"/> Yes 2 <input type="checkbox"/> No	458 _____ Quarts	
		459 _____ Fifths	
		460 _____ Pints	
		461 _____ Half pints	
		462 _____ Drinks/shots	
(4) Another alcoholic beverage? . . . . . Specify _____	451 1 <input type="checkbox"/> Yes 2 <input type="checkbox"/> No	463 _____ Quarts	
		464 _____ Pints	
		465 _____ Half pints	
		466 _____ Bottles	
		467 _____ Glasses	
59. Would you say you were very drunk, pretty loaded, feeling good, or relatively sober at that time?	468 1 <input type="checkbox"/> Very drunk 2 <input type="checkbox"/> Pretty loaded 3 <input type="checkbox"/> Feeling good 4 <input type="checkbox"/> Relatively sober		

60. About how many hours had you been drinking?	469 _____ Hours
61. Where were you drinking? Read categories and mark all that apply	470 1 <input type="checkbox"/> At home 2 <input type="checkbox"/> At a friend's home 3 <input type="checkbox"/> In a bar or tavern 4 <input type="checkbox"/> In a car 471 5 <input type="checkbox"/> In a restaurant. * 6 <input type="checkbox"/> On the street 7 <input type="checkbox"/> At work 8 <input type="checkbox"/> Other - Specify _____
62a. Were you drinking alone or with others?	472 1 <input type="checkbox"/> Alone - Skip to 63 2 <input type="checkbox"/> Others
b. Who were you drinking with? Read categories and mark all that apply	473 1 <input type="checkbox"/> Family * 2 <input type="checkbox"/> Friends 3 <input type="checkbox"/> Anyone around/strangers
63. These next questions deal with the health care you have received since you were admitted to this jail, this time. During the first two weeks you were in jail:	
a. Was your blood pressure taken?	474 1 <input type="checkbox"/> Yes 2 <input type="checkbox"/> No
b. Was a blood sample taken?	475 1 <input type="checkbox"/> Yes 2 <input type="checkbox"/> No
c. Were you given a skin test for tuberculosis?	476 1 <input type="checkbox"/> Yes 2 <input type="checkbox"/> No
d. Were you given a chest x-ray?	477 1 <input type="checkbox"/> Yes 2 <input type="checkbox"/> No
e. Were you given a dental examination?	478 1 <input type="checkbox"/> Yes 2 <input type="checkbox"/> No
f. Were you given an eye examination?	479 1 <input type="checkbox"/> Yes 2 <input type="checkbox"/> No
g. Was your height measured?	480 1 <input type="checkbox"/> Yes 2 <input type="checkbox"/> No
h. Was your weight measured?	481 1 <input type="checkbox"/> Yes 2 <input type="checkbox"/> No
i. Was your pulse taken?	482 1 <input type="checkbox"/> Yes 2 <input type="checkbox"/> No
j. Was your temperature taken?	483 1 <input type="checkbox"/> Yes 2 <input type="checkbox"/> No
k. Was a urine sample taken?	484 1 <input type="checkbox"/> Yes 2 <input type="checkbox"/> No
l. Was your heart listened to?	485 1 <input type="checkbox"/> Yes 2 <input type="checkbox"/> No
m. Was anything else done?	486 1 <input type="checkbox"/> Yes - Specify _____ 2 <input type="checkbox"/> No

