FOREWORD

CONTENTS

The data contained in this annual report points out that crime remains a social problem of grave concern. We must be cognizant however, that our law enforcement agencies are limited in their role in crime detection and suppression. The President's Commission on Law Enforcement and Administration of Justice said it very well when they stated in their report "The Challenge of Crime in a Free Society":

But the fact that the police deal daily with crime does not mean that they have unlimited power to prevent it, or reduce it, or deter it. The police did not create and cannot resolve the social conditions that stimulate crime. They did not start and cannot stop the convulsive social changes that are taking place in America. They do not enact the laws that they are required to enforce, nor do they dispose of the criminals they arrest. The police are only one part of the criminal justice system; the criminal justice system is only one part of the government; and the government is only one part of society. Insofar as crime is a social phenomenon, crime prevention is the responsibility of every part of society. The criminal process is limited to case by case operations, one criminal or one crime at a time. (1967-pg 92).

This report presents an overview of the nature and extent of crime in our state as reported to our law enforcement agencies. They in turn voluntarily submit their data to the Criminal Justice Data Center. Without their continuing support this publication would not be possible.

**MONTANA
UNIFORM CRIME
REPORTING PROGRAM**

INTRODUCTION

This report by the Montana Board of Crime Control's Criminal Justice Data Center contains the most complete and accurate information currently available about crime in Montana. It contains an extensive collection of facts and detailed analyses of the prevalence of different types of crimes, crime trends, and offenses known and arrests made by law enforcement. It is a summary of the nature, extent, and location of crime in the State of Montana.

Crime in Montana addresses the informational needs of law enforcement administrators, planners, legislators, and local government officials. It also affords citizens an opportunity to assess the state's crime situation.

CRIMINAL JUSTICE DATA CENTER

The major mission of the Criminal Justice Data Center has been to develop, implement, and maintain data collection systems to store and analyze criminal justice information. The data collection systems provide information to strengthen the management and administration of the criminal justice system in Montana. The Data Center maintains data including law enforcement manpower, salary range, and equipment records; Law Enforcement Assistance Administration (L.E.A.A.) subgrant information; jail inspection records; county demographics; and the Montana Uniform Crime Reporting (M.U.C.R.) system records.

The Criminal Justice Data Center functions as the statistical analysis center for criminal justice data for Montana. It serves as a clearinghouse for the data and provides analytical services as requested by public and private entities.

MONTANA UNIFORM CRIME REPORTING PROGRAM

Montana became involved in the National Uniform Crime Reporting program in September, 1978 when the F.B.I. transferred data collection responsibility from its Uniform Crime Reporting division to the Montana Board of Crime Control's Criminal Justice Data Center. This transfer has enhanced crime data collection by giving the state more control over crime reporting, closer contact with local law enforcement agencies, and more detailed information about crime.

The new Montana Uniform Crime Reporting (M.U.C.R.) system has encouraged law enforcement participation in data collection, recordkeeping, and data analysis and application. Law enforcement agencies are wholly responsible for compiling their own crime reports and submitting them to the Data Center on a monthly basis.

The M.U.C.R. program involves two distinct incident based data systems: the Offense and Activity Information System and the Custody Information System. The Offense and Activity System summarizes the types of crimes being committed, the date, time, and location of each occurrence, the type and value of property stolen and/or recovered, and the status of each case. A report on the number of law enforcement officers killed or assaulted is also included. The Custody Information System records the types of arrests made, the sex, race, and age of persons arrested, the types of court charges made, and the disposition of each case.

