PREFACE

This preliminary report presents a summary of the data collected for An Evaluation of Criminal Justice Information Agencies. The information was gathered through a combined telephone and mail survey of more than 300 agencies, in every state and the District of Columbia, that use or maintain data on corrections, courts, juvenile justice, and law enforcement. Not all agencies had responded at the time of this writing. As a result, only partial summaries are available for some states. Therefore, information presented in this report will be updated in the final report.

The preliminary report comprises summaries of data availability, data access, the role of the Statistical Analysis Center (SAC), the source of formal agency authorization to analyze and report on justice information and statistics, and the capabilities to use and process data.

By design, the narratives are brief, and only very broad interstate comparisons are implied. The narratives are followed by supplemental tables and figures. More in-depth discussions and analyses, plus more extensive data tables, are planned for the final report. The final report is designed as a companion piece to the state profiles.

Each state profile has six sections, one series of tables, and two figures. The content of each of these items is discussed below.

GENERAL CHARACTERISTICS

Criminal justice data (corrections, courts, juvenile justice, and/or law enforcement) used by each responding agency are named, and nonresponses are reported. Also highlighted are any outstanding characteristics of the state criminal justice information system.

DATA AVAILABILITY

Operational and planned information systems, the extent of computerization, and the comprehensiveness of available data is summarized.

Preceding page blank

DATA ACCESS

The accessibility of data maintained by each respondent agency to other local, state, and Federal agencies is summarized. Access by the Federal Bureau of Investigation, the Bureau of Prisons, the Law Enforcement Assistance Administration, the US Attorney's Office, and the Bureau of Alcohol, Tobacco, and Firearms is discussed. The local and state agencies referenced in this section are not the specific respondent agencies, but generic agency types (local criminal justice agencies, local non-criminal justice agencies, police, courts, and corrections). Particular attention is paid to security and privacy as a restraint on data accessibility.

STATISTICAL ANALYSIS CENTER (SAC) PROFILE

The SAC role in the availability and analysis of data is examined along with a general discussion of the SAC characteristics (location, funding, and length of time in operation).

AUTHORIZATION FOR STATISTICAL REPORTING

Formal authorization to report on justice information and statistics and the basis for this authorization are stated.

CAPABILITIES TO USE AND PROCESS DATA

Each agency's ability to process and analyze the data it uses is presented. Included are an examination of the availability of computers, programmers, statisticians, and data analysts and a discussion on whether each respondent agency produces statistical summaries or analytical reports on a regular basis.

TABLES SHOWING THE AVAILABILITY OF DATA TYPES

The availability and original source of specific types of data in corrections, courts, juvenile justice, and law enforcement are tabulated. The graphic arrangement of the tables makes it easy to compare the availability of different areas of data within states and particular types of data across states.

The data are classified as operational (case data used in daily operations) or statistical (aggregate data used in statistical summaries and analyses). This distinction is made because the availability of statistical data facilitates comparisons of the effectiveness of alternative programs.

These tables display only the data types reported to be available by each agency. Some additional data of which the particular respondent was not aware may be available in each agency. The availability of data will be supplemented in the final report after questionnaires not yet returned are received.

FIGURES SHOWING DATA TRANSFERS AMONG AGENCIES

These figures graphically summarize which agencies use and/or maintain data in different areas of criminal justice. In addition, the exchange of data among agencies is illustrated. The role of the SAC in data transfers and service transfers is highlighted by placing the SAC in the center of the diagram. This illustrates whether the SAC relationship with other agencies is dependent, interdependent, or coordinative.

FIGURES SHOWING SERVICE TRANSFERS AMONG AGENCIES

These figures illustrate the types of technical assistance services that are exchanged between agencies and the level of these service transfers.

ACRONYMS

The following acronyms are used throughout the state profiles.

CCH	Computerized Criminal History
CDS	Comprehensive Data System
CJC	Criminal Justice Council
CJIS	Criminal Justice Information System
LEAA	Law Enforcement Assistance Administration
MIS	Management Information System
OBSCIS	Offender-Based State Corrections Information System
OBTS	Offender-Based Transaction Statistics
PROMIS	Prosecutor Management Information System
SAC	Statistical Analysis Center
SJIS	State Judicial Information System
SPA	State Planning Agency
UCR	Uniform Crime Reporting

ALABAMA

GENERAL CHARACTERISTICS: The primary data users are listed below.

- Statistical Analysis Center - SAC (corrections, courts, law enforcement)
- Criminal Justice Information Center (corrections, courts, law enforcement)
- Board of Pardons and Paroles (corrections, law enforcement)
- Office of Prosecution Services (courts, law enforcement)
- Administrative Office of the Courts (courts)
- Department of Youth Services (juvenile justice)
- Board of Corrections (has not yet responded to questionnaire)

DATA AVAILABILITY: A reply to the questionnaire has not yet been received from Corrections. Partial returns indicate data in all areas are computerized.

State information systems vary by level of implementation. An Offender-Based State Corrections Information System (OBSCIS) and a Computerized Criminal History (CCH) system are operational. A Prosecutor Management Information System (PROMIS) and a State Judicial Information System (SJIS) are being developed.

The Courts reports the existence of a caseload reporting system which contains aggregate data on filings and dispositions by court and by jurisdiction. However, the court information system is incomplete and requires validation prior to implementation.

Although a response from Corrections is outstanding, respondent agencies indicate comprehensive data are maintained on corrections and law enforcement.

It is difficult to describe the availability of courts data since Prosecution Services and the Information Center did not report the specific types of data which they maintain.

DATA ACCESS: Pardons and Parole, the Information Center, and the SAC list security and privacy as factors limiting other agencies' access to their data. Historical precedent is also cited by Pardons and Parole for restricting agency access.

Law enforcement data maintained by the Information Center and the SAC are available on an unlimited basis to all agencies except local non-criminal justice agencies which may use published data only. The Information Center also restricts the State Planning Agency (SPA) and the Law Enforcement Assistance Administration (LEAA) to selected files.

Before any information retained by the Courts can be disseminated, it must be validated. All agencies except local non-criminal justice agencies, which may use edited files, have no access to these data.

Youth Services reports any agency but local criminal justice agencies and the state courts may access edited files. The courts are granted unlimited access to data while local criminal justice agencies may utilize selected files.

Prosecution Services did not respond to these questions.

SAC PROFILE: For over 5 years the SAC has been located in the Criminal Justice Council (CJC) and its currently state supported. It is authorized under legislation specific to the CJC with reference to SAC.

The SAC describes its function as coordinative. It completes projects for agencies which have neither the staff nor capabilities to do so themselves.

AUTHORIZATION FOR STATISTICAL REPORTING: All agencies but Prosecution Services are legislatively authorized to report on information and statistics. The Information Center is charged with collecting, analyzing, maintaining, and disseminating criminal data to other state agencies and the Federal Government.

CAPABILITIES TO USE AND PROCESS DATA: Only Prosecution Services does not utilize a computer in its data processing activities. The Courts, Pardon and Parole, and the Information Center maintain their own computers. All but the latter also have access to a second system. The SAC and Youth Services utilize the computer facilities of another agency.

All agencies have access to programming staff. Only the Courts and the Information Center (which also maintains a staff of three to five statisticians) maintain their own staffs of programmers.

Shortage of computer support staff appears to be a serious problem. The SAC, Youth Services, and Pardons and Parole all cite this factor as contributing to the inadequacy of computer services.

Prosecution Services is the only agency which provides no statistical or analytical reports to other agencies.

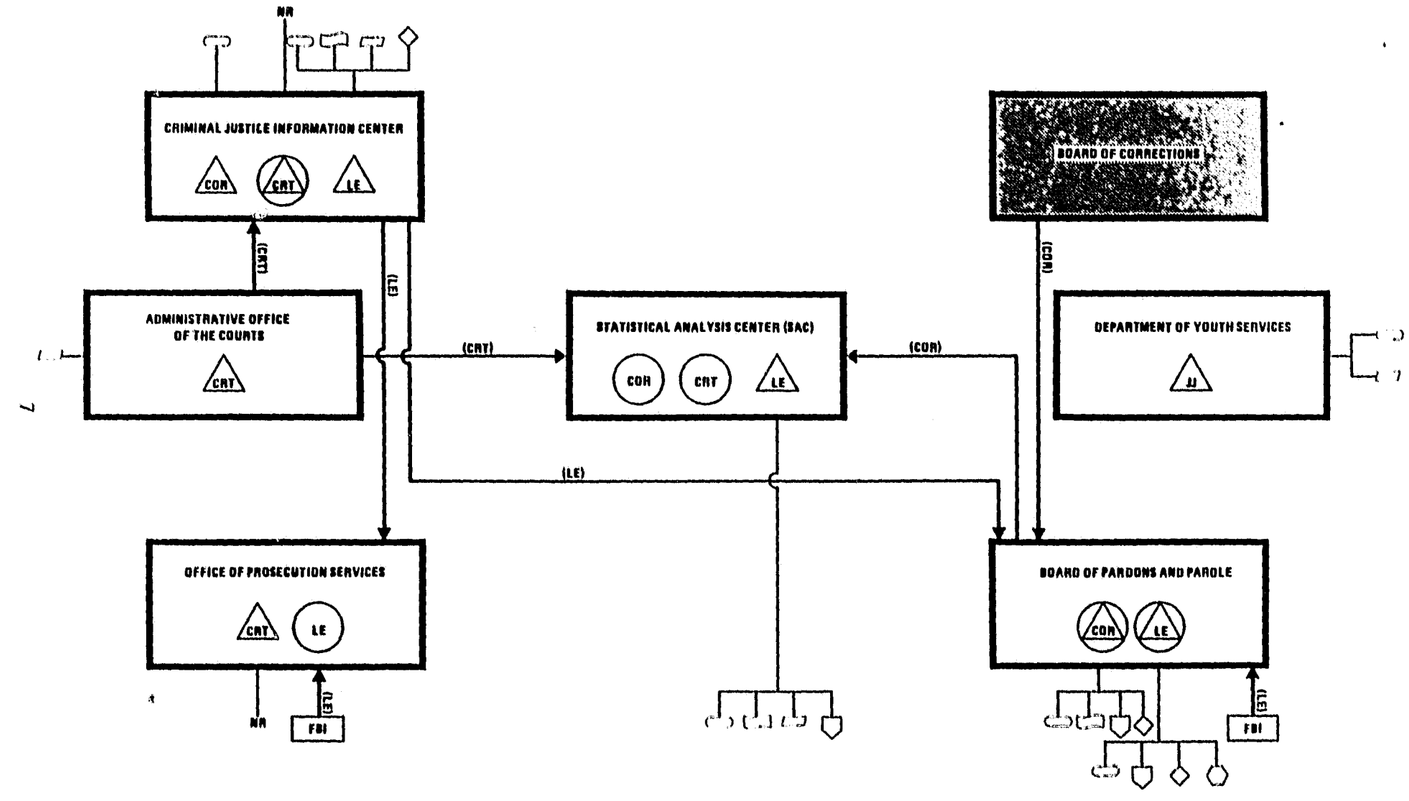
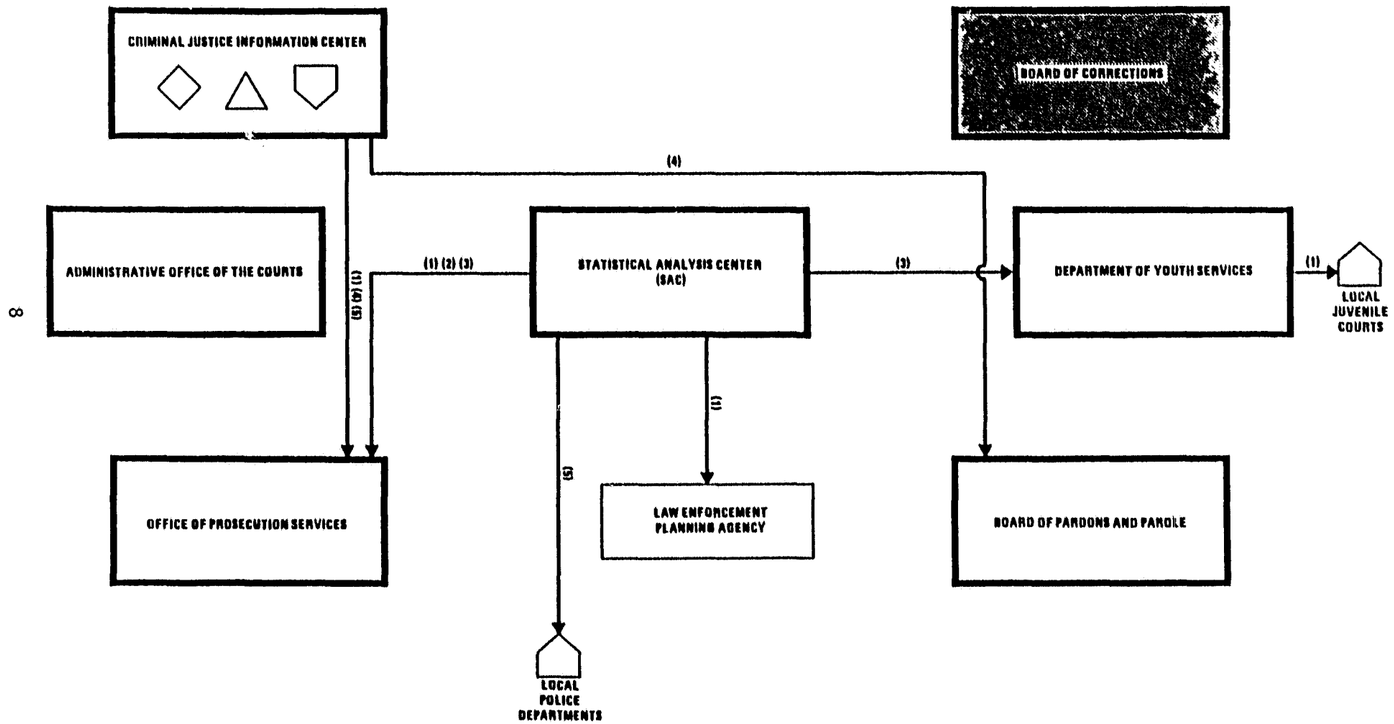
DATA TRANSFERS AMONG AGENCIES



SEE APPENDIX A FOR EXPLANATION OF FIGURES

<u>ALABAMA</u>

SERVICE TRANSFERS AMONG AGENCIES



SEE APPENDIX B FOR EXPLANATION OF FIGURES

ALASKA

GENERAL CHARACTERISTICS: The primary data users are listed below.

- Criminal Justice Planning Agency - SAC (corrections, courts, juvenile justice, law enforcement)
- Judicial Council (corrections, courts, law enforcement)
- Court System (courts, juvenile justice)
- Department of Health and Social Services - Division of Corrections (corrections, juvenile justice)
- Department of Law - Criminal Division (law enforcement)
- Department of Public Safety (law enforcement)

Data processing services of the Department of Administration (Division of Data Processing) are utilized by several agencies.

As of December 1, 1980, the Division of Youth Corrections and the Division of Social Services were merged into a Division of Family and Youth Services within the Department of Health and Social Services. The reorganization attempted to concentrate all juvenile justice information in one division.

DATA AVAILABILITY: Computerized data are maintained for corrections, courts, juvenile justice, and law enforcement.

Both a PROMIS and an Offender-Based Transaction Statistics (OBTS) system are being planned. OBSCIS is being developed. Public Safety reports all agencies which are part of AJIS (Alaska Justice Information System) have on-line access to data maintained by Public Safety.

Other than courts information, the data maintained are comprehensive. The only operational-level courts data available from the Court are management and administration (personnel and budget) and jury information.

DATA ACCESS: Security and privacy are cited by Public Safety and the Judicial Council as considerations for limiting the access of other agencies to their data.

All agencies except local non-criminal justice agencies, the SPA, and LEAA are permitted to use selected operational files of Public Safety. The three restricted agencies may use edited files only.

The Judicial Council allows all state and local agencies, except the state court which is granted unlimited access, use of published data only. Access granted to Federal agencies is discretionary and depends upon individual circumstances.

Unlimited access is permitted to all agencies by the Planning Agency for its juvenile justice and law enforcement files.

Only local non-criminal justice agencies are denied unlimited access to the corrections data of Corrections. No reason is given for restricting the access of the non-criminal justice agencies.

According to statute, no agency is permitted to use the juvenile justice data of the Court. For its court data, the Court limits the access of all agencies but the State Police to published data. The State Police are allowed to use edited data files.

No data are maintained by Law.

SAC PROFILE: The SAC has been in existence for over 2 years. It is funded under the Comprehensive Data System (CDS) program, LEAA discretionary funds, and state funds. The SAC is located in the CJC and exists under legislation specific to the CJC.

There is an interdependent relationship between the SAC and other state agencies. It is dependent on the Court for its courts data and Corrections for its corrections data. The SAC also maintains some of its own data and disseminates various information to other agencies. Corrections reports receiving assistance in data collection, data processing, and general technical assistance from the SAC. Statistical services are provided to the Judicial Council by the SAC. The Council considers the SAC to be in its early stages of development and considering this fact, reports the services are very good.

The SAC reports its workload is increasing with no corresponding increase in staff.

AUTHORIZATION FOR STATISTICAL REPORTING: All agencies but Law and the Court are authorized to report on criminal justice information and statistics. The Judicial Council is authorized under state constitution to conduct studies and make recommendations regarding justice. Its power is broad since it can initiate studies on a wide range of issues. Both Public Safety and the SAC are legislatively authorized. Public Safety is required to manage AJIS. Corrections responded "don't know" to the basis of its authorization.

CAPABILITIES TO USE AND PROCESS DATA: All agencies except Law use a computer to process data. Only Public Safety and the Judicial Council do not maintain their own systems. Each uses the facilities of another agency (Department of Administration) and has its own staff of statisticians/analysts. Public Safety reports it needs additional staff and computer services. The SAC and the Court utilize their own computer operationally and statistically and also use the facilities of another agency. Both agencies have a staff of programmers and statisticians. Corrections maintains its own computer, programming staff, and statisticians.

No reports are disseminated to other agencies by the Court or Law.

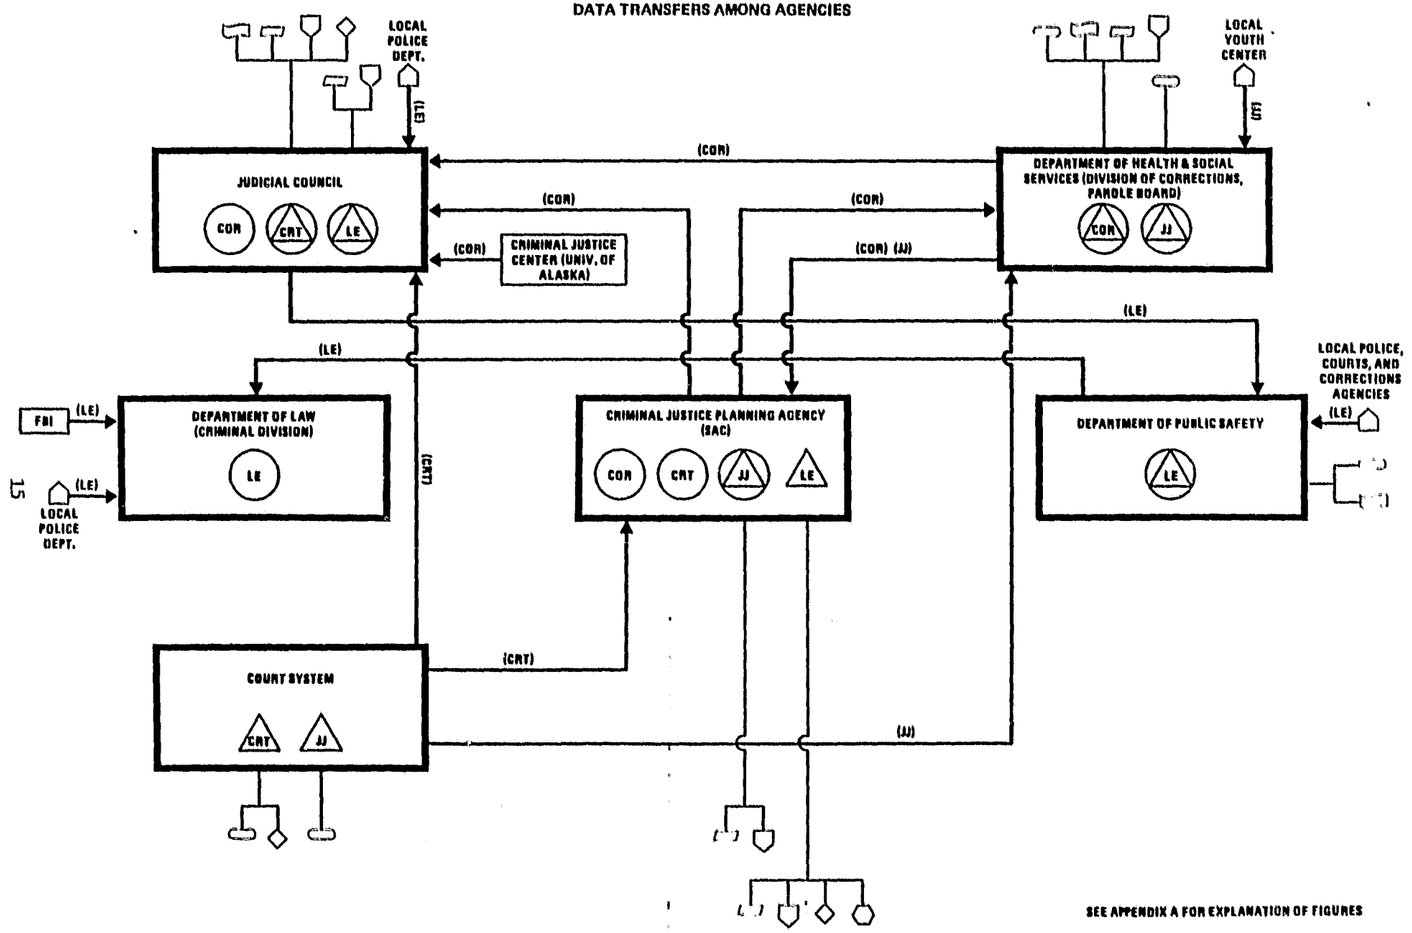
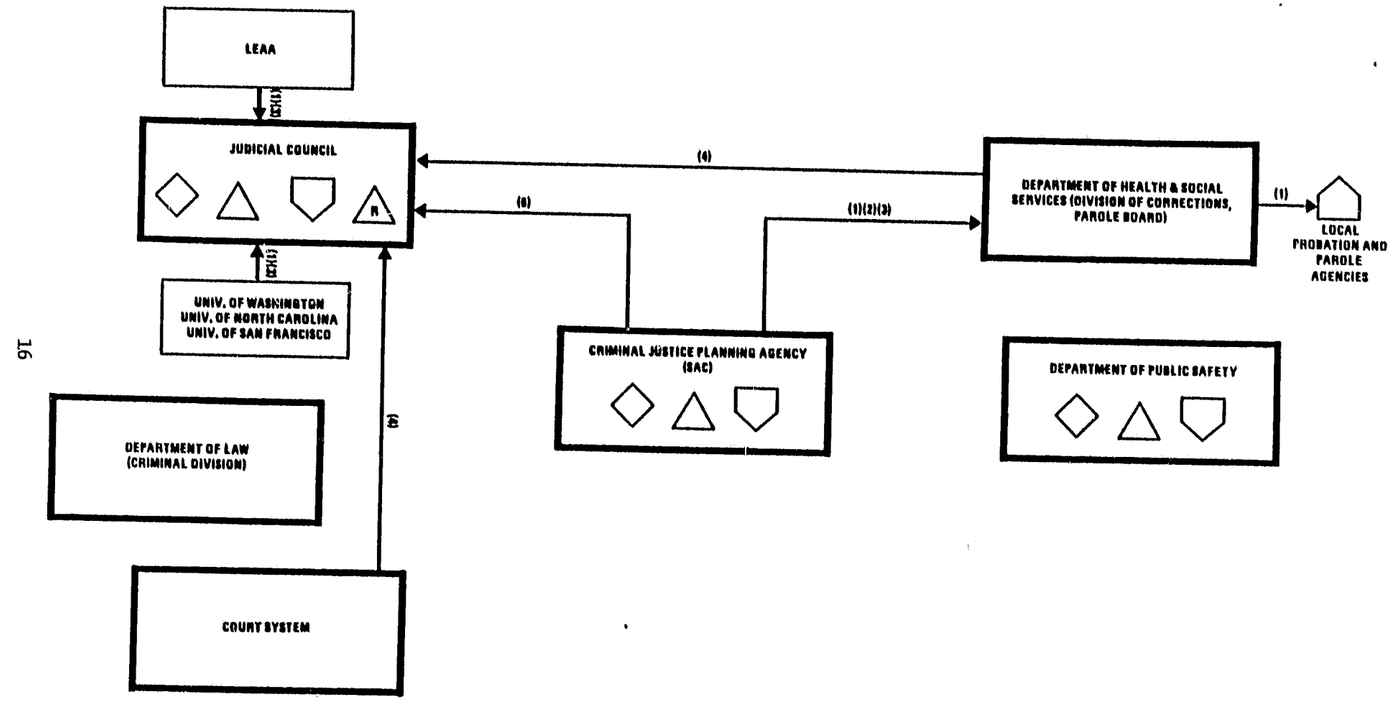
DATA TRANSFERS AMONG AGENCIES



SEE APPENDIX A FOR EXPLANATION OF FIGURES

ALASKA
SERVICE TRANSFERS AMONG AGENCIES



SEE APPENDIX B FOR EXPLANATION OF FIGURES

ARIZONA

GENERAL CHARACTERISTICS: The primary data users are listed below.

- Justice Planning Agency - SAC (corrections, juvenile justice, law enforcement)
- Joint Juvenile Justice Committee (juvenile justice, law enforcement)
- Department of Corrections (corrections, juvenile justice)
- Supreme Court (courts, juvenile justice)
- Department of Public Safety (law enforcement)

DATA AVAILABILITY: Corrections, courts, juvenile justice, and law enforcement data are computerized.

The thrust in Arizona is toward decentralized, regional information systems rather than comprehensive statewide systems. The state is divided into two regions. Each operates three information systems (a jail management subsystem, a courts, prosecutor, and defender subsystem, and a probation subsystem).

The only statewide system in operation is OBSCIS. PROMIS is being planned, but will be regional. Although Arizona withdrew from the national CCH system data base, an OBTS system is being developed. One capability of the OBTS system will be to identify offenders across systems, rather than being restricted by region.

The Juvenile Justice Committee indicates the coordination and reporting of juvenile justice information is difficult. Record keeping by juvenile justice agencies is poor, particularly in rural counties.

Public Safety serves as a clearinghouse for all criminal justice data. According to statute, all criminal justice computer sites must be linked to the facilities of Public Safety.

Complete data are available in all areas but courts and law enforcement. No agency maintains any operational-level law enforcement data. Only limited courts operational data (appellate, management and administration-personnel, and budget) are available through the Court.

DATA ACCESS: Corrections and the Juvenile Justice Committee report access to their data is limited for security and privacy reasons.

Only published data are made available to other agencies by the Juvenile Justice Committee.

The availability of Corrections' juvenile justice data varies by agency.

SAC permits unlimited use of data by all agencies but local non-criminal justice agencies. Non-criminal justice agencies are restricted to the use of published information. No reason is indicated for the restriction of use.

A mandate governs the release of data by Public Safety. All agencies but local criminal and non-criminal justice agencies and Corrections are permitted unlimited use of data.

No reason was provided by the Court for limiting the use of its data.

SAC PROFILE: The SAC has existed for over 6 years under legislation specific to the SAC. It has been located in the Judicial Planning Agency but may be relocated to Public Safety depending on LEAA refunding.

Corrections, the Juvenile Justice Committee, the Court, and Public Safety utilize various services offered by the SAC. The Juvenile Justice Committee indicates these services are excellent.

AUTHORIZATION FOR STATISTICAL REPORTING: The Supreme Court is the only respondent agency not authorized for statistical reporting. Only the Juvenile Justice Committee is not legislatively authorized. The Committee is a demonstration project established under LEAA and required by the state to conduct studies on juvenile justice.

CAPABILITIES TO USE AND PROCESS DATA: The Juvenile Justice Committee is the only agency which does not use a computer to process data.

Public Safety and the Supreme Court maintain their own systems. The latter uses its system primarily for statistical functions. On-line access to a support facility is available to Corrections, Public Safety, and the SAC. The additional facilities are used operationally and statistically by Corrections.

Corrections and the SAC maintain their own programmers and statisticians/analysts. Seven statisticians/analysts are employed by Corrections. Public Safety maintains its own staff of programmers. Private contractors provide programming services to the Supreme Court which employs no statisticians/analysts.

All agencies but the Juvenile Justice Committee prepare statistical reports for use by other agencies.

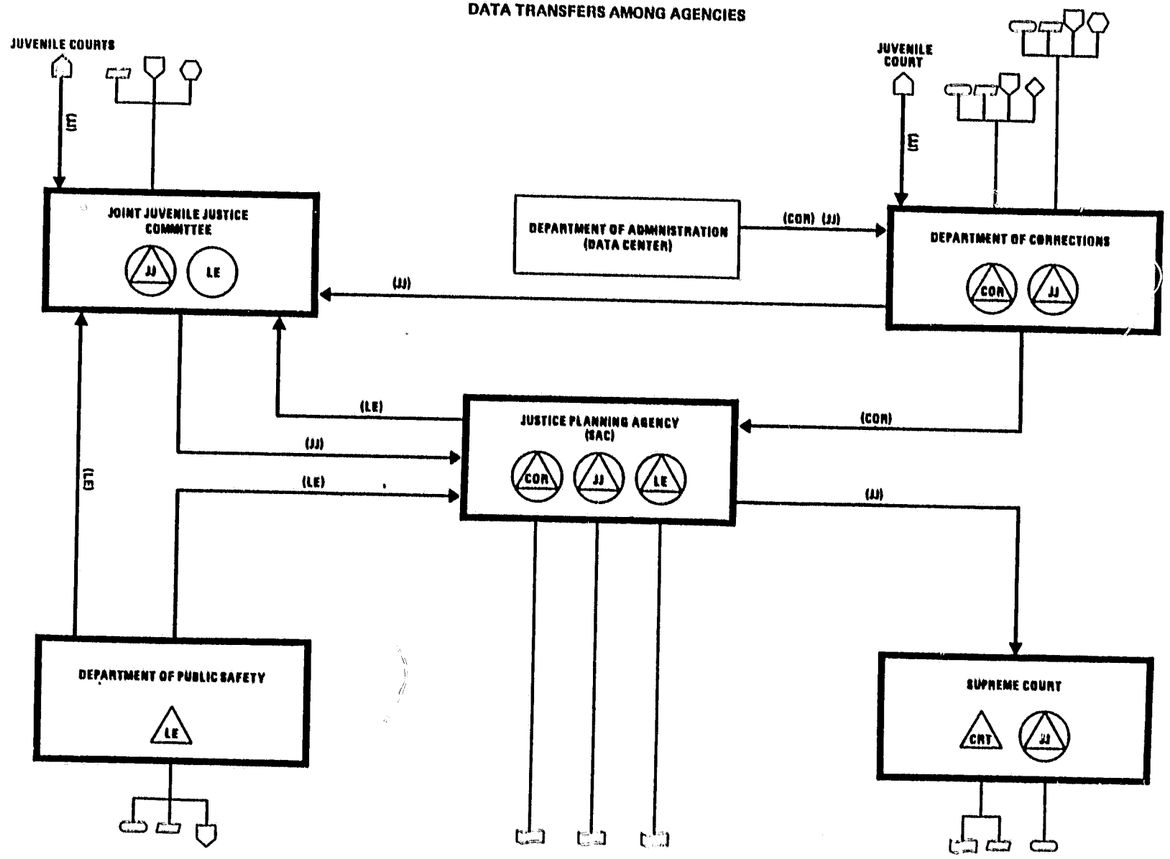
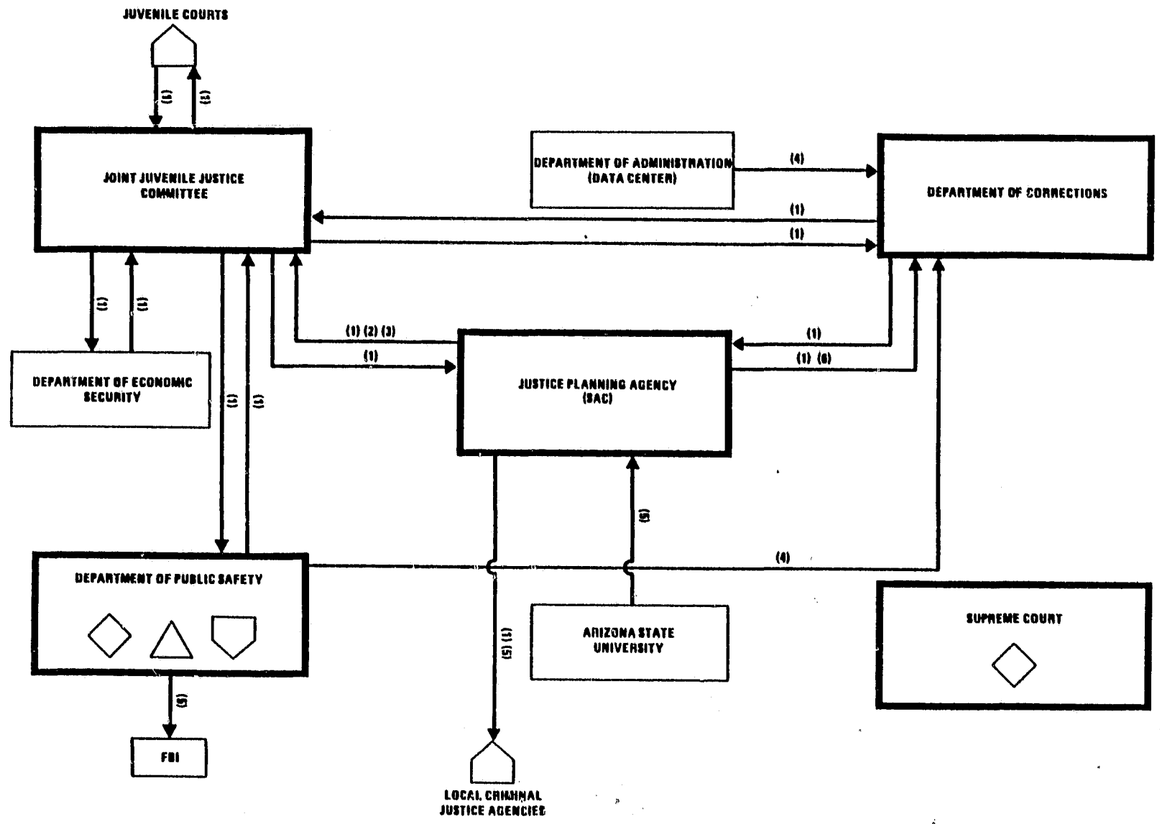
DATA TRANSFERS AMONG AGENCIES



SEE APPENDIX A FOR EXPLANATION OF FIGURES

ARIZONA

SERVICE TRANSFERS AMONG AGENCIES



SEE APPENDIX B FOR EXPLANATION OF FIGURES

ARKANSAS

GENERAL CHARACTERISTICS: The primary data users are listed below.

- Crime Information Center - SAC (corrections, courts, law enforcement)
- Department of Corrections (corrections, courts)
- Judicial Department - Supreme Court (courts)
- Division of Youth Services (has not yet responded to questionnaire)
- State Police - Criminal Identification Division (has not yet responded to questionnaire)

DATA AVAILABILITY: Responses are pending from two agencies. Data availability and the level of computerization are currently not known since the sole source of juvenile justice data (Youth Services) has not yet responded. Partial returns indicate corrections, courts, and law enforcement data are computerized.

An OBTS system is operational. SJIS is being developed.

The Corrections data (operational and statistical) maintained by respondent agencies are comprehensive.

Operational-level courts data are limited. Only appellate data (Supreme Court) and criminal detainers/warrants (Corrections) are available.

Partial data indicate no agency retains operational law enforcement information. This may change upon receipt of the State Police questionnaire.

DATA ACCESS: State and Federal security and privacy conditions limit the access of all agencies to data maintained by the SAC.

Privacy considerations also apply to the limited use of Corrections' (corrections) data by other agencies. Local non-criminal justice agencies, the SPA, LEAA, and Bureau of Prisons are permitted no data access. All other agencies except the Crime Information Center which has unlimited use of the data, may utilize edited files. For its courts data, Corrections determines whether information should be released on a case-by-case basis.

The Supreme Court grants all state agencies but local criminal and non-criminal justice agencies and the state courts the use of edited files. The courts and criminal justice agencies may access selected operational files while non-criminal justice agencies are limited to the use of published information.

SAC PROFILE: The SAC has been in existence for over 6 years and is located in the Crime Information Center. This location is not expected to change.

The source of SAC funding is state general revenue.

It exists under legislation issued by the Crime Information Center which defines SAC responsibilities.

The SAC will provide assistance to any agency upon request.

Corrections indicates it has used SAC services, particularly programming services which they report are excellent.

AUTHORIZATION FOR STATISTICAL REPORTING: All respondent agencies are legislatively authorized to report on statistics.

The SAC is responsible for collecting, maintaining, and disseminating criminal justice data.

CAPABILITIES TO USE AND PROCESS DATA: A computer is used by all respondent agencies to process data. Only the Supreme Court maintains its own system which is used for operational and statistical purposes. The Supreme Court uses no additional computer facilities, but maintains its own staff of programmers and ten statisticians/analysts.

Both the SAC and Corrections have access to the computer facilities of another agency (operational and statistical).

Both agencies have a staff of statisticians (SAC - four and Corrections - one); but only SAC maintains its own staff of programmers. Corrections uses the programming staff of the Crime Information Center.