CHECK ITEM G	If all "No's" are marked in item 63, skip to 66a	
64. Who administered these tests? <i>Read categories and mark all that apply</i>	<input checked="" type="checkbox"/> 1 Doctor <input type="checkbox"/> 2 Nurse <input type="checkbox"/> 3 Paramedic <input type="checkbox"/> 4 Admitting officer <input type="checkbox"/> 5 Other - Specify _____	
65a. Were you given the results of the check-up?	<input checked="" type="checkbox"/> 1 Yes <input type="checkbox"/> 2 No - Skip to 66a	
b. Were you told of any problems?	<input checked="" type="checkbox"/> 1 Yes <input type="checkbox"/> 2 No - Skip to 66a	
c. Did the person who gave you the check-up do anything or prescribe any medicine to take care of this (these) problem(s)?	<input checked="" type="checkbox"/> 1 Yes <input type="checkbox"/> 2 No	
66a. After the first two weeks, were you given any other medical tests, check-ups, or physical examinations?	<input type="checkbox"/> Yes - How many? _____ <input checked="" type="checkbox"/> 0 No - Skip to 68 <input checked="" type="checkbox"/> X Inmate has not been in jail more than 2 weeks - Skip to 68	
b. Was this (were these) exam(s) to follow up a problem that had been discovered earlier?	<input type="checkbox"/> Yes - How many? _____ <input checked="" type="checkbox"/> 0 No	
c. Was this (were these) exam(s) at your request?	<input type="checkbox"/> Yes - How many? _____ <input checked="" type="checkbox"/> 0 No	
67. In (any of) the examination(s) which took place after your first two weeks in jail:		
a. Was your blood pressure taken?	<input checked="" type="checkbox"/> 1 Yes <input type="checkbox"/> 2 No	
b. Was a blood sample taken?	<input checked="" type="checkbox"/> 1 Yes <input type="checkbox"/> 2 No	
c. Were you given a skin test for tuberculosis?	<input checked="" type="checkbox"/> 1 Yes <input type="checkbox"/> 2 No	
d. Were you given a chest x-ray?	<input checked="" type="checkbox"/> 1 Yes <input type="checkbox"/> 2 No	
e. Were you given a dental examination?	<input checked="" type="checkbox"/> 1 Yes <input type="checkbox"/> 2 No	
f. Were you given an eye examination?	<input checked="" type="checkbox"/> 1 Yes <input type="checkbox"/> 2 No	
g. Was your height measured?	<input checked="" type="checkbox"/> 1 Yes <input type="checkbox"/> 2 No	

67. Continued	
h. Was your weight measured?	<input checked="" type="checkbox"/> 1 Yes <input type="checkbox"/> 2 No
i. Was your pulse taken?	<input checked="" type="checkbox"/> 1 Yes <input type="checkbox"/> 2 No
j. Was your temperature taken?	<input checked="" type="checkbox"/> 1 Yes <input type="checkbox"/> 2 No
k. Was a urine sample taken?	<input checked="" type="checkbox"/> 1 Yes <input type="checkbox"/> 2 No
l. Was your heart listened to?	<input checked="" type="checkbox"/> 1 Yes <input type="checkbox"/> 2 No
68. Since you were admitted to jail this time, have you asked to see a doctor or other medical person?	<input checked="" type="checkbox"/> 506 Yes - How many times? _____ <input type="checkbox"/> No - Skip to 71a
69. Have you ever been refused permission to see the doctor or other medical person?	<input checked="" type="checkbox"/> 507 Yes - How many times? _____ <input type="checkbox"/> No
<b>CHECK ITEM H</b>	If number entered in 68 is the same as the number entered in 69, skip to 71a. If number entered in 68 is greater than the number entered in 69, ask 70.
Notes	

70. What type of health person do you generally see?	(500) 1 <input type="checkbox"/> Doctor 2 <input type="checkbox"/> Nurse 3 <input type="checkbox"/> Paramedic 4 <input type="checkbox"/> Other - Specify
71a. Do you have any health problems or medical conditions which would require you to see a doctor or other health person on a regular basis?	(509) 1 <input type="checkbox"/> Yes 2 <input type="checkbox"/> No - Skip to 72a
b. What type of problem do you have? Do NOT read categories Mark all that apply	(510) 1 <input type="checkbox"/> Heart condition * 2 <input type="checkbox"/> Respiratory, breathing, or lung problem 3 <input type="checkbox"/> Nervous disorder (nervous system, not tense or "uptight") 4 <input type="checkbox"/> Mental problem 5 <input type="checkbox"/> Muscle or bone problem 6 <input type="checkbox"/> Urinary problem (511) * 1 <input type="checkbox"/> Blood problem 2 <input type="checkbox"/> Skin problem 3 <input type="checkbox"/> Emotional problem 4 <input type="checkbox"/> Depression 5 <input type="checkbox"/> Other - Specify
c. Did you have this (these) problem(s) before you were admitted to this jail this time?	(512) 1 <input type="checkbox"/> Yes 2 <input type="checkbox"/> No
72a. Does this jail have an infirmary with beds for overnight stays?	(513) 1 <input type="checkbox"/> Yes 2 <input type="checkbox"/> No 3 <input type="checkbox"/> Don't know } Conclude interview
b. Have you ever spent a night in the infirmary?	(514) 1 <input type="checkbox"/> Yes 2 <input type="checkbox"/> No
CONCLUDE INTERVIEW	