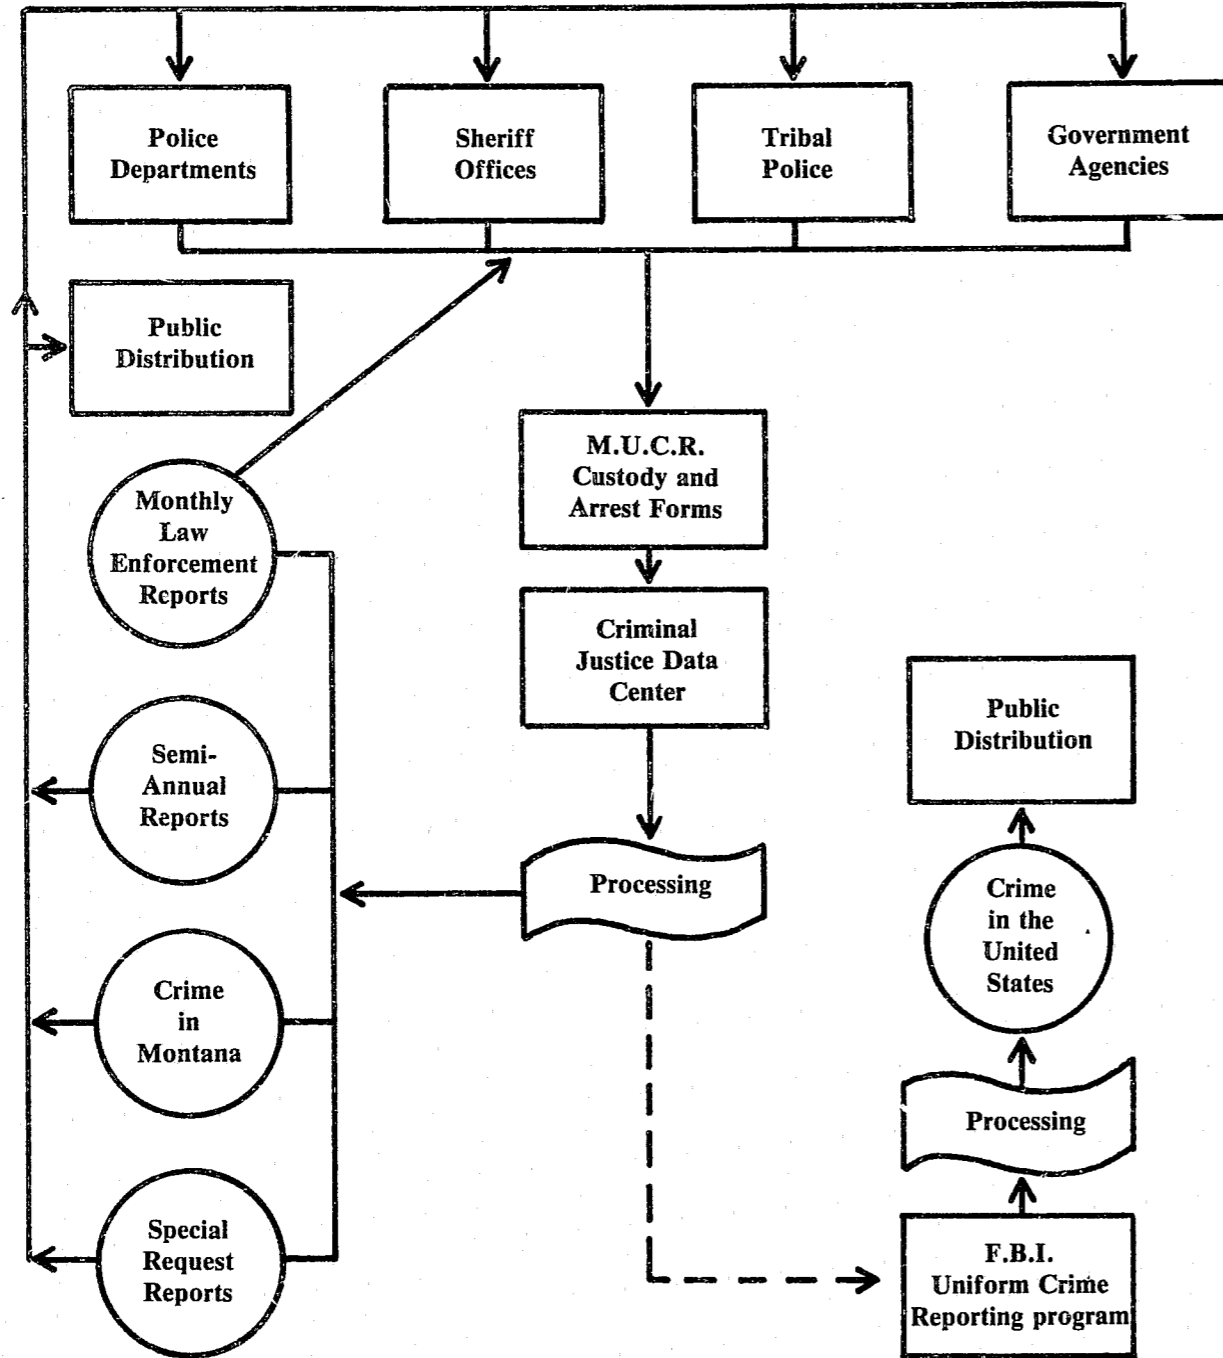

Criminal justice data is furnished to the Data Center on Custody and Offense forms by county law enforcement agencies, local police departments, and government agencies such as the Bureau of Indian Affairs and the National Park Service. In addition, many small police departments and campus police units report to the sheriff's department in their county and the data is forwarded to the Data Center. Although reporting is voluntary, 93.8% of law enforcement agencies in Montana provided data in 1981. These agencies represent 98.8% of the state's population.

Each agency's information is processed and compiled into monthly law enforcement reports. A particularly important service of the M.U.C.R. program is the statistical feedback to contributors provided by these monthly reports. Data is returned to contributors in the form of computerized summaries of misdemeanor and felony offenses and arrests, showing crime by offense and arrest categories, such as offenses known, unfounded offenses, actual offenses, adult and juvenile clearances, and type and value of property stolen and/or recovered. All of this information is useful to departments in planning resource allocation, identifying needs and problems, managing budget and manpower allocations, and maintaining good public relations.

Other reports and publications are compiled from the M.U.C.R. data. These include semi-annual state and agency reports, the annual *Crime in Montana* publication, and any special reports requested by private or public groups. The monthly M.U.C.R. data is also sent to the F.B.I. for processing with other state's Uniform Crime Reporting data. This information is published annually in *Crime in the United States*.

A flowchart showing the movement of M.U.C.R. data through the Criminal Justice Data Center is shown below.

**MONTANA UNIFORM CRIME REPORTING PROGRAM
SOURCES AND USES OF DATA**

CRIME FACTORS

The amount and type of crime reported in *Crime in Montana* is based on actual offenses reported to the police and does not measure those offenses unknown to the law enforcement community. A considerable volume of crime is not reported to law enforcement agencies because the victims may consider the offenses against them to be of very little consequence, they believe there is very little the police can do about them, or they fear publicity of a police investigation or retaliation from offenders. Recent national victimization surveys indicate that the actual number of certain index offenses committed may be fully double the number that are made known to police.