Statistical/analytical reports are prepared by all respondent agencies.

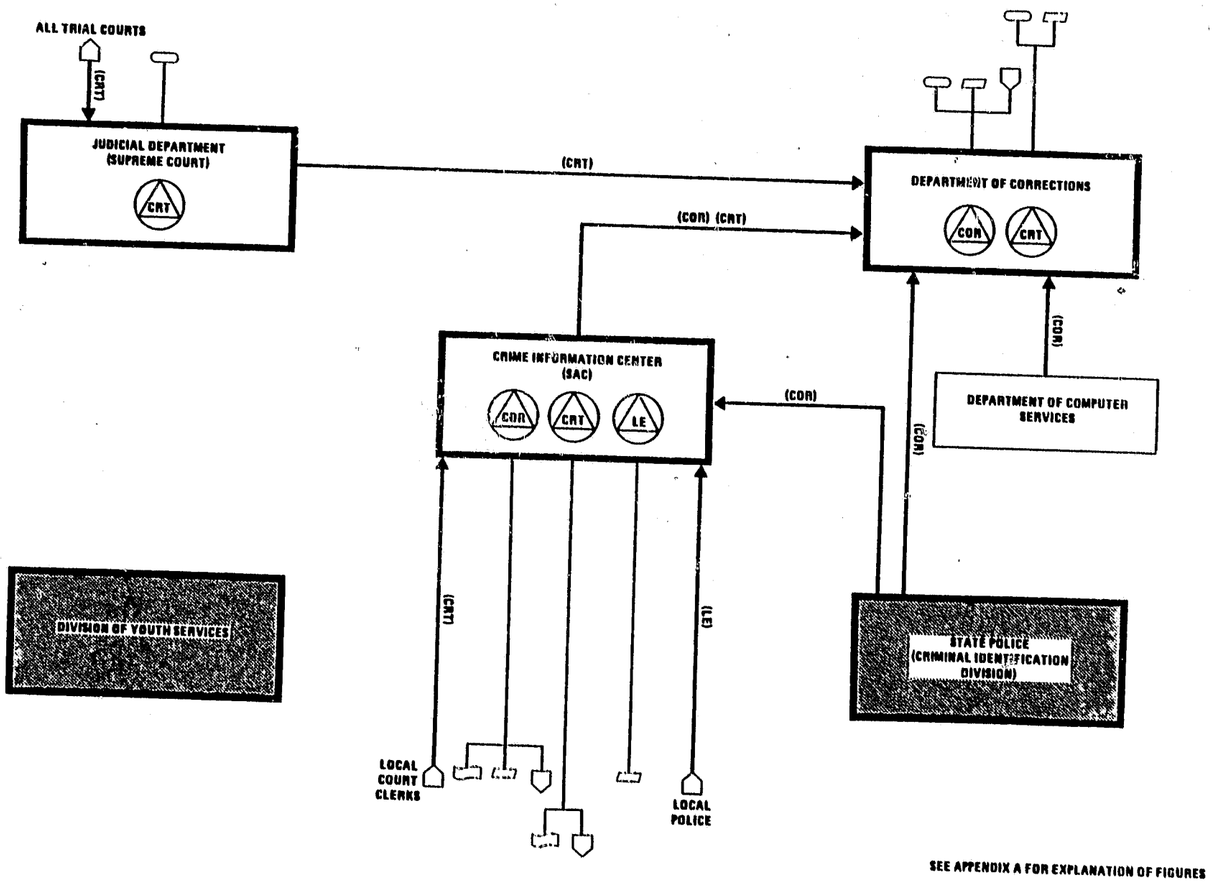
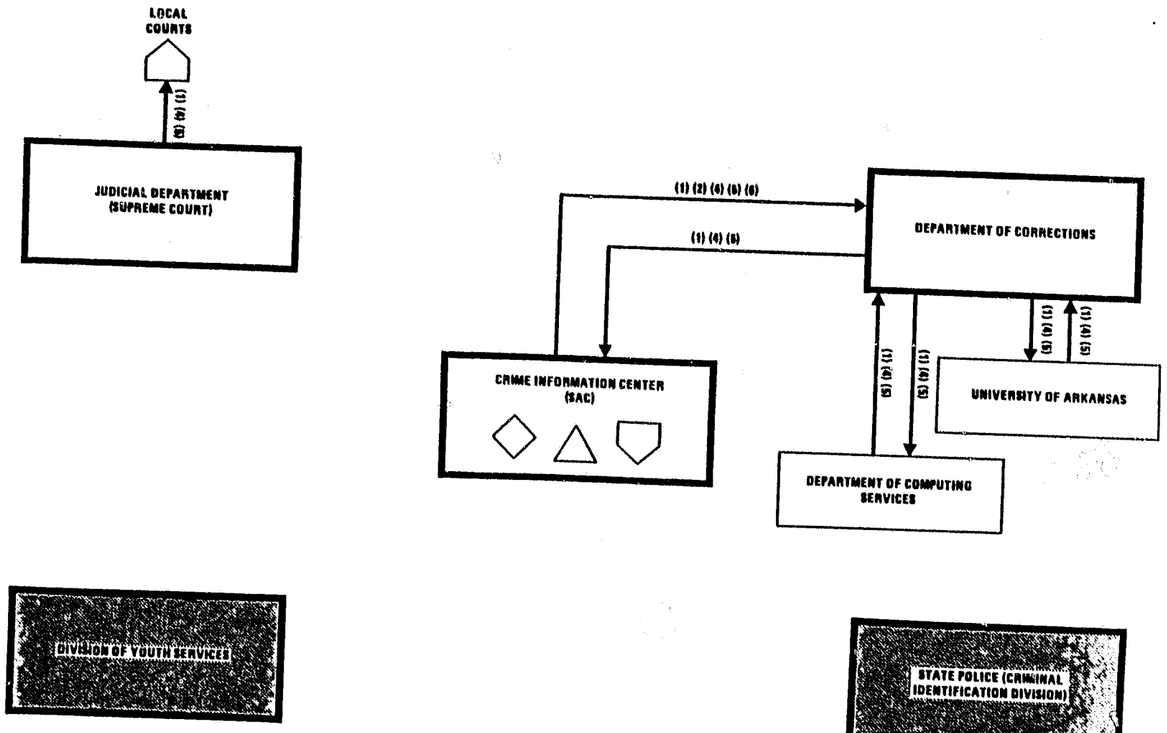
DATA TRANSFERS AMONG AGENCIES



SEE APPENDIX A FOR EXPLANATION OF FIGURES

ARKANSAS

SERVICE TRANSFERS AMONG AGENCIES



SEE APPENDIX B FOR EXPLANATION OF FIGURES

CALIFORNIA

GENERAL CHARACTERISTICS: The primary data users are listed below.

- Department of Justice - Bureau of Criminal Statistics - SAC (corrections, courts, juvenile justice, law enforcement)
- Department of Corrections (corrections, courts, law enforcement)
- Administrative Office of the Courts (courts, juvenile justice)
- Board of Prison Terms (corrections, courts)
- Youth Authority (corrections, juvenile justice)

DATA AVAILABILITY: Computerized data are available for corrections, courts, juvenile justice, and law enforcement.

There is a statewide OBTS system and an operational CCH system.

OBSCIS is operational on a limited basis.

Multiple agencies maintain both operational and statistical data in all areas except law enforcement. The only agency which maintains statistical law enforcement data is the SAC.

DATA ACCESS: For all data maintained by the SAC, agencies are limited to the use of edited files. No reasons are indicated for restricting access.

State privacy considerations are cited by Corrections for limiting the availability of its information to published data.

The Courts also restricts the access of other agencies to published information because of limited data processing capabilities.

Prison Terms allows all agencies access to selected operational data files based on state and Federal security and privacy restrictions.

State-level agencies are granted unlimited access to data maintained by the Youth Authority. Access for Federal and local agencies is restricted for security and privacy reasons.

SAC PROFILE: There is an operational SAC and it is located in the Attorney General's Office. The location is not expected to change.

State funds support the SAC which exists under the authority of the California Penal Code. The California SAC is unique in that it was not created in response to the national CDS program.

The SAC describes its relationship with other criminal justice agencies as dependent since it relies on them as sources of data.

The SAC does maintain data in all areas and shares its data with various agencies.

Both the Youth Authority and Corrections utilize SAC services, which Corrections describes as generally useful.

AUTHORIZATION FOR STATISTICAL REPORTING: All agencies are formally authorized to report on criminal justice statistics under legislation.

According to the Penal Code, the SAC is required (as part of the Bureau of Criminal Statistics) to collect criminal justice data, and submit reports to the legislature and Federal agencies.

CAPABILITIES TO USE AND PROCESS DATA: All respondent agencies are well equipped to process data. All agencies utilize a computer and maintain a staff of programmers and statisticians/analysts. The SAC, Youth Authority, and Corrections maintain 16, 15, and 16 statisticians/analysts respectively.

Only Corrections must rely solely on the computer facilities of another agency for data processing (operational and statistical). All other agencies maintain their own systems.

The Courts and Prison Terms have access to the computer facilities of another agency in addition to their own. Prison Terms uses the computer of the Health and Welfare Data Center while the Courts (which is the only agency not using a computer for both operational and statistical purposes) uses the Teale Data Center.

All agencies prepare reports for use by other agencies.

CALIFORNIA

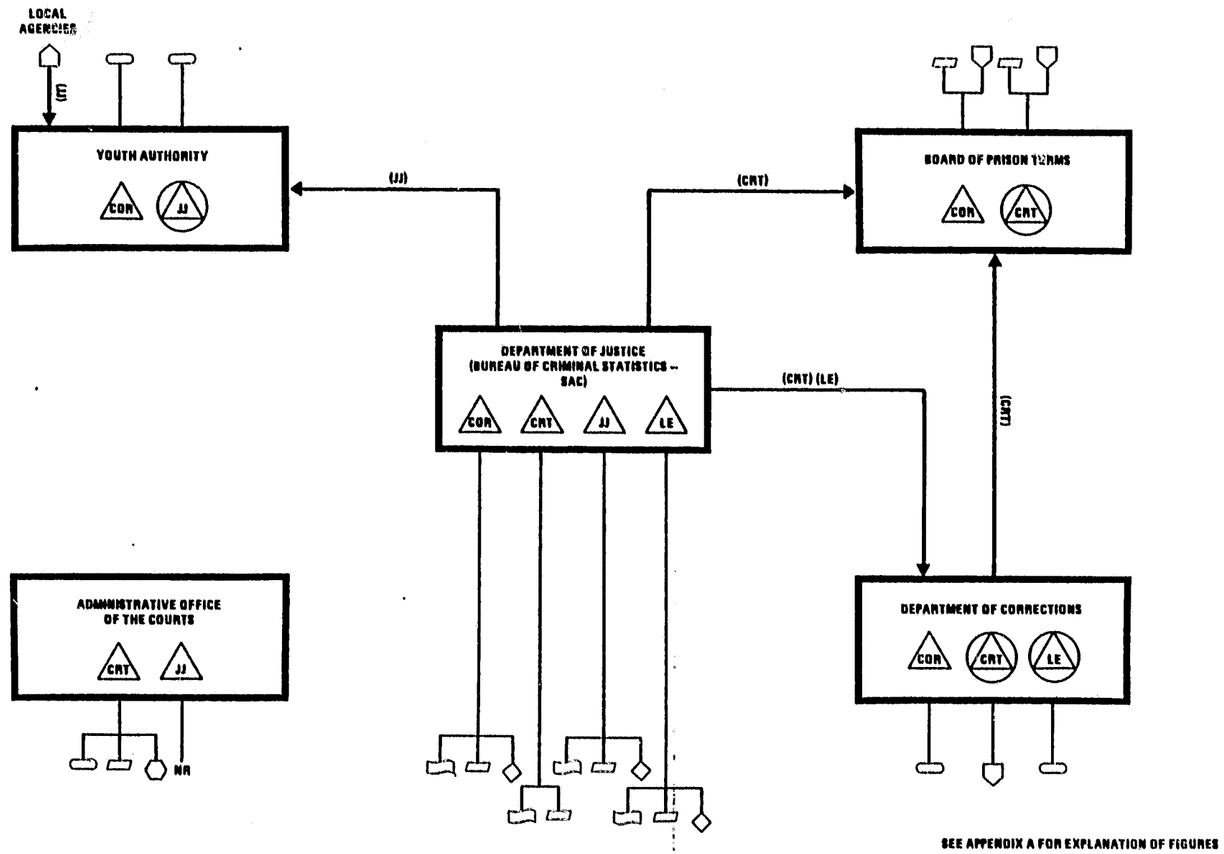
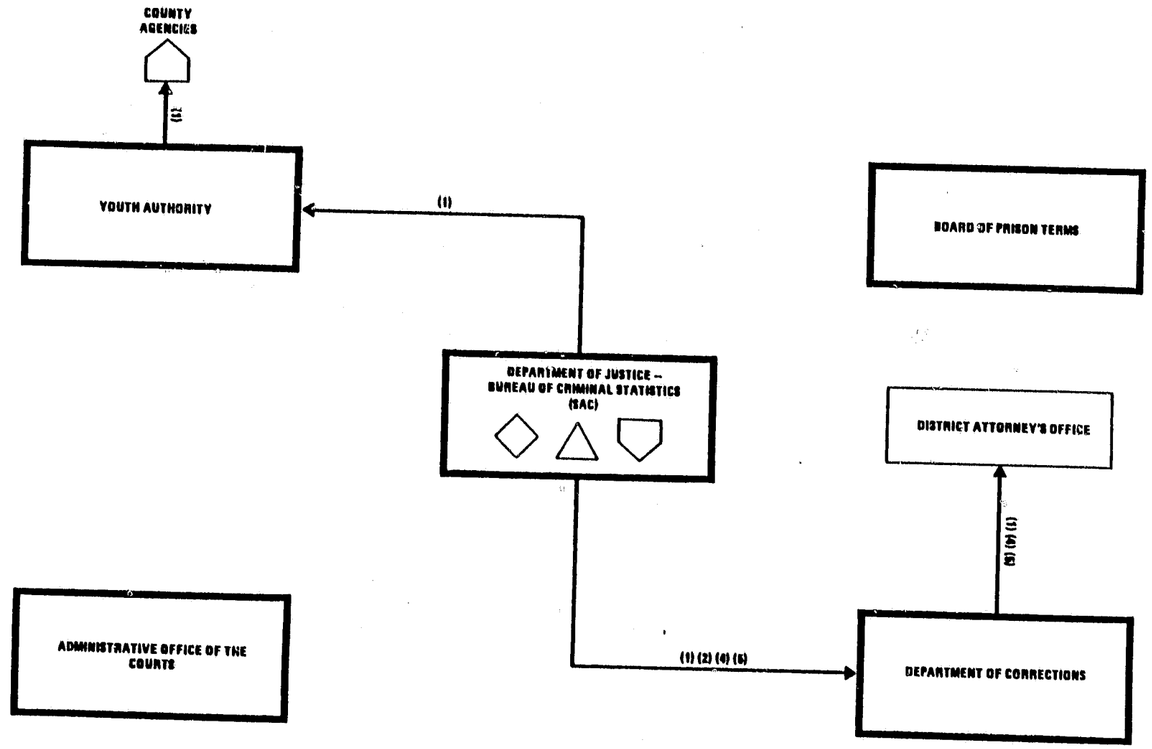
DATA TRANSFERS AMONG AGENCIES



SEE APPENDIX A FOR EXPLANATION OF FIGURES

CALIFORNIA

SERVICE TRANSFERS AMONG AGENCIES



SEE APPENDIX B FOR EXPLANATION OF FIGURES

COLORADO

GENERAL CHARACTERISTICS: The primary data users are listed below.

- Division of Criminal Justice - SAC (corrections, courts, juvenile justice, law enforcement)
- Department of Corrections (corrections, law enforcement)
- Department of Institutions - Division of Youth Services (corrections, juvenile justice, law enforcement)
- Bureau of Investigation (has not yet responded to questionnaire)
- Attorney General (has not yet responded to questionnaire)
- Judicial Department - Office of the State Court Administrator (has not yet responded to questionnaire)

DATA AVAILABILITY: Responses are outstanding from three agencies. Therefore, it is impossible to present an accurate description of data availability and level of computerization. Usable returns show that corrections, courts, juvenile justice, and law enforcement information is computerized.

OBSCIS, SJIS, and PROMIS are all operational. However, PROMIS is regional only.

The state is in the process of planning an OBTS system. SAC is the repository for such data.

Of the agencies responding to date, charges/dispositions data, maintained by the SAC, are the only operational courts data available.

In the law enforcement area, the SAC maintains statistical OBTS information and operational criminal history records.

Although not formally indicated, Corrections reports it receives courts and juvenile justice data from presentence reports which are submitted by the courts. File-to-file transfers of corrections data are processed between the SAC, Corrections, and Investigation. Law enforcement data are transferred file to file between the SAC and Investigation.

DATA ACCESS: Security and privacy are factors cited by the SAC and Corrections for limiting access to data.

Juvenile justice data maintained by respondent agencies are generally available on a "published data" basis only. This limitation is placed on Youth Services data by juvenile code. The SPA is allowed to use edited juvenile justice data of the SAC but all other agencies must utilize published information.

For its courts and law enforcement files, the SAC permits access to published data, except for the SPA which may utilize edited files.

Access to the corrections data of the SAC and Corrections varies by agency.

SAC PROFILE: The SAC maintains its own data and receives additional information from other agencies as needed.

Only Corrections reports receiving general technical assistance from the SAC in data collection and analysis.

The SAC reports providing technical assistance in data collection, access, and analysis on request.

AUTHORIZATION FOR STATISTICAL REPORTING: Only the SAC is formally authorized (by legislation) to report within the state. No specific responsibilities are indicated.

CAPABILITIES TO USE AND PROCESS DATA: All agencies use a computer to process data, and only the SAC does not maintain its own system.

Youth Services utilizes its computer for statistical functions only and does not access another system. Corrections uses its system operationally and statistically.

Corrections and the SAC use multiple sources for additional operational and statistical computer support. The SAC reports that access to one of its additional systems is limited to "off" periods.

Statistical/analytical reports are distributed by all respondent agencies.

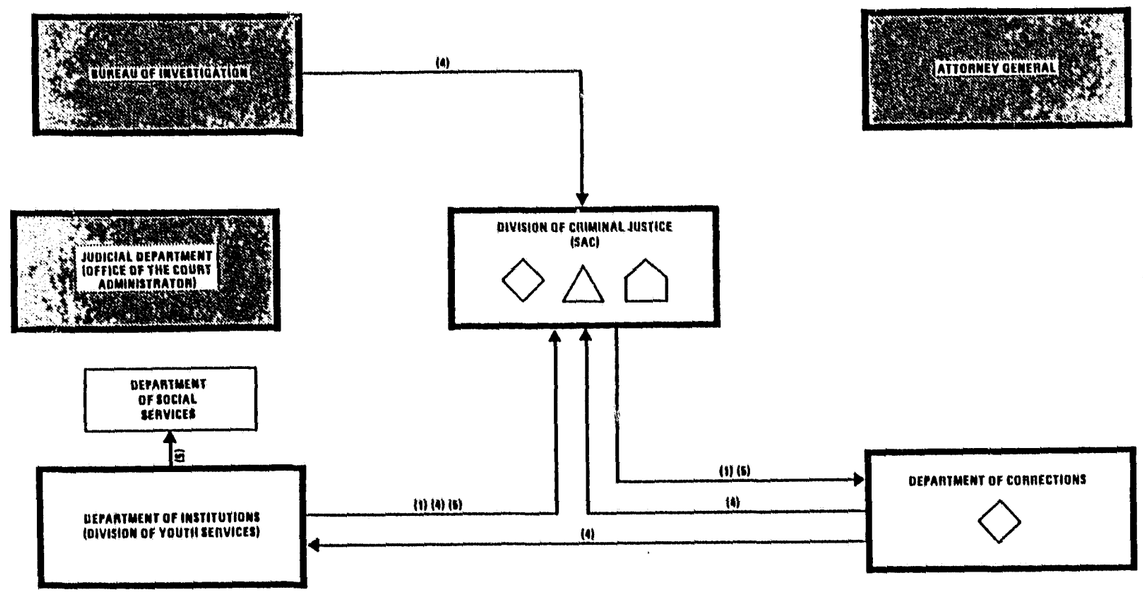
SEE APPENDIX A FOR EXPLANATION OF FIGURES

COLORADO

SERVICE TRANSFERS AMONG AGENCIES



SEE APPENDIX B FOR EXPLANATION OF FIGURES

CONNECTICUT

GENERAL CHARACTERISTICS: The primary data users are listed below.

- Justice Commission - SAC (corrections, courts, juvenile justice, law enforcement)
- Department of Corrections (corrections, courts)
- Department of Children and Youth Services (juvenile justice, law enforcement)
- Office of Adult Probation (corrections, law enforcement)
- Chief State's Attorney's Office (courts, law enforcement)
- Judicial Department (courts, juvenile justice, law enforcement)
- Department of Public Safety (has not yet responded to questionnaire)

DATA AVAILABILITY: Computerized information is maintained on corrections, courts, and juvenile justice. Since Public Safety's responses are outstanding, it is not yet known whether computerized records are maintained on law enforcement.

An OBTS/CCH system and OBSCIS are being developed.

The orientation toward record keeping is to set up distinct repositories for each area of data. Corrections (corrections), the Judicial Department (courts), Children and Youth Services (juvenile justice), and Public Safety (law enforcement) are the principal data sources. In addition, Adult Probation maintains information on corrections and probation, and the Chief State's Attorney's Office on prosecutors and appellate courts.

The types of data maintained are quite comprehensive.

DATA ACCESS: Four of the five data-maintaining agencies indicate that access to their information is limited by security and privacy considerations.

Access is most restricted in the Courts area. The Judicial Department grants no access to local non-criminal justice agencies, corrections, the SPA, and all Federal agencies. Local criminal justice agencies, the state police, and the Department of Motor Vehicles have access to selected operational files. Only the state courts have unlimited access. Access to the Chief State's Attorney's data is limited to published reports for all Federal agencies, the state police, and local non-criminal justice agencies. The SPA has access to edited files and the state courts and corrections to unlimited operational files.

Corrections, Children and Youth Services, and Adult Probation distinguish access by type of requesting agency.

The SAC maintains no data.

SAC PROFILE: The SAC has been in operation for over 3 years. It is fully funded under the CDS program. This funding expires in June 1981.

The SAC describes its relationship with the criminal justice community as a passive one. This is perhaps evidenced by the fact that only the Chief State's Attorney's Office reports relying on the SAC for technical assistance. The agency's role, however, is in a transition period from primarily grants management to long-range criminal justice planning. Eventually the agency is expected to become a part of the Office of Policy and Management.

AUTHORIZATION FOR STATISTICAL REPORTING: All agencies except the Judicial Department are legislated to report on criminal justice information and statistics. The Judicial Department answered "don't know" to the question of formal reporting authorization.

CAPABILITIES TO USE AND PROCESS DATA: Children and Youth Services and the Judicial Department maintain their own computer systems and programming staffs. Corrections has its own programming staff but relies on the computer facilities of the Department of Administrative Services. The SAC uses both the computer and programming resources of the University of Connecticut. Adult Probation and the Chief State's Attorney's Office do not use a computer.

Corrections and Youth Services report computer and/or support services are inadequate to meet their needs. Corrections responds that it must adapt to a computer system that is not necessarily applicable to criminal justice data. Also, it believes that the state cannot be competitive with the private sector in hiring competent staff. Youth Services reports that its system does not have the hardware capability to process operational data.

All responding agencies hire either statisticians or data analysts and provide statistical summaries and/or anlaytical reports.

CONNECTICUT

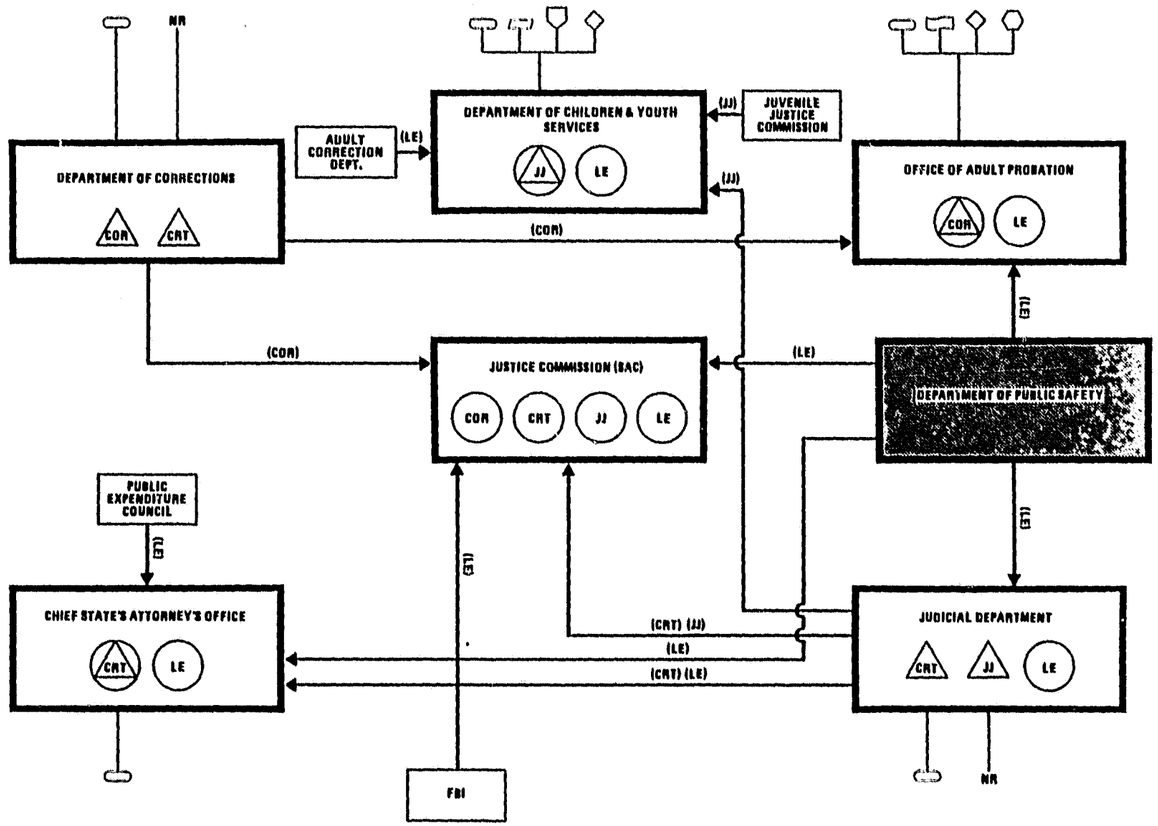
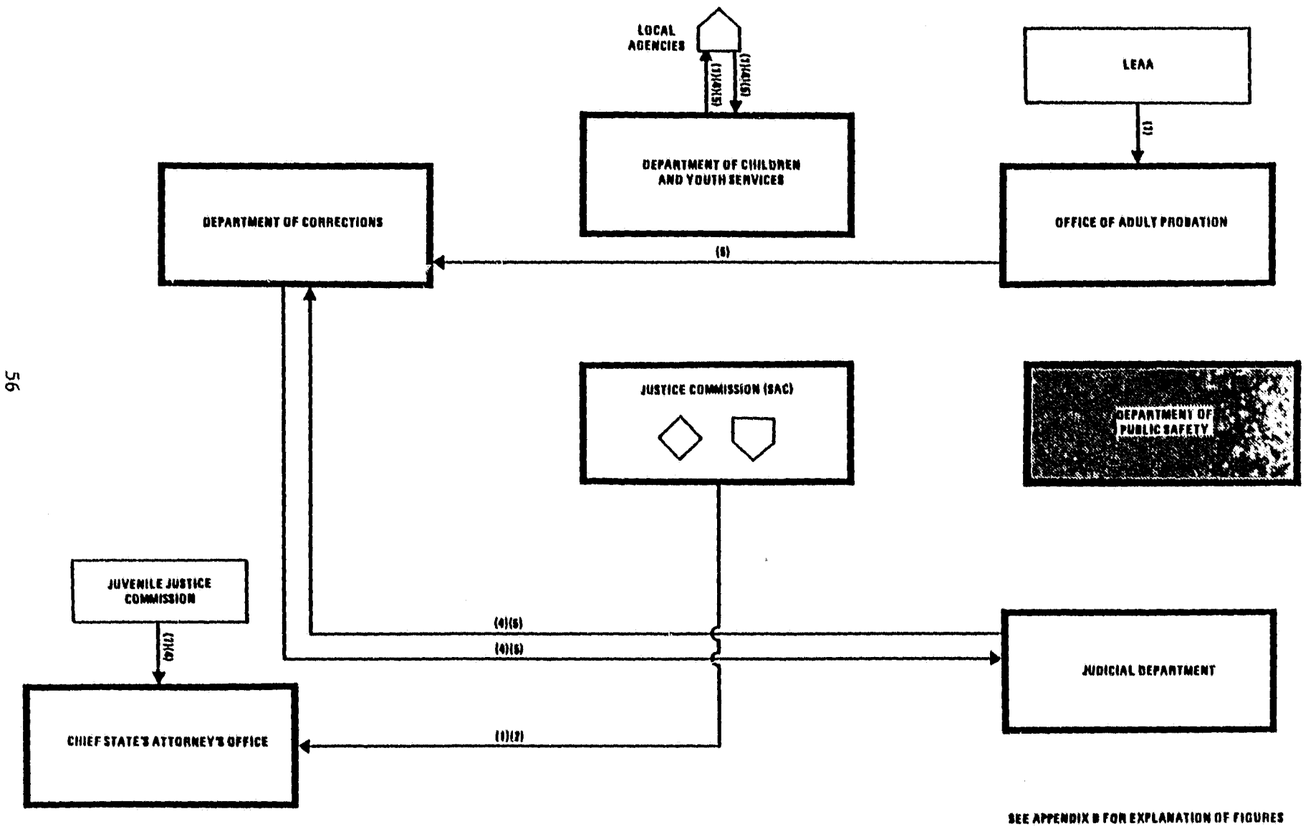
DATA TRANSFERS AMONG AGENCIES



SEE APPENDIX A FOR EXPLANATION OF FIGURES

CONNECTICUT

SERVICE TRANSFERS AMONG AGENCIES



SEE APPENDIX B FOR EXPLANATION OF FIGURES

DELAWARE

GENERAL CHARACTERISTICS: The primary data users are listed below.

- Criminal Justice Planning Commission - SAC (corrections, courts, juvenile justice, law enforcement)
- State Police - Bureau of Identification (corrections, courts, juvenile justice, law enforcement)
- Family Court (courts, juvenile justice)
- Department of Corrections (has not yet responded to questionnaire)
- Administrative Office of the Court (has not yet responded to questionnaire)

A central data processing center supports the data processing activities of various agencies.

DATA AVAILABILITY: Corrections and the Administrative Office of the Court have not yet responded to the survey. Therefore, it is difficult to accurately describe the availability of data and the level of computerization. Partial information indicates all areas of data are computerized.

OBSCIS is being implemented and an OBTS system is being designed. The State Police are the operational managers of DELJIS (Delaware Justice Information System) which is being implemented.

Although the Family Court indicates all of its data are manual, its courts data are being computerized.

The only courts and juvenile justice data maintained by the State Police are statistical-level disposition data.

DATA ACCESS: The State Police grants unlimited access to all agencies except local non-criminal justice agencies for its corrections, court, juvenile justice, and law enforcement data. Local non-criminal justice agencies are denied access under state law.

Privacy considerations are cited by the Family Court as factors in limiting all agencies to the use of edited files only (courts, juvenile justice).

The SAC maintains no data.

SAC PROFILE: The SAC has been funded for more than 4 years.

Although the SAC exists under executive order, its function has evolved under the parent agency's (Planning Commission) authorization to gather data.

The SAC receives all of its data from other agencies and reciprocates by providing limited information to the Family Court.

Principally, the SAC provides all interested agencies with impact analyses of proposed criminal justice legislation.

The Family Court and State Police report receiving SAC services on request. The latter indicates the SAC has provided projections and information on proposed legislation.

AUTHORIZATION FOR STATISTICAL REPORTING: Under legislation and executive order, the State Police is authorized to collect statistics and information. Legislation enables the State Police to collect and disseminate Uniform Crime Reporting (UCR) data. They are authorized to manage DELJIS under executive order.

Neither the Family Court nor SAC are legislatively authorized for statistical reporting. However, the SAC parent-agency (Planning Commission) is authorized to collect data.

CAPABILITIES TO USE AND PROCESS DATA: Only the SAC and State Police use a computer to process data. The SAC uses its own computer for statistical applications only. It utilizes the programming staff of Central Data Processing.

The State Police utilizes the services of Central Data Processing for statistical and operational functions, but operational uses of the computer take priority over statistical uses.

Both the SAC and State Police cite limitations in the support staff and services available through Central Data Processing. The SAC reports the programmers do not know the SAC file system. The State Police report the system is understaffed and the hardware insufficient to handle all state needs. Both the SAC and State Police have access to one on-staff statistician/analyst.

The SAC, State Police, and Family Court disseminate reports to other agencies.

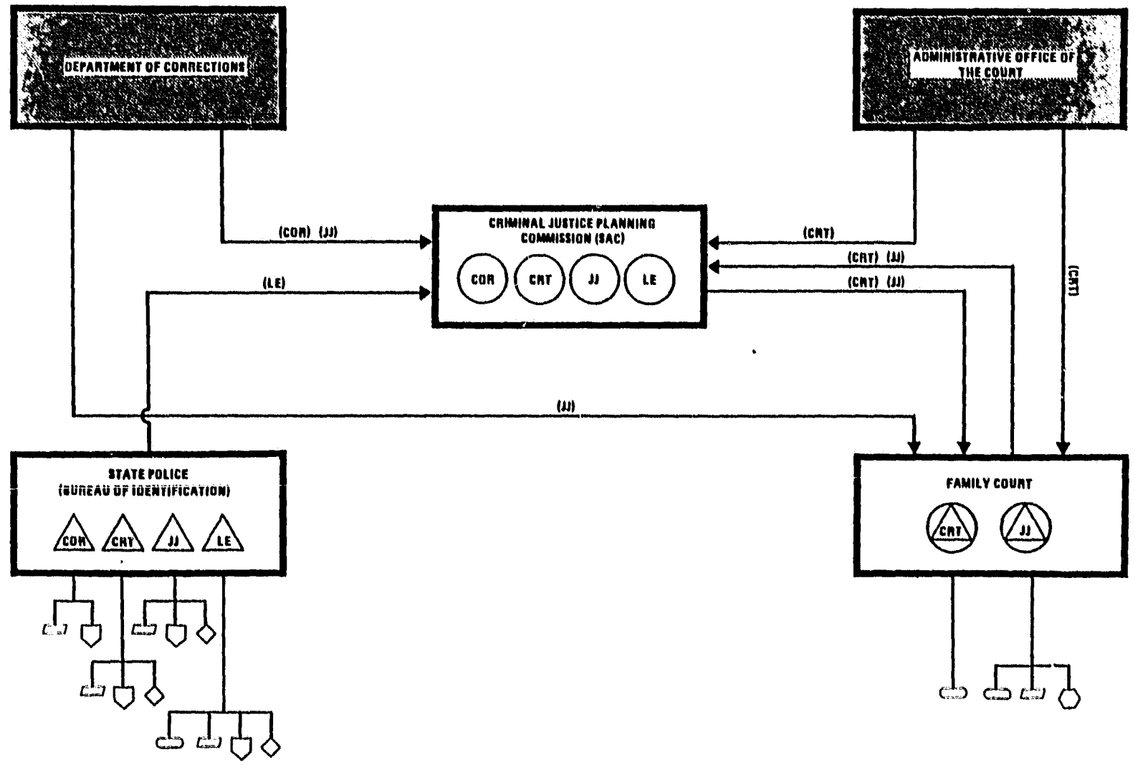
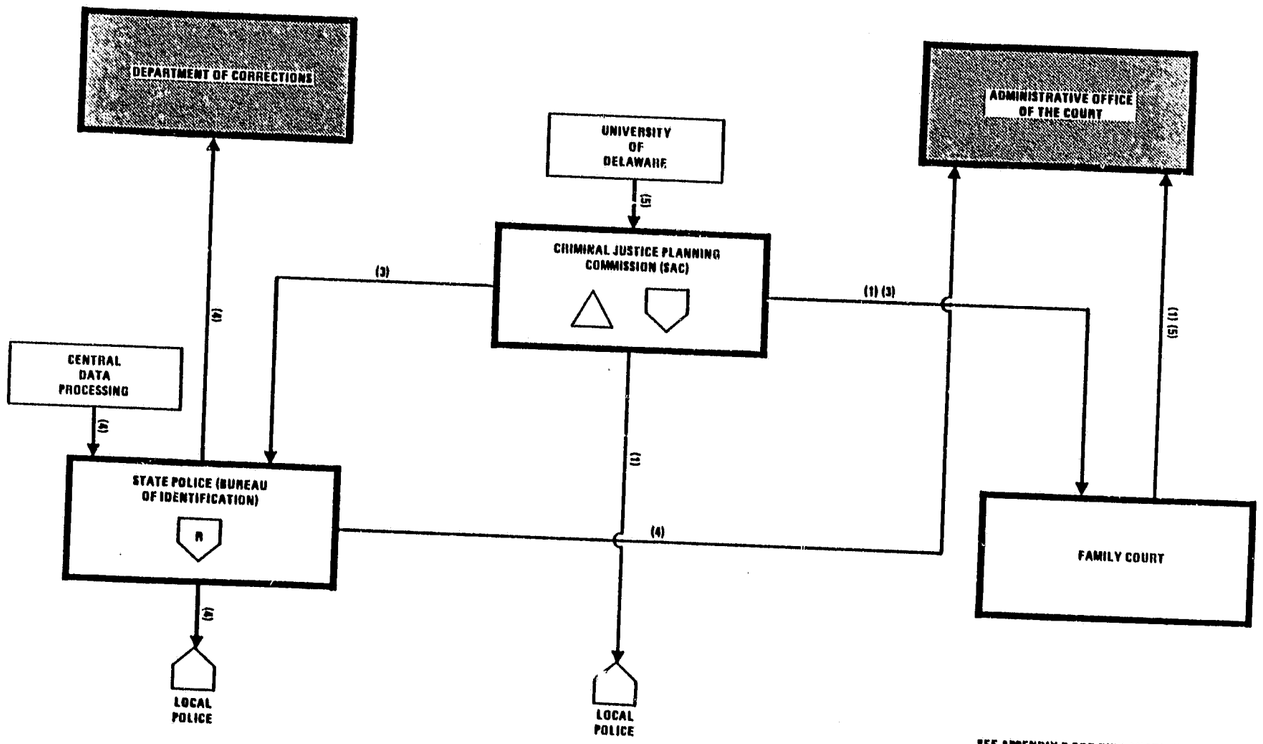
DATA TRANSFERS AMONG AGENCIES



SEE APPENDIX A FOR EXPLANATION OF FIGURES

DELAWARE

SERVICE TRANSFERS AMONG AGENCIES



SEE APPENDIX B FOR EXPLANATION OF FIGURES

DISTRICT OF COLUMBIA

GENERAL CHARACTERISTICS: The primary data users are listed below.