FORM 513-49 (11-17-77)

Appendix III

Technical notes and definitions

As used throughout this report, a "jail" is defined as a local government facility authorized to detain for at least 48 hours any adult suspected or convicted of a criminal offense. Excluded from consideration as local jails were facilities designed specifically for the detention of juveniles, hospitals for the criminally insane, drunk tanks, and lockups.<sup>1</sup> In addition, all facilities operated by Federal or State correctional authorities, including State-operated jails in Connecticut, Delaware, Hawaii, Rhode Island, and Vermont, were excluded. The term "inmate population" refers to the number of persons confined in all locally operated jails.

Excluded from the scope of the 1978 Survey of Inmates of Local Jails were 193 small jails, holding about 900 inmates. This procedure differed from that used in the 1970 and 1972 enumerations and was adopted because the facilities were not authorized to hold any inmates after they had been formally charged with a criminal offense, a process that usually (though not always) takes place within the first 48 hours of confinement.

Data on State and Federal prisoners housed in local jails because of prison overcrowding were derived from the 1978 National Jail Census.

The terms "legal status" and "detention status" are used broadly (and synonymously) to characterize various phases of the criminal adjudication process, ranging from arrest to the serving of time on an unappealed sentence. The terms also include such administrative or jurisdictional dispositions as "sentenced to a local facility" or to a "nonlocal facility," the latter of which refers to State or Federal institutions in cases where persons were temporarily confined in the local jail at the time of the survey because of overcrowding in the "nonlocal" facility or for other, unspecified reasons.

Additional explanatory notes and definitions of selected terms follow below.

**Age**—The inmates' age was that given at the time of the interview. Data on age groups for the U.S. male population are estimates for March 1978, provided by the Population Division, Bureau of the Census.

<sup>1</sup>Although juvenile detention institutions were outside the scope of the survey, the companion facility census revealed that jails held a total of 1,611 juveniles. For a distribution of the juvenile inmates by State, see Table A, following the definitions in this appendix.

**Alcohol use**—Inmates who indicated that they had been drinking alcoholic beverages at the time of the arrest that led to their incarceration were questioned as to the amount they had consumed to determine whether they had been "under the influence" of alcohol. In accordance with criteria furnished by the National Institute on Alcohol Abuse and Alcoholism, it was considered that inmates had been under the influence if they indicated that they had consumed 8.33 cans of beer, or 6.67 4-ounce glasses of wine, or 9 1-ounce jiggers of hard liquor. These amounts contain the chemical equivalent of 4 ounces of ethanol (pure alcohol). Inmates who had consumed more than one kind of beverage were considered to be under the influence if the combined amounts totaled the 4-ounce minimum alcohol content.

**Annual income**—Each inmate was asked to indicate the level of personal income for the 12-month period prior to the incarceration, as well as the main source of that income. Data on income levels for the U.S. population age 18-54 are estimates for March 1978. See Bureau of the Census, *Current Population Reports*, Series P-60, No. 118, "Money Income of Families and Persons in the United States", U.S. Government Printing Office, Washington, D.C., March 1979, pp. 184-193.

**Convicted**—Those jail inmates judged guilty of an offense either after a plea of guilty or as the result of a trial. The category covers two basic groupings—persons "awaiting sentence" and those "sentenced." The latter group includes inmates assigned to serve time in a local facility (either the facility where they were held at the time of the survey or another local facility), or a nonlocal facility, or an unknown type of facility.

**Drug use**—For analytical purposes, three categories characterized the frequency of illicit drug usage by inmates during the course of their lifetime: daily, weekly, and less than weekly (a category that includes occasional users and those who had used a drug only once). The types of drugs surveyed for extent of usage and drug influence at the time an offense was committed included the three leading narcotics: heroin, methadone, and cocaine. Inmates were also asked about the use of amphetamines ("uppers") and barbiturates ("downers") without a medical prescription, as well as about their experience with marijuana (including hashish), LSD, PCP, and "other drugs."