A report on the number and types of crime alone doesn't tell the whole story of criminal activity within the state. Other factors which may influence the type and volume of crime are:

- density and size of community
- composition of the population with reference to age, race and sex
- economic status of the population
- stability of population such as seasonal workers and tourism
- educational, recreational and religious characteristics
- effective strength of the police force
- policies of the prosecuting officials and the courts
- attitude of the public toward law and law enforcement

STATISTICAL METHOD OF REPORTING

Several statistical measurements are used to make the crime data more meaningful: *crime index and crime rate*. These are discussed below.

CRIME INDEX

The crime index has been used nationwide for many years as a standard for comparing the amount and extent of serious crime. It is the total number of the actual seven major crimes reported.

The index includes seven crimes divided into two groups, crimes against persons and crimes against property. The sub-classification allows comparison and contrast of the groups. The Montana Uniform Crime Reporting System defines these crimes as follows:

Crimes Against Persons

Homicide—The willful killing of one human being by another.

Rape—The carnal knowledge of a female forcibly and against her will and all attempts to commit forcible rape.

Robbery—The taking or attempting to take anything of value from the care, custody or control of a person or persons by force or threat of force or violence and/or by putting the victim in fear.

Aggravated Assault—An unlawful attack by one person upon another for the purpose of inflicting severe or aggravated bodily injury. This type of assault usually is accompanied by the use of a weapon or by means likely to produce death or great bodily harm.

Crimes Against Property

Burglary—The unlawful entry of a structure to commit a felony or a theft.

Larceny/Theft—The unlawful taking, carrying, leading, or riding away of property from the possession or constructive possession of another.

Motor Vehicle Theft—The theft or attempted theft of a motor vehicle.

These seven crimes are recognized as the most serious crimes in our society and the most likely to be reported to law enforcement.

The crime index is only an indication of the amount and type of crime occurring in a jurisdiction. It is not an absolute measure. If multiple crimes were committed during an incident and reported, only the most serious is recorded in the index.

CRIME RATE

One of the most commonly used statistical measurements is the crime rate, which calculates the number of incidents which occur for every 100,000 residents. The crime rate is useful in comparing the amount of crime in two areas with unequal populations.

The crime rate is calculated by dividing the total number of index crimes (the seven major index crimes) by the population or estimated population and multiplying the answer by 100,000 as follows:

$$\frac{\text{Number of Crimes}}{\text{Population of Law Enforcement Jurisdiction}} \times 100,000 = \text{Crime Rate}$$

SECTION TWO

**CRIME
SUMMARY**

STATE SUMMARY OF OFFENSES

The 1981 state summary of offenses known to the police is given on the following page. This summary presents a breakdown of the numbers of offenses reported to police, unfounded or baseless offenses reported, actual offenses, and offenses cleared by arrest. The column "Cleared by Arrest" gives the total numbers of offenses, adult and juvenile, cleared by arrest. The "Cleared by Arrest Under 18" presents only juvenile arrests. The "Percent of Actual Offenses Cleared by Arrest" is the percent of total offenses, adult and juvenile, cleared by arrest.

**1981
STATE SUMMARY OF
OFFENSES KNOWN TO THE POLICE**

*Indicates sub-categories of offense.

**1981 — CRIME RATE
SEVEN MAJOR INDEX CRIMES**

According to the F.B.I. and Bureau of the Census, Montana's estimated 1981 population is 792,000. This is the figure on which the crime rates are based in the following illustration.

CRIMES AGAINST PERSONS			CRIMES AGAINST PROPERTY		
Index Offenses	Number of Actual Offenses	Rate Per 100,000 Population	Index Offenses	Number of Actual Offenses	Rate Per 100,000 Population
Homicide	40	5.1	Burglary	7,144	902.0
Rape	186	23.5	Larceny/		
Robbery	280	35.4	Theft	24,945	3,149.6
Assault	1,315	166.0	Motor Veh.		
			Theft	1,962	247.7
Total	1,821	229.9	Total	34,051	4,299.4
			GRAND TOTAL	35,872	4,529.3

Comparison of the amount of crime and estimated population for the state shows a crime rate of 4529.3. This means that 4529 out of every 100,000 Montanas were victims of a major crime — or more simply there were:

- 4529.3 crimes per 100,000 persons
- 453.0 crimes per 10,000 persons
- 45.0 crimes per 1,000 persons
- 4.5 crimes per 100 persons

Out of every 100 Montanans, 4.5 were victims of an index crime in 1981. In 1980, the level of victimization was 4.7 per 100 persons.

CRIME INCIDENCE COMPARISON

A comparison of the total number of crimes reported in 1981 to those reported in 1980 provides a measure of the fluctuation in criminal activity.

The number of index crimes decreased this year. The total of 35,872 index crimes in 1981 is 919 lower than the 36,791 index crimes reported in 1980. A comparison of total crime between 1980 and 1981 is shown in the following illustration. The percentage of change from 1980 to 1981 is shown in the column at the right.