- Office of Criminal Justice Plans and Analysis - SAC (has not yet responded to questionnaire)
- Department of Corrections (corrections, courts, law enforcement)
- Court System - Executive Office (corrections, courts, juvenile justice), Superior Court (corrections, courts, juvenile justice, law enforcement)
- US Attorney's Office (corrections, courts, law enforcement)
- Corporation Council - Juvenile Section (juvenile justice, law enforcement)
- Police Department (law enforcement)
- Juvenile Clerk's Office (has not yet responded to questionnaire)
- Bail Agency (has not yet responded to questionnaire)

The US Attorney's Office handles adult prosecutorial services since the District of Columbia does not have an Attorney General. It reports to the US Department of Justice. The Corporation Council is the prosecutor's office for juvenile offenders.

DATA AVAILABILITY: Computerized information is available on corrections, courts, juvenile justice, and law enforcement.

An OBTS/CCH system is being investigated. OBSCIS and PROMIS are operational.

Data holdings are comprehensive. The Court System maintains a variety of data types on corrections, courts, and juvenile justice. It and the US Attorney's Office are the major sources of courts data. There is some overlap between their holdings, particularly in operational data types. The Corporation Council supplements the Court System's records in the juvenile justice area.

The Police maintains complete operational law enforcement records and all statistical types surveyed except disposition and OBTS data.

DATA ACCESS: The Court System grants unlimited data access only to the individual courts. Local non-criminal justice agencies, the CJC, and LEAA are restricted to published data only. All other agencies may access selected operational files. In the corrections and courts area, access is regulated by Federal statute. In juvenile justice, access limitations are dictated by District statute.

Corrections cites security and privacy considerations for limiting the data access of local criminal justice agencies; the police, courts, the CJC, and the US Attorney's Office to selected operational files only. The access of other agencies is not specified.

Federal privacy regulations govern access to the data of the US Attorney's Office. Access is limited to edited files only for all agencies except the courts. The courts are granted no access to its holdings.

The Police provides unlimited access to its law enforcement data to local criminal justice agencies, access to selected operational files for all District agencies, and access to edited files for all Federal agencies. Restrictions in access are because of security and privacy considerations. No response was given for the access of local non-criminal justice agencies.

The Corporation Council allows access to selected operational juvenile justice files for all agencies. In law enforcement, local non-criminal justice agencies are denied any data access.

SAC PROFILE: The SAC is located in the CJC. An analysis of its role in the justice community is not yet possible since it has not responded to the questionnaire.

AUTHORIZATION FOR STATISTICAL REPORTING: Only the Court System and the Police are formally authorized for statistical reporting. Corrections has no formal authorization, and the Corporation Council and the US Attorney's Office responded "don't know" to this inquiry.

CAPABILITIES TO USE AND PROCESS DATA: All agencies use a computer in their data processing activities. All but the Corporation Council maintain their own systems and staffs of programmers. The Corporation Council utilizes the computer of the Courts System. Corrections maintains supplemental access to the Police computer and the US Attorney's Office to the systems of the Police, Corrections, and the Bail Agency.

All respondent agencies use their computers for operational and statistical purposes. The Courts System reports that operational uses of its system limit statistical applications.

The inadequacy of computer services and support staff appears to be a recurring problem. The Court System writes that it needs more hardware and core in its system. The Corporation Council and the US Attorney's Office, as well as the Court System, report that support staff shortages exist.

Only the Police, Corrections, and the Courts System report maintaining statisticians/analysts on staff.

All agencies except the US Attorney's Office (which responded "don't know" to the question) prepare statistical summaries and/or analytical reports.

DISTRICT OF COLUMBIA

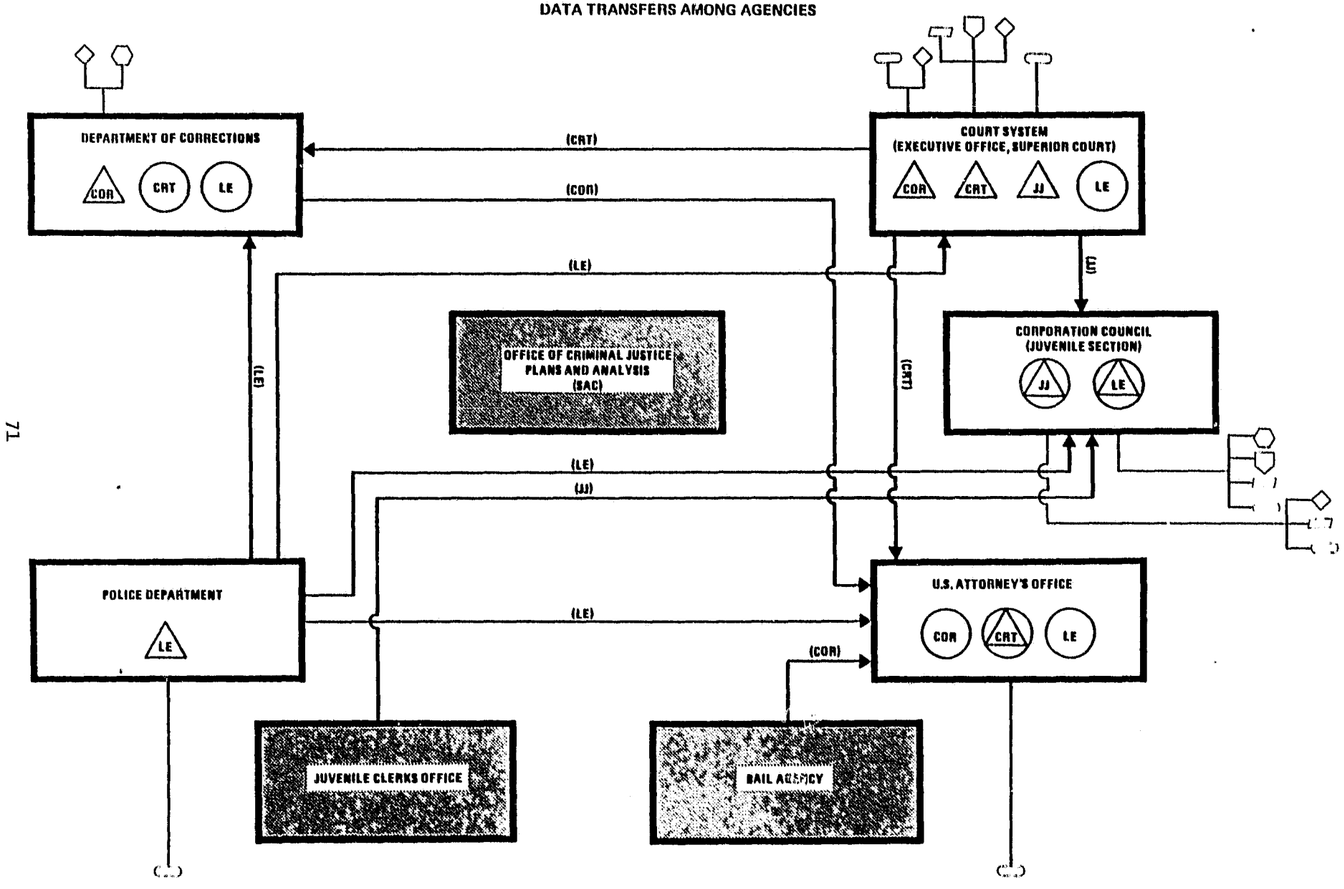
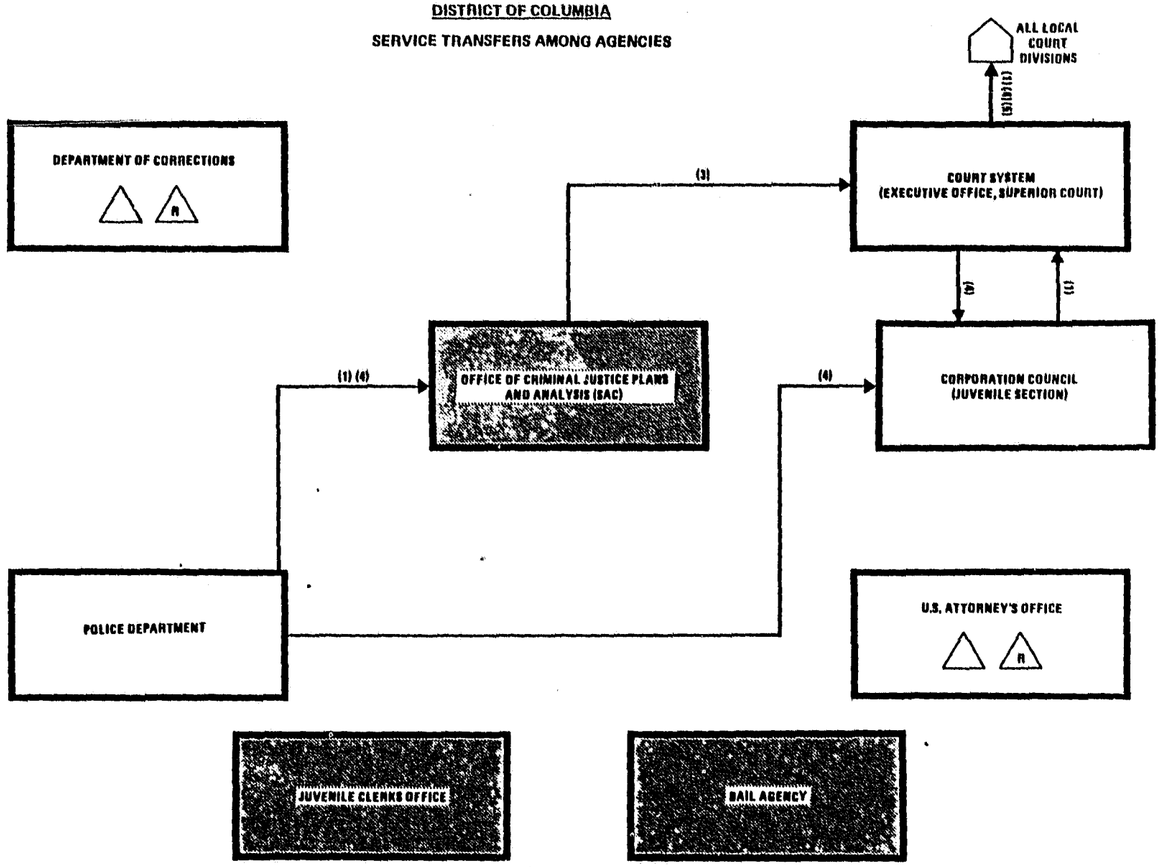
DATA TRANSFERS AMONG AGENCIES



SEE APPENDIX A FOR EXPLANATION OF FIGURES

DISTRICT OF COLUMBIA

SERVICE TRANSFERS AMONG AGENCIES



SEE APPENDIX II FOR EXPLANATION OF FIGURES

FLORIDA

GENERAL CHARACTERISTICS: The primary data users are listed below.

- Department of Law Enforcement (corrections, courts, juvenile justice, law enforcement)
- Department of Corrections (corrections, courts, juvenile justice, law enforcement)
- Bureau of Criminal Justice Assistance (corrections, juvenile justice, law enforcement)
- Supreme Court (courts)
- Department of Health and Rehabilitation Services - Youth Services Program (juvenile justice)

Criminal Justice Assistance, which is the SPA, reports there is little inter-agency cooperation for exchange of information. Most criminal justice agencies are territorial toward their data. This response may be explained by the strict restrictions exercised by other agencies against the SPA in data access.

DATA AVAILABILITY: Computerized information is available for corrections, courts, juvenile justice, and law enforcement.

No formal OBTS system has been developed. However, the state does have an offender-tracking system and a CCH system is operational.

Both OBSCIS and PROMIS are operational.

SJIS is being implemented.

Complete operational and statistical data are retained in all areas but law enforcement. Although operational and statistical law enforcement data are kept on file by Law Enforcement, the data are limited.

Criminal Justice Assistance indicates there is a problem in reporting courts data in the state. Certain information categories have been dropped, causing some confusion.

DATA ACCESS: All data-maintaining agencies report access to their data is restricted by security and privacy considerations. All agencies except Youth Services prohibit local non-criminal justice agencies, the SPA, and LEAA from utilizing the same level of access as other agencies.

Law Enforcement restricts local non-criminal justice agencies, the SPA, and LEAA to the use of published information for all of its data. Other agencies may use edited data files.

Unlimited access to the corrections data maintained by Corrections and the Supreme Court is available to all agencies except local non-criminal justice agencies, the SPA, and LEAA which must specifically request access. No confidential information is released to them.

For its courts data, access granted by the Supreme Court to other agencies is discretionary and varies by agency.

Youth Services indicates its data are confidential and restricted, but does not report on access regulations for particular agencies.

No data are maintained by Criminal Justice Assistance.

SAC PROFILE: There is no SAC in Florida. However, Criminal Justice Assistance indicates that through Block Grant funding it can provide services similar to a SAC including evaluation and technical assistance.

AUTHORIZATION FOR STATISTICAL REPORTING: All agencies (except the Supreme Court whose authority is established by state constitution) are legislatively authorized to report on criminal justice statistics.

Law Enforcement is required to establish an intrastate system of statistics on crimes and criminals and to manage the UCR.

Criminal Justice Assistance is authorized to collect, analyze, and evaluate data and to submit an annual plan to the legislature and the governor.

CAPABILITIES TO USE AND PROCESS DATA: All agencies use a computer in their data processing activities.

Only Criminal Justice Assistance does not maintain its own computer system. However, it does utilize its own small management information system (MIS).

Both Corrections and the Supreme Court report limitations with their systems. The Supreme Court reports they can only run one statistical program at a time. Limitations on hardware and staff hinder the timely analyses needed by Corrections.

The facilities at Florida State University are accessed on-line by Youth Services (operational and statistical) and Criminal Justice Assistance (statistical).

Corrections also uses operational and statistical functions of another agency's computer system, but the agency is not specified.

Programmers and statisticians/analysts are maintained on staff by all agencies except Criminal Justice Assistance.

Statistical/analytical reports are made available by all respondent agencies.

SEE APPENDIX B FOR EXPLANATION OF FIGURES

GEORGIA

GENERAL CHARACTERISTICS: The primary data users are listed below.

- Crime Commission (corrections, courts, juvenile justice, law enforcement)
- Administrative Office of the Courts (corrections, courts, juvenile justice)
- Department of Offender Rehabilitation (corrections)
- Crime Information Center (corrections, courts, juvenile justice, law enforcement)
- Prosecuting Attorney's Council (corrections, courts)
- Department of Human Resources - Division of Youth Services (juvenile justice)
- Board of Pardon and Parole (corrections, courts, juvenile justice, law enforcement)
- Institute of Government - University of Georgia (corrections, courts, juvenile justice)

The Institute of Government is intended to act as a justice data repository and a source of statistical and analytical reports. It is in its formative stages.

State code established the Department of Administrative Services to perform data processing activities for other agencies.

DATA AVAILABILITY: Computerized data are available on corrections, courts, juvenile justice, and law enforcement.

A CCH system is operational, and an OBTS system is being implemented. A fully operational OBSCIS exists. Pardon and Parole manages an information system called the Parole Guidelines Program. Data is maintained on the number of offenders processed and the probation/parole decision. These data are manual, but will become computerized in the near future. The Prosecuting Attorney's Council maintains an information system on criminal appeals.

A highly cooperative relationship seems to exist between agencies. A large amount of data and services are exchanged between respondent agencies. Courts, Offender Rehabilitation, Crime Information Center, the Prosecuting Attorney's Office, Youth Services, Pardon and Parole, and the Institute of Government all supplement the data they maintain in a particular area by receiving additional data from other agencies.

Technical assistance services are also freely transferred. The focus of this exchange is the Crime Commission. It maintains reciprocal technical assistance relationships with all responding agencies except the Prosecuting Attorney's Council.

Data type holdings are fairly comprehensive. However, due to the number of data maintaining agencies and multiple data area holdings, there is a great duplication of information.

The Courts indicates that its juvenile justice data are kept on file for a limited time and then destroyed.

DATA ACCESS: The Crime Information Center (corrections, courts, law enforcement), Pardons and Parole (corrections, courts, juvenile justice, law enforcement), and the Courts (juvenile justice) cite security and privacy factors as limiting agency access to their files.

Pardons and Parole limits all agencies except Corrections to published data only in all areas. Corrections may access selected operational files.

In juvenile justice, the Courts limits all agencies to published data only because of a state statute denying the release of juvenile offenders' names. The Crime Information Center grants unlimited access to its juvenile data, but its information is statistical only. Youth Services did not indicate the accessibility of its data.

Offender Rehabilitation and the Institute of Government determine access on a case-by-case basis. The Prosecuting Attorney's Council varies access by type of agency.

SAC PROFILE: CDS funding for the SAC expired in June 1980. When the state did not contribute the money necessary for the SAC to continue operations, the SAC was formally dissolved. The Crime Commission was the location of the former SAC. It reports that it continues to perform many of the functions of the SAC. It is apparent that the technical assistance role of the former SAC has been perpetuated by the Crime Commission.

AUTHORIZATION FOR STATISTICAL REPORTING: All respondent agencies are formally authorized for statistical reporting.

CAPABILITIES TO USE AND PROCESS DATA: All agencies except the Crime Commission use a computer in their data processing activities. The Institute of Government, Crime Information Center, and the Courts maintain their own systems. The latter also has access to the facilities of the Fulton County Board of Education. The Prosecuting Attorney's Council and Offender Rehabilitation utilize the facilities of the Department of Administrative Services. Youth Services and Pardon and Parole do not indicate their sources of computer support.

Only the Courts reports inadequate computer services or support staff. They respond that there is not enough staff to meet their needs.

Only Youth Services, the Courts, and the Institute of Government maintain their own programmers. Youth Services, the Institute of Government, Offender Rehabilitation, the Crime Information Center, and the Courts all have statisticians and/or data analysts on staff. All respondent agencies provide statistical and/or analytical reports for use by other agencies.

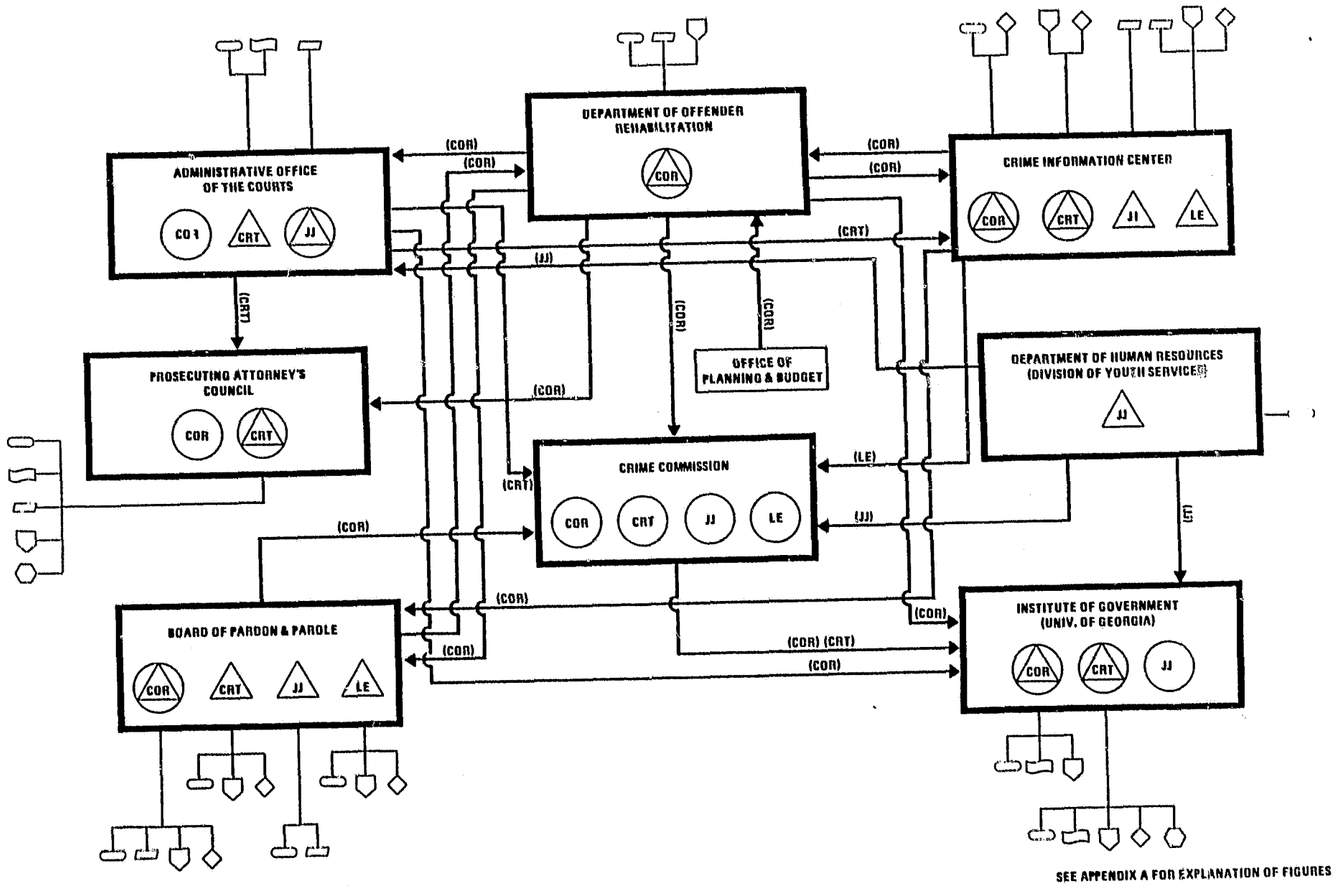
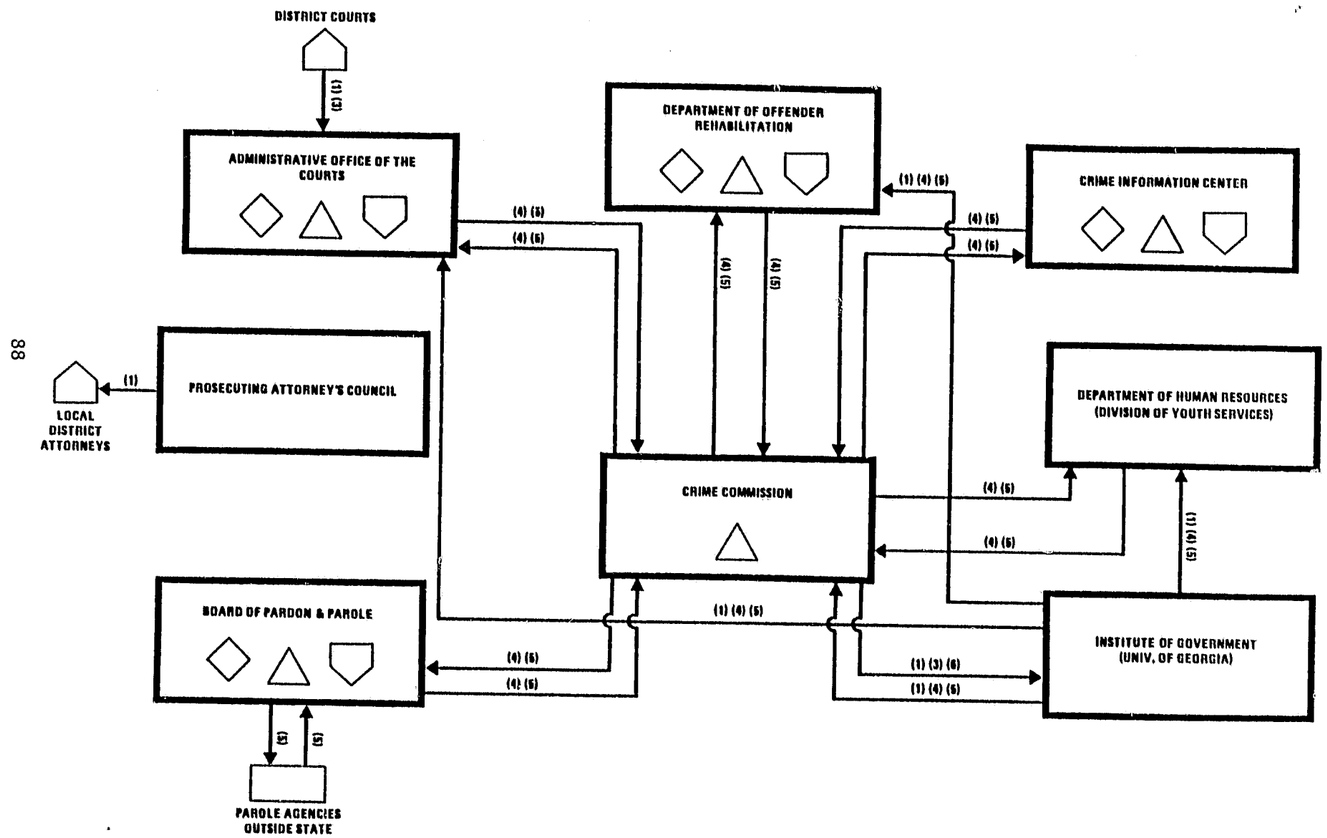
DATA TRANSFERS AMONG AGENCIES



SEE APPENDIX A FOR EXPLANATION OF FIGURES

GEORGIA
SERVICE TRANSFERS AMONG AGENCIES



SEE APPENDIX B FOR EXPLANATION OF FIGURES

HAWAII

GENERAL CHARACTERISTICS: The primary data users are listed below.

- Criminal Justice - SAC (corrections, courts, law enforcement)
- Department of Social Service - Office of Correctional Information and Statistics, Paroling Authority (corrections, courts, juvenile justice, law enforcement)
- Supreme Court (corrections, courts, juvenile justice, law enforcement)
- Law Enforcement Planning Agency (corrections, courts, juvenile justice, law enforcement)

DATA AVAILABILITY: Corrections, courts, and law enforcement data are computerized. Juvenile justice data are maintained by the Supreme Court and the Office of Correctional Information and Statistics and are manual.

Both an OBTS system and a CCH system are operational.

OBSCIS is being implemented.

Comprehensive operational and statistical-level data are maintained by multiple agencies for corrections, courts, and juvenile justice. The SAC is the only agency which retains law enforcement (operational and statistical) information.

For its corrections data, the Supreme Court reports that only aggregated data are computerized; case files are manual. The Supreme Court is in the process of computerizing its courts data.

DATA ACCESS: Both the SAC and Supreme Court cite security and privacy considerations for limiting the access of other agencies to their data.

All of the courts data retained by the Supreme Court are considered public information. Only the lack of terminal access may limit an agency's use of these data. Edited juvenile justice data files are released to agencies by the Supreme Court on request and upon receipt of a signed indemnity statement. For its corrections files, the Supreme Court permits all agencies other than local criminal and non-criminal justice agencies and state courts the use of selected operational files. Local criminal and non-criminal justice agencies may use edited files, and state courts have unlimited access to corrections files. However, all corrections data released by the Supreme Court are aggregated data, and no individual is identified.

For all files maintained by the SAC, all but non-criminal justice agencies are permitted to use selected operational files. Non-criminal justice agencies are limited to published data.

Organizational policy restricts outside agencies' use of the corrections and juvenile justice files maintained by Correctional Information and Statistics. No agency is granted access to its juvenile justice data. Access to its corrections data varies by agency.

Organizational factors are also cited by the Paroling Authority as data access limitations. It reports that it does not consider local non-criminal justice agencies and the SPA to be part of the criminal justice system. Therefore, no access to data is granted to them.

SAC PROFILE: For over 7 years, the SAC has been located within the Judiciary. As of July 1981, its location will be changed to the Attorney General's Office.

The SAC is fully state funded. It exists under legislation specific to the SAC.

The SAC's role in the state is reciprocal. It both receives data from other agencies and disseminates data from its own data bases.

Several agencies report receiving SAC services. However, restrictions on the quality of the services are reported. The Planning Agency indicates the SAC's annual report is somewhat useful. Both the Supreme Court and the Paroling Authority respond that data provided by the SAC are outdated and not in a usable form.

AUTHORIZATION FOR STATISTICAL REPORTING: All agencies are required by legislation to report on criminal justice information. The Planning Agency is authorized to develop an annual improvement plan and to assess the needs of the state in criminal justice planning.

CAPABILITIES TO USE AND PROCESS DATA: The Planning Agency is the only agency which does not use a computer to process data and does not have a staff of statisticians/analysts.

The SAC and Supreme Court maintain their own systems and also use the computer facilities of another agency. Both have their own staffs of programmers and statisticians/analysts.

Correctional Information and Statistics utilizes the computer of the Data Processing Division and maintains its own programmers and statisticians.

The Paroling Authority makes use of the programming staff of Correctional Information and Statistics and employs one statistician. It does not clearly indicate whose computer it uses.

Limitations on the adequacy of computer services are reported by the Supreme Court, Paroling Authority, and Correctional Information and Statistics.

All agencies disseminate statistical or analytical reports to other agencies.

HAWAII

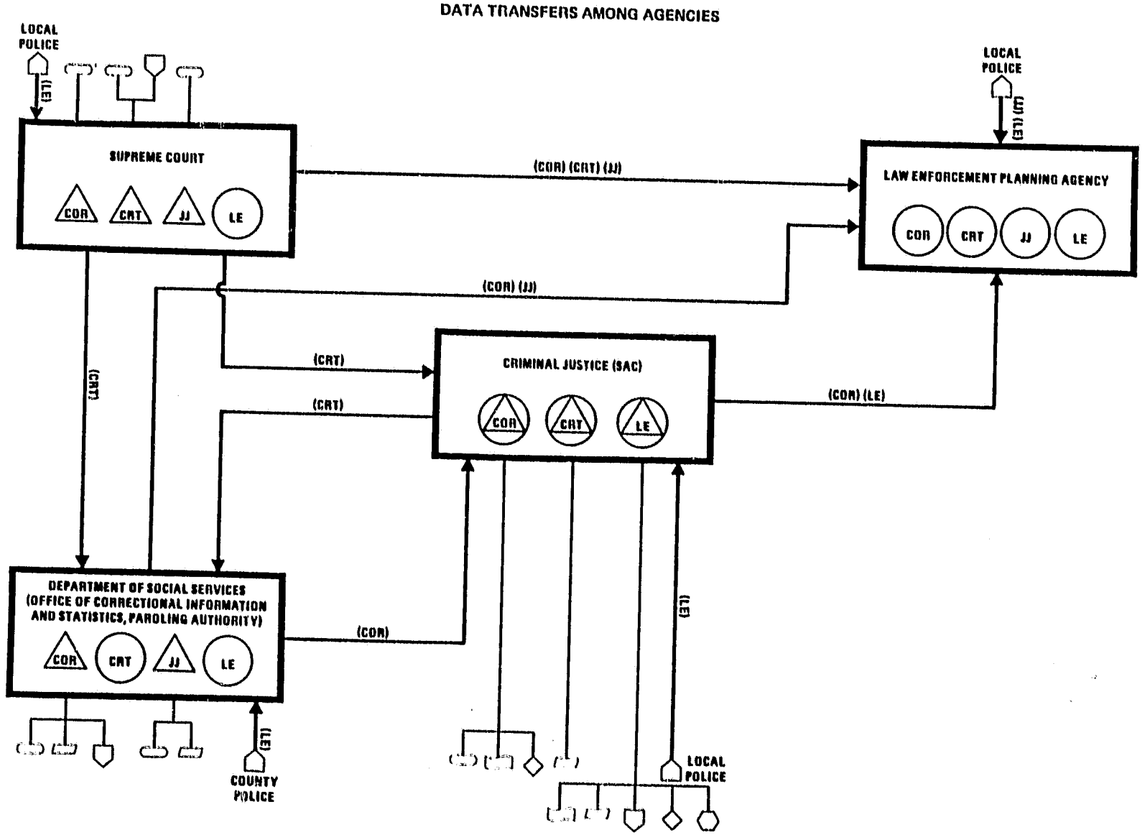
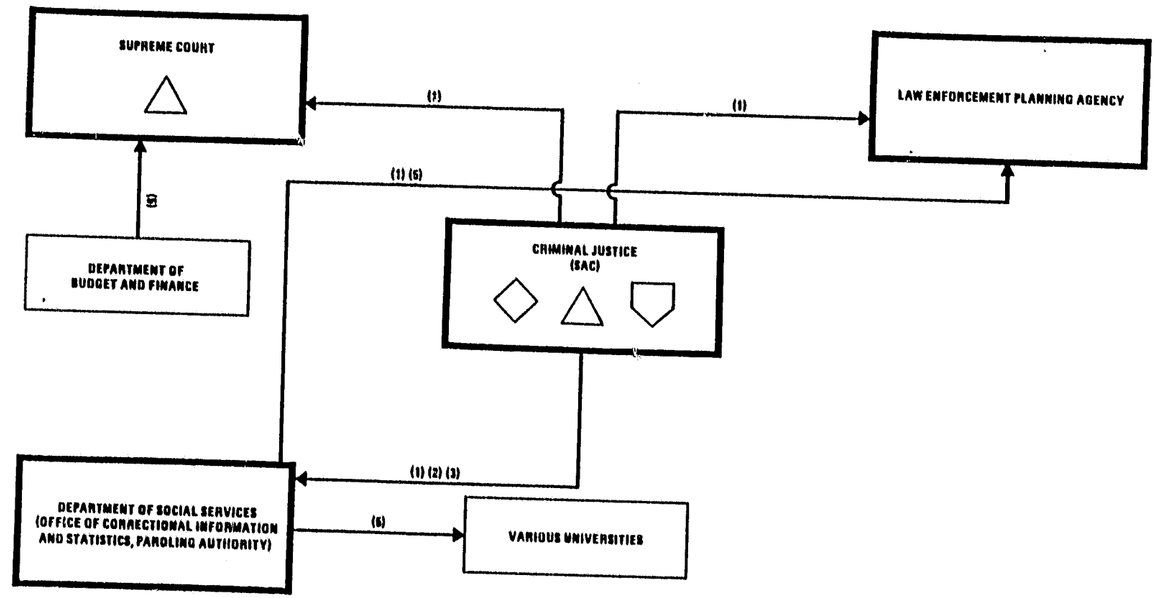
DATA TRANSFERS AMONG AGENCIES



SEE APPENDIX A FOR EXPLANATION OF FIGURES

HAWAII

SERVICE TRANSFERS AMONG AGENCIES



SEE APPENDIX B FOR EXPLANATION OF FIGURES

IDAHO

GENERAL CHARACTERISTICS: The primary data users are listed below.

- Law Enforcement Planning Commission - SAC (corrections, courts, juvenile justice, law enforcement)
- Department of Law Enforcement (corrections, courts, law enforcement)
- Department of Corrections (corrections)
- Department of Health and Welfare (juvenile justice)
- Supreme Court (courts, law enforcement)

DATA AVAILABILITY: Computerized information is currently maintained on corrections and juvenile justice. Law Enforcement data are maintained manually. (The Supreme Court maintains courts data but did not indicate whether records are automated or manual.) Law Enforcement maintains criminal history records but does not have an operational OBTS segment.

The state does not have an OBSCIS.

Each distinct area of criminal justice data is primarily housed within a single agency. Corrections, Law Enforcement, Health and Welfare, and the Supreme Court are the principal repositories for corrections, law enforcement, juvenile justice, and courts data respectively. Law Enforcement also maintains very limited corrections and courts data, but all other respondent agencies report maintaining no additional criminal justice information.

All data maintained by Law Enforcement are manual. The Department is in the process of implementing an automated record keeping system.

DATA ACCESS: Access to data maintained by Law Enforcement is governed by state statute. Non-criminal justice agencies and the Bureau of Alcohol, Tobacco, and Firearms are given no access; the SPA is given access by agreement for research purposes only; local criminal justice agencies are granted limited access to selected operational files; and all other agencies cited are given unlimited access.

Although Health and Welfare formally limits most access to its juvenile files to published data only, it reports that in all cases, additional access would probably be given if requested for valid reasons.

No agencies have direct terminal access to the files of Corrections. Therefore, access is available to published data only, or by special request.

The SAC does not maintain any data, and the Supreme Court did not respond to this section.

SAC PROFILE: The SAC has been in operation for 6 years. It was created by legislation specific to the Criminal Justice Council with reference to the SAC.

The SAC is located within the CJC, which in turn reports to Law Enforcement. Proposed reorganization would make the SAC directly responsive to Law Enforcement.

The SAC has a dependent relationship with other state agencies for data access. It maintains no data, but obtains computer printouts and statistical reports, as needed, from other agencies. It reciprocates by providing various forms of technical assistance to the CJC, Law Enforcement, and Health and Welfare.