**Educational attainment**—Data on the educational attainment of the U.S. population are estimates for March 1978, provided by the Population Division, Bureau of the Census.

**Employment status**—The "employed" were construed as all inmates who had full-time or part-time jobs or business enterprises at the time of their admission

to jail. "Full-time" employment was defined as working 35 hours or more per week, a category that encompassed Armed Forces personnel. The term "part-time" covered employment of fewer than 35 hours a week. Data on the employment status of the U.S. population are estimates for February 1978. See Department of Labor, Bureau of Labor Statistics, *Employment and Earnings*, March 1978, Vol. 25, No. 3, pp. 33-34, 39.

**Hispanic**—Inmates who indicated that their origin was Mexican, Puerto Rican, Cuban, Central or South American, or some other Hispanic origin, irrespective of race. Data on the Hispanic component of the U.S. population can be found in Bureau of the Census, *Current Population Reports*, Series P-20, No. 339, "Persons of Spanish Origin in the United States: March 1978," U.S. Government Printing Office, Washington, D.C., June 1979.

**Juvenile**—A legal rather than demographic designation. For both 1970 and 1978, data on juveniles confined in local jails were collected in nationwide censuses of jail facilities. A distribution of juvenile inmates by State is displayed in Table A, at the end of this appendix. Information on juveniles was not collected for 1972.

**Marital status**—Determined as of the date of the interview rather than at the time of admission. Five categories were included on the questionnaire: never married, married, widowed, divorced, and separated. For analysis purposes, the last two were combined. "Married" includes those in common-law union. "Separated" refers to persons legally apart, rather than those separated by incarceration. Data on the marital status of the U.S. population are estimates for March 1978, provided by the Population Division, Bureau of the Census.

**Military service**—Data on male veterans in the U.S. population were based on figures for September 1977, as reported in: Bureau of the Census, *Statistical Abstract of the United States: 1978*, U.S. Government Printing Office, Washington, D.C., September 1978, p. 385. Although inmates who are veterans of the Armed Forces were not asked whether they had served in Vietnam or elsewhere in Southeast Asia, it can be assumed that most of them below age 25 had not because they would have been too young. The number of troops in Vietnam had been substantially reduced by the end of 1972 and was down to almost zero by January 1973. Inmates who were 24 years old at the time of the survey (February 1978) would have been 18 in 1972 and, among inmates less than 25 years of age as of 1978, only 24-year-olds would have had the opportunity to have seen military service in Vietnam. On the other hand, because the official U.S. Government definition of "Vietnam era veterans" encompasses those who

served at any time between April 5, 1964, and May 7, 1975, it can be assumed that inmates between the ages of 21 and 24 could have served in the military during that era.

**Poverty level**—As applied to 1977 annual income, the U.S. Government definition of the "poverty level" for family groups larger than 2 persons ranged from \$4,806 for a 3-member family to \$10,137 for a family of 7 persons or more. See Bureau of the Census, *Current Population Reports, Series P-60, No. 116, "Money Income and Poverty Status of Families and Persons in the United States (Advance Report),"* U.S. Government Printing Office, Washington, D.C., July 1978, p. 20.

**Prison**—A State or Federal confinement facility, chiefly used for holding convicted felons serving sentences of more than 1 year. In this report, figures on Federal and State prisoners for 1972 are as of December 31, approximately 6 months after that year's jail inmate survey. For 1978, prisoner figures are as of December 31, 1977, about 2 months prior to the 1978 jail inmates survey. See Law Enforcement Assistance Administration, *Prisoners in State and Federal Institutions on December 31, 1971, 1972 and 1973*, NPS Bulletin SD-NPS-PSF-1, May 1975, pp. 12-16, and same title, NPS Bulletin SD-NPS-PSF-5, February 1979, pp. 13-15.

**Race**—The race of inmates was determined by interviewer observation. The racial categories distinguished in the report are white, black, and other. The category "other" includes American Indians, Alaskan Natives, Pacific Islanders, and persons of Asian ancestry. Data on races for the U.S. male population are estimates for March 1978, provided by the Population Division, Bureau of the Census.