CRIME INCIDENCE COMPARISON 1980-1981				
Offense	1980	1981	Percent Change	
Homicide	30	40	+33.3	
Rape	166	186	+12.0	
Robbery	257	280	+ 8.9	
Aggravated Assault	1,243	1,315	+ 5.8	
Total Offenses Against Persons	1,696	1,821	+ 7.4	
Burglary	7,027	7,144	+ 1.7	
Larceny/Theft	25,749	24,945	- 3.1	
Motor Vehicle Theft	2,319	1,962	- 15.4	
Total Offenses Against Property	35,095	34,051	- 3.0	
Total 7 Major Offenses	36,791	35,872	- 2.5	
Negligent Manslaughter	8	9	+12.5	
Other Assaults	2,628	2,707	+ 3.0	
Arson	182	186	+ 2.2	
Forgery and Counterfeiting	572	639	+11.7	
Fraud	2,042	1,721	- 15.7	
Embezzlement	12	11	- 8.3	
Stolen Property	171	189	+10.5	
Vandalism	11,973	10,837	- 9.5	
Weapons	222	313	+41.0	
Prostitution	29	36	+24.1	
Sex Offenses	406	745	+83.5	
Drugs	917	963	+ 5.0	
Gambling	28	35	+25.0	
Offenses Against Family	640	510	- 20.3	
Total Other Offenses	19,830	18,901	- 4.7	
GRAND TOTAL	56,621	54,773	- 3.3	

The overall incidence of crime decreased 3.3 percent for all crimes between 1980 and 1981 for a total decrease of 1,848 offenses.

The seven major offenses showed a 2.5 percent decrease overall. Total offenses against persons increased 7.4 percent, from 1,696 to 1,821 offenses. This increase was offset by a 3.0 percent decrease in total offenses against property from 35,095 to 34,051 offenses.

Part II crimes decreased in 1981 by 4.7 percent overall, from 19,830 to 18,901 offenses.

This decrease can be attributed to percentage decreases in offenses with high crime indices. High percentage decreases occurred in three offense categories. Offenses against the family decreased 20.3%, fraud decreased 15.7%, and vandalism decreased 9.5%.

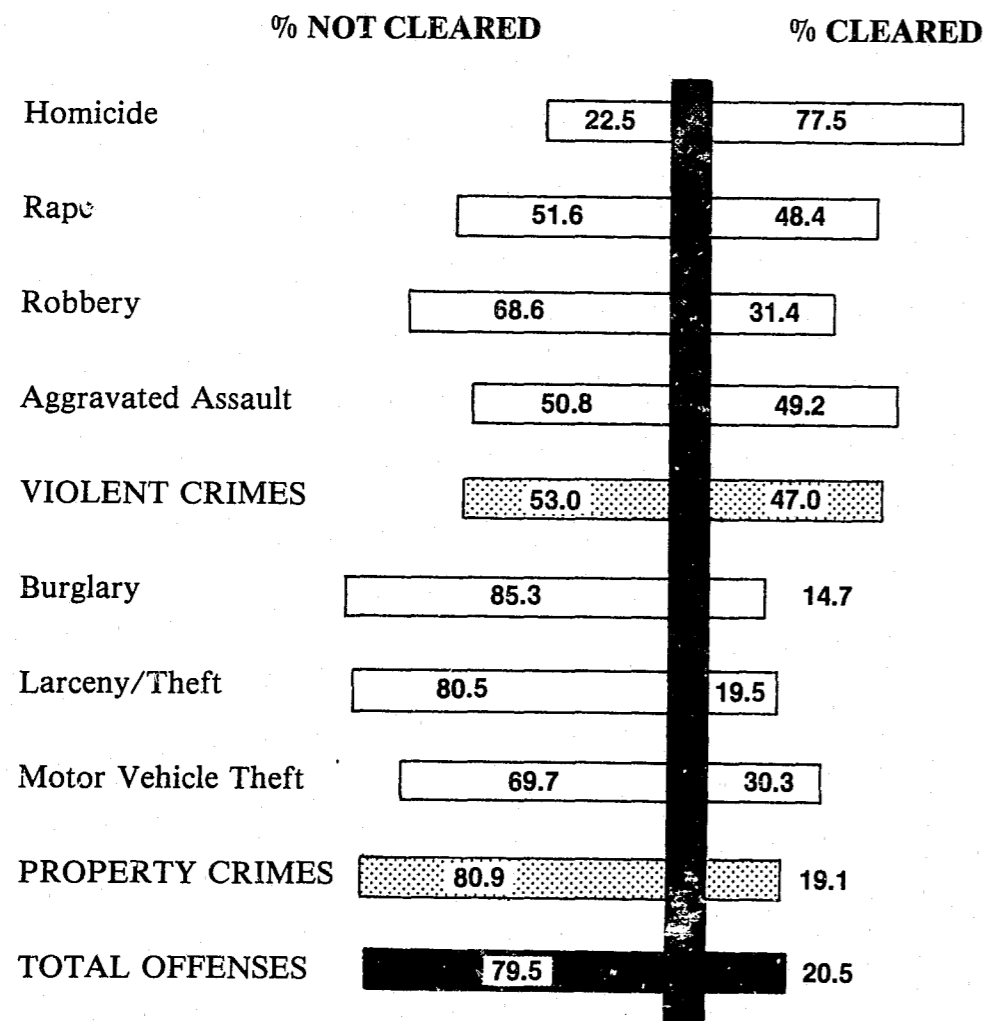

High percentage increases occurred in four offense categories. However, these offenses had relatively low crime indices. Sex offenses increased 83.5%, weapons offenses increased 41.0%, gambling offenses increased 25.0%, and prostitution increased 24.1%.