AUTHORIZATION FOR STATISTICAL REPORTING: Law Enforcement is required by legislation to report on criminal history information in the state. Health and Welfare produces an annual statistical report to the governor as legislated. The SAC and Corrections are not formally authorized to report on criminal justice information and statistics. The Supreme Court did not respond to this series of questions.

CAPABILITIES TO USE AND PROCESS DATA: All respondents except Law Enforcement (the Supreme Court did not respond to this question) currently maintain their own computer systems and programming staffs. The SAC and Health and Welfare use their systems for both operational and statistical data processing purposes. Corrections performs operational tasks only on their computer. The SAC reports computer access delays for their statistical work when the system is active in an operational mode. The SAC has additional on-line access to the State Computer Center and Boise State University and uses these systems for both operational and statistical purposes.

Corrections responds that computer support staff are inadequate because of insufficient funding.

The SAC maintains one statistician and one criminal justice analyst on staff. Law Enforcement has two statisticians; Corrections has one part-time person functioning as a statistician.

The SAC, Corrections, and Law Enforcement all produce either statistical summaries or analytical reports for use by other agencies. (Health and Welfare and the Supreme Court did not respond.)

[1]RESPONDED ONLY PARTIALLY TO QUESTIONNAIRE

SEE APPENDIX B FOR EXPLANATION OF FIGURES

ILLINOIS

GENERAL CHARACTERISTICS: The primary data users are listed below.

- Law Enforcement Commission - SAC (corrections, courts, juvenile justice, law enforcement)
- Department of Corrections (corrections, courts, juvenile justice)
- Supreme Court - Committee on Criminal Justice Programs (corrections, courts, juvenile justice), Probation Division (corrections, courts, juvenile justice)
- Department of Law Enforcement (has not yet responded to questionnaire)

DATA AVAILABILITY: Partial returns indicate computerized data are available in all areas.

OBSCIS and an OBTS/CCH system are operational. PROMIS is being planned.

The SAC is one of five agencies (Department of Agriculture, Corrections, Attorney General, and the Cook County Department of Corrections) which maintains a computer interface for the exchange of data.

Complete operational and statistical-level data are maintained by multiple agencies in all areas except law enforcement. Since Law Enforcement has not yet responded, data on law enforcement are incomplete.

The only types of computerized courts and law enforcement data kept by the SAC are appellate (courts) and UCR (law enforcement)

DATA ACCESS: The SAC permits unlimited use of its law enforcement and juvenile justice data. Access to its courts data is restricted to published information. Only appellate (courts) data are regulated by Federal security and privacy reasons. Use of the SAC's corrections files is based on the approval of the original data-providing agency.

Corrections allows all agencies the use of published information in corrections and courts. A court order is required to receive additional corrections data and specific inquiries for courts data are referred to the circuit courts. All agencies but local criminal and local non-criminal justice agencies have unlimited access to Corrections' juvenile justice files. Organizational policy and Federal regulations restrict the access of these agencies to juvenile justice data.

Criminal Justice Programs grants unlimited use of its data since all the data it maintains are statistical.

Security and privacy concerns govern the limited access of agencies to Probations' data. Only the state courts have unlimited use of corrections and juvenile justice files.

SAC PROFILE: Funded under the SAC component of the CDS program, the SAC has been operational for over 3 years.

The SAC is located in the CJC and exists under legislation specific to the CJC with reference to the SAC and under an executive order with reference to the SAC.

The SAC describes its relationship with other agencies as coordinative because it provides technical assistance on both an ongoing and on-request basis.

Although Corrections considers the services it receives from the SAC as very good, Criminal Justice Programs is generally unsatisfied with the performance of the SAC. It reports that SAC studies are not useful and study conclusions demonstrate the SAC's misunderstanding of state statutes and constitution.

AUTHORIZATION FOR STATISTICAL REPORTING: All respondent agencies are authorized to report on statistics within the state.

Both Corrections and the Probation Division are authorized under legislation. The Probations Division is required to establish a uniform record keeping system on probation services.

Law Enforcement is authorized under executive order. Criminal Justice Programs must maintain and preserve all court files as authorized by constitution, legislation, and judicial order.

CAPABILITIES TO USE AND PROCESS DATA: Only Law Enforcement and Corrections use a computer to process data and both maintain their own systems which are used operationally and statistically. In addition, both agencies have access to other computer facilities and maintain their own programmers.

Criminal Justice Programs anticipates the use of its own computer in July 1983.

Statisticians/analysts are employed by all agencies but the Probations Division.

State and local agencies receive statistical reports from all respondent agencies on request.

ILLINOIS

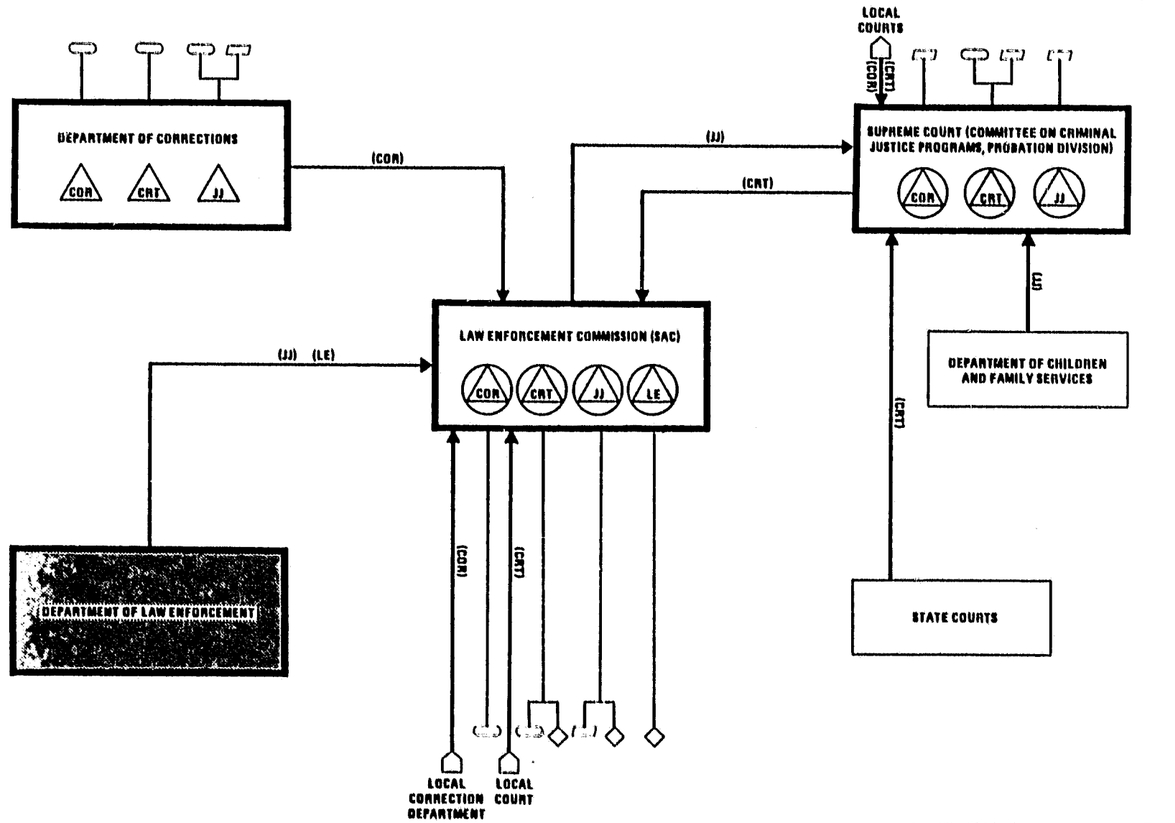
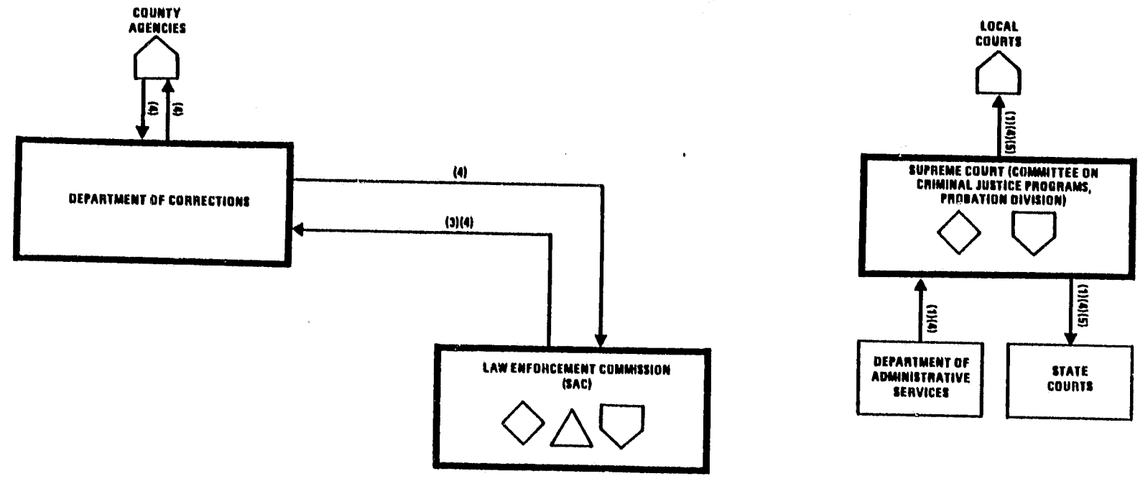
DATA TRANSFERS AMONG AGENCIES



SEE APPENDIX A FOR EXPLANATION OF FIGURES

ILLINOIS

SERVICE TRANSFERS AMONG AGENCIES



DEPARTMENT OF LAW ENFORCEMENT

SEE APPENDIX B FOR EXPLANATION OF FIGURES

INDIANA

GENERAL CHARACTERISTICS: The primary data users are listed below.

- Criminal Justice Planning Agency (corrections, courts, juvenile justice, law enforcement)
- Department of Corrections (corrections, juvenile justice)
- State Police (law enforcement)
- Supreme Court - Division of State Court Administration (corrections, courts, juvenile justice)

DATA AVAILABILITY: The level of computerization in record keeping is extremely low. The only computerized information is maintained in the law enforcement area by the State Police. There are no operational OBTS, CCH, OBSCIS, or SJIS programs. A localized PROMIS is operational.

The comprehensiveness of data holdings varies sharply by area. The most complete information is in the corrections area. Corrections maintains all corrections data types named in the survey except probation. The Supreme Court does maintain statistical information on probation. Very little data are kept on courts. The Supreme Court maintains statistical appellate, civil, pleas and dispositions, and budget data. There are no operational data maintained on courts according to survey respondents. A moderate amount of statistical and operational data is maintained on juvenile justice and law enforcement.

DATA ACCESS: All data held by the Supreme Court are considered public record and are accessible to all agencies.

The State Police cites precedent for limiting the access of local non-criminal justice agencies, the SPA, and LEAA to edited files only. All other agencies have unlimited access.

All local agencies and LEAA and the Bureau of Alcohol, Tobacco, and Firearms have access to selected operational files from Corrections. These limitations are due to historical precedent in juvenile justice and state security and privacy statute in corrections. All other agencies have unlimited data access.

The Planning Agency maintains no data.

SAC PROFILE: There is no SAC in the state.

AUTHORIZATION FOR STATISTICAL REPORTING: All respondent agencies are legislatively authorized for statistical reporting. The Planning Agency is additionally mandated by executive order.

CAPABILITIES TO USE AND PROCESS DATA: All agencies produce either statistical or analytical reports. However, only the State Police uses a computer in its data processing activities. It does not maintain its own system but did not indicate whose system it uses. It does report that computer services and support staff are adequate to meet its needs.

Corrections and the Planning Agency are the only agencies to employ statisticians. No respondent agencies have criminal justice data analysts on staff.

INDIANA

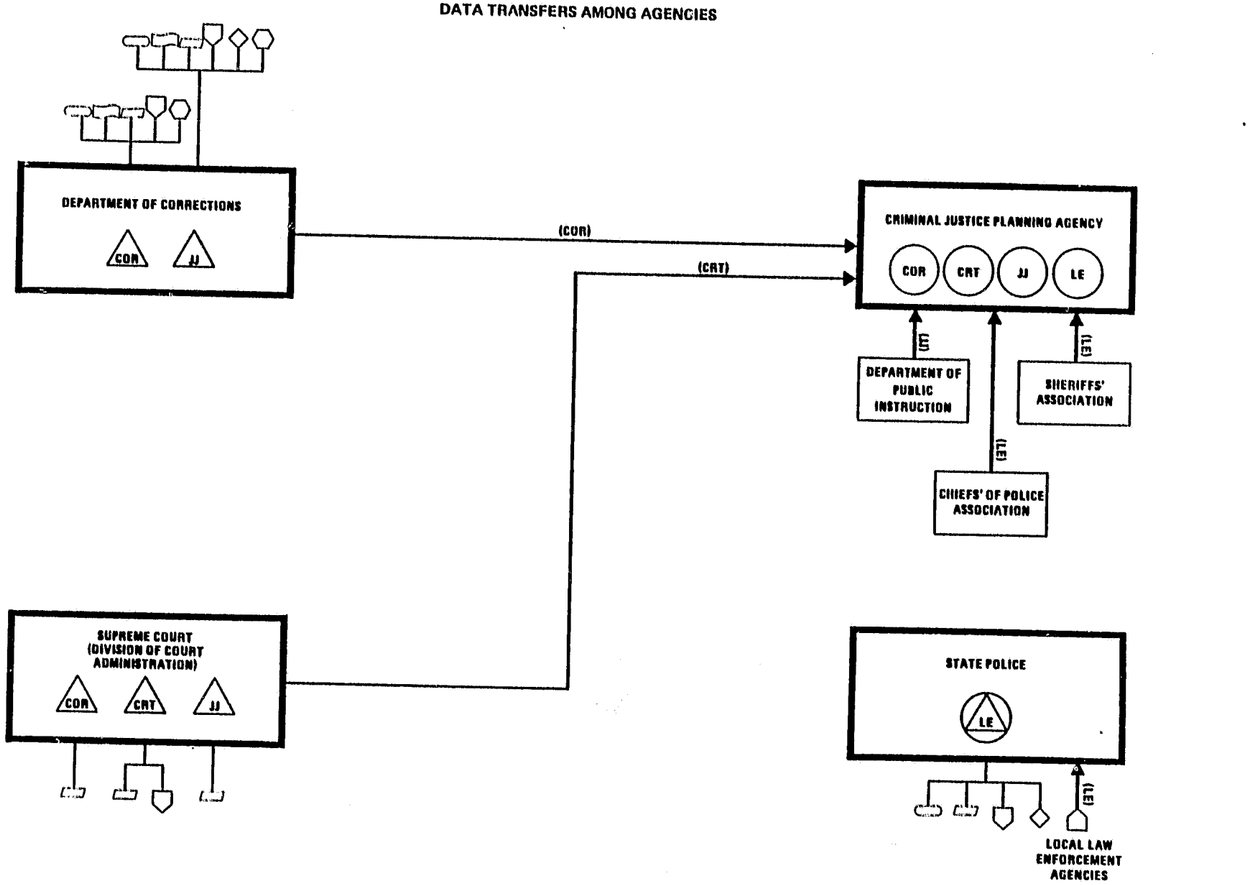
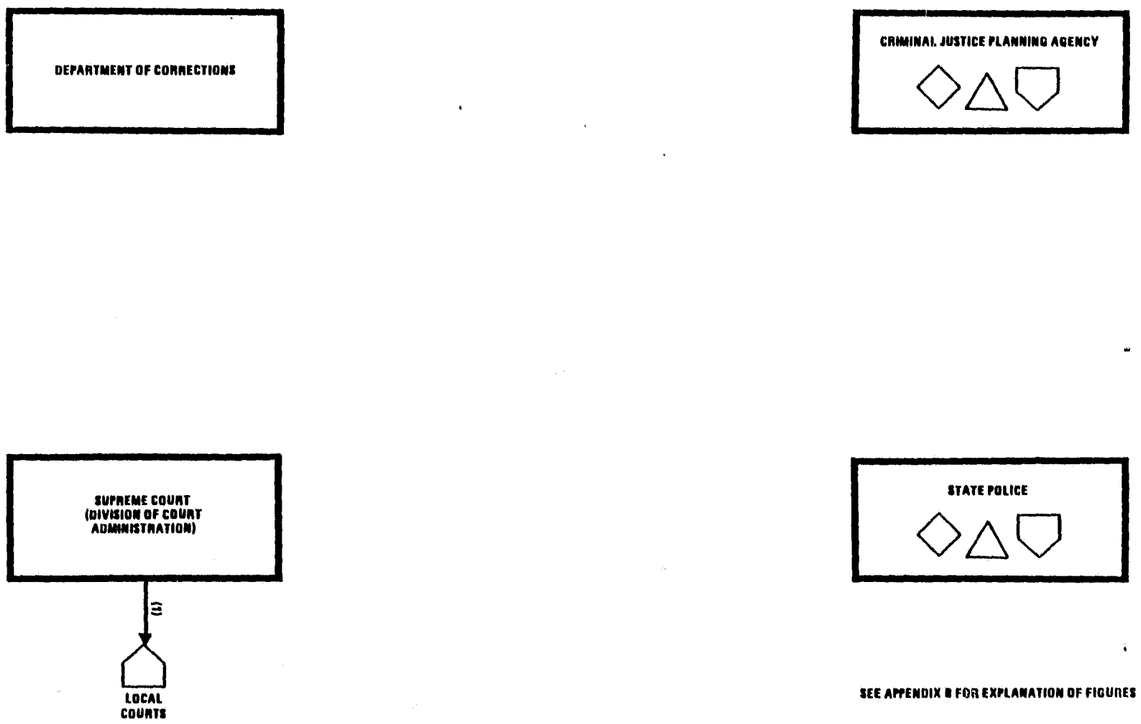
DATA TRANSFERS AMONG AGENCIES



SEE APPENDIX A FOR EXPLANATION OF FIGURES

INDIANA

SERVICE TRANSFERS AMONG AGENCIES



SEE APPENDIX B FOR EXPLANATION OF FIGURES

IOWA

GENERAL CHARACTERISTICS: The primary data users are listed below.

- Office of Planning and Programming - SAC (corrections, courts, juvenile justice, law enforcement)
- Crime Commission (corrections, courts, juvenile justice, law enforcement)
- Department of Social Services (corrections, juvenile justice)
- Department of Public Safety (law enforcement)
- Supreme Court (corrections, courts)
- Bi-State Computer (courts, law enforcement)

The Bi-State Computer is an automated regional information system shared by Iowa and Illinois. It maintains data on courts, prosecutors, and law enforcement for 13 local law enforcement agencies. The system was created by intergovernmental agreement and is a subunit of government.

The Crime Commission is the State Criminal Justice Council. It takes an active role in data use and analysis.

DATA AVAILABILITY: Computerized information is maintained on corrections, courts, juvenile justice, and law enforcement.

OBSCIS and a CCH system are fully operational. An OBTS system is currently being implemented on a pilot basis.

There is no source of operational data reported on juvenile justice. Social Services maintains various statistical types of juvenile justice data, and the Crime Commission maintains compliance information on the de-institutionalization of status offenders. Operational-level corrections data are also not maintained on probation and parole.

The Bi-State Computer is the primary resource for courts data. The Supreme Court maintains appellate information but does not maintain any criminal data types.

DATA ACCESS: Access to the Crime Commission's data is unlimited for all agencies since only aggregated information is maintained.

Social Services grants the Division of Corrections unlimited access to its corrections data. Corrections is located within Social Services. All other state and local agencies have only limited access to the edited data files on corrections and juvenile justice kept by Social Services. Federal agencies have no access to Social Services' juvenile files and limited access to their corrections files. No reasons for access limitations are stated.

The Supreme Court releases only published data to state and local agencies. LEAA has access to certain edited data files. No reasons are given for limiting agency access.

Public Safety cites a state security and privacy statute for limiting access to its law enforcement data. The statute prohibits dissemination of criminal history and intelligence information to non-criminal justice agencies. Criminal justice agencies, including the SPA, are granted access to selected operational files.

Unlimited access to the Bi-State Computer data bases is granted to state courts and the SPA. The access of other agencies is determined by data type. For example, information on the evaluation of witnesses maintained on the prosecutor system is not accessible to other agencies.

SAC PROFILE: The SAC was created as a component of the state CDS plan. It has been operational for nearly 3 years. The SAC is located in a branch of the Governor's office. This location is not expected to change in the foreseeable future.

The SAC maintains no data. It uses information submitted by other state agencies on computer printouts and statistical summaries.

The SAC has provided technical assistance in data collection, data processing, and/or data analysis to the Crime Commission, Supreme Court, and Social Services. Users indicate satisfaction with the quality of these services.

AUTHORIZATION FOR STATISTICAL REPORTING: Only the Crime Commission and Public Safety respond that they are formally authorized to report on information and statistics. The Commission is legislated to conduct inquiries, plan, and review data. Public Safety is required by legislation to collect UCR, criminal history, and other data useful in apprehending criminals. The SAC is seeking formal authorization to report on information and statistics.

CAPABILITIES TO USE AND PROCESS DATA: Social Services and the Bi-State Computer maintain their own computer systems. The SAC and Public Safety utilize the computer facilities of the Comptroller's Office. The Crime Commission and the Supreme Court have no computer access. All agencies using a computer maintain their own programming staffs and report satisfaction with computer facilities and support staff.

The Bi-State Computer and Public Safety utilize a computer for both operational and statistical purposes. The SAC and Social Services only perform statistical tasks on their systems.

The SAC, Public Safety, and Social Services report maintaining statisticians on staff. The SAC, Public Safety, and Crime Commission employ criminal justice data analysts.

All agencies except the Supreme Court respond that they prepare either statistical or analytical reports for dissemination.

IOWA

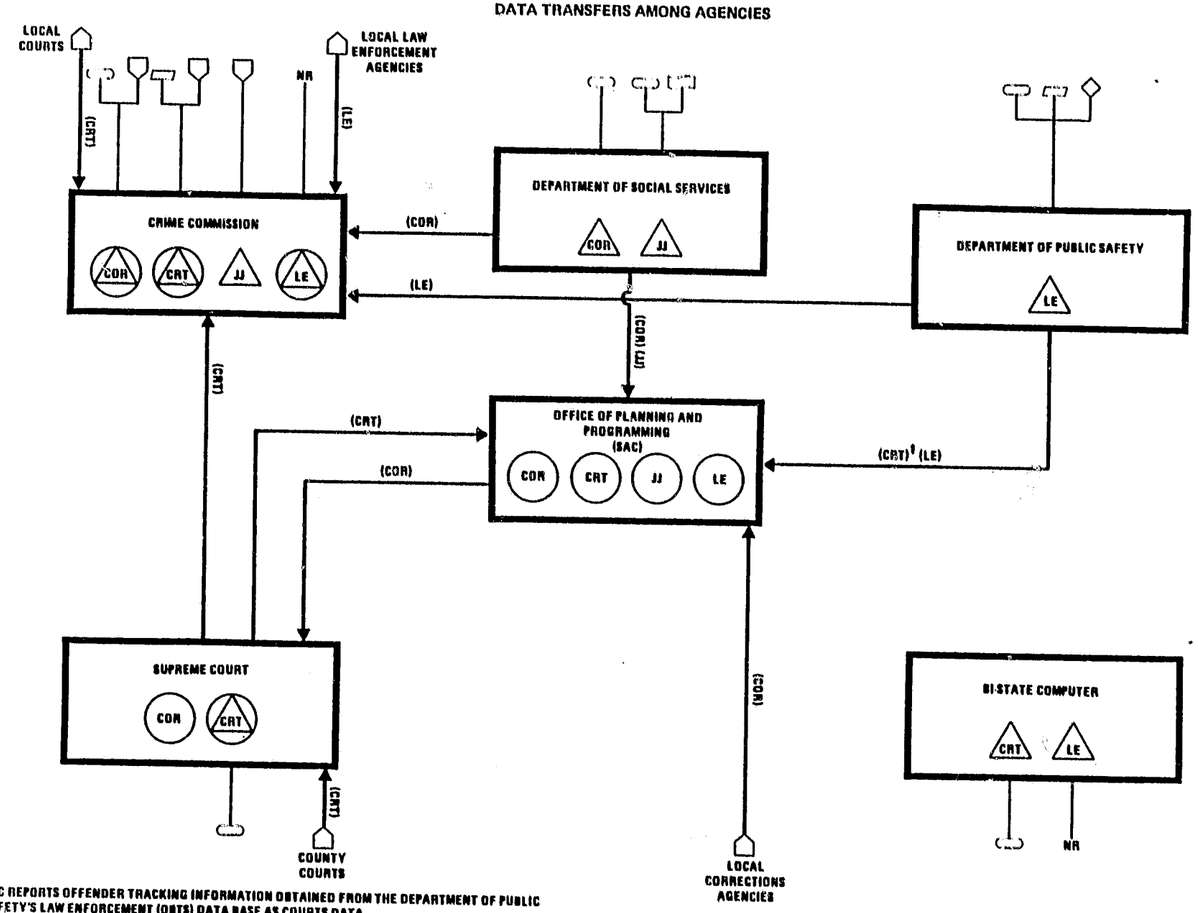
DATA TRANSFERS AMONG AGENCIES

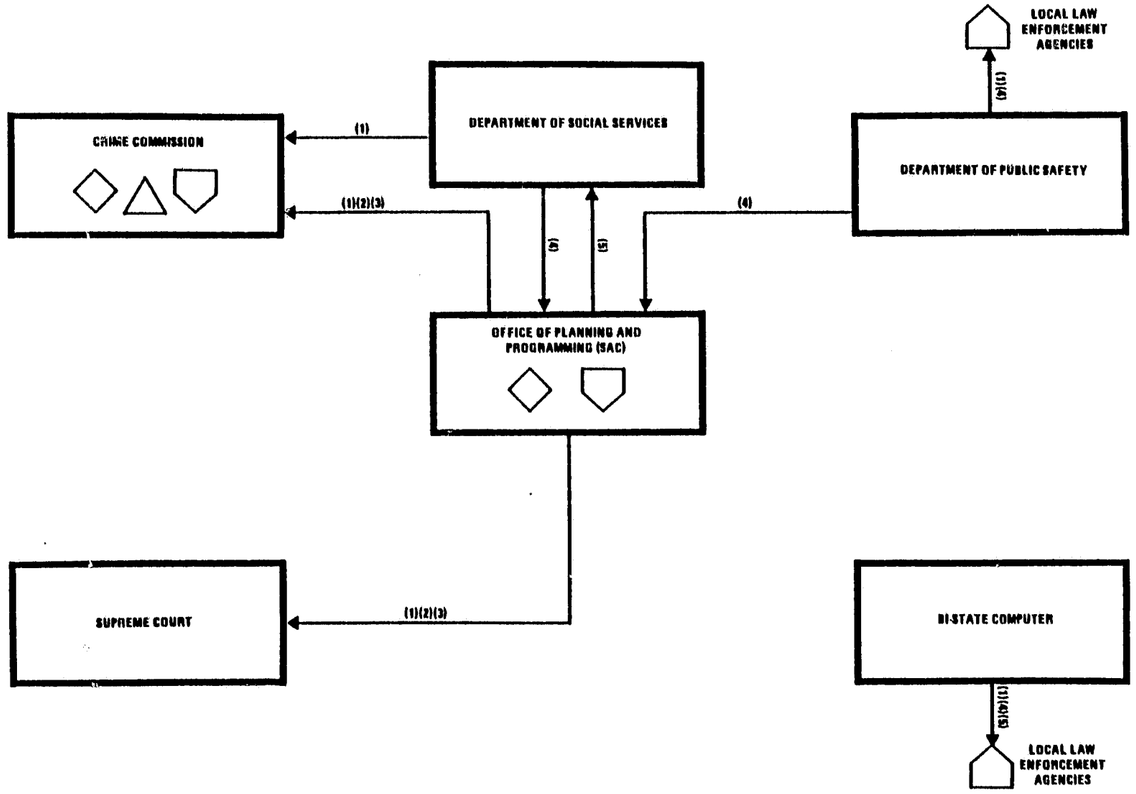


[1] SAC REPORTS OFFENDER TRACKING INFORMATION OBTAINED FROM THE DEPARTMENT OF PUBLIC SAFETY'S LAW ENFORCEMENT (OBTS) DATA BASE AS COURTS DATA.

SEE APPENDIX A FOR EXPLANATION OF FIGURES

IOWA

SERVICE TRANSFERS AMONG AGENCIES



SEE APPENDIX B FOR EXPLANATION OF FIGURES

KANSAS

GENERAL CHARACTERISTICS: The primary data users are listed below.

- Governor's Commission on Criminal Administration - SAC (corrections, courts, juvenile justice, law enforcement)
- Department of Social and Rehabilitation Services (juvenile justice)
- Supreme Court - Office of Judicial Administration (corrections, courts, juvenile justice)
- Bureau of Investigation (corrections, courts, juvenile justice, law enforcement)
- Department of Corrections (corrections, law enforcement)
- County and District Attorney's Association (corrections, courts, juvenile justice, law enforcement)
- Highway Patrol (courts, juvenile justice, law enforcement)

A central division of computer services supports both operational and statistical data processing activities of other state agencies.

DATA AVAILABILITY: Computerized information is available on corrections, courts, juvenile justice, and law enforcement.

A statewide OBTS information system and PROMIS are being planned. OBSCIS is operational. As reported by the SAC, there is no Criminal Justice Information System (CJIS) Board to provide effective coordination of data within the state.

Only the SAC reports receiving some computer-processed data in the form of computer tapes from other agencies. Other respondent agencies receive reports and summaries or copies of original documents.

DATA ACCESS: The Supreme Court, Investigation, and Corrections report that security and privacy considerations limit the access of other agencies to their data bases.

All agencies have unlimited access to the courts data maintained by the Supreme Court. Access to their juvenile justice data is more restricted due to a juvenile statute on confidentiality.

Investigation reports restricting the access of local non-criminal justice agencies, the SPA, and LEAA to published data and edited data files for corrections, courts, and law enforcement data. Local non-criminal justice agencies are granted no access to the juvenile justice data bases of the Bureau.

The availability of juvenile justice data maintained by Social and Rehabilitation Services is restricted for all agencies. Based on a state statute of confidentiality, agencies may access selected operational files only. All agencies have unlimited access to the juvenile justice data retained by the SAC. The SAC maintains only statistical data on juvenile justice. The District Attorney's Association maintains no data. The Highway Patrol did not respond to these questions.

SAC PROFILE: The SAC has been operational for more than 3 years. However, Investigation reports that the SAC and the SPA may be terminated by February 1981. (Federal support for the SAC under existing CDS guidelines will expire in May 1981.) If the SAC is terminated, the Bureau contends it may assume the SAC function within the state.

Services are provided by the SAC in the areas of data collection, data processing, and general technical assistance to state agencies. Only one agency (Supreme Court) reports dissatisfaction with SAC services. The Supreme Court indicates data obtained from the SAC are outdated since the SAC uses Federal forms to collect the data.

AUTHORIZATION FOR STATISTICAL REPORTING: Social and Rehabilitation Services, Supreme Court, Investigation, and Corrections are formally authorized to report on criminal justice information and statistics. All agencies indicate the basis for authorization is legislation.

CAPABILITIES TO USE AND PROCESS DATA: All agencies except the District Attorney's Association use a computer. The SAC, Investigation, and Corrections maintain their own computing systems and computer programming staffs. All systems are used for both operational and statistical data processing purposes. However, Investigation uses its system mainly for operational purposes and only secondarily for statistical applications. Social and Rehabilitation Services uses the SAC's computer facilities and programming staff for statistical data processing activities. The Highway Patrol utilizes the State Division of Computer Services for both operational and statistical purposes and programming support. The SAC, Supreme Court, and Investigation also use the State Division of Computer Services for additional statistical functions.

The Highway Patrol reports that the operational uses of its system limits statistical applications. It cites core limitations and lack of dedicated staff as reasons for restrictions on statistical usage. The Supreme Court, Investigation, and Highway Patrol report inadequacies in computer services due to time and program limitations. Additionally, the SAC, Investigation, and Highway Patrol report computer support staff are inadequate because of a shortage of staff.

All agencies except the District Attorney's Association and the Highway Patrol have criminal justice data analysts and/or statisticians on staff. (Social and Rehabilitation Services did not respond to these questions.) All agencies except Corrections indicate they prepare statistical/analytical reports for use by other agencies. (Highway Patrol did not respond to these questions.)

[1] RESPONDENT MAINTAINS ONLY LIMITED INFORMATION

SEE APPENDIX B FOR EXPLANATION OF FIGURES

KENTUCKY

GENERAL CHARACTERISTICS: The primary data users are listed below.

- Department of Justice - Bureau of Corrections (corrections, courts), Justice Unit (courts, juvenile justice)
- State Police (corrections, law enforcement)
- Commonwealth Attorney's Office (courts, law enforcement)
- Department for Human Resources - Bureau for Social Services (has not yet responded to questionnaire)
- Administrative Office of the Court (refused to respond to questionnaire)

DATA AVAILABILITY: The responses from two primary data users are missing. An accurate description of data availability is difficult to present. Based on responses already received, corrections, courts, and juvenile justice data are computerized.

Corrections data (operational and statistical) maintained by Corrections and courts data (operational) kept on file by the Attorney's Office are complete. All other data maintained by respondent agencies are limited.

The Juvenile Justice Unit did not respond to the types of juvenile justice data it maintains. The State Police did not respond to questions on law enforcement data types.

DATA ACCESS: The Attorney's Office permits all agencies unlimited use of its law enforcement data. No reason is given for not including local non-criminal justice agencies and the SPA with all other agencies in unlimited use of its courts data.

All agencies except non-criminal justice agencies (which are limited to published information) may utilize selected corrections data files of Corrections. Access to the corrections files of the State Police varies by agency.

SAC PROFILE: There is no SAC in Kentucky.

AUTHORIZATION FOR STATISTICAL REPORTING: The Juvenile Justice Unit and the State Police are authorized by executive order and legislation respectively to collect, analyze, and report on criminal justice information.

The Juvenile Justice Unit is mandated to submit an annual report regarding state compliance under the Juvenile Justice and Delinquency Act. Criminal history reporting is the responsibility of the State Police.

CAPABILITIES TO USE AND PROCESS DATA: Only the Juvenile Justice Unit does not use a computer.

The State Police maintains its own system (which is used for operational and statistical purposes) and its own programmers.

Both Corrections and the Attorney's Office rely on another agency's facilities for operational and statistical programming. Corrections has access to the facilities of the Division of Computer Services and the Attorney's Office uses the City of Louisville's data processing services.

No agency employs statisticians.

All agencies except Corrections (which didn't respond to this series of questions) prepare some statistical and/or analytical reports for other agencies.

LOUISIANA

GENERAL CHARACTERISTICS: The primary data users are listed below.

- Commission on Law Enforcement and the Administration of Criminal Justice (corrections, courts, juvenile justice, and law enforcement)
- Department of Health and Human Services - Division of Youth Services (corrections, juvenile justice, law enforcement)
- Supreme Court - Office of Judicial Administration (courts, juvenile justice)
- State Police - Bureau of Criminal Identification (law enforcement)
- Department of Corrections (has not yet responded to questionnaire)

Budget constraints have forced the discontinuation of some formal information systems throughout the state and have contributed to the low level of data computerization. Agencies report that the lack of funds has prevented the installation of modern computer facilities. In addition, SAC funding ceased in 1980, so there is no longer an operational SAC.

DATA AVAILABILITY: A reply from one respondent agency has not yet been received. Reports of data availability and computerization are based on partial responses. Information from respondent agencies indicates courts and law enforcement data are computerized. (Youth Services did not indicate how its juvenile justice and law enforcement data are accessed.)

The Commission on Law Enforcement reports that the OBTS system developed by Louisiana served as a model for other states in the design of such information systems. Funding for the OBTS system has been seriously decreased, so there is no longer a statewide system.

Corrections manages a corrections system similar to OBSCIS.

A fingerprint identification system is also used.

Other than statistical-level corrections data and operational-level juvenile justice data, information maintained by participating agencies is very limited. Only operational appellate courts data are retained by the Court. (However, Youth Services did not respond to questions regarding its juvenile justice and law enforcement data, and a response from Corrections is pending.)

DATA ACCESS: The Commission on Law Enforcement reports the state courts, corrections, and LEAA have unlimited access to its data, but data are aggregate in nature. No other agencies have requested access.

Unlimited access to its law enforcement files is permitted to all agencies but the SPA by the State Police. No reasons are cited for restricting access.

Security and privacy reasons govern the access to Youth Services' corrections data. All agencies but the SPA (selected files), LEAA, and the US Attorney's Office (unlimited access) may use published data.

The Supreme Court also cites security and privacy considerations for restricting agencies (except state courts) to the use of edited files for its courts data. State courts are permitted unlimited access to these files. Access to its juvenile justice data is also unlimited.

SAC PROFILE: Until 1980, the state had a SAC. LEAA block grant funding and matching state funds were discontinued. The Commission on Law Enforcement reports it has assumed some SAC functions.

AUTHORIZATION FOR STATISTICAL REPORTING: Only the State Police are not authorized to report on criminal justice information.

The Supreme Court is authorized by its own rule to report to the legislature and the Judicial Council.

Youth Services and the Commission on Law Enforcement are legislatively authorized. The latter is required to submit reports to the legislature and LEAA.

CAPABILITIES TO USE AND PROCESS DATA: Youth Services and the Commission on Law Enforcement do not use computer faciliites. At one time, the Commission did maintain its own system, but budget cuts halted the use of the computer.

The Supreme Court and State Police maintain their own computer systems' (used for operational and statistical processing) and programming staffs. (However, the system used by the Supreme Court is a 12-year-old minicomputer.) The Supreme Court also has on-line access to the facilities of the Information Processing Authority for operational and statistical functions.

Statisticians/analysts are available on-staff at the Supreme Court, Youth Services, and Commission on Law Enforcement.