**Unconvicted**—Those jailed inmates involved in criminal proceedings for a crime alleged against them, but not yet judged innocent or guilty. Within this category, the status "not yet arraigned" denotes those inmates who had not yet been charged in a court with the commission of a crime. Inmates who had been formally charged before a court were categorized as "arraigned and awaiting or on trial."

**Table A** Juvenile inmates of local jails, by region and State, 1970 and 1978

Region and State	1970	1978
United States	3,857	1,611
Northeast	989	99
Maine	2	6
New Hampshire	0	8
Vermont	0	0

NOTE: As of 1978, five States—Connecticut, Delaware, Hawaii, Rhode Island, and Vermont—had integrated jail-prison systems and, therefore, were excluded from the calculation. Alaska, which had 6 locally operated jails in addition to an integrated jail-prison system, was included in the calculations. The 1970 figure for New York and, hence, those for the Northeast and the U.S. differ from those published in the 1970 National Jail Census; 3,943 youthful offenders not subject to juvenile court jurisdiction were excluded for purposes of comparison with 1978 data.

Appendix IV

Survey methodology and standard errors

The statistical data and analytical findings presented in this report derive from a survey conducted in February 1978 among a sample of the inmates of local jails throughout the United States. The survey, undertaken through personal interviews, was coordinated with the 1978 Census of Local Jails, taken the same month. The inmates interviewed were questioned about their social and economic background, alcohol and drug use habits, prior criminal record, current offense, and court experience. The completed interviews were assigned appropriate numerical weights to assure that in the aggregate they would be representative of all jail inmates throughout the Nation. Based on a sample rather than a complete enumeration, the data are estimates subject to errors resulting from sampling variability.

Sample design and size

Survey specifications required a sample of about 4,000 male and 2,000 female inmates in approximately 400 institutions. The sample, drawn from files maintained by the Governments Division of the U.S. Bureau of the Census, amounted to about 1 in every 26 persons detained in the Nation's locally operated jails. About 3,500 facilities met the criteria detailed in the first two paragraphs of Appendix III and, thus, were eligible for inclusion in the sample.

As a first step in designing the survey, these jails were stratified into three classes for men and five for women. Institutions that held an estimated 225 or more inmates were all included in both samples. In each of these large institutions—numbering 132 and containing almost half of the inmates of each sex—males were sampled at the rate of 1 in 35 and females at the rate of 1 in 4. Jails holding fewer than 225 inmates were divided into two classes in the male sample and four classes in the female sample. Institutional and inmate sampling rates for each of the classes are shown in the accompanying chart. The male sample was self-weighting and the female sample was of sufficient size to assure adequate representation in the survey.

Of some 6,300 interview candidates identified by this selection process, some 5,300—approximately 85 percent—were actually interviewed. Of the remaining 1,000, 47 percent were released before they could be interviewed, 42 percent declined to participate, and the remaining 11 percent were excluded for other reasons.

Sex of inmates and stratum	Number of inmates in institution	Sex of population of institution	Institutional sampling rate	Inmate sampling rate
<b>Male inmates</b>				
I	225 or more	Males or both sexes	All	1 in 35
II	Less than 225	Both sexes, including at least 21 males	1 in 5	1 in 7
III	Less than 225	Both sexes, less than 21 males	1 in 35	All
<b>Female inmates</b>				
I	225 or more	Females or both sexes	All	1 in 4
II	Less than 225	Females	1 in 2	1 in 2
III	Less than 225	Both sexes, including at least 20 females	1 in 2	1 in 2
IV	Less than 225	Both sexes, including at least 21 males; less than 20 females	1 in 5	All
V	Less than 40	Both sexes, including less than 21 males; less than 20 females	1 in 35	All

Estimation procedure

Five adjustment factors were applied in the assignment of a final weight to each interview, or data record:

(1) A *basic weight* (the reciprocal of each inmate's probability of selection), applied to all records. For males, the value of this weight was 35. For females, one of three weights was assigned: 4, 5, or 35.

(2) An *institution noninterview adjustment*, applied to inmate data records to account for jailed inmates in institutions where it was not possible to conduct interviews and where demographic information on the inmates was not available.