CLEARANCES

An offense is considered cleared when a law enforcement agency has identified the offender, gathered sufficient evidence, and filed a charge. The arrest of one person can clear several crimes or conversely, several persons may be arrested in the process of clearing one crime.

The following illustration shows the percentage of actual offenses cleared by arrest. Note that property crimes — burglary, larceny/theft and motor vehicle theft — have the lowest percentages of clearance, while violent crimes or crimes against persons have the highest percentages of clearance.

CRIME INDEX PROFILE

The circle below shows the proportion of each index crime to the total of all index crimes committed in Montana in 1981.

The three property crimes, burglary, larceny/theft and motor vehicle theft, accounted for 94.9 percent of all index crimes. The violent crimes, homicide, rape, robbery, and aggravated assault, accounted for 5.1 percent of the index crimes.

**1981 -
CRIME INDEX PROFILE**

CRIME AND POPULATION GROWTH TRENDS

In order to demonstrate the crime and the population growth trends over a period of years, percentage changes were calculated using 1973 as the base year. This was the year in which the Criminal Justice Data Center in Montana began collecting data on both arrests and offenses. This is similar to the current Montana Uniform Crime Reporting system.

Montana recorded 24,581 index crimes in 1973 with a crime rate of 3409.3 per 100,000 and a population of 721,000. By 1981, the number of index crimes had risen to 35,872 with a crime rate of 4529.3 and a population of 792,000. These figures represent a 45.9 percent increase in the crime index, a 32.9 percent increase in the crime rate, and a 9.8 percent increase in population.

The graph below shows that both the crime index and crime rate rose sharply between 1973 and 1975, dropped in 1978, then peaked in 1980. During this time period the state population showed a steady, but slight, increase.

**CRIME INDEX, CRIME RATE, AND POPULATION
(By Percent Change From 1973)**

CRIME PROJECTION

The number of recorded index offenses in Montana increased from 24,581 in 1973 to 35,872 in 1981. This change indicates a 45.9 percent increase. Much of this increase can be attributed to better and more sophisticated reporting methods by the law enforcement agencies. In addition, the increased population has an influence on the number of crimes.

The illustration on the following page shows the trend increases and decreases in crime from 1973 as well as projections to 1986 based on previous years.