All respondent agencies but the State Police prepare statistical and analytical reports.

LOUISIANA

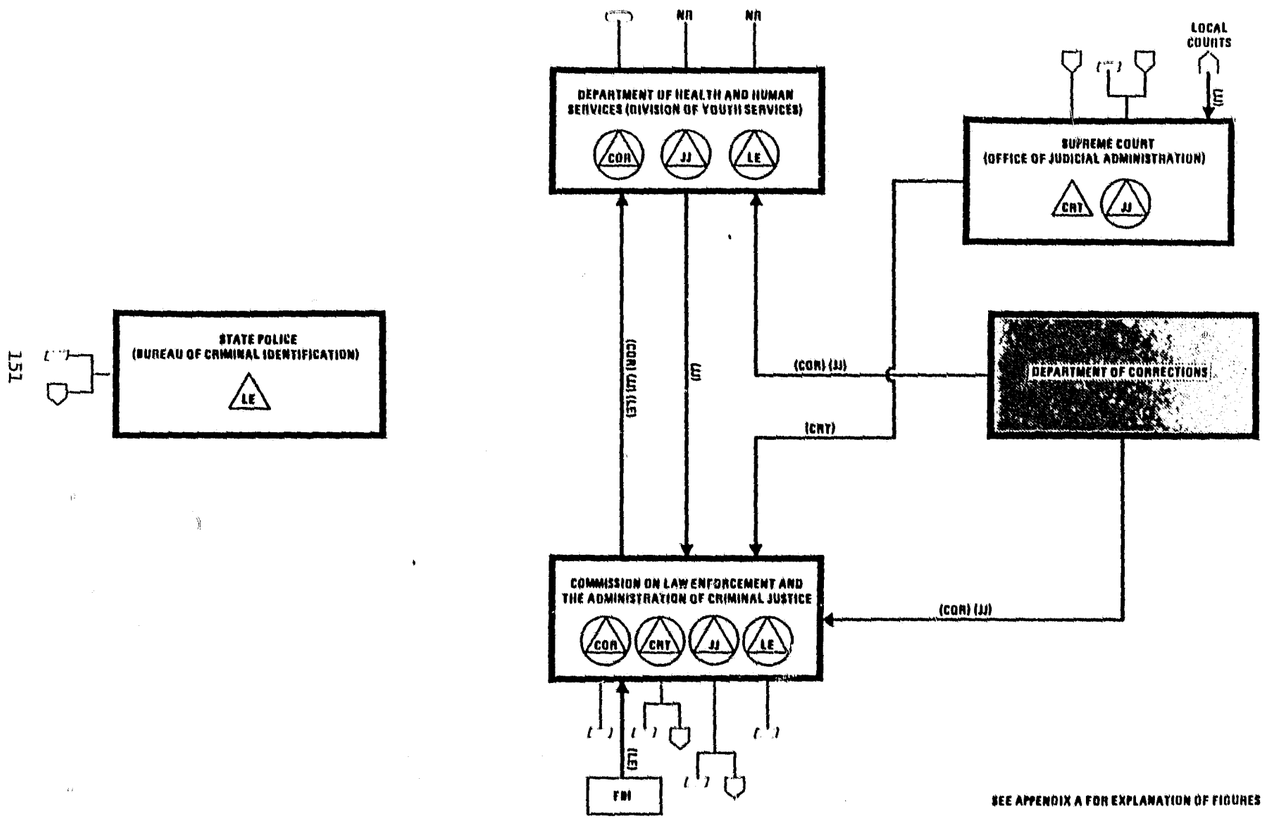
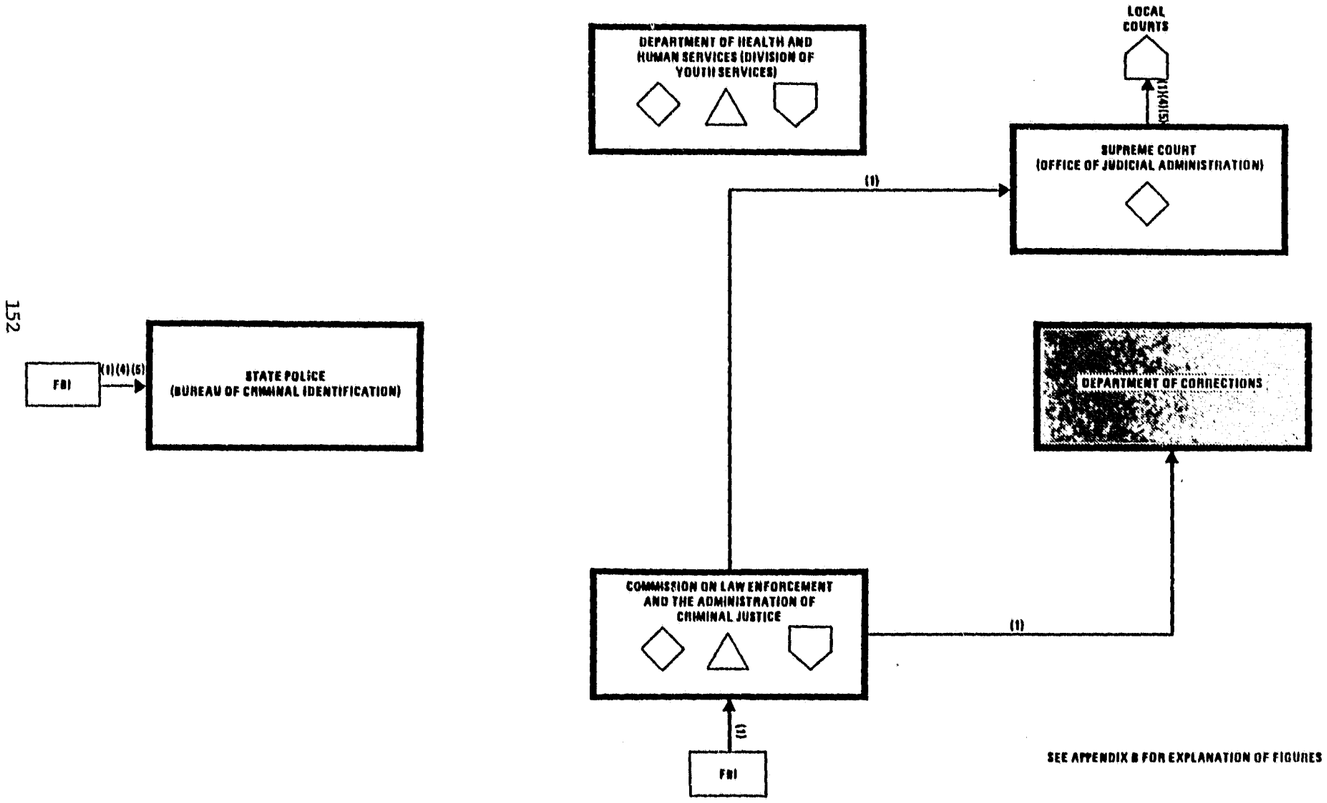
DATA TRANSFERS AMONG AGENCIES



SEE APPENDIX A FOR EXPLANATION OF FIGURES

LOUISIANA

SERVICE TRANSFERS AMONG AGENCIES



SEE APPENDIX B FOR EXPLANATION OF FIGURES

MAINE

GENERAL CHARACTERISTICS: The primary data users are listed below.

- Criminal Justice Data Center - SAC (corrections, courts, juvenile justice, law enforcement)
- Department of Mental Health and Corrections (corrections, courts, juvenile justice, law enforcement)
- Administrative Office of the Courts (courts)
- Bureau of Identification - State Police (corrections, courts, juvenile justice, law enforcement)

DATA AVAILABILITY: Computerized records are maintained on corrections, courts, juvenile justice, and law enforcement.

OBTS and CCH systems, and OBSCIS are being developed.

Three of the four respondent agencies maintain data in all surveyed areas of criminal justice. The types of data they maintain are comprehensive. However, there is wide duplication between agencies in data holdings.

The only operational courts data maintained by the Court is budgetary and personnel information. Identification is the major maintainer of operational courts data.

DATA ACCESS: In most cases, the level of access to an agency's data is not affected by the type of requesting agency. Mental Health and Corrections, for example, limits all agencies in the courts and corrections areas to edited data files that are stripped of identifiers. This limitation is because of state security and privacy considerations. Access distinctions based on type of agency are made in the corrections area.

Identification restricts all agencies to edited corrections, courts, and juvenile justice files. In law enforcement, access distinctions by agency type are made. All limitations are because of security and privacy factors.

The SAC grants local non-criminal justice agencies access to selected operational files in corrections and juvenile justice. All other agencies have unlimited access in these areas. The SAC did not indicate the extent of access restrictions in courts and law enforcement.

Access to the Courts' files is limited to selected operational information for all agencies except state courts, whose access is unlimited.

SAC PROFILE: The SAC has been in existence for 6 years. It is currently jointly funded through the CDS program and a state matching grant. CDS funding will expire in April 1981.

The SAC is located in the CJC. There has been some consideration given to moving the SAC.

The SAC maintains much of its own data. It also receives data from all respondent agencies and other sources when needed.

Technical assistance services are provided to Mental Health and Corrections and Identification by the SAC. It also receives technical assistance from Mental Health and Corrections.

AUTHORIZATION FOR STATISTICAL REPORTING: The SAC is not formally authorized to report on justice statistics and information. The Court and Identification are both so authorized by legislation. Mental Health and Corrections reports its authorization is attributable to legislation, state constitution, and executive order.

CAPABILITIES TO USE AND PROCESS DATA: All respondent agencies use Central Computer Services for data processing and programming support, except the SAC, which did not specify whose facilities it uses.

Only the Courts considers its access to computer services and support staff adequate. All other agencies cite financial constraints as a severe limitation on the assistance of Central Computer Services. Mental Health and Corrections also indicates that utilizing the system for operational tasks sometimes limits statistical processing.

All respondent agencies except Identification have their own statisticians and/or analysts. Identification uses the statisticians and analysts of the SAC.

All agencies prepare both statistical summaries and analytical reports.

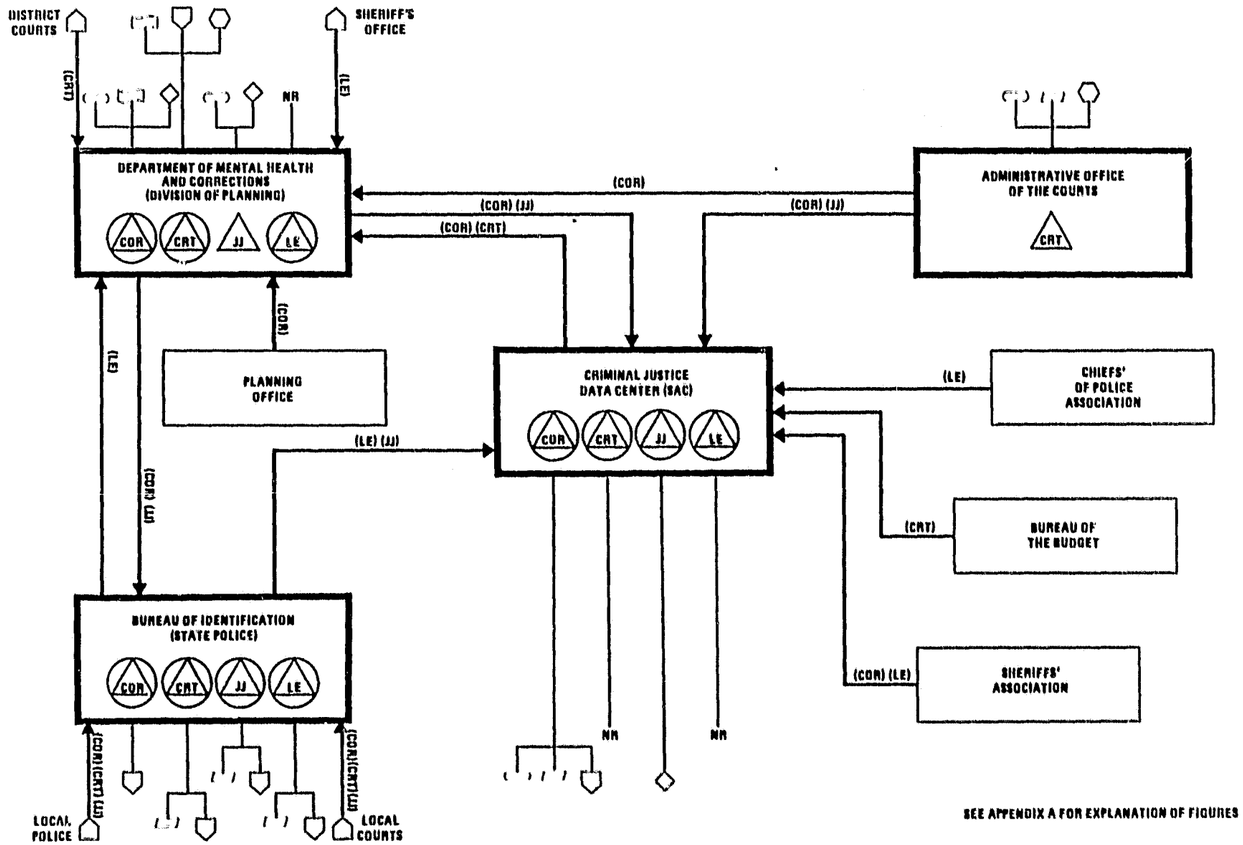
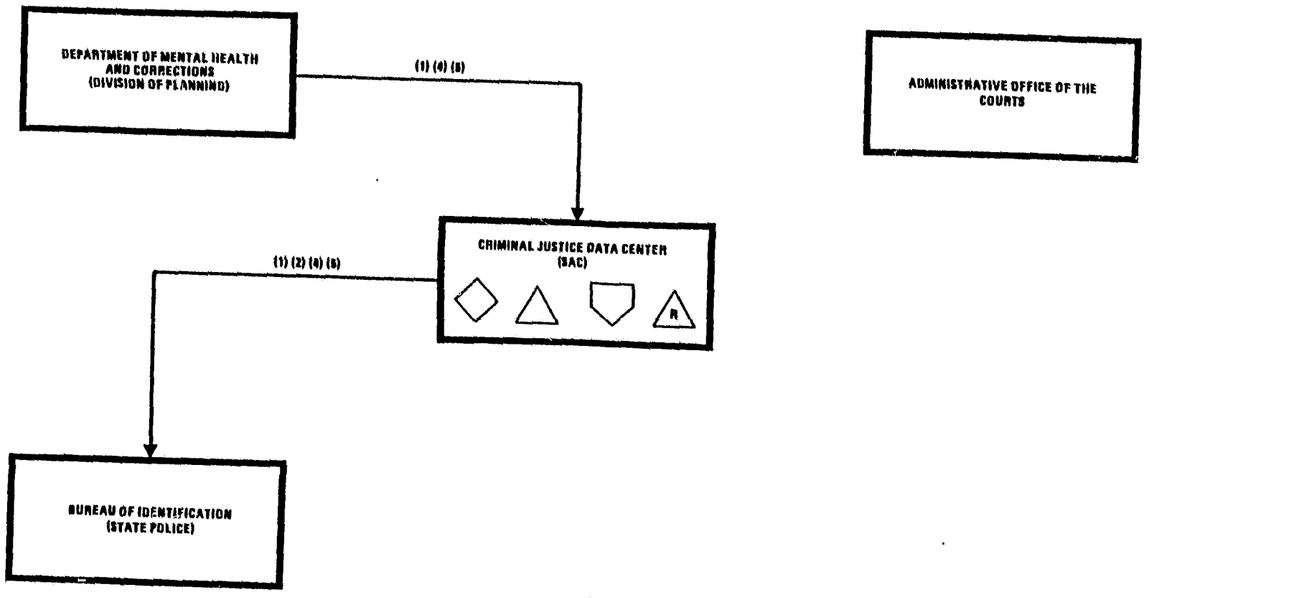
DATA TRANSFERS AMONG AGENCIES



SEE APPENDIX A FOR EXPLANATION OF FIGURES

MAINE

SERVICE TRANSFERS AMONG AGENCIES



SEE APPENDIX B FOR EXPLANATION OF FIGURES

MARYLAND

GENERAL CHARACTERISTICS: The primary data users are listed below.

- Governor's Commission on Law Enforcement and Administration of Justice - SAC (corrections, courts, juvenile justice, law enforcement)
- Department of Public Safety and Correctional Services (corrections, courts, law enforcement)
- Administrative Office of the Court (courts, juvenile justice)
- Department of Health and Mental Hygiene - Juvenile Services Administration (juvenile justice, law enforcement)

DATA AVAILABILITY: Computerized information is maintained on corrections, courts, juvenile justice, and law enforcement.

An OBSCIS II is being developed for the Division of Parole and Probation. An OBTS system is also being developed.

The SAC obtains statistical data on computer tape, computer printouts, and statistical summaries on an as-needed basis.

No respondent agency maintains operational data on probation or parole. Public Safety and Correctional Services does maintain these data types on a statistical basis.

The Court reports maintaining only statistical courts data. These data are used to produce judicial manpower studies that are disseminated to other agencies. The Court does submit operational data on charges, pleas, verdicts, and sentencing to a central CCH repository maintained by Public Safety and Correctional Services under the state's CJIS plan.

DATA ACCESS: Public Safety and Correctional Services is responsible for disseminating criminal history data to authorized agencies. By department policy, not all information maintained is made available for dissemination. The amount of information disseminated varies according to the type of data. Access to courts and law enforcement data is limited to selected operational files. Access to corrections data is restricted further to published data only.

Within Public Safety and Correctional Services, at the division level, further access distinctions are made according to the type of requesting agency. The Division of Corrections, for example, grants greater access to local criminal justice agencies than non-criminal justice agencies, the SPA, and Federal agencies.

The Court grants unlimited access to its courts and juvenile justice data for all agencies except local non-criminal justice agencies. A security and privacy consideration is cited as the reason for the limitation.

Juvenile Services restricts all agencies to published data only for privacy reasons. It reports that additional information can only be obtained from the original provider of the information (e.g., local agencies).

The SAC maintains no data.

SAC PROFILE: The SAC was created over 4 years ago by executive order. It acts as staff to the Criminal Justice Council which in turn reports to the Executive Department.

The SAC is actively involved in the further development of information systems. SAC personnel serve on an Information System Policy Committee and a legislatively mandated Criminal Justice Information Advisory Board. The SAC is also responsible for developing state-level offender processing statistics.

The SAC is an active provider of technical assistance services to the criminal justice community. All respondent agencies report utilizing these services.

AUTHORIZATION FOR STATISTICAL REPORTING: The SAC and Public Safety and Correctional Services are formally authorized to report on information and statistics. Juvenile Services and the Court are not so authorized.

CAPABILITIES TO USE AND PROCESS DATA: All respondent agencies use a computer in their data processing activities, but only Public Safety and Correctional Services and Juvenile Services maintain their own systems. The SAC currently utilizes the facilities of the University of Maryland, but plans to add its own minicomputer in the near future. The Court uses the computer facilities of the Office of the Comptroller and, to a lesser extent, Public Safety and Correctional Services.

The SAC uses a computer solely for statistical purposes while all other agencies perform operational and statistical tasks on their systems.

Both the Court and Public Safety and Correctional Services respond that the adequacy of computer services is constrained by budget limitations, and the adequacy of support staff is undermined by staff vacancies that have gone unfilled.

Only Juvenile Services does not produce analytical reports or statistical summaries.

The SAC reports having both statisticians and criminal justice data analysts on staff, Juvenile Services only statisticians, and Public Safety and Correctional Services and the Court neither statisticians nor analysts.

MARYLAND

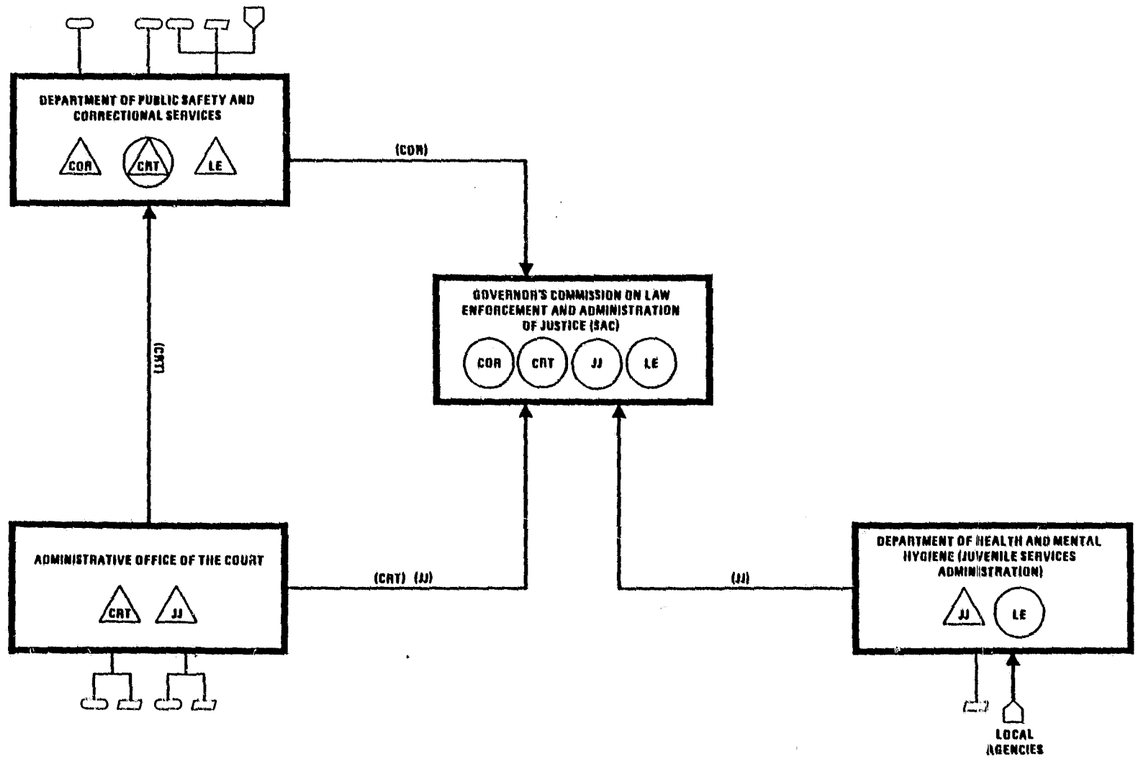
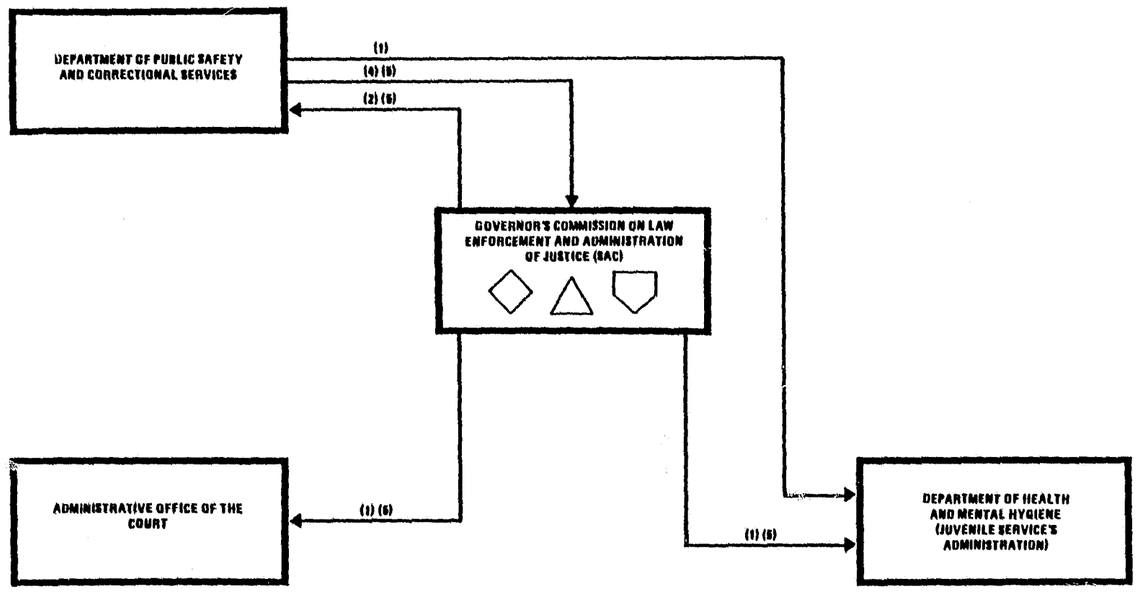
DATA TRANSFERS AMONG AGENCIES



SEE APPENDIX A FOR EXPLANATION OF FIGURES

MARYLAND

SERVICE TRANSFERS AMONG AGENCIES



SEE APPENDIX B FOR EXPLANATION OF FIGURES

MASSACHUSETTS

GENERAL CHARACTERISTICS: The primary data users are listed below.

- Committee on Criminal Justice - SAC (corrections, courts, juvenile justice, law enforcement)
- Office of the Chief Administrative Justice of the Trial Court - Commission on Probation (corrections, courts, juvenile justice)
- Department of Corrections (corrections, courts, juvenile justice)
- Parole Board (corrections, law enforcement)
- Department of Youth Services (juvenile justice)
- Executive Office of Public Safety - Criminal History Systems Board (corrections, law enforcement)
- Department of the Attorney General (has not yet responded to questionnaire)

Public Safety functions as a service bureau to all criminal justice agencies in the executive branch of government.

DATA AVAILABILITY: One respondent agency has not yet returned a questionnaire. However, responses to date indicate computerized data are maintained on corrections, courts, juvenile justice, and law enforcement.

The Trial Court reports it has developed a manual file similar to a CCH system which contains data on all offense transactions. These data are disseminated to all law enforcement officials. (A CCH system is being planned.)

An OBTS system is also being planned.

Public Safety will be the repository for OBSCIS which is being developed.

Data are comprehensive in all areas but law enforcement. The Parole Board only retains operational information on warrants. Public Safety maintains four types of statistical law enforcement data and limited operational data on criminal history records and wants/warrants.

DATA ACCESS: In order for any agency to use data maintained by another agency, it must be generally approved by a review board and be listed as an approved agency.

Corrections grants unlimited use of its data to all agencies but local non-criminal justice agencies (which are not approved by the review board) and LEAA. No reason is given for restricting the access of LEAA.

Youth Services permits access to its data on a "need to know" basis.

State and Federal security and privacy reasons are listed by the Parole Board, Public Safety, and the Trial Court for limiting the access of various agencies to their files. The degree of access permitted to requesting agencies varies according to agency and the type of data requested.

The SAC maintains no data files.

SAC PROFILE: For over 5 years, the SAC has been funded under the CDS program. CDS funding is expected to terminate in January 1981 at which time state appropriations will support the SAC.

The location of the SAC in the CJC is reported to be a constraint on its responsibilities. The SAC reports that the SPA relies heavily on the SAC for "trivial" technical assistance and, therefore, is limited in its performance of other functions.

Since the SAC maintains no data, it is dependent on other agencies for criminal justice information.

Public Safety and the Trial Court report using SAC services. The former indicates the SAC is very responsive to its needs.

AUTHORIZATION FOR STATISTICAL REPORTING: All agencies except the SAC (and Youth Services, which responded "don't know") are authorized to collect and report on criminal justice information.

The Parole Board is authorized under Federal accreditation regulations to exchange and report on criminal justice information.

All other agencies are legislatively authorized.

CAPABILITIES TO USE AND PROCESS DATA: All respondent agencies use a computer in their data processing activities and employ their own programmers. Only the Trial Court, Corrections, and Public Safety have their own computer systems (operational and statistical).

The Trial Court is the only agency which does not use additional computer facilities. Several agencies report access to the computers of the state college system.

All agencies but the SAC employ statisticians/analysts and all prepare either statistical or analytical reports.

MASSACHUSETTS

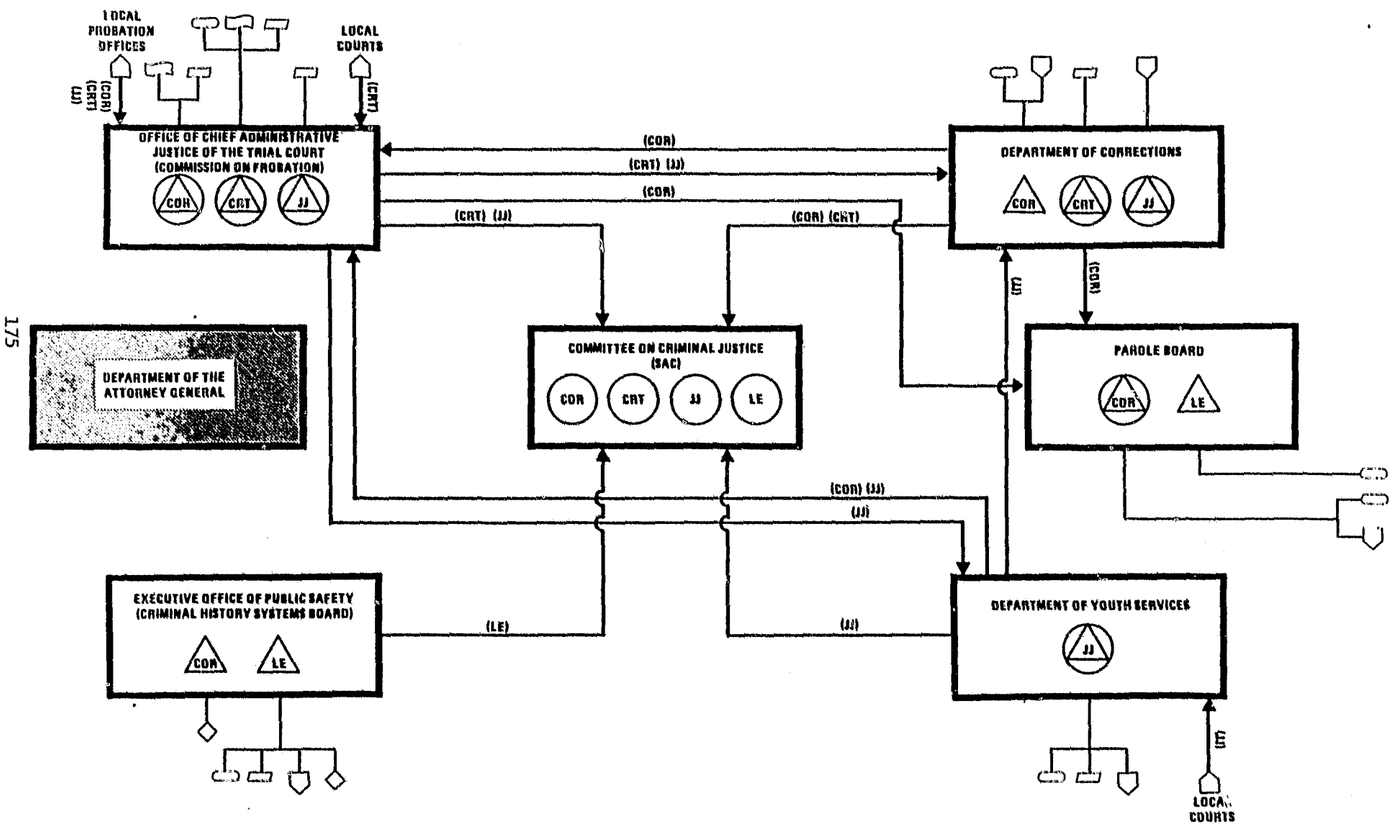
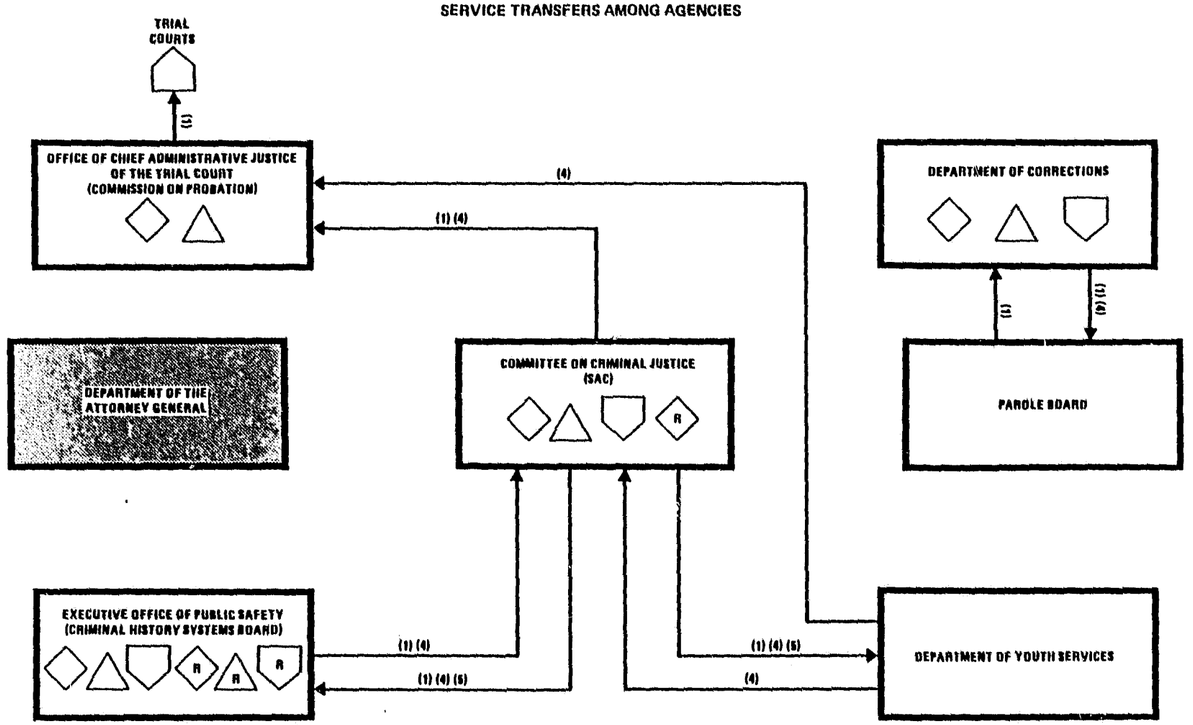
DATA TRANSFERS AMONG AGENCIES



SEE APPENDIX A FOR EXPLANATION OF FIGURES

MASSACHUSETTS

SERVICE TRANSFERS AMONG AGENCIES



SEE APPENDIX B FOR EXPLANATION OF FIGURES

MICHIGAN

GENERAL CHARACTERISTICS: The primary data users are listed below.

- Office of Criminal Justice - SAC (corrections, courts, juvenile justice, law enforcement)
- Department of Corrections (corrections, courts, law enforcement)
- State Police (juvenile justice, law enforcement)
- Prosecuting Attorneys' Association (courts, law enforcement)
- Department of Social Services - Office of Children and Youth Services (juvenile justice)
- Court Administrator (has not yet responded to questionnaire)

The Attorneys' Association is a private, non-profit group which provides training and career preparation for prosecutors. It is charged with the resonsibility of implementing PROMIS in eight counties.

DATA AVAILABILITY: A response from the principal user of courts data (Court Administrator) has not been received. The SAC and State Police did not indicate the manner in which their law enforcement data are accessed. Responses from other agencies indicate computerized information is available on corrections, courts, and juvenile justice.

SJIS, PROMIS, and OBSCIS are being implemented.

A CCH system is operational.

Operational and statistical data types are maintained in all areas. (The SAC did not indicate the specific types of data it maintains on law enforcement.) Pending a response from the Court Administrator, courts data are limited.

DATA ACCESS: The State Police allows all agencies the use of edited data files only. No reasons are listed for this access restriction.

A state statute governs the access to Corrections' courts data. Only law enforcement agencies and the state courts are permitted unlimited access to these data. Non-criminal justice agencies, the SPA, and all Federal agencies (except the FBI) are restricted to selected courts data files. Corrections permits unlimited access to its corrections data.

No reasons are stipulated by the SAC for restricting the access of all agencies to edited files or published data in corrections and juvenile justice.

Youth Services reports that state law governs the release of juvenile justice data. Information is released by the agency at the discretion of the director.

The Attorneys' Association maintains no data.

SAC PROFILE: The SAC has been in operation for 3 years and is in its third year of funding under the CDS program. Additional sources of funding are LEAA and state matching funds.

Located in the CJC, the SAC is authorized under legislation specific to the CJC.

The SAC reports that its role is coordinative. It provides information and services to criminal justice agencies. However, no agencies report receiving any data from the SAC and only general technical assistance is used by the State Police.

AUTHORIZATION FOR STATISTICAL REPORTING: Only the Attorneys' Association is not authorized for statistical reporting. All other agencies receive authorization under legislation. Youth Services is additionally authorized under executive order.

CAPABILITIES TO USE AND PROCESS DATA: The Attorneys' Association does not use a computer for data processing. All other respondent agencies maintain their own computers, programmers, and statisticians.

Youth Services reports that the operational uses of its system limit statistical applications.

All utilize supplemental computer facilities with no problems reported.

Analytical reports or statistical summaries are disseminated by all agencies.