(3) An *inmate noninterview adjustment*, applied to adjust the weights of all interviewed inmate data records in order to account for noninterviewed inmates for whom partial demographic information was available. This adjustment, made separately for males and females, was applied to 18 categories of information as defined by different combinations of three variables: race (black and other than black), age (under 20, 20-24, 25 and over), and size of facility. There were three size-of-facility categories for males, all pertaining to facilities housing both males and females: facilities with fewer than 21 males, those with at least 21 males but fewer than 225 total inmates, and those with 225 or more inmates. For females, the three categories were: facilities for

females only and housing fewer than 225 inmates; facilities housing males and females with a total of fewer than 225 inmates; and facilities housing both males and females with a total of 225 inmates or more. For any of the 18 categories, the noninterview adjustment was defined as the ratio of the weighted number of interviewed plus noninterviewed inmates in that category to the weighted number of interviewed inmates in the same category.

(4) A *first-stage ratio adjustment* was one of two steps taken to minimize the variance resulting from the use of jails within the sample to represent jails that were not in the sample. It was applied to all data records of inmates (separately for males and females) in jails that were *not* self-representing; therefore, this adjustment factor was not applicable to the records of inmates in the 132 large, self-representing facilities. The procedure, applied before the inmate count made in the 1978 Census of Jail Facilities became available, adjusted for the difference between the estimated number of inmates held in jails within the sample and the estimated number in jails represented by the sample.

(5) The final step in the weighting procedure was a *second-stage ratio adjustment* to bring the survey-derived inmate count into accord with the jail population as enumerated in the 1978 Census of Jail

Facilities. A ratio adjustment was developed for each of the three size-of-facility categories for males (less than 21, 21-224, and 225 or more) and for each of the two such categories for females (less than 225 and 225 or more). For any category, the adjustment was defined as the ratio between the total number of inmates as determined by the facility census and the weighted total estimated from the inmate survey.

Reliability of estimates

The particular sample used for the 1978 Survey of Inmates of Local Jails was only one of a large number of possible samples of the same size that could have been selected using the same design and sample selection procedures. Estimates derived from different samples would differ from each other. The standard error of a survey estimate is a measure of the variation among the estimates from all possible samples and is, therefore, a measure of the precision with which the estimate from a particular sample approximates the average of all possible sample estimates. The estimate and its associated standard error may be used to construct an approximate confidence interval—that is, an interval having a prescribed probability that it would include the average of all possible sample estimates. This average may or may not be contained in any particular computed interval. But, for a particular sample, it can be determined with specific confidence that the average of all possible sample estimates is included in the constructed interval.

If all possible samples were selected under essentially the same general conditions and using the same sample design, and if an estimate and its estimated standard error were calculated from each sample, then:

1. Approximately 68 percent of the intervals from one standard error below the estimate to one standard error above the estimate would include the average for all possible samples.
2. Approximately 90 percent of the intervals from 1.6 standard errors below the estimate to 1.6 standard errors above the estimate would include the average for all possible samples.
3. Approximately 95 percent of the intervals from two standard errors below the estimate to two standard errors above the estimate would include the average for all possible samples.

In addition to sampling error, the estimates presented in this report are subject to non-sampling error. Major sources of such error include the inability to obtain complete information from all inmates in

the sample; errors in estimating values for missing data; differences in the inmates' interpretation of questions; respondent inability or unwillingness to provide correct information or to report information accurately; errors made in recording, coding, and processing the data; and possible undercoverage (i.e., failure to represent all jails within the sample). Standard errors calculated for use with data from this survey partially gauge the effect of certain nonsampling errors in response and enumeration, but they do not measure systematic biases in the data. Because the full extent of nonsampling error is unknown, however, particular care should be exercised in the interpretation of figures based on a relatively small number of cases or on small differences between estimates.

Statistical results from the survey were used for analytical purposes in this report only when based on an estimated count of 300 or more male inmates (or inmates of both sexes) and of 100 or more female inmates. When computed on smaller bases, the estimates were considered statistically unreliable. Nevertheless, such figures are shown in the data tables to permit such combinations of data categories as may serve the need of individual users.

Computation and application of standard errors

Results presented in this report were tested to determine whether or not statistical significance could be associated with observed differences between figures. As a result of such tests, all statements of comparison are significant at a 1.6 standard error level or better, and the vast majority are significant at a minimum level of 2.0 standard errors. This means that, for most comparisons cited in the report, the estimated difference is greater than twice the standard error of the difference. Statements of comparison qualified by the phrase "some indication" have a level of significance between 1.6 and 2.0 standard errors. For this report, differences that failed the test at 1.6 standard errors (i.e., at a 90-percent level of confidence) were not considered statistically significant. The discussion that follows is designed to assist persons wishing to perform their own standard error tests.