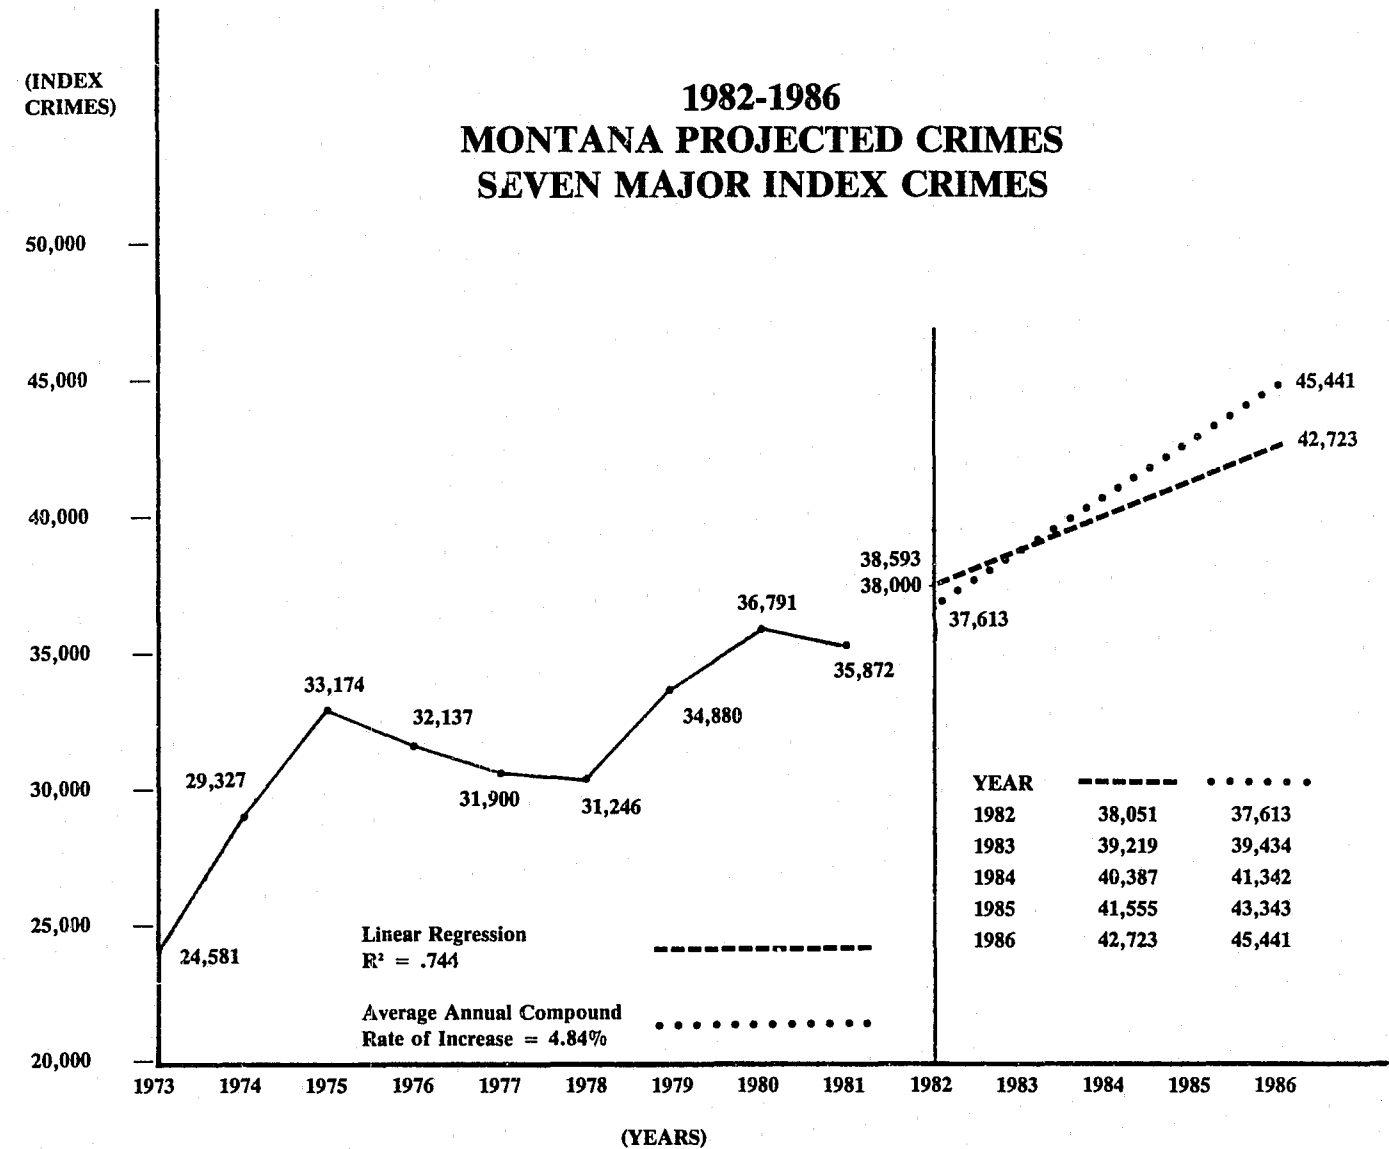

Two linear methods were used in developing the crime projections. The first, linear least squares regression, plots on the illustration the number of crimes for the nine-year period including 1973 to 1981. Using the regression formula, $y = a + bx$, a line is then projected from 1973 to 1986. By this method, the number of crimes is projected to be 42,723 in 1986.

The second method, average annual compound rate of increase, projects the 1982 to 1986 crime rate using a compound annual rate of increase of 4.84 percent. This technique projects the 1986 crime rate to be 45,441.

A summary of the two projection methods is shown as follows:

Projection Method	Projected Crimes				
	1982	1983	1984	1985	1986
Linear Regression	38,051	39,219	40,387	41,555	42,723
Average Annual Compound Rate of Increase	37,613	39,434	41,342	43,343	45,441

It is important to note that the projections are not point estimations but rather trend estimates. Thus, using linear techniques, it is predictable that Montana can anticipate the number of crimes in 1986 to be between 42,723 and 45,441 if present trends continue.

The F.B.I. publication, *Crime in the United States*, ranked the estimated crime rates of the fifty states for 1981. Using a partial year's data, the F.B.I. estimated Montana's crime rate at 5018.9. Although this is higher than the crime rate of 4529.3 figured using a full year's data, the following table shows where Montana fell in relation to other states when comparing 1981 estimated crime rates.

**1981
ESTIMATED CRIME RATE OF EACH STATE
BY RANK FROM LOWEST TO HIGHEST**

Rank	State	Crime Rate*	Rank	State	Crime Rate*
1.	West Virginia	2618.7	26.	Missouri	5351.4

THE UNITED STATES AND MONTANA COMPARISONS

Comparison of the crime rate for the nation and this state shows Montana had a crime rate of 4,529.3 per 100,000 population while the United States crime rate was 5,799.9. This indicates that Montana had a lower crime rate than the national average.

A comparison of the percentage change in the crime index from 1980 to 1981 provides a measure of fluctuation in criminal activity. The number of index crimes decreased 2.5 percent in Montana in 1981. This exceeded the national rate of decrease of 1.7 percent.

**1981
OFFENSE SUMMARY**

- * Crimes against property accounted for 94.9 percent of all reported index offenses.
- * Crimes against persons accounted for 5.1 percent of all reported index offenses.
- * An index crime occurred every 14 minutes with a property crime occurring every 15 minutes. A violent crime occurred every 5 hours.
- * From 1973 through 1981, the number of crimes increased 45.9 percent while the estimated population increased only 9.8 percent.
- * Crime rates relate the incidence of crime to population. The crime rate can be considered a victim risk rate because it demonstrates the risk of becoming a crime victim. Thus, of every 100 Montanans, 4.5 were victims of an index crime and 6.9 of every 100 were victims of either an index crime or a serious crime.
- * Of the 35,872 actual major offenses, 20.5 percent were cleared, either by arrest or exceptional means.

SECTION THREE

MONTANA CRIMES REPORTED BY CONTRIBUTOR

The 1981 crime rate for each county in Montana is listed below. Eight counties were above the statewide average of 4,529.3 crimes reported per 100,000 of population. These eight counties contained 45.3 percent of the total state population and were the scene of 65.0 percent of the reported index crimes.