MICHIGAN

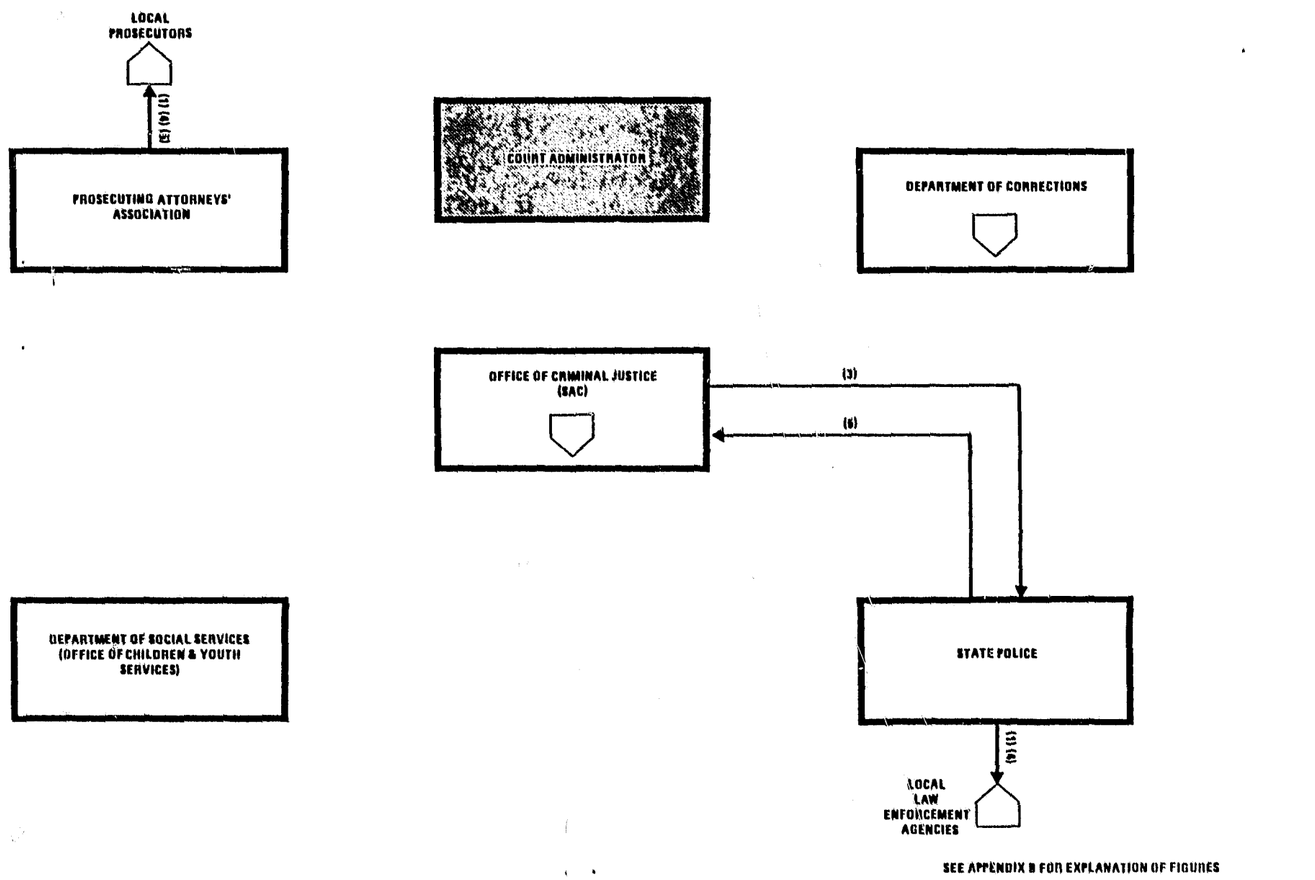
SERVICE TRANSFERS AMONG AGENCIES



SEE APPENDIX B FOR EXPLANATION OF FIGURES

MINNESOTA

GENERAL CHARACTERISTICS: The primary data users are listed below.

- Crime Control Planning Board - SAC (corrections, courts, juvenile justice, law enforcement)
- Department of Corrections (corrections, juvenile justice)
- Bureau of Criminal Apprehension (corrections, courts, juvenile justice, law enforcement)
- Supreme Court (has not yet responded to questionnaire)

DATA AVAILABILITY: Computerized information is maintained on corrections, courts, juvenile justice, and law enforcement.

An OBTS system is being implemented. OBSCIS and SJIS are operational.

Criminal Apprehension and Corrections maintain various corrections data types. Neither agency maintains any management and administration information.

Of the partial returns, Criminal Apprehension is the only agency to maintain courts and law enforcement data. Its operational law enforcement files are comprehensive.

There is no agency that serves as a respository for juvenile justice data. Criminal Apprehension, Corrections, and the SAC maintain some types of juvenile justice data. Their holdings are extremely limited, however.

DATA ACCESS: Criminal Apprehension cites state and Federal security and privacy laws for limiting access to its data bases. For all areas of data, all agencies except local non-criminal justice agencies, the SPA, and LEAA have access to selected operational files. Local non-criminal justice agencies are restricted to published data only at all times. The SPA and LEAA are limited to edited files only in corrections and courts and published data only in juvenile justice and law enforcement.

Access to Corrections' files varies by requesting agency and is governed by security and privacy laws. Access is most restricted for local non-criminal justice agencies and LEAA.

The SAC grants unlimited access to its juvenile justice information for all agencies.

SAC PROFILE: The SAC has been operational for almost 6 years. It is functionally part of the CJC. The SAC is funded by an LEAA grant and state dollars. It receives no funding under the CDS program.

The SAC is not actively involved in information system development. It also is not visibly active in providing technical support to other agencies. Only Corrections reports using SAC technical assistance services.

AUTHORIZATION FOR STATISTICAL REPORTING: All respondent agencies are legislatively authorized to report on justice information and statistics.

CAPABILITIES TO USE AND PROCESS DATA: All agencies use a computer in their data processing activities. Criminal Apprehension maintains its own system and also uses the facilities of the Information Systems Bureau of the Department of Administration. It uses both computers for operational and statistical processing. Corrections maintains its own computer which it uses for operational purposes. The SAC has access to a computer at the University of Minnesota for both operational and statistical needs.

Criminal Apprehension reports that present computer facilities are often not responsive to its needs, untimely, and costly. Other respondents contend that their computer services are adequate to meet their needs.

Criminal Apprehension and Corrections use the Information Systems Bureau for programming support. The SAC maintains its own staff of programmers.

Criminal Apprehension (8), Corrections (6), and the SAC (10) all have statisticians/analysts on staff.

MISSISSIPPI

GENERAL CHARACTERISTICS: The primary data users are listed below.

- Statistical Analysis Center - SAC (corrections, courts, juvenile justice, law enforcement)
- Department of Public Safety (corrections, law enforcement)
- Department of Corrections (corrections)
- Supreme Court (courts)
- Department of Youth Services (corrections, juvenile justice)

A Central Data Processing Authority provides computer support to agencies in need of this service.

DATA AVAILABILITY: Computerized information is maintained on corrections, courts, juvenile justice, and law enforcement.

There is no OBSCIS or OBTS/CCH system. UCR data are being computerized.

Data-maintaining agencies, with the exception of the SAC, hold data principally in the areas that are most relevant to their day-to-day operations. Only the SAC maintains data in all four of the justice areas that were surveyed.

Statistical and operational data are extensive in the corrections area. Corrections collects this data and stores it off-site at the Central Data Processing Authority.

Youth Services maintains a variety of juvenile justice data types.

Holdings in the courts and law enforcement area are limited. The Court maintains no operational courts data. Public Safety's operational and statistical law enforcement holdings are slight. The SAC reports maintaining both courts and law enforcement data but does not indicate what data types are on file.

DATA ACCESS: Local non-criminal justice agencies are limited to edited files from Corrections' corrections data base because of state and Federal security and privacy considerations. All other agencies have unlimited access to these data. Youth Services restricts access in corrections to published reports for all agencies. Access to the SAC's corrections data is dependent on the type of requesting agency.

The Court grants all agencies unlimited access to its courts data. The SAC does not report its access requirements for courts data.

Access to the juvenile justice data held by Youth Services is limited to published data only because of a state security and privacy statute.

The SAC does not report its access requirements for juvenile justice data.

Only the FBI has unlimited access to Public Safety's law enforcement data. Local criminal justice agencies, state police, and corrections are restricted to edited files only. All other agencies have no access to these data. All but local non-criminal justice agencies have unlimited access to the SAC's law enforcement data base. Restricted agencies may access selected operational files.

SAC PROFILE: The SAC has been in operation for over 6 years. It is located in the CJC. Relocation to the Governor's Office is under consideration.

The SAC reports providing technical assistance in data access, data collection, and data analysis on request. The availability of these services is not well known to other agencies. Some agencies respond that they are unaware of SAC services. Only the Supreme Court reports using these services.

AUTHORIZATION FOR STATISTICAL REPORTING: The SAC, Youth Services, and Public Safety are formally authorized for statistical reporting. Corrections answered "don't know" to this question.

The SAC is responsible for collecting and analyzing data related to criminal justice planning. Its authority is derived from legislation and executive order.

Youth Services is required by legislation to report annually on the number and disposition of all cases of delinquency, neglect, and abuse referred to the Youth Courts.

CAPABILITIES TO USE AND PROCESS DATA: The SAC and Public Safety maintain their own computer systems on which they perform both operational and statistical tasks. Both agencies, as well as Corrections, also use the services of the Central Data Processing Authority. All report computer access is adequate to meet their needs. Youth Services and the Court do not use a computer.

The SAC, Public Safety, and Corrections maintain their own programming staffs. The SAC, Youth Services, and Corrections maintain either staff statisticians or data analysts.

Only the SAC and Corrections report that they prepare statistical summaries and analytical papers for use by other agencies.

MISSOURI

GENERAL CHARACTERISTICS: The primary data users are listed below.

- Department of Social Services - Division of Youth Services (juvenile justice), Board of Probation and Parole, Division of Corrections (have not yet responded to questionnaire)
- Highway Patrol (has not yet responded to questionnaire)
- Supreme Court - Court Administrator (has not yet responded to questionnaire)

DATA AVAILABILITY: Only Youth Services has responded to the questionnaire. Therefore, a complete description of data availability and level of computerization cannot be presented. The juvenile justice data maintained by Youth Services are both manual and computerized.

Data maintained by Youth Services is available on all operational and statistical categories except detention records (statistical) and apprehension (operational and statistical).

DATA ACCESS: Organizational policy governs the limitation of all agencies, except the SPA, to the use of selected files. The SPA has unlimited access to Youth Services' juvenile justice files.

SAC PROFILE: There is no SAC in Missouri.

AUTHORIZATION FOR STATISTICAL REPORTING: Youth Services is formally authorized under legislation and executive order to report on statistics.

CAPABILITIES TO USE AND PROCESS DATA: The Department of Social Services provides computer facilities and programming staff for Youth Services. Youth Services reports that inexperienced programmers contribute to the inadequacies of its computer support services.

No statisticians/analysts are employed by Youth Services.

The only reports prepared by Youth Services are for internal use by Social Services.

MONTANA

GENERAL CHARACTERISTICS: The primary data users are listed below.

- Board of Crime Control - SAC (corrections, courts, juvenile justice, law enforcement)
- Board of Crime Control - Juvenile Justice Bureau (juvenile justice, law enforcement)
- Department of Institutions (corrections, courts, juvenile justice)
- Supreme Court (courts)
- Law Enforcement Network Service Bureau (law enforcement)

An Administrative Services agency supports the data processing needs of other state agencies.

DATA AVAILABILITY: Computerized data are available in all areas.

OBSCIS is operational.

The only agency which maintains complete files for any area of data is Institutions in the corrections area. All other agencies retain only limited information in any one area.

In juvenile justice, the only data kept by the SAC are those files which it automated for another agency.

The Juvenile Justice Bureau responded "don't know" to the specific types of law enforcement data in its files.

DATA ACCESS: The sole corrections data-maintaining agency, Institutions, releases its data to all agencies but local non-criminal justice agencies. Data are released to these agencies on agreement. For its courts data, Institutions grants no access and requests that all agencies receive clearance from the state courts. (The Supreme Court permits unlimited use of its courts files.)

Both the SAC and the Juvenile Justice Bureau cite security and privacy conditions and organizational factors as restraints on the use of their data. All law enforcement data on file at the SAC are released to agencies in edited files.

Restrictions on juvenile justice data are more severe. The SAC limits all agencies, but the SPA (which may utilize edited data) to the use of published information. The State Police, state courts, and corrections are prevented from accessing the juvenile justice data of the Juvenile Justice Bureau. All other agencies are restricted to published information.

SAC PROFILE: For over 9 years, the state has had a funded SAC. The SAC is supported by CDS program funds and state matching funds.

Currently, the SAC is located in the CJC but was formerly located in the Crime Control Division, Research and Design Bureau.

It is authorized under legislation specific to the CJC.

The SAC reports its relationship with other agencies is coordinative. It originally compiled data which are now part of other agencies' automated files. It also provides technical assistance on request.

Both the Service Bureau and Juvenile Justice Bureau receive various SAC services. The latter reports dissatisfaction with these services which is attributed to the lack of motivation of SAC staff.

AUTHORIZATION FOR STATISTICAL REPORTING: The SAC, Supreme Court, and Institutions are legislatively authorized for criminal justice reporting.

CAPABILITIES TO USE AND PROCESS DATA: All respondent agencies use computer facilities to process data, but only Institutions maintains its own system (operational and statistical). All other agencies have access to the Department of Administration's facilities. Only the SAC uses that system operationally and statistically.

The Department of Administration also provides programming staff services to the Supreme Court and Service Bureau.

Statistical personnel are on staff in the SAC and Institutions.

Excluding the Service Bureau, all respondent agencies prepare either statistical or analytical reports for use by other agencies.

NEBRASKA

GENERAL CHARACTERISTICS: The primary data users are listed below.

- Crime Commission - SAC (corrections, courts, juvenile justice, law enforcement)
- Department of Correctional Services (corrections, juvenile justice, law enforcement)
- Probation Administration (corrections, juvenile justice)
- Office of Jail Standards (corrections, juvenile justice)
- Court Administrator's Office (courts, juvenile justice, law enforcement)
- State Patrol (corrections, courts, law enforcement)

A Central Data Processing facility exists in the Department of Administrative Services. It provides processing and programming assistance on request.

DATA AVAILABILITY: Computerized information is maintained on corrections, courts, juvenile justice, and law enforcement.

A CCH system is operational. An OBTS system is planned. There is no OBSCIS, SJIS, or PROMIS.

State statute established the State Patrol as the central data repository for criminal records. It maintains only operational records on corrections, courts, and law enforcement.

The principal source of statistical and operational juvenile justice data is Correctional Services. Jail Standards and the SAC hold some additional statistical data, and the Court maintains statistical and operational data.

The Probation Administration maintains only identification data (name, social security, etc.) on probation. All additional information on demographics, status, and record checks is kept only at district probation offices. In juvenile justice, the Probation Administration maintains some juvenile probation data and presentence investigation reports.

DATA ACCESS: The State Patrol grants unlimited access to its files to all agencies except the SPA and local non-criminal justice agencies. The SPA is given selected operational information for audit purposes only. Local non-criminal justice agencies are given access to published data only by a state security and privacy statute.

Correctional Services does not differentiate access by agency type. All agencies have access to selected operational files in corrections and law enforcement and edited files only in juvenile justice. State Statute regulates all access to Correctional Services' data bases.

No agencies may access the files of Jail Standards. Although its corrections information is public record, an organizational policy stipulates that requests are referred to the original source of the data. In juvenile justice, all access is denied subject to a state statute that seals juvenile records.

The Probation Administration contributes selected operational corrections files to the central repository at the State Police. All requests for data are referred to the central repository. By state security and privacy statute, no access is given to the Probation Administration's juvenile files.

The SAC and the Court grant unlimited data access to all agencies.

SAC PROFILE: The SAC has been in existence for 5 1/2 years. It is currently fully state funded. The SAC is located in the CJC and was created by legislation specific to the CJC with reference to the SAC. The location of the SAC is not expected to change. The Governor's Reorganization Task Force has recommended, however, that Jail Standards be merged with the Crime Commission. Jail Standards presently reports to an independent board appointed by the Governor.

The SAC provides technical assistance in data analysis on request to other agencies. The Probation Administration and the Court have utilized this service.

AUTHORIZATION FOR STATISTICAL REPORTING: All agencies except the Court are formally authorized by legislation for statistical reporting. Jail Standards is mandated to establish standardized corrections records and statistical systems.

CAPABILITIES TO USE AND PROCESS DATA: All agencies use a computer in their data processing tasks. The Crime Commission maintains its own system which it uses for operational purposes only. The Probation Administration, the State Patrol, Jail Standards, and Correctional Services all use Central Data Processing facilities for operational and statistical computer work. Correctional Services reports that it is sometimes hard to get adequate computer time on this system. The Court does not indicate the specific agency that provides computer access.

Jail Standards and Correctional Services maintain their own programming staffs. The Probation Administration, the State Patrol, and the SAC use the programming support of Central Data Processing. The Court does not indicate the source of its programming support.

All agencies except the Court have statisticians/analysts on staff. All agencies except the State Patrol produce statistical and/or analytical reports.

NEBRASKA

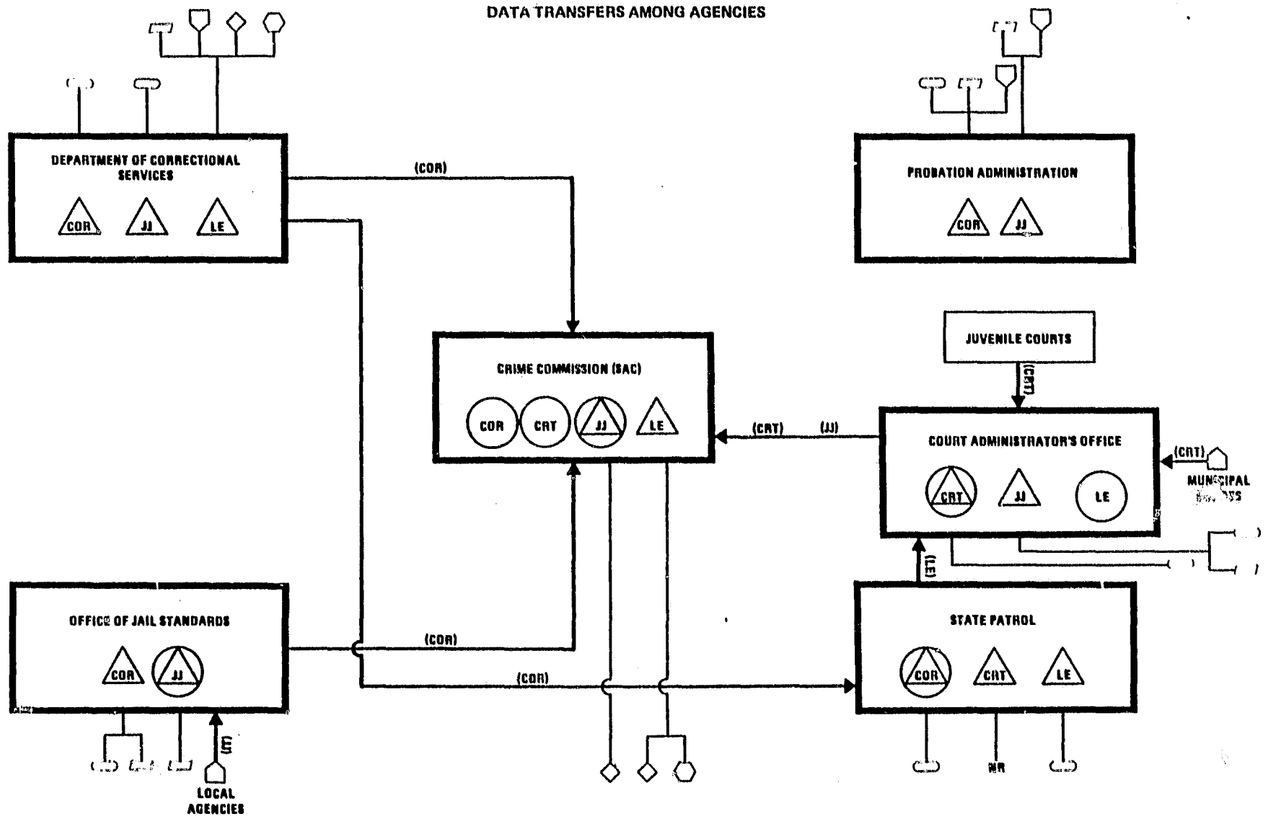
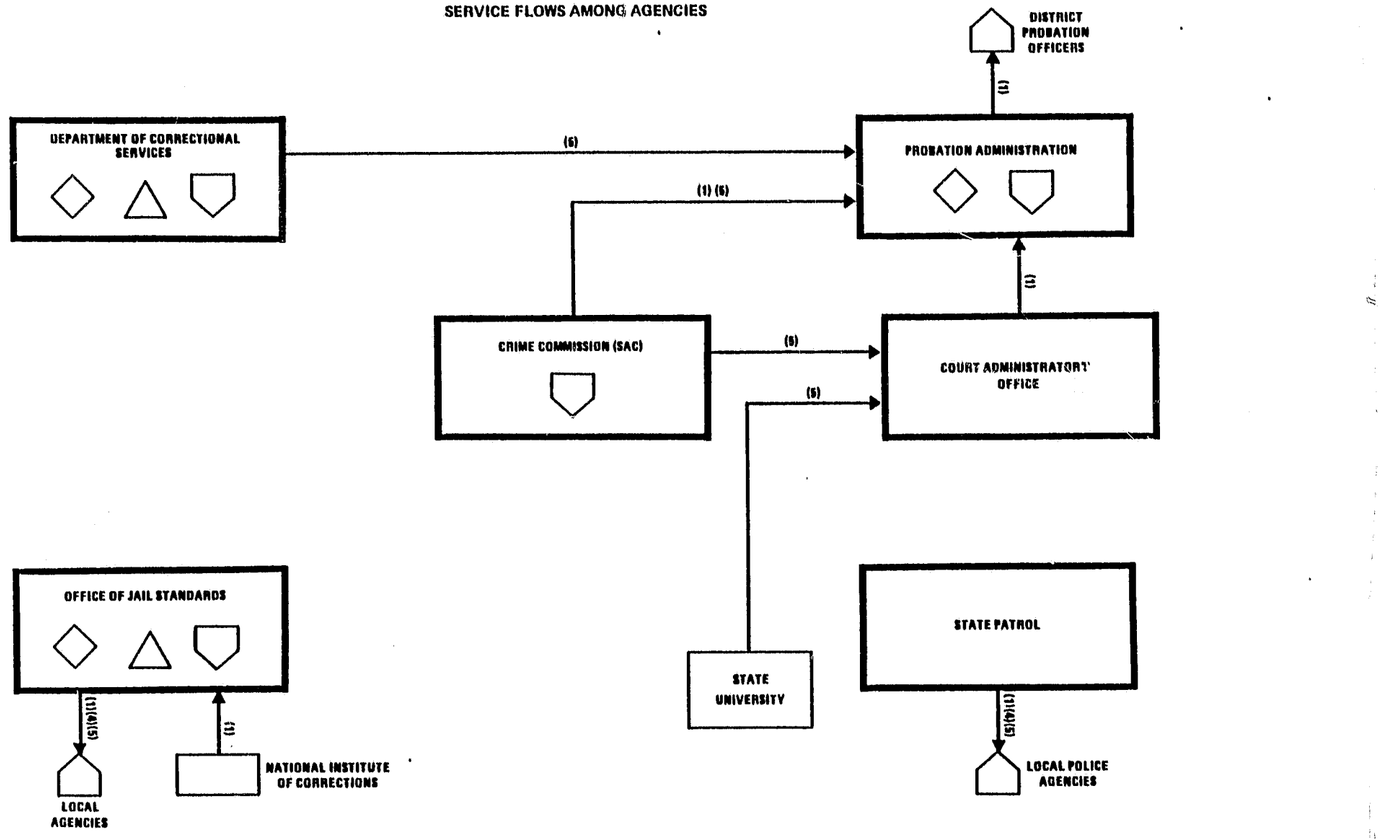
DATA TRANSFERS AMONG AGENCIES



SEE APPENDIX A FOR EXPLANATION OF FIGURES

<u>NEBRASKA</u>

SERVICE FLOWS AMONG AGENCIES



SEE APPENDIX II FOR EXPLANATION OF FIGURES

NEVADA

GENERAL CHARACTERISTICS: The primary data users are listed below.

- Department of Law Enforcement Assistance (law enforcement)
- Adult Parole and Probation (corrections, courts, juvenile justice)
- Administrative Office of the Courts (courts)
- Department of Human Resources - Youth Services Division (juvenile justice)
- Department of Prisons (refused to respond to questionnaire)

Funding cutbacks and manpower shortages have disrupted the commitment to criminal justice information and statistics. Programs and data holdings have been reduced drastically.

There are only minimal exchanges of data and technical assistance services between agencies.

DATA AVAILABILITY: Respondent agencies report maintaining computerized information on corrections, courts, and juvenile justice.

Funding problems have jeopardized or terminated the development of OBTS and CCH systems, OBSCIS, fingerprint records, and the central data repository. UCR records are collected manually from 31 participating agencies.

Data availability ranges from comprehensive to minimal according to area. Parole and Probation maintains statistical corrections information and operational files on parole, probation, and management and administration. Prisons (which refused to respond to the questionnaire) probably supplements these limited operational holdings.

The Courts maintains very limited courts data. Parole and Probation is the primary source of courts information.

The juvenile justice holdings of Youth Services are comprehensive. Parole and Probation deals with adult offenders only. It does collect limited data on an adult's past juvenile records for presentence reports.

Data are scarce in the law enforcement area. Law Enforcement Assistance maintains manual records on crime incidence (UCR), arrests and clearances, and offense reports. There currently are no state-wide criminal history records. The Las Vegas Metropolitan Police Department maintains criminal records, but for metropolitan areas only, in its SCOPE system.

DATA ACCESS: All local, state, and federal agencies are limited to accessing selected operational files only from Parole and Probation. Access is governed by state security and privacy law, need to know, court order, and approval by the individual offender.

The Court limits access of all agencies to published data only despite its limited data base. No reason for the limitation is stated. Parole and Probation did not indicate what the access regulations are for its more extensive courts holdings.

Juvenile justice data access is tightly regulated by state law. The records maintained by Parole and Probation are obtained by court order and are not available for release to other agencies. Youth Services reports that only published data are accessible by other agencies.

Law Enforcement Assistance limits access for local non-criminal justice agencies to selected operational law enforcement files. All other agencies have unlimited access.

SAC PROFILE: The SAC was terminated in 1979 after 5 years of CDS funding expired.

AUTHORIZATION FOR STATISTICAL REPORTING: The Courts is formally authorized by legislation and executive order to develop a uniform system for collecting judicial statistics. Only Parole and Probation is also formally authorized.

CAPABILITIES TO USE AND COLLECT DATA: Parole and Probation maintains its own computer system. The Courts maintains a microcomputer which it uses for statistical tasks. It writes that it lacks the necessary programming staff to efficiently use the computer. Youth Services uses the computer facilities and programming support of Central Data Processing for statistical tasks. Law Enforcement Assistance does not utilize a computer.

Only Youth Services does not have a staff statistician.

All agencies prepare statistical summaries. Parole and Probation and Law Enforcement Assistance also produce analytical reports.

NEW HAMPSHIRE

GENERAL CHARACTERISTICS: The primary data users are listed below.

- Office of the Attorney General - SAC (corrections, courts, juvenile justice, law enforcement)
- Supreme Court (corrections, courts, juvenile justice)
- State Police (corrections, courts, law enforcement)
- Judicial Council (courts, juvenile justice)
- State Prison (corrections)
- Youth Development Center (juvenile justice)

A central data processing facility exists which supports the operational and statistical data processing activities of other agencies.

There is no State Department of Corrections at present although creation of such an agency is being considered.

DATA AVAILABILITY: Computerized information is maintained on corrections, courts, juvenile justice, and law enforcement.

OBSCIS and SJIS are operational. An OBTS/CCH system is being planned.

The only data maintained by the SAC are statistical-level criminal courts information on defendants. The SAC does maintain direct on-line access to the data bases of the State Prison and the Youth Development Center.

The data maintained by the Supreme Court are general and contain no specific information on individuals.

DATA ACCESS: Respondents from the State Police, State Prison, and Judicial Council cite security and privacy considerations as a factor for limiting the access of other agencies to their data bases.

Access to the corrections and courts data maintained by the State Police is limited only for local non-criminal justice agencies. All other agencies have unlimited access to all operational data files. For its law enforcement data, the State Police also limits the access of the Federal Bureau of Prisons and LEAA.

Unlimited access to its courts data is granted by the Judicial Council. However, according to state law no information on juveniles is released.

The Supreme Court reports that the access of all agencies to its data (with the exception of personnel and budget information) is unlimited since the data are not specific to the individual. The Youth Development Center also grants unlimited access to its data with the permission of its director of research.

Unless an agency has on-line facilities to the SAC's data files, it is restricted to the use of published data.

SAC PROFILE: There has been a functioning SAC for over 5 years.

The SAC has been located in the Attorney General's office since July 1979. Prior to that, it was located within the Governor's Commission on Crime and Delinquency, the CJC. The SAC exists under legislation specific to the Criminal Justice Council with reference to the SAC.

The SAC provides data collection, data processing, and technical assistance services to various state agencies. Respondent agencies report using SAC services on a limited basis and a general satisfaction with those services.

AUTHORIZATION FOR STATISTICAL REPORTING: The SAC, State Prison, Judicial Council, State Police, and Youth Development Center are all formally authorized to manage, analyze, or report on criminal justice information and statistics. The basis of the authorizations is state statute for the State Prison, State Police, and Judicial Council, state statute and executive order for the SAC, and a mandate by the Board of Trustees for the Youth Development Center. The Supreme Court's role in this area is informal and done to support its own operational purposes.

CAPABILITIES TO USE AND PROCESS DATA: All agencies except the Judicial Council use a computer. Only the Youth Development Center does not maintain its own computer system. The SAC uses its computer solely for statistical purposes. The Supreme Court, State Prison, and State Police use their systems for both operational and statistical purposes.

The Supreme Court, the State Prison, and the State Police report access to central data processing services for additional processing needs. The Youth Development Center also reports access to the computer facilities of another agency, although the agency itself is not indicated.

All respondent agencies (except the Judicial Council) maintain their own computer programming staffs, but only the SAC maintains a staff of statisticians.

All respondents except the Supreme Court indicate that they prepare statistical summaries for use by other agencies, and all but the State Police and Judicial Council prepare analytical reports.

NEW JERSEY

GENERAL CHARACTERISTICS: The primary data users are listed below.

- Department of Law and Public Safety - Division of Systems and Communications - SAC (corrections, courts, law enforcement)
- Department of Law and Public Safety - Division of State Police (corrections, courts, law enforcement)
- Department of Corrections (corrections, courts, juvenile justice, law enforcement)
- Department of Human Services - Division of Youth and Family Services (juvenile justice)
- Law Enforcement Planning Agency (corrections, courts, juvenile justice, law enforcement)
- Administrative Office of the Court (has not yet responded to questionnaire)

DATA AVAILABILITY: Computerized files are maintained on corrections, courts, juvenile justice, and law enforcement. In juvenile justice, however, the major sources of operational data maintained by Corrections and Human Services are manual. Human Services hopes to have these data automated by July 1981. Only the statistical juvenile justice data maintained by the Planning Agency are currently automated.

A fully operational OBTS/CCH system exists in the state. Over 530 policy agencies contribute data to the criminal history repository maintained by the State Police.

OBSCIS and a state-level PROMIS are currently being planned.

The data maintained and used by the Planning Agency are statistical only in all areas of criminal justice.

Human Services does not distinguish in its files between juvenile delinquents and status offenders.

DATA ACCESS: The SAC reports granting all agencies unlimited access to its files except for local non-criminal justice agencies and LEAA. These agencies may access only statistical information due to historical precedent.

The State Police gives no data access to non-criminal justice agencies, including the SPA, in the corrections and courts area. In law enforcement, local non-criminal justice agencies may access edited data files while the SPA maintains no access. All limitations are due to state and Federal security and privacy considerations.

Human Services also cites state and Federal security and privacy considerations, as well as organizational factors, for denying the availability of its juvenile justice records to all agencies.

Access to Corrections' data is generally limited to published information only for all local agencies and edited data files for all other agencies. Departmental policy requires approval from the Commissioner for all data requests other than published information.

The Planning Agency allows all agencies full access to its files since they contain only statistical information.

SAC PROFILE: The SAC has been in operation over 7 years and is fully state funded. It is located within Law and Public Safety. This location is not expected to change in the near future.

The SAC receives unprocessed data from state and local agencies and maintains them in a computerized system. By maintaining its own data, the SAC feels it can carry out its own analyses from beginning to end.

The SAC reports that it does not generally provide technical assistance services to other criminal justice agencies. Corrections is the only responding agency to report utilizing any SAC services.

AUTHORIZATION FOR STATISTICAL REPORTING: Only the SAC and Corrections indicate that they are formally authorized to report on criminal justice information and statistics. The SAC is required to analyze and report on OBTS for the executive branch and the legislature. Corrections' authority is legislated and pertains to corrections and parole only.

CAPABILITIES TO USE AND PROCESS DATA: All agencies except the Planning Agency use a computer in their data processing activities. The SAC and Human Services maintain their own systems and have their own programming staffs. Corrections and the State Police utilize the computer facilities and the programming staff of the SAC. Corrections uses a computer only for statistical purposes. All other agencies use their systems for statistical and analytical purposes. Human Services reports that statistical uses have a lower computer priority than operational uses.

Corrections responds that computer services and support staff are inadequate to meet their needs. It contends that the department's work has a low priority on the SAC system and that the data processing center is always short staffed and has high turnover.

Only the SAC and Human Services maintain their own statisticians and criminal justice analysts.

The SAC, Corrections, and the Planning Agency disseminate statistical and/or analytical reports to other state and local agencies.

NEW JERSEY

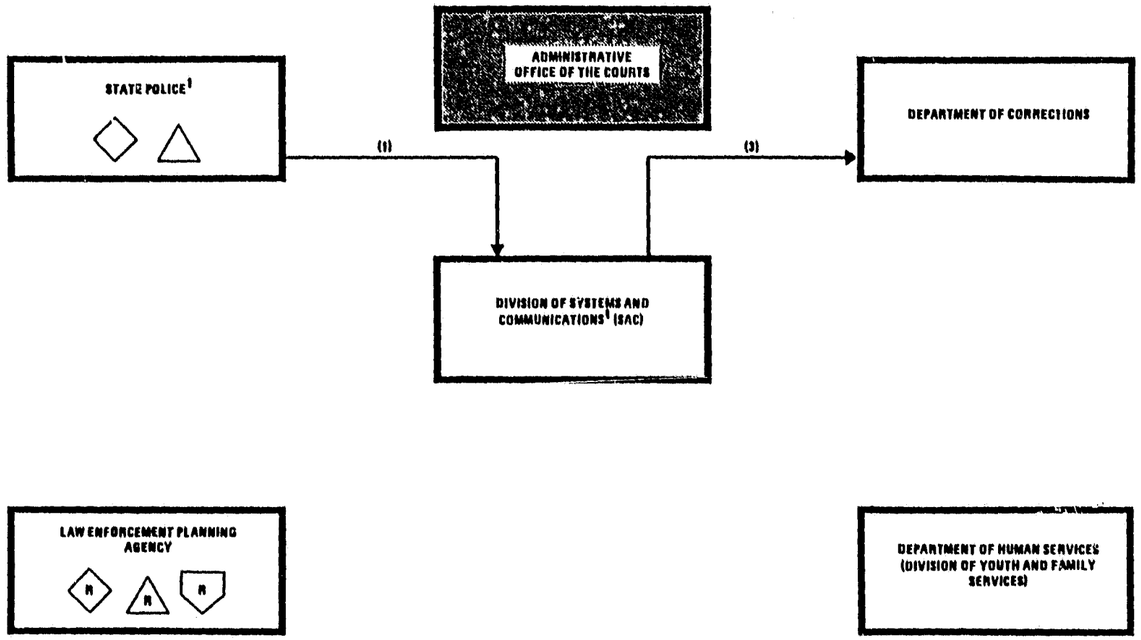
SERVICE TRANSFERS AMONG AGENCIES



[1]DIVISION OF STATE POLICE AND DIVISION OF SYSTEMS AND COMMUNICATIONS ARE BOTH ADMINISTRATIVELY PART OF THE DEPARTMENT OF LAW AND PUBLIC SAFETY. THEY ARE DISPLAYED SEPARATELY TO HIGHLIGHT THE FUNCTIONS OF THE SAC.

SEE APPENDIX B FOR EXPLANATION OF FIGURES

NEW MEXICO

GENERAL CHARACTERISTICS: The primary data users are listed below.

- Corrections and Criminal Rehabilitation Department - SAC (corrections, courts, juvenile justice)
- Administrative Office of the Courts (courts, juvenile justice)
- Department of Corrections (corrections, juvenile justice)
- Attorney General's Office (corrections, law enforcement)
- State Police (law enforcement)

New Mexico is part of a four-state regional program (Arizona, Utah, and Colorado are also members, with Idaho, Montana, and Wyoming to join sometime this year) funded as a narcotics strike force to gather data. New Mexico's role in the program is governed by the Attorney General's Office.

There is an Automated Data Processing Division which provides computer support to other agencies.

DATA AVAILABILITY: Corrections, courts, and law enforcement data are computerized. Juvenile justice data maintained by respondent agencies are manual.

There is an operational OBSCIS. An OBTS/CCH system is being planned.

Corrections reports it uses its minicomputer for offender-tracking data.

Data exchange between agencies is minimal. Only the SAC receives courts data from the Courts. Other agencies maintain all the data that they use.

Operational courts data are the only data types not available. All other data are complete.

DATA ACCESS: Access to data files is generally limited by respondent agencies. Security and privacy considerations are listed as the reasons for this.

The SAC cites security and privacy conditions for limiting other agencies to published information in corrections, courts, and juvenile justice.

Courts and juvenile justice data maintained by the Courts are sequestered and available to the public as published data.

Law enforcement files of the State Police are released on a need to know basis.

All agencies but the state courts, corrections, and SPA (which may use selected files) have unlimited access to the corrections files of the

Attorney General's Office. It permits no access to its law enforcement data without the permission of the Law Enforcement Academy.

Access to Corrections' data varies by agency.

SAC PROFILE: There is a funded SAC in the state. It provides no data to other agencies.

The State Police and the Courts indicate receiving SAC services. The Courts comments that services are adequate.