The tabulation below presents two sets of parameters (denoted *a* and *b*) to calculate the standard errors applicable to estimates for inmates of each sex, as well as for the total jail population. The *a* value is used only in computations involving absolute numbers, and the *b* value is used in conjunction with both numbers and percentages.

Population	Parameter a	Parameter b
All inmates	-0.000301	47.66
Male	-0.000338	50.32
Female	-0.000738	7.05

Formula 1. Standard errors for estimates of the number of inmates may be calculated by using the following formula:

$$s.e.(x) = \sqrt{ax^2 + bx}$$

In this formula, *x* is the estimated number of inmates, whether male, female, or the two combined, and *a* and *b* are the parameters taken from the tabulation above.

To illustrate the use of Formula 1, Data Table 2 shows that the number of unconvicted women being held in jails was 4,074. This estimate and the appropriate parameters are substituted in the formula, and the calculation proceeds as follows:

$$s.e.(4,074) = \sqrt{(-0.000738)(4,074)^2 + (7.05)(4,074)} = 128$$

This means that the confidence interval around the estimate of 4,074 at one standard error is 128, and the confidence interval at the second standard error would be double that figure, or 256.

Formula 2. Standard errors for an estimate of the percent of inmates may be calculated using the following formula:

$$s.e.(p) = \sqrt{\frac{b}{x} p(100-p)}$$

In this formula, *x* is the size of the inmate population (or subgroup thereof) that is the base of the percentage for which the standard error is being computed; *p* is the estimated percentage; and *b* is the parameter from the above tabulation.

Using Data Table 3, it can be seen that an estimated 56.7 percent of all Hispanic inmates were categorized under "convicted" detention status and that the base figure for this estimate is 16,349. The Formula 2 calculation proceeds from the following:

$$s.e.(56.7) = \sqrt{\frac{47.66}{16,349} 56.7(100-56.7)} = 2.7$$

This means that the confidence interval around the estimate of 56.7 at one standard error is 2.7, and the confidence interval at the second standard error would be double that figure, or 5.4.

Formula 3. The standard error of a difference between two estimates is approximated with the formula

$$s.e.(x-y) = \sqrt{s.e.(x)^2 + s.e.(y)^2}$$

where *x* and *y* represent the two estimates. The formula will represent the actual standard error quite accurately for the difference between uncorrelated estimates. If, however, there is a large positive correlation, the formula will overestimate the true standard error of the difference; and if there is a large negative

correlation, it will underestimate the true standard error of the difference.

In the preceding example, the standard error of the estimated 56.7 percent was calculated using Formula 2. Data Table 3 of the report also yields a figure of 57.8 as the percent of "convicted" non-Hispanics. Using Formula 2 again, it can be found that the standard error of this percent is 0.905. Applying Formula 3 with  $x = 57.8$  and  $y = 56.7$ ,

$$\begin{aligned} \text{s.e.}(x-y) &= \sqrt{(0.905)^2 + (2.7)^2} \\ &= 2.8 \end{aligned}$$

This means that the chances are 95 out of 100 that the estimated difference based on the sample would differ from the average difference from all possible samples by less than twice the standard error, or 5.6. The 95-percent confidence interval around the difference of 1.1 is from -4.5 to +6.7 (i.e., 1.1 plus and minus 5.6). Because this confidence interval includes negative values, it cannot be concluded with 95-percent confidence that this difference stems from factors other than sampling error.

The ratio of a difference to its standard error also may be used for determining its level of statistical significance. For example, a ratio of 2.0 or more denotes that the difference is significant at the 95-percent confidence level; a ratio from 1.6 to 2.0 indicates that the difference is significant at a confidence level between 90 and 95 percent; and a ratio of less than 1.6 defines a level of confidence below 90 percent. In the above example, the ratio of the difference 1.1 to its standard error 2.8 equals 0.4. It can, therefore, be concluded that the difference was not significant at a minimum confidence level of 90 percent.

**END**