The eight counties are not a contiguous geographical high-crime area, nor do they all represent high population areas. Of the eight, the first four counties correspond to the high population areas of the state. The other four, Roosevelt, Broadwater, Lincoln, and Hill are moderate to low population areas. In areas of relatively low population any fluctuation in the number of crimes creates a major impact on the crime rate.

**CRIME RATE BY COUNTY
1981 Ranking**

Rank	County	Crime Rate	Rank	County	Crime Rate
1.	Cascade	7723.4	26.	Granite	2603.6
2.	Missoula	7133.1	27.	Jefferson	2509.1
3.	Lewis & Clark	6493.8	28.	Toole	2463.7
4.	Yellowstone	5921.1	29.	Ravalli	2437.7
5.	Roosevelt	5129.9	30.	Blaine	2400.1
6.	Broadwater	4990.9	31.	Rosebud	2376.7
7.	Lincoln	4636.3	32.	Phillips	2210.8
8.	Hill	4623.0	33.	Musselshell	2055.4
STATE TOTAL		4529.3	34.	Carbon	1953.8
9.	Flathead	4506.5	35.	Glacier	1909.9
10.	Richland	4504.0	36.	McCone	1822.8

25.	Lake	2609.5	51.	Daniels	279.3

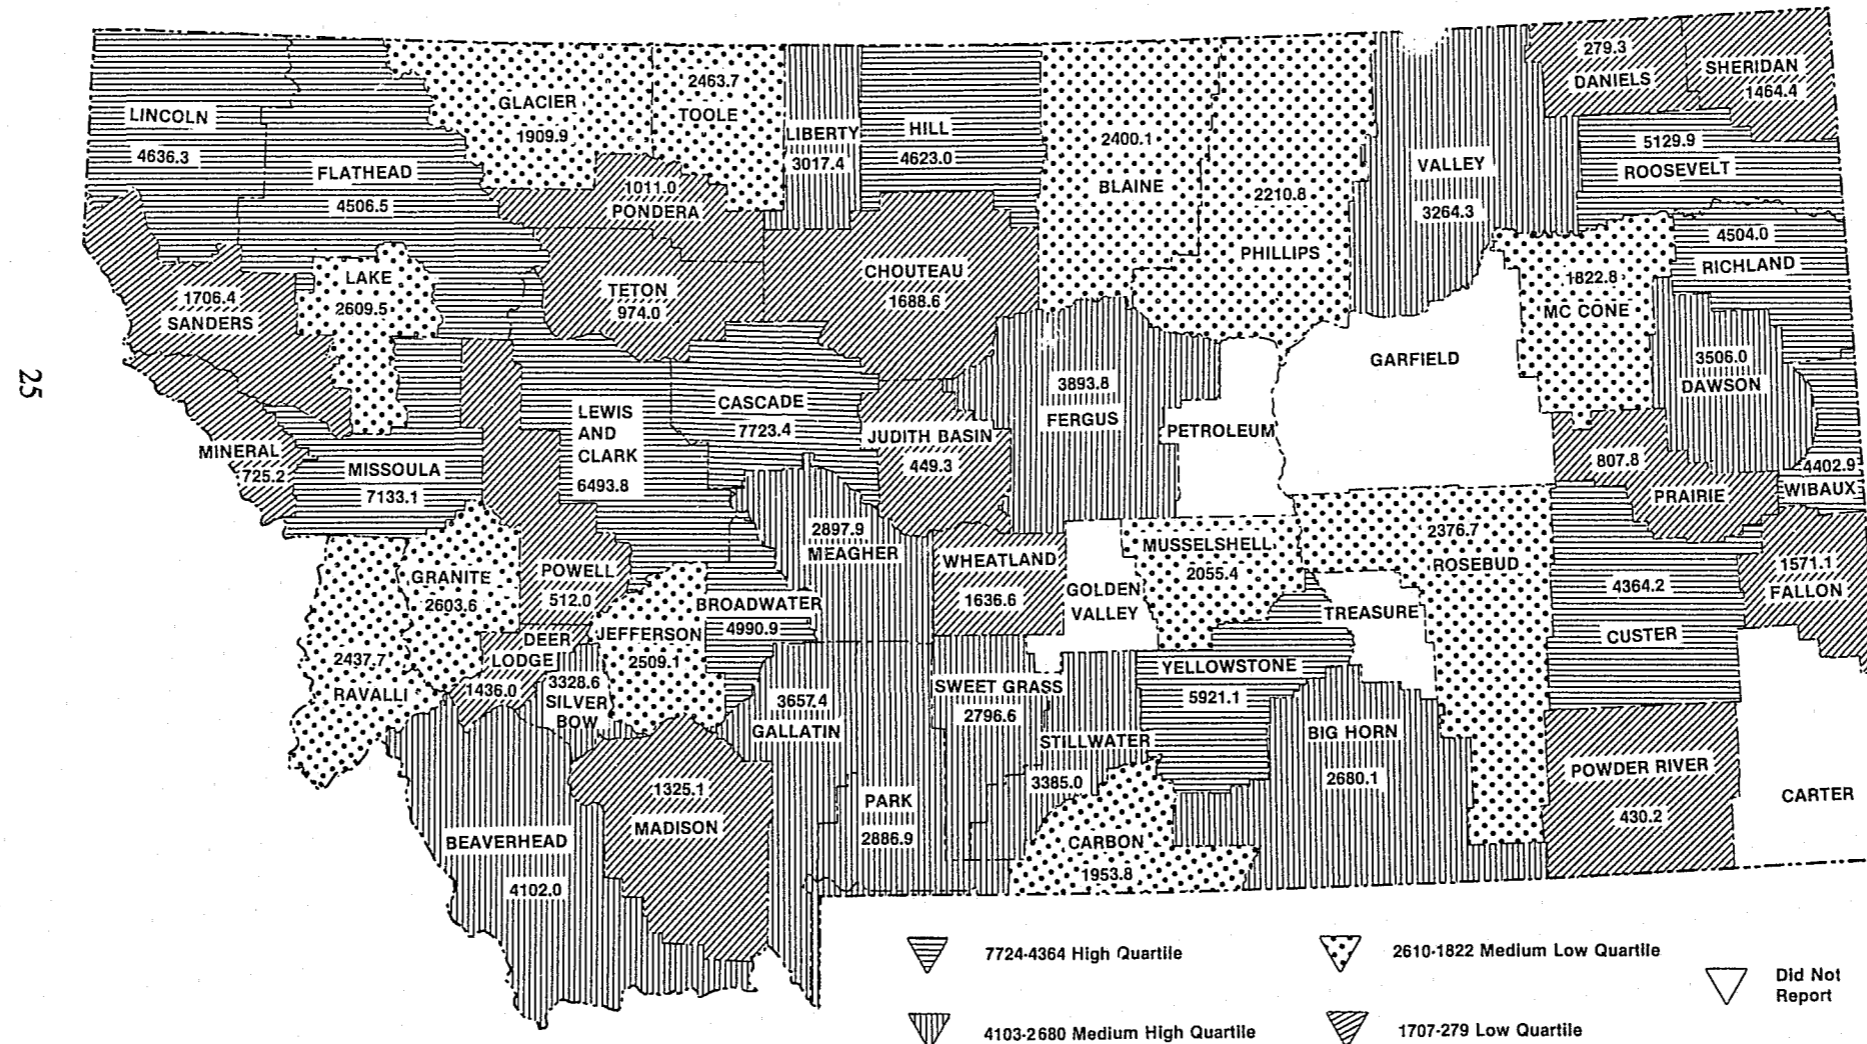

Carter, Garfield, Golden Valley, Petroleum, and Treasure Counties did not report.

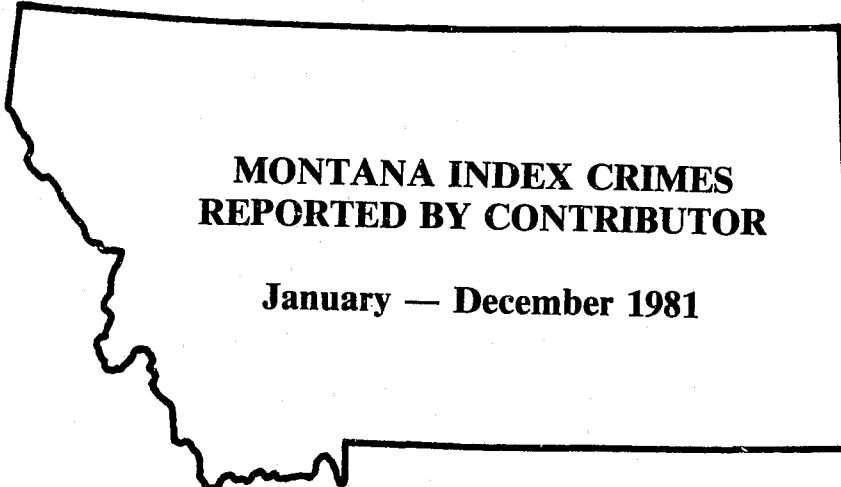

MONTANA — 1981 CRIME RATE PER 100,000 POPULATION (BY QUARTILE)

The map below shows a breakdown, by quartile, for each county's 1981 crime rate. The high quartile counties had crime rates below 7,724 but above 4,364. Medium high quartile counties had crime rates below 4,103 but above 2,680. Medium low

quartile county crime rates were between 2,610 and 1,822. The low quartile county crime rates fell between 1,707 and 279. Five counties did not report.

**MONTANA INDEX CRIMES
REPORTED BY CONTRIBUTOR**

January — December 1981

This section is a summary of offenses reported to each law enforcement agency. Several crime rates may appear to be extreme for some jurisdictions; however, this is because in communities with low populations, any fluctuation in the number of crimes creates a major impact on the crime rate.

The population figures for each jurisdiction are provided by the Federal Bureau of Investigation through the Bureau of Census.

1. A — Submitted Annually.
2. DID NOT REPORT means the agency did not report any data for the year.
3. The crime rate per 100,000 is given for each agency as if a full 12 months of data had been submitted.
4. The 1981 population data were obtained from the FBI-UCR program and the Bureau of Indian Affairs. FBI data were based on preliminary Bureau of the Census estimates.
5. The crime rate per 100,000 of 4529.3 for the state total is based upon the total state population of 792,000. If the crime rate is figured only for the population of those agencies reporting, the crime rate is 4584.5 for a population of 782,468.
6. Some cities are not indicated as their crime reports are submitted through the county sheriff's office.