AUTHORIZATION FOR STATISTICAL REPORTING: Only the State Police does not have formal authority for statistical reporting. All other agencies are authorized under legislation.

CAPABILITIES TO USE AND PROCESS DATA: All respondent agencies use some computer data processing facilities. The SAC, Corrections, and Attorney General's Office have their own systems.

The Automated Data Processing Division is utilized by all agencies for computer support and programming services. The State Police reports the Division could use more staff, but services are adequate. Only the Courts does not use the facility for both operational and statistical purposes.

The SAC, Corrections, and the Courts employ statisticians/analysts.

The SAC and the Courts provide both statistical and analytical reports for other agencies. Statistical reports are prepared by the State Police.

NEW MEXICO

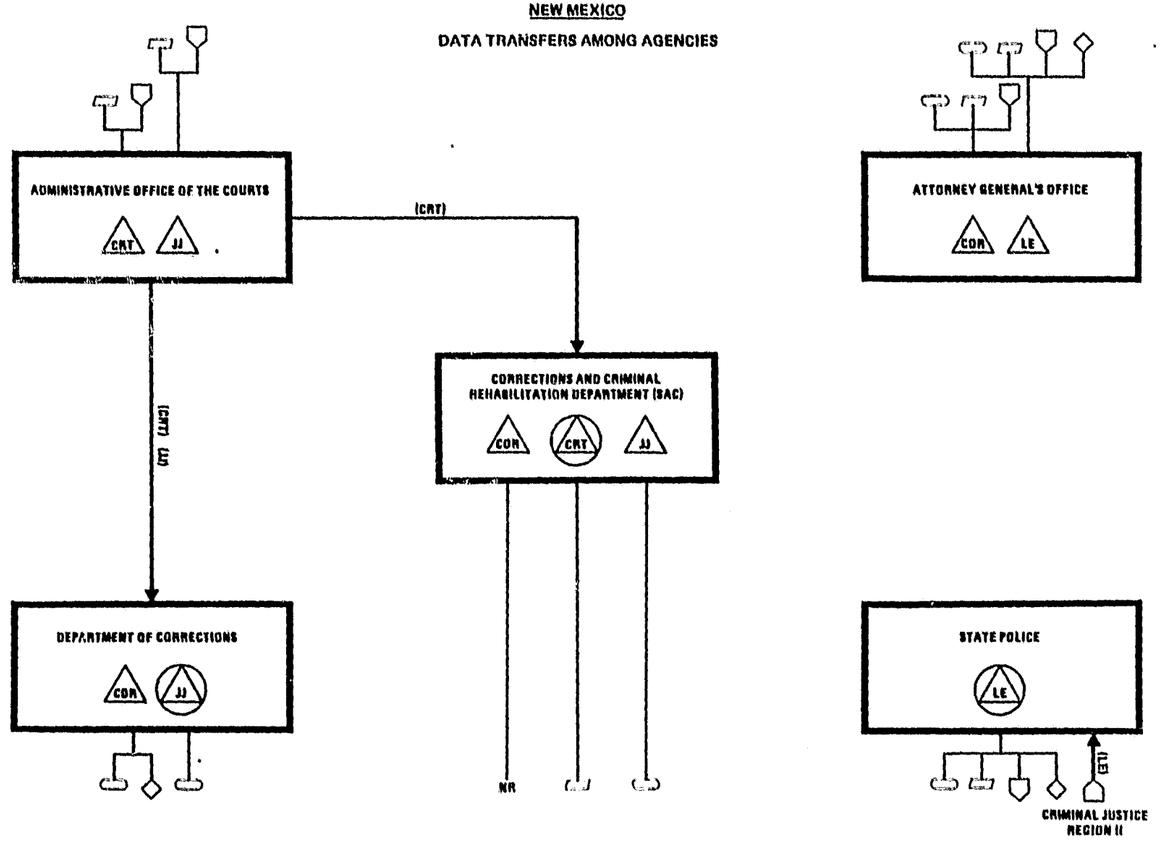
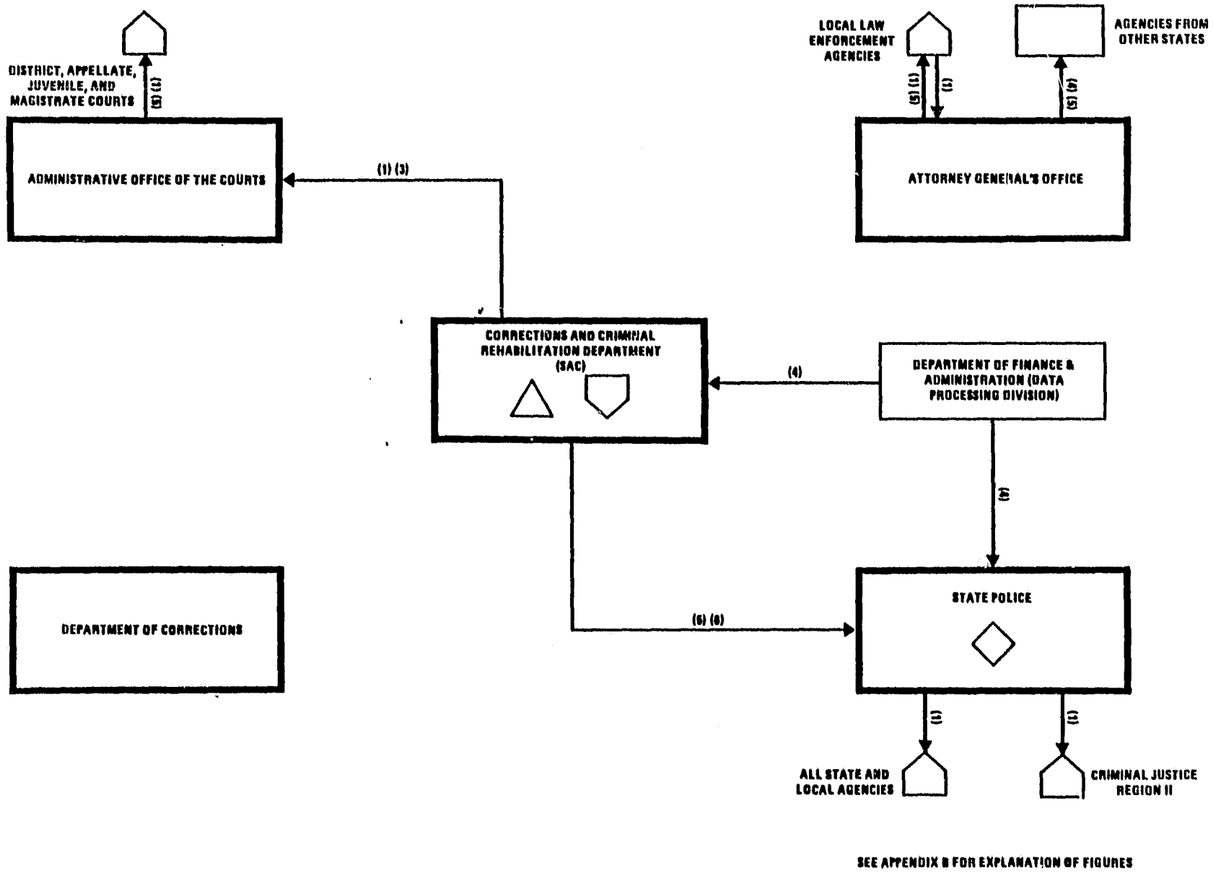
DATA TRANSFERS AMONG AGENCIES



SEE APPENDIX A FOR EXPLANATION OF FIGURES

NEW MEXICO

SERVICE TRANSFERS AMONG AGENCIES



SEE APPENDIX B FOR EXPLANATION OF FIGURES

NEW YORK

GENERAL CHARACTERISTICS: The primary data users are listed below.

- Division of Criminal Justice Services - SAC (corrections, courts, juvenile justice, law enforcement)
- State Police (courts, law enforcement)
- Department of Correctional Services (corrections)
- Division of Probation (corrections, courts, juvenile justice, law enforcement)
- Department of Social Services (juvenile justice)
- Division for Youth (juvenile justice)
- Office of Court Administration (has not yet responded to questionnaire)
- Division of Parole (has not yet responded to questionnaire)

DATA AVAILABILITY: Computerized information is maintained on corrections, courts, juvenile justice, and law enforcement. All respondent agencies report maintaining at least some computerized records. The principal source of courts data, the Office of Court Administration, has not yet responded to the questionnaire. However, other respondents referred to the courts data base as automated.

OBSCIS and a CCH system are operational. An OBTS system is being implemented.

Data are particularly comprehensive in corrections and law enforcement. Correctional Services maintains the broadest corrections information. It has on file all operational and statistical data types mentioned in the survey except operational records on management and administration. The State Police and the SAC maintain a diversity of law enforcement data types.

Social Services, Youth, Probation, and the SAC all retain statistical juvenile justice data. Only Social Services and Youth report maintaining operational records, and their files are limited principally to adjudication and after care information.

No responding agency reports maintaining courts data.

An active exchange of data takes place between agencies.

DATA ACCESS: Access to data varies by data type, maintaining agency, and requesting agency. The most universal guideline is that juvenile records are accessible on an extremely limited basis because of a state

security and privacy statute. Social Services, Youth, Probation, and the SAC all cite this statute as governing the dissemination of their juvenile justice data.

Correctional Services also references security and privacy considerations for limiting the access to its corrections files.

Probation restricts all agencies but local criminal justice agencies (corrections) and the police and courts (courts) to published data only.

SAC PROFILE: The SAC has been operating for almost 5 years. It both receives data from, and provides data to, other agencies. It maintains statistical and operational data on corrections and law enforcement and statistical information only on juvenile justice.

The SAC sees its role as reactive in that it responds to the needs of other agencies by providing various forms of technical assistance on request. Correctional Services, Probation, and Youth all use SAC services.

AUTHORIZATION FOR STATISTICAL REPORTING: All responding agencies except Youth are legislated to report on criminal justice information and statistics.

CAPABILITIES TO USE AND PROCESS DATA: The overall capacity to process data is high. All agencies use computers and maintain their own programming staffs. Social Services, the SAC, the State Police, and Youth maintain their own computer systems and use them for both operational and statistical tasks. All but the SAC also have access to a second system. Probation utilizes the SAC's computer for operational and statistical data processing and Probation uses the facilities of the Office of General Services for both operational and statistical work.

Both Social Services and Youth report that the operational uses of their systems limit the time available for statistical analyses.

Correctional Services and Probation respond that computer support staff are insufficient resulting in inadequate services.

All agencies except the State Police maintain staffs of statisticians/data analysts.

All responding agencies prepare both statistical summaries and analytical reports. (The State Police did not respond to this question.)

NEW YORK

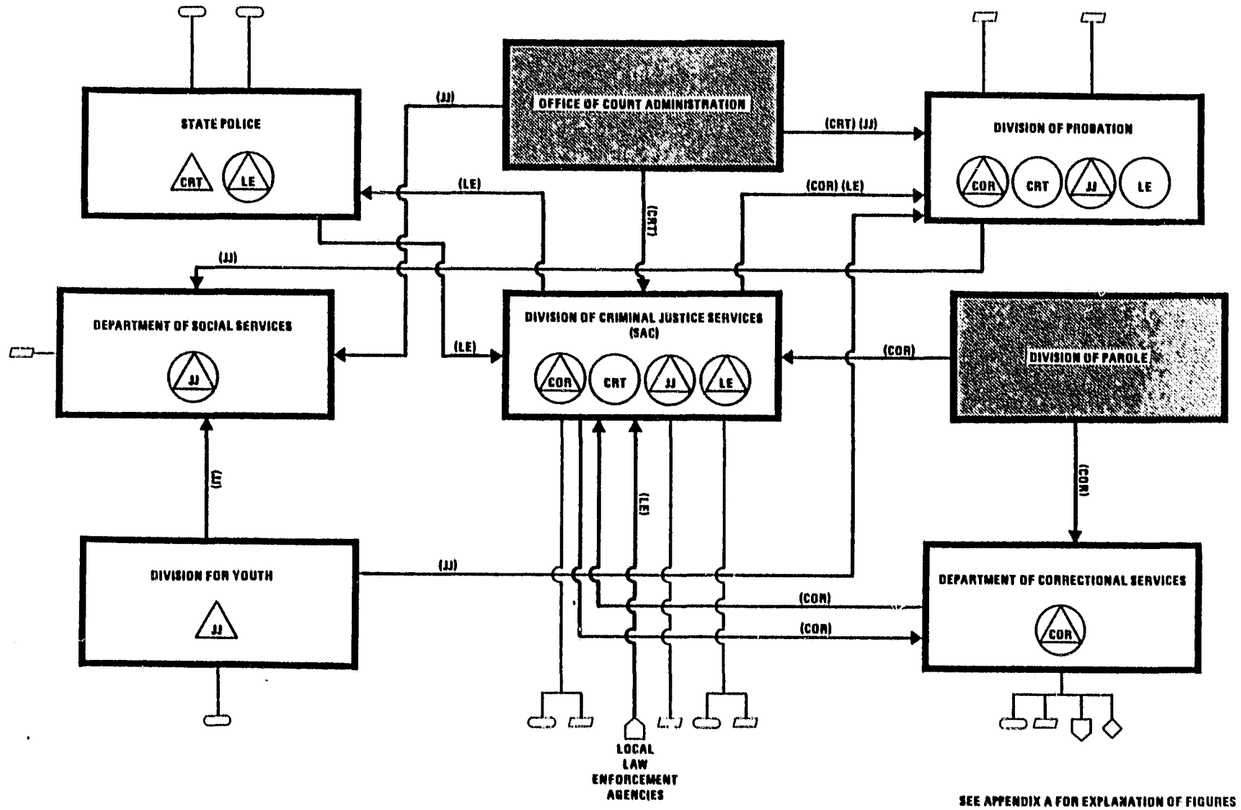
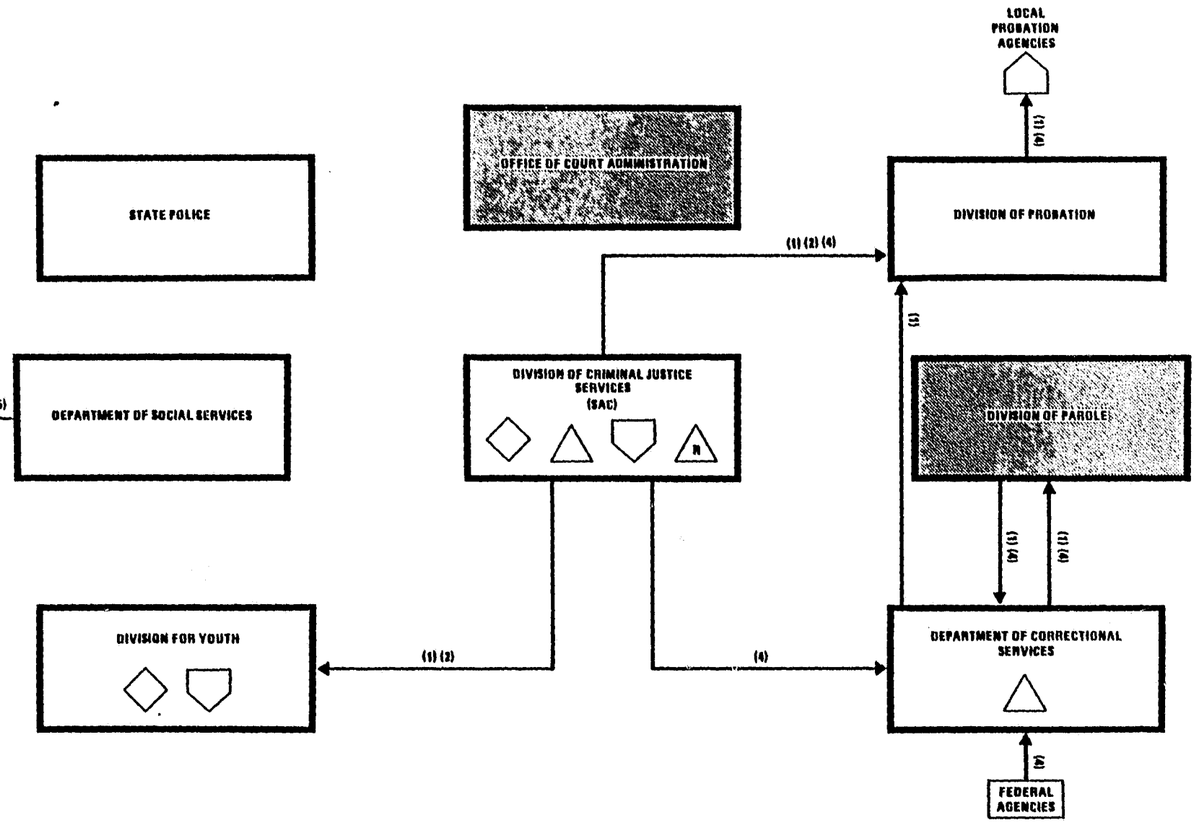
DATA TRANSFERS AMONG AGENCIES



SEE APPENDIX A FOR EXPLANATION OF FIGURES

NEW YORK

SERVICE TRANSFERS AMONG AGENCIES



SEE APPENDIX B FOR EXPLANATION OF FIGURES

NORTH CAROLINA

GENERAL CHARACTERISTICS: The primary data users are listed below.

- Governor's Crime Commission (corrections, courts, juvenile justice, law enforcement)
- Department of Justice - Police Information Network (corrections, courts, law enforcement)
- Department of Corrections (corrections)
- Administrative Office of the Courts (courts, juvenile justice)
- Department of Human Resources - Division of Youth Services (juvenile justice)

Youth Services reports that a Juvenile Justice Committee has been formed to coordinate the collection, dissemination, and use of juvenile justice data by state agencies.

DATA AVAILABILITY: Corrections, courts, juvenile justice, and law enforcement data are computerized.

Respondent agencies report receiving information in the form of computer tapes and printouts from other state and local agencies.

A computerized courts information system is in operation on a limited, pilot basis.

While OBSCIS is operational, there is no developed OBTS system; however, Justice maintains criminal history information which could be used for generating offender-based tracking data.

Except for juvenile justice data which are maintained by two agencies, all areas of criminal justice information are maintained separately by distinct agencies.

DATA ACCESS: All data-maintaining agencies cite security and privacy considerations as reasons for limiting access to data.

Local criminal justice agencies, non-criminal justice agencies, and the SPA are more restricted in accessing Corrections' data than the state courts or state police.

Youth Services permits the state police, FBI, Bureau of Prisons, US Attorney's Office, and the Bureau of Alcohol, Tobacco, and Firearms no access to its juvenile justice data.

NORTH CAROLINA

GENERAL CHARACTERISTICS: The primary data users are listed below.

- Governor's Crime Commission (corrections, courts, juvenile justice, law enforcement)
- Department of Justice - Police Information Network (corrections, courts, law enforcement)
- Department of Corrections (corrections)
- Administrative Office of the Courts (courts, juvenile justice)
- Department of Human Resources - Division of Youth Services (juvenile justice)

Youth Services reports that a Juvenile Justice Committee has been formed to coordinate the collection, dissemination, and use of juvenile justice data by state agencies.

DATA AVAILABILITY: Corrections, courts, juvenile justice, and law enforcement data are computerized.

Respondent agencies report receiving information in the form of computer tapes and printouts from other state and local agencies.

A computerized courts information system is in operation on a limited, pilot basis.

While OBSCIS is operational, there is no developed OBTS system; however, Justice maintains criminal history information which could be used for generating offender-based tracking data.

Except for juvenile justice data which are maintained by two agencies, all areas of criminal justice information are maintained separately by distinct agencies.

DATA ACCESS: All data-maintaining agencies cite security and privacy considerations as reasons for limiting access to data.

Local criminal justice agencies, non-criminal justice agencies, and the SPA are more restricted in accessing Corrections' data than the state courts or state police.

Youth Services permits the state police, FBI, Bureau of Prisons, US Attorney's Office, and the Bureau of Alcohol, Tobacco, and Firearms no access to its juvenile justice data.

Other agencies are allowed limited access subject to the approval of parents and clients.

Only three agencies are permitted less than full access to the law enforcement data maintained by the Police Information Network. The SPA and LEAA are limited to the use of operational data files. Local non-criminal justice agencies are restricted to published data only.

No data are kept on file by the Crime Commission.

SAC PROFILE: There has never been a funded SAC in this state, nor has a CDS plan been submitted for approval.

The Crime Commission reports it is the "analysis center" for the state.

Corrections cites the Police Information Network in the Department of Justice as fulfilling the functions of a SAC.

AUTHORIZATION FOR STATISTICAL REPORTING: All agencies except the Crime Commission indicate they are authorized to report on criminal justice information. The Courts, Police Information Network, and Corrections indicate they are legislatively authorized. Youth Services responds "don't know" to this question.

CAPABILITIES TO USE AND PROCESS DATA: All agencies use a computer for data processing activities, and all agencies except Youth Services responds "don't know" to this question.

Computer systems maintained by respondent agencies are utilized for both operational and statistical applications with no limitations cited.

Only two agencies report using the computer facilities of another agency. The Department of Administration provides additional statistical support for the Crime Commission and both operational and statistical support for Youth Services.

Neither the Crime Commission nor Youth Services maintains computer programming staffs.

The Crime Commission is the only agency which does not maintain a staff of statisticians or criminal justice data analysts.

All agencies except the Crime Commission, which didn't respond to this question, prepare statistical and analytical reports for other agencies.

NORTH CAROLINA

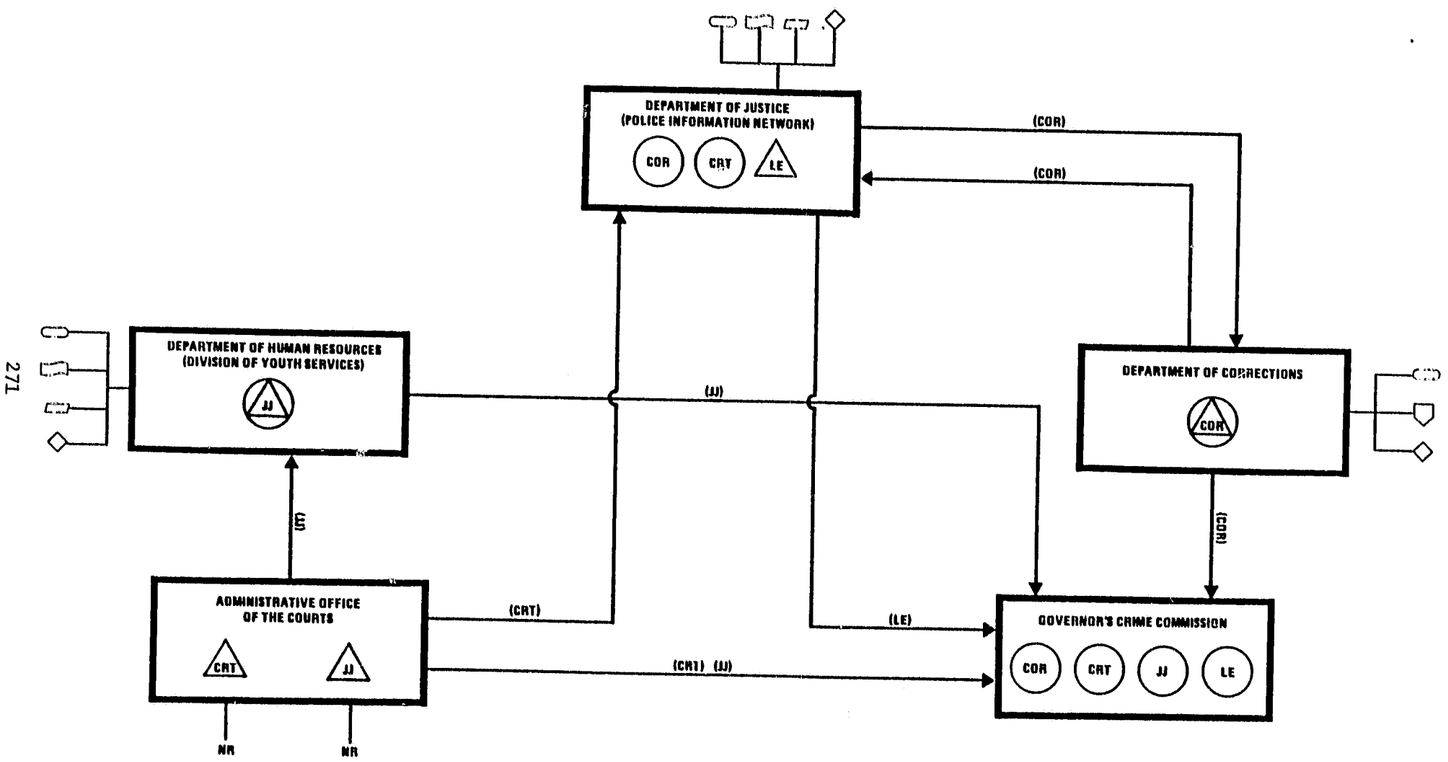
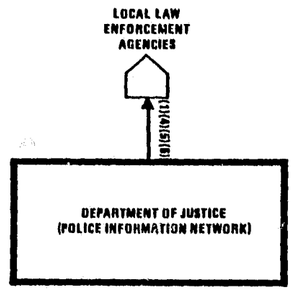
DATA TRANSFERS AMONG AGENCIES

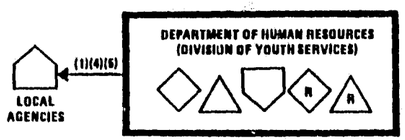


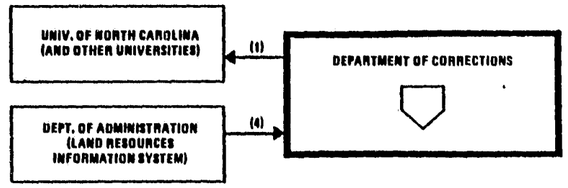
SEE APPENDIX A FOR EXPLANATION OF FIGURES

NORTH CAROLINA

SERVICE TRANSFERS AMONG AGENCIES







SEE APPENDIX B FOR EXPLANATION OF FIGURES

NORTH DAKOTA

GENERAL CHARACTERISTICS: The primary data users are listed below.

- Combined Law Enforcement Council (corrections, courts, juvenile justice, law enforcement)
- Bureau of Criminal Investigation (law enforcement)
- Supreme Court - State Court Administrator's Office (courts, juvenile justice)
- State Penitentiary (corrections)
- Parole and Probation Department (corrections, courts)
- Department of Social Services - Division of Children and Family Services (juvenile justice)
- Attorney General's Office (has not yet responded to questionnaire)

One agency reports that greater continuity is needed between corrections, courts, law enforcement, and probation and parole data. It recommends delegating responsibility for records and information systems to a centralized representative of the criminal justice community.

DATA AVAILABILITY: Computerized information is maintained on corrections, juvenile justice, and law enforcement. The Supreme Court is the principal source of courts data and did not indicate whether its records were manual or automated.

Data availability is not comprehensive. There is no OBSCIS or OBTS system. No agency reports maintaining any operational juvenile justice data. This information is only maintained on a regional basis by caseworkers. In law enforcement, fingerprint reports and criminal history records are the only operational data reported. They are maintained by Criminal Investigation which, is the only respondent agency indicating that it keeps any law enforcement data.

Operational and statistical data types maintained on corrections are quite thorough. However, these records, maintained principally by the State Penitentiary, are not computerized. The only automated corrections information is statistical data maintained by the Law Enforcement Council.

A manual jail information system is in use. All jails in the state contribute data which have been compiled in numerous reports, used to monitor the individual jails, and utilized in planning a state corrections master plan.

The Law Enforcement Council uses and maintains only statistical data. It also processes and analyzes the UCR and manpower training data collected by Criminal Investigation from local sheriffs and police departments.

DATA ACCESS: The data that are available are highly accessible. Unlimited data access is granted all agencies by the Law Enforcement Council, Parole and Probation, and Criminal Investigation. The State Penitentiary only limits access for local non-criminal justice agencies and Federal agencies for security and privacy reasons. All state agencies, including the SPA, have unlimited access.

The Supreme Court and Children and Family Services cite privacy considerations for limiting juvenile justice data access to published information only for all agencies.

SAC PROFILE: There is no SAC in the state. The Law Enforcement Council indicates that it performs most SAC functions.

AUTHORIZATION FOR STATISTICAL REPORTING: Only Criminal Investigation, Supreme Court, and Children and Family Services are formally authorized to report on criminal justice statistics. In each case, the basis of the authorization is legislation.

CAPABILITIES TO USE AND PROCESS DATA: The Law Enforcement Council, Criminal Investigation, Supreme Court, and Children and Family Services all use the computer facilities of Central Data Processing. None of these agencies maintains its own system, and only Children and Family Services employs its own programming staff. Parole and Probation and the State Penitentiary do not utilize a computer in their data processing activities.

The Law Enforcement Council and Supreme Court use a computer for statistical purposes only while Children and Family Services performs only operational tasks. Criminal Investigation did not respond to this question.

Two of the users of the Central Data Processing computer indicate dissatisfaction with the services. The Law Enforcement Council reports that turnaround time is very slow and that program analysts are rotated, making it necessary to regularly familiarize new people with its programs. Children and Family Services responds that support staff services are inadequate due to legislation limiting the number of staff.

The State Penitentiary and Parole and Probation do not employ statisticians or data analysts and do not produce any statistical or analytical reports. Criminal Investigation prepares statistical reports but does not maintain any statisticians or data analysts on staff. All other agencies employ statisticians and/or analysts and produce statistical or analytical reports.

NORTH DAKOTA

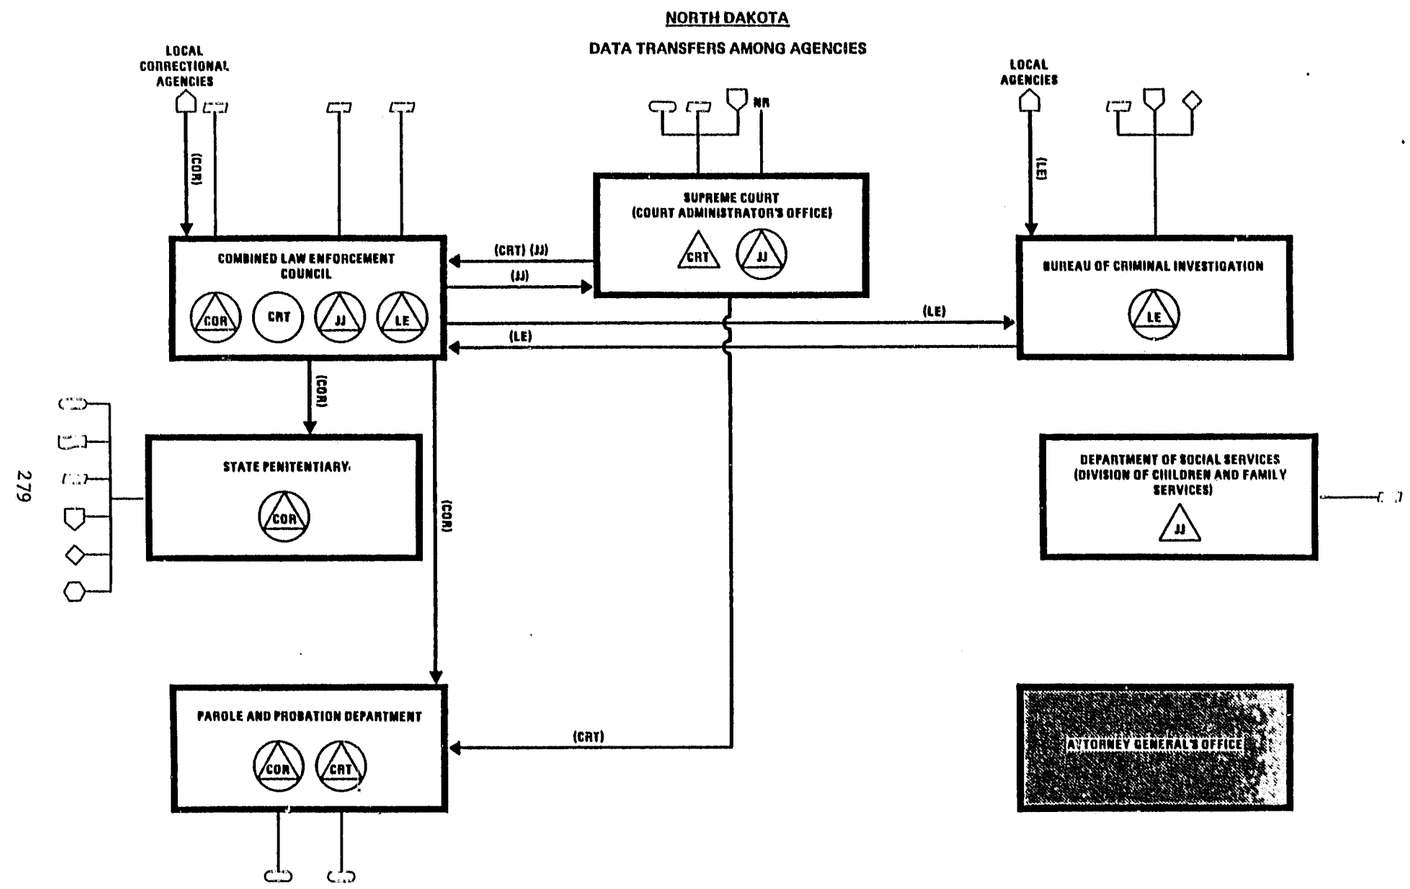
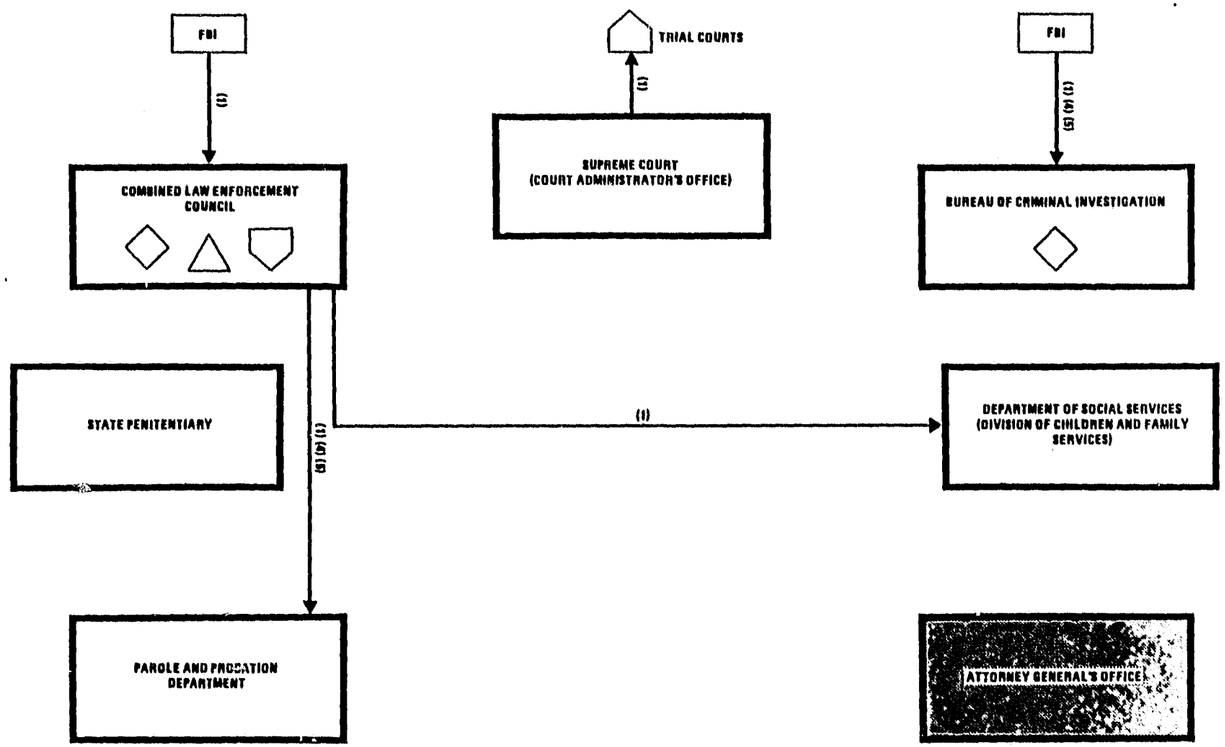
DATA TRANSFERS AMONG AGENCIES



SEE APPENDIX A FOR EXPLANATION OF FIGURES

NORTH DAKOTA

SERVICE TRANSFERS AMONG AGENCIES



SEE APPENDIX B FOR EXPLANATION OF FIGURES

OHIO

GENERAL CHARACTERISTICS: The primary data users are listed below.

- Department of Economic and Community Development - SAC (corrections, courts, juvenile justice, law enforcement)
- Department of Economic and Community Development - Office of Criminal Justice Services (corrections, courts, juvenile justice, law enforcement)
- Department of Rehabilitation and Correction (corrections, courts)
- Supreme Court (courts, juvenile justice)
- Youth Commission (juvenile justice)
- Bureau of Criminal Identification and Investigation (refused to respond to questionnaire)

DATA AVAILABILITY: Computerized data are maintained on corrections, courts, juvenile justice, and law enforcement.

OBSCIS and an OBTS/CCH system are operational. The SAC reports that Identification and Investigation manages the OBTS system.

Operational and statistical data holdings on corrections and juvenile justice are extensive. Courts data are more limited. An accurate description of law enforcement data is difficult since the primary user of law enforcement data (Identification and Investigation) has not responded. No responding agency maintains operational law enforcement information.

DATA ACCESS: Under Ohio's Public Record Law, all records maintained by Criminal Justice Services are public information unless otherwise restricted. Total access to its courts and law enforcement files is granted to all requesting agencies. Local non-criminal justice agencies are restricted to edited files in the corrections and juvenile justice areas.

Organizational policy governs the access of agencies to the SAC's data. All agencies except the SPA (which is permitted unlimited access) are restricted to the use of edited files.

All agencies are permitted unlimited use of the data files of the Supreme Court.

Security and privacy conditions are cited by the Youth Commission for limiting all agencies to published data only.

Rehabilitation and Corrections varies access to its data by requesting agency. Privacy restrictions apply to all non-criminal justice agencies.

SAC PROFILE: The SAC has been in operation for just over 4 years. It is funded under the CDS program and by state matching funds.

Located in the CJC, the SAC is authorized under legislation specific to the CJC with reference to the SAC.

The SAC provides various services to other agencies on request. It reports that it has plenty of funds to conduct large scale surveys.

AUTHORIZATION FOR STATISTICAL REPORTING: The Youth Commission is the only agency which is not formally authorized to collect or report on criminal justice information. All other agencies are authorized under legislation. Constitutional requirements also mandate the Supreme Court and executive order outlines additional regulations for Rehabilitation and Correction.

CAPABILITIES TO USE AND PROCESS DATA: A computer is used by all respondent agencies to process data. The Youth Commission and Criminal Justice Services maintain their own systems. Supplemental facilities are utilized by all agencies. The Youth Commission does not stipulate which additional facility it uses. All other agencies use a state computer center for both computer facilities and programmers.

Rehabilitation and Correction reports system limitations because of programmers who lack familiarity with the agency's needs.

Statisticians/analysts are on staff in the Supreme Court, SAC, and Criminal Justice Services.

All agencies distribute statistical/analytical reports to requesting agencies.

OHIO

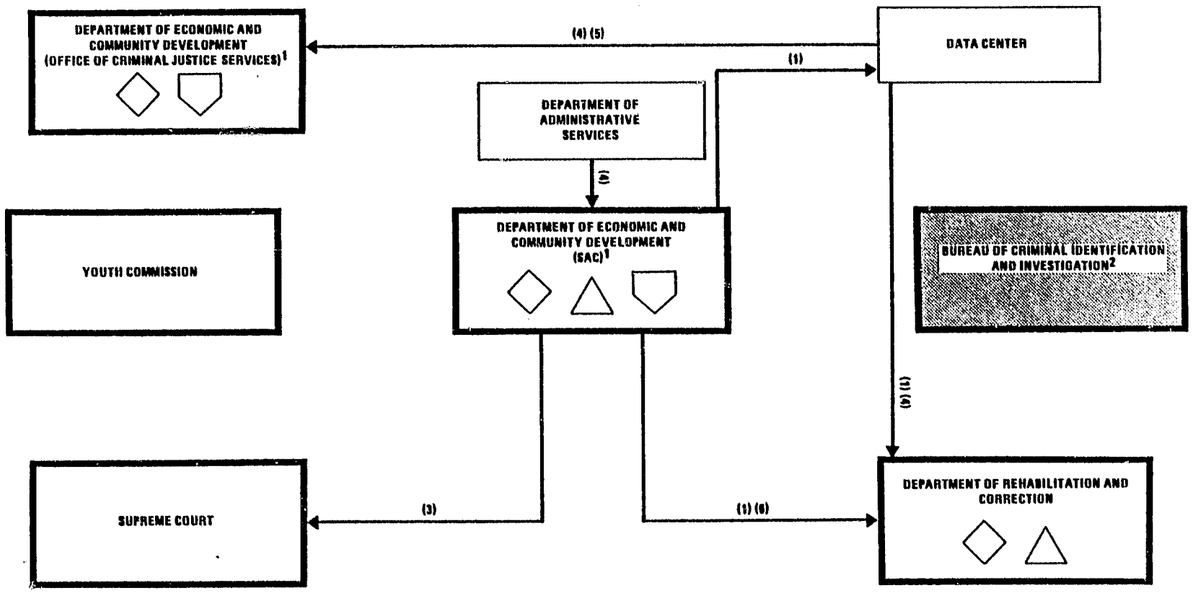
SERVICE TRANSFERS AMONG AGENCIES



[1] OFFICE OF CRIMINAL JUSTICE SERVICES AND SAC ARE BOTH ADMINISTRATIVELY PART OF THE DEPARTMENT OF ECONOMIC AND COMMUNITY DEVELOPMENT. THEY ARE DISPLAYED SEPARATELY TO HIGHLIGHT THE FUNCTIONS OF THE SAC.

[2] REFUSED TO RESPOND TO QUESTIONNAIRE.

SEE APPENDIX B FOR EXPLANATION OF FIGURES

OKLAHOMA

GENERAL CHARACTERISTICS: The primary data users are listed below.

- Bureau of Investigation - SAC (has not yet responded to questionnaire)
- Administrative Office of the Courts (courts, juvenile justice)
- County District Attorney's Office (corrections, juvenile justice, law enforcement)
- Department of Public Safety (corrections, law enforcement)
- Department of Corrections (corrections, law enforcement)
- Department of Human Services (has not yet responded to questionnaire)

DATA AVAILABILITY: Two major data sources, the Bureau of Investigation and Human Services, have not yet responded to the questionnaire. Based on partial returns, computerized information is maintained on corrections, juvenile justice, and law enforcement.

A statewide OBTS/CCH system is operational. OBSCIS is planned.

Corrections maintains comprehensive operational and statistical data on corrections. It does not have on file statistical data on offender status. However, this information is available from Public Safety.

The Court is the only responding agency that reports maintaining courts data. It keeps all statistical data types surveyed except prosecutorial information. However, its operational holdings are limited to appellate, assignment, and management and administrative records. All of the Court's holdings are in a manual format.

The District Attorney's Office maintains various juvenile justice and law enforcement data. It also has direct terminal access to the files of the Bureau of Investigation.

Public Safety maintains operational and statistical data on law enforcement. Its holdings are not as complete as those reported by the District Attorney's Office, however.

DATA ACCESS: Access to data bases is fairly restrictive. This is primarily because of organizational factors rather than security and privacy considerations.

Corrections' data are available in published form only. No direct file access is given, but special requests may be filled.

The Court limits all agencies except the individual state courts to published data only. This restriction is reported as a product of the manual format of the data base. State courts do have unlimited access to all operational files.

Local non-criminal justice agencies, state courts, the SPA, and all Federal agencies have no access to the data bases of Public Safety. This is because of organizational factors. All other agencies do have unlimited access.

The District Attorney's Office is the only agency to cite that state and Federal security and privacy considerations govern data access. All agencies except local non-criminal justice agencies (published data only) and state courts (unlimited access) are limited to selected operational files.

SAC PROFILE: The SAC has been in operation for nearly 8 years. It was created by executive order.

In June 1980, the SAC was relocated to the Bureau of Identification. Prior to that, it was most recently located in the CJC. Until 1976, the SAC was housed within the Board of Affairs of the State Purchasing Agency.

The SAC's current role is impossible to assess since it has not yet responded to the questionnaire.

AUTHORIZATION FOR STATISTICAL REPORTING: The Court is authorized to report on justice information and statistics by state constitituion and legislation. The District Attorney's Association is authorized by legislation and a Federal Court agreement to maintain statistics, exchange information with Federal, state, and local agencies, and promote the criminal justice system. Public Safety and Corrections are not formally authorized to report on statistics.

CAPABILITIES TO USE AND PROCESS DATA: All respondent agencies maintain their own computers and programming staffs. All but the Court (statistical uses only) utilize their systems for operational and statistical tasks. Corrections reports that the operational uses of its system interfere with statistical processing.

All agencies supplement their own facilities by maintaining access to at least one other computer.

All agencies find computer services and support staff to be adequate except the Court, which cites limited support personnel.

Only Public Safety fails to maintain either statisticians or data analysts on staff.

Public Safety, Corrections, and the Court provide statistical summaries and/or analytical reports to other agencies.

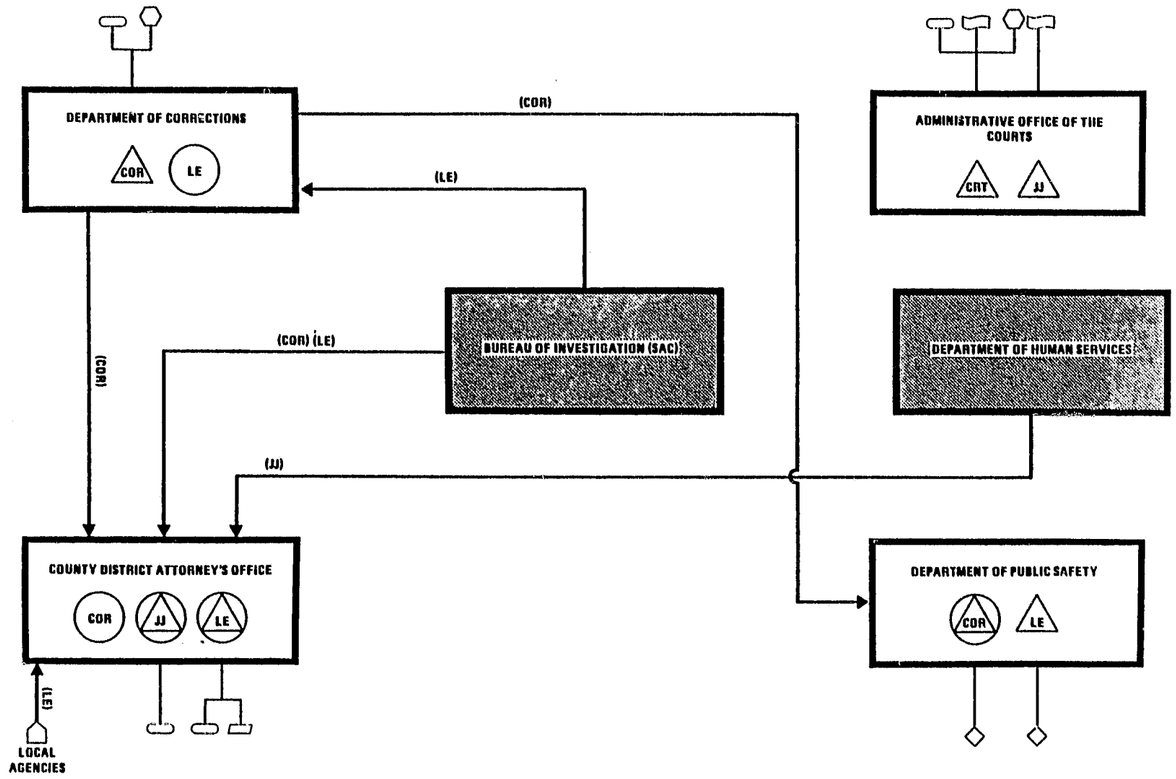
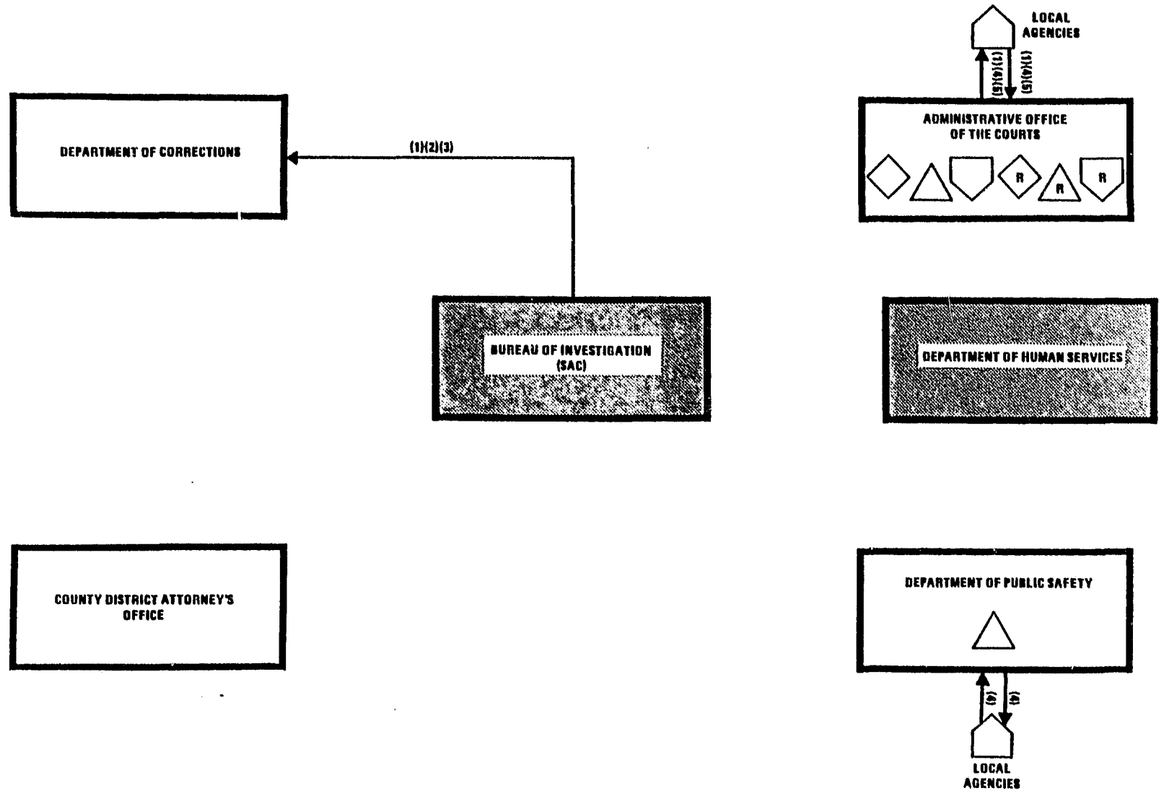
DATA TRANSFERS AMONG AGENCIES



SEE APPENDIX A FOR EXPLANATION OF FIGURES

OKLAHOMA

SERVICE TRANSFERS AMONG AGENCIES



SEE APPENDIX B FOR EXPLANATION OF FIGURES

OREGON

GENERAL CHARACTERISTICS: The primary data users are listed below.

- Law Enforcement Council - SAC (corrections, courts, juvenile justice, law enforcement)
- Law Enforcement Data System - LEDS (law enforcement)
- State Police - Bureau of Identification (corrections, courts law enforcement)
- Department of Human Resources - Division of Corrections (corrections)
- Juvenile Services Commission (corrections, courts, juvenile justice, law enforcement)
- Supreme Court - Court Administrator's Office (has not yet responded to questionnaire)

DATA AVAILABILITY: Computerized information is maintained on corrections, courts, juvenile justice, and law enforcement.

A broad-based computerized criminal history system is operational. Data are reported to Identification and updated by LEDS through an on-line hookup. The SAC also maintains a CCH file but without offender names.

LEDS maintains a central computerized file on wants and warrants. It also stores incident-based UCR data.

Juvenile justice data are controlled at the local level by 36 county juvenile departments. Only extremely limited juvenile data are maintained by Juvenile Services. The Commission was authorized by the 1979 Legislature to develop a statewide comprehensive juvenile services information system. A feasibility study was completed in October 1980 and recommended the development of a county-based, but state-controlled data base. A demonstration project is scheduled for implementation in August 1981 if funds become available.

DATA ACCESS: All responding agencies report that state security and privacy regulations limit data access for at least some kinds of information and to some agencies.

Identification grants unlimited access to its records for all agencies except local non-criminal justice agencies. The latter have no access because of security and privacy considerations.

LEDS cites state security and privacy reasons for limiting the access of local non-criminal justice agencies, the SPA, and LEAA to its law enforcement data.

Access to SAC files is unlimited except in the juvenile justice area. In juvenile justice, all agencies are limited to published data only because of security and privacy constraints. Since the SAC's files contain no identifiers, wider access is being considered. However, the SAC fears this may be objectionable to the agencies that contribute the data.

Juvenile Services and Corrections also limit data access, for security and privacy reasons.

SAC PROFILE: The SAC has been operating for nearly 8 years. It receives no CDS money, but is funded through a combination of state and Federal grants.

Until 1976, the SAC was part of the Executive Department. It is presently located within the CJC. A move back to the Executive Department is being discussed.

The SAC describes itself as a service provision agency which obtains its data from other agencies. This relationship is particularly descriptive of the SAC's interactions with LEDS.

AUTHORIZATION FOR STATISTICAL REPORTING: All responding agencies except Juvenile Services are formally authorized to analyze statistics and information. (Corrections did not respond to this question.)

CAPABILITIES TO USE AND PROCESS DATA: LEDS maintains its own computer and programming staff, which are also used by Identification. The SAC utilizes the Data Systems Division computer for its processing. Juvenile Services does not use a computer.

LEDS and Identification do not have analysts or statisticians on staff. They often use the data anlaysis services of the SAC, which has both criminal justice data anlaysts and statisticians in house. Juvenile Services employs one statistician.

The SAC is the only agency that regularly prepares analytical reports. LEDS prepares statistical summaries for use by the SAC. Identification and Juvenile Services prepare neither statistical nor analytical reports.

(Corrections did not respond to questions in this section.)

PENNSYLVANIA

GENERAL CHARACTERISTICS: The primary data users are listed below.

- Commission on Crime and Delinquency - SAC (corrections, courts, juvenile justice, law enforcement)
- Administrative Office of the Courts (courts, juvenile justice)
- Bureau of Corrections (corrections)
- Board of Probation and Parole (corrections)
- Department of Public Welfare - Office of Children, Youth, and Families (juvenile justice)
- State Police (has not yet responded to questionnaire)
- Juvenile Court Judges Commission (has not yet responded to questionnaire)
- Governor's Office of Policy and Planning (has not yet responded to questionnaire)

There is a large amount of interaction between agencies for the exchange of data and services.

Data processing services are available to agencies through the Central Management Information Center.

DATA AVAILABILITY: Responses from three data users are outstanding. Partial returns indicate corrections, courts, juvenile justice, and law enforcement data are automated.

An OBTS system is being implemented, and OBSCIS is planned.

Although the State Police has not yet responded, it apparently has fairly sophisticated computer facilities. Other respondent agencies indicate using these facilities. Also, data provided to other agencies by the State Police are in the form of computer tapes or printouts.

Comprehensive operational and statistical data are available in all areas except law enforcement. The only information in this area is on file at the SAC and is limited statistical data. (Two outstanding responses may supplement these findings.)

DATA ACCESS: All state and local agencies are allowed unlimited use of the SAC's data. However, no data are released containing individual identifiers. Information released to Federal agencies is by specific request only.

Probation and Parole and the Courts indicate security and privacy restrictions govern the dissemination of their data. Access to the data maintained by both agencies varies by requesting agency.

State law is cited by Corrections and Welfare as limiting the availability of their data. All agencies may utilize the published data of Corrections. State courts, the SPA, the Bureau of Prisons, and LEAA may use selected files from Welfare. All other agencies must rely on published information.

SAC PROFILE: The SAC which has been in operation for over 11 years is jointly supported by state funds, LEAA action funds, and CDS program funds.

The present location of the SAC is the CJC. Prior to this, it was housed within the Attorney General's Office.

Legislation specific to the CJC with reference to the SAC is the authority under which the SAC exists.

The SAC plays an integral role in the dissemination of information in the state. It maintains data in all areas and passes information to other agencies. The SAC reports that it has worked closely with other agencies in the development of information systems.

There is a high level of activity between the SAC and other agencies in the distribution of various services. Only Welfare comments that SAC reports are not timely.

AUTHORIZATION FOR STATISTICAL REPORTING: All respondent agencies are required by legislation to report on criminal justice information.

Executive order, constitution, and Supreme Court rules provide additional guidelines for the Courts.

The SAC must collect, maintain, and analyze statistical data from all criminal justice entities in the state.

CAPABILITIES TO USE AND PROCESS DATA: Computer facilities are utilized by all agencies to process data. Pardon and Parole, Corrections, and Welfare use their own computer facilities and programming staff.

Only the Courts does not use supplemental computer facilities. The Central Management Information Center facilities are used by Pardon and Parole (operational and statistical) and Corrections (statistical). The State Police computer and programmers are used by the SAC, and Welfare utilizes the computer and staff of Pennsylvania State University.

At least one statistician is available on staff in each agency.

All respondent agencies prepare statistical and analytical reports except Corrections, which prepares only statistical summaries.

PENNSYLVANIA

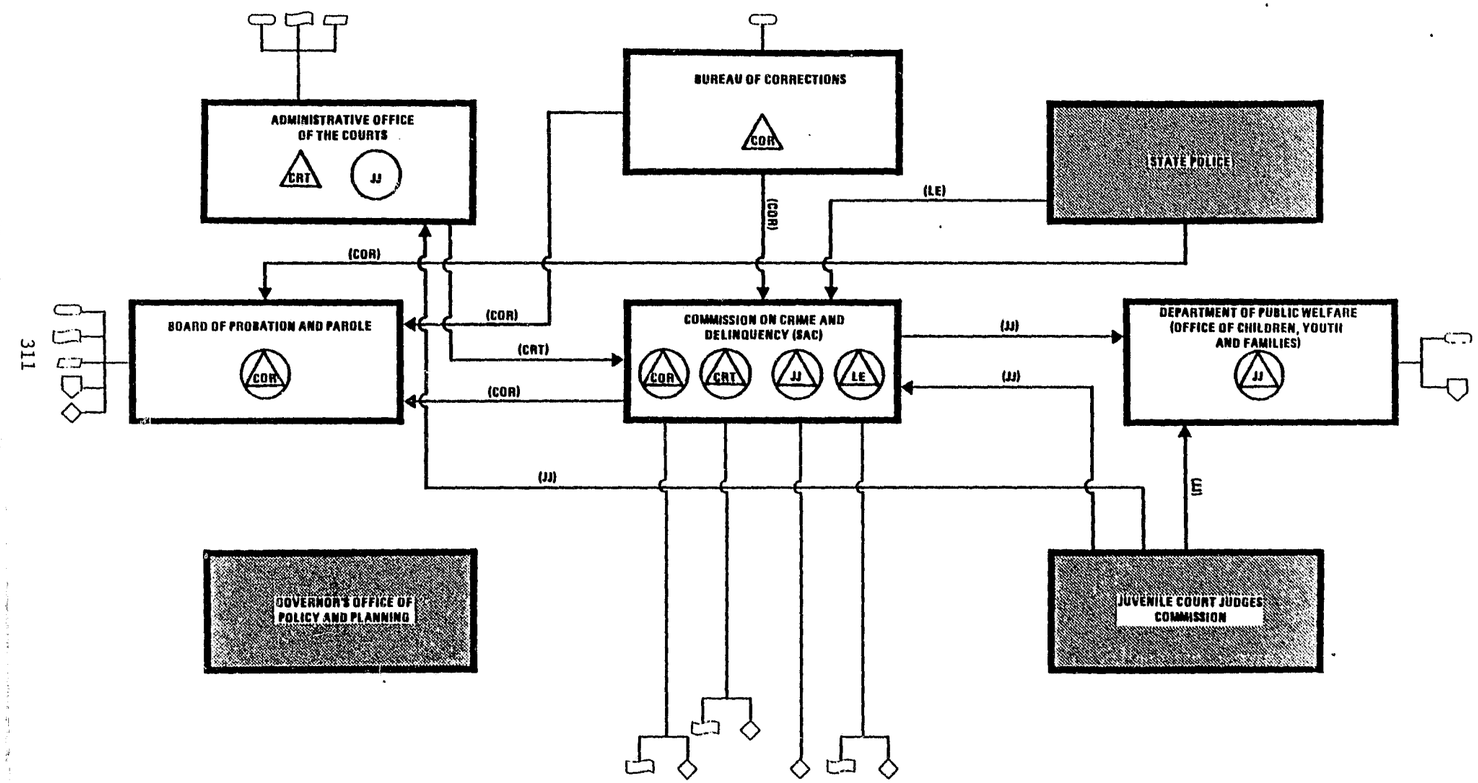
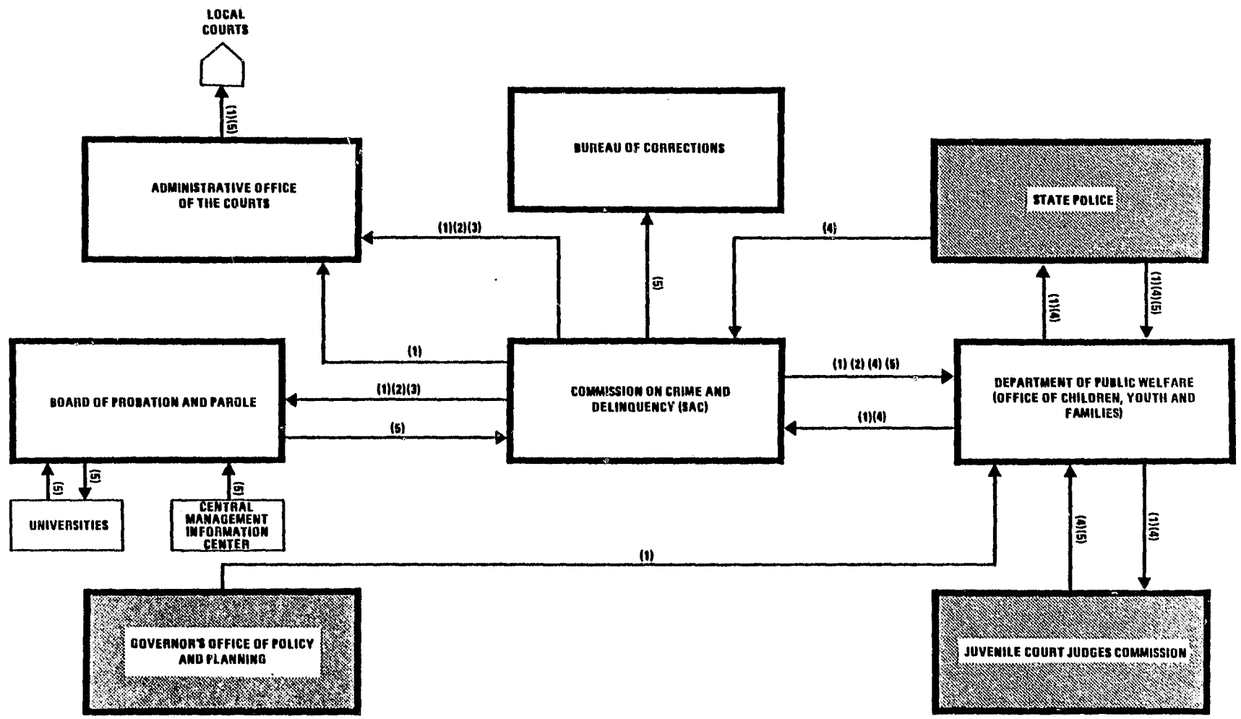
DATA TRANSFERS AMONG AGENCIES



SEE APPENDIX A FOR EXPLANATION OF FIGURES

PENNSYLVANIA

SERVICE TRANSFERS AMONG AGENCIES



SEE APPENDIX B FOR EXPLANATION OF FIGURES

RHODE ISLAND

GENERAL CHARACTERISTICS: The primary data users are listed below.

- Governor's Justice Commission - SAC (corrections, juvenile justice, law enforcement)
- Judicial Systems and Sciences (corrections, courts, juvenile justice, law enforcement)
- Department of Corrections (corrections, courts)
- Department of the Attorney General - Bureau of Criminal Identification (corrections, courts, law enforcement)
- State Police (law enforcement)
- Family Court (has not yet responded to questionnaire)

DATA AVAILABILITY: Computerized data are maintained on corrections, courts, juvenile justice, and law enforcement. Most of these data are maintained by Rhode Island Judicial Systems and Sciences (RIJSS). The only other computerized data at present are statistical information held by the SAC.

The level of computerization is increasing in terms of information systems and data storage. OBTS and CCH systems and OBSCIS are being developed. The State Police, Corrections, and Family Court are in the process of automating their law enforcement, corrections, and juvenile justice data holdings respectively. Criminal Identification is obtaining a mini-computer under an LEAA grant.

The data types maintained by responding agencies are fairly complete with the exception of the juvenile justice area. This finding may change since the primary source of these data, the Family Court, has not yet responded.

DATA ACCESS: All agencies except Criminal Identification cite that security and privacy factors limit data access to their files.

The SAC releases to other agencies only data that are approved as public information by the data-collecting agency.

Corrections grants local non-criminal justice agencies and the SPA access to published data only due to state and Federal security and privacy considerations.

RIJSS varies access depending upon type of data and requesting agency. No access is given to juvenile justice data due to a state statute on juvenile records.

The State Police allows all local and most Federal criminal justice agencies unlimited access to its law enforcement data. State agencies,

local non-criminal justice agencies, and LEAA are limited to selected operational files to maintain security and privacy.

Criminal Identification grants unlimited access to its files.

SAC PROFILE: The SAC has been in existence for 5 years. It is located in the CJC and is authorized by legislation specific to the CJC with reference to the SAC.

The SAC is funded through June 1981 by a combination of state and Federal money. Its future beyond that time is uncertain. The SAC has already had to reduce its staff to continue to function. Perhaps as a result, when questioned about their use of SAC services, two agencies responded with "there is no longer a SAC" and "we will use these services when the SAC becomes operational." Criminal Identification does report using the SAC for technical assistance in data access and analysis.

The SAC maintains its own corrections and law enforcement data and obtains juvenile justice data from the Family Court as needed.

AUTHORIZATION FOR STATISTICAL REPORTING: All respondents except Corrections are formally authorized to report on criminal justice statistics. The SAC is authorized by executive order to evaluate the causes and incidence of crime, to collect and analyze statistics, and to establish priorities for improving criminal justice. Criminal Identification's authorization is also by executive order and State Police's by legislation. RIJSS is unaware of the source of its mandate.

CAPABILITIES TO USE AND PROCESS DATA: Only the State Police maintains both its own computer system and programming staff. It uses its system only for operational purposes. RIJSS utilizes the facilities of the Division of Data Processing for both operational and statistical needs but maintains its own programming staff. The SAC obtains computer and programming access for its statistical needs through the Department of Employment Security. All respondents find computer services and support staff adequate to meet their needs. Corrections and Criminal Identification do not presently utilize a computer.

All respondent agencies except RIJSS and Criminal Identification have statisticians and/or data analysts on staff. All but Criminal Identification produce statistical or analytical reports.

SOUTH CAROLINA

GENERAL CHARACTERISTICS: The primary data users are listed below.

- Office of Criminal Justice Planning - SAC (corrections, courts, juvenile justice, law enforcement)
- Attorney General's Office (corrections, courts, law enforcement)
- Department of Corrections (corrections, courts, law enforcement)
- Department of Probation and Parole (corrections, courts)
- Law Enforcement Division (law enforcement)
- Department of Youth Services (corrections, juvenile justice, law enforcement)
- Department of Juvenile Placement and After Care (juvenile justice, law enforcement)
- Office of Court Administration (refused to respond to questionnaire)

A well-developed network of data and service sharing exists between state agencies.

DATA AVAILABILITY: Computerized information is maintained on corrections, courts, juvenile justice, and law enforcement. The overall level of computerization is high. All respondent agencies report maintaining at least partially automated files.

An OBTS system is being developed. OBSCIS is operational.

Data availability is generally comprehensive in corrections, juvenile justice, and law enforcement. The courts area is difficult to assess since the Office of Court Administration refused to respond to the questionnaire.

Youth Services reports that until 5 years ago, there was no uniform collection of juvenile justice data. As a result, Youth Services began to collect these data out of its own need. It has since become a repository for juvenile justice data.

The Attorney General reports that operational prosecutorial information is only available on the local level.

Although there is some duplication of data holdings, most agencies maintain only the data that are useful to them and obtain additional data from other agencies as needed. There is much cooperation between agencies in exchanging data.

DATA ACCESS: Data access varies sharply by data type, maintaining agency, and requesting agency.

Corrections, Probation and Parole, Juvenile Placement and After Care, Youth Services, and the SAC all cite state security and privacy considerations as limiting the access of various agencies to their data bases. In the juvenile area, state law denies access to any data defined by personal identifiers.

The Attorney General's Office limits the access of all agencies except state courts to edited courts data files only because of organizational factors. State courts have unlimited access to courts data.

The Law Enforcement Division grants unlimited access to its law enforcement data to all agencies except non-criminal justice agencies and LEAA. Local non-criminal justice agencies have no access to these files, and LEAA limits access to conviction data only. No reason for these limitations is given.

SAC PROFILE: The SAC has been operational for 4 1/2 years. It is located in the CJC and was created by legislation specific to the CJC with reference to the SAC.

The SAC maintains an interdependent relationship with the justice community. It both provides to and receives from various agencies diverse technical assistance services. One user of SAC services reports the SAC staff is quite capable but is most useful in the area of sophisticated statistical analysis.

AUTHORIZATION FOR STATISTICAL REPORTING: All agencies except Corrections and Probation and Parole are formally authorized to report on criminal justice information and statistics.

CAPABILITIES TO USE AND PROCESS DATA: All agencies utilize a computer for both operational and statistical data processing needs. The Attorney General's Office, Corrections, and Law Enforcement maintain their own systems. The Attorney General's Office supplements its own system by also using the computer of Law Enforcement. The SAC, Probation and Parole, and Youth Services also use this system. The SAC also has access to the University of South Carolina's computer. Juvenile Placement and After Care uses the computer of the Department of General Services.

The Attorney General's Office indicates that its own system is overloaded by operational uses which in turn limit statistical applications. The Attorney General's Office, Corrections, and Juvenile Placement and After Care cite lack of money, high computer costs, computer downtime, frequent staff turnover, and an insufficient number of programmers as causes of inadequate computer services.

Juvenile Placement and After Care contracts for programmers. Probation and Parole uses the programming staff of Law Enforcement. All other agencies maintain their own programming staff.

All agencies except Probation and Parole have statisticians or data analysts in-house. All agencies prepare statistical summaries or analytical reports.

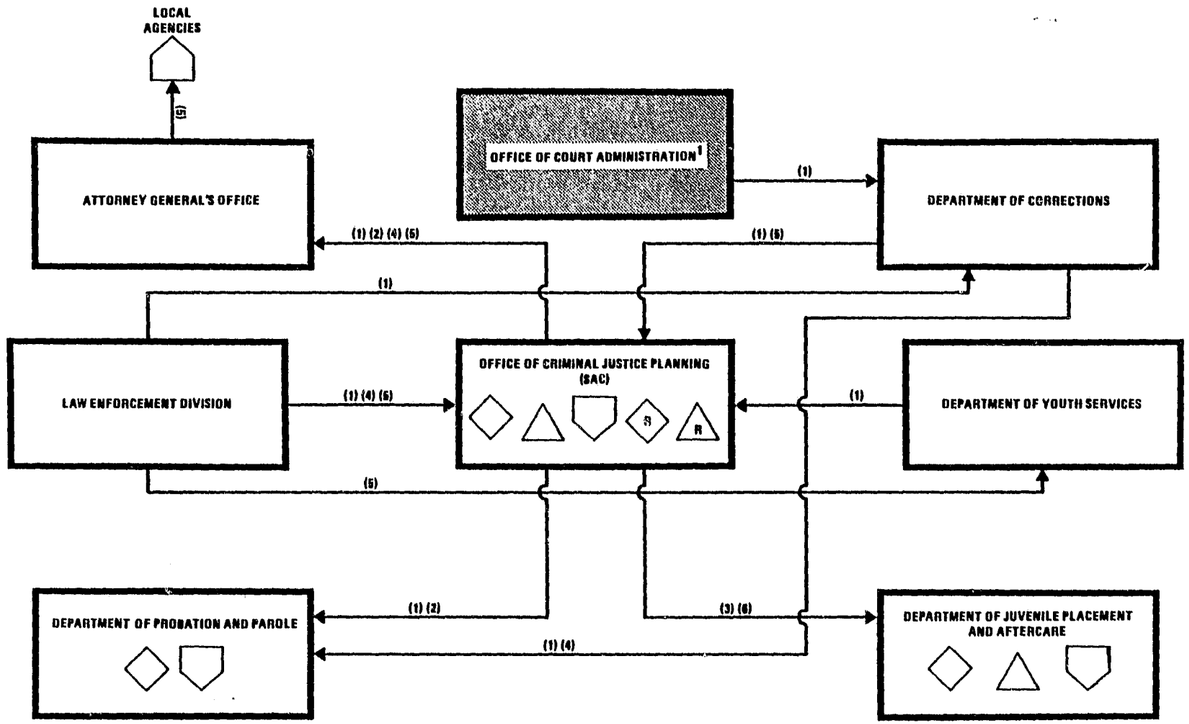
[1] REFUSED TO RESPOND TO QUESTIONNAIRE

SEE APPENDIX A FOR EXPLANATION OF FIGURES

SOUTH CAROLINA

SERVICE TRANSFERS AMONG AGENCIES



[1]REFUSED TO RESPOND TO QUESTIONNAIRE

SEE APPENDIX B FOR EXPLANATION OF FIGURES

SOUTH DAKOTA

GENERAL CHARACTERISTICS: The primary data users are listed below.

- Division of Criminal Investigation (corrections, law enforcement)
- Division of Law Enforcement Assistance (corrections, courts, law enforcement)
- Board of Charities and Corrections (corrections)
- Unified Judicial System (refused to respond to questionnaire)

Central Data Processing exists to provide computer assistance to agencies in need.

DATA AVAILABILITY: An analysis of the comprehensiveness of data holdings and the level of computerization is impossible because of the refusal of the Unified Judicial System to respond to the questionnaire. The Unified Judicial System is the principal maintainer for courts and juvenile justice data.

Among participating agencies, only the corrections data maintained by Charities and Corrections is computerized. Criminal Investigation is in the process of computerizing some of its law enforcement data.

In addition to the operational SJIS, OBSCIS is being developed by the staff at the State Penitentiary. No OBTS nor CCH system exists. A UCR program was recently inaugurated.

A thorough set of statistical and operational corrections data types, including probation and parole information, is maintained by Charities and Corrections. Law Enforcement Assistance also maintains statistical data on corrections and Criminal Investigation keeps operational corrections data.

Law Enforcement Assistance holds some statistical information on courts. No responding agency maintains operational courts data or statistical and operational juvenile justice data.

Criminal Investigation maintains manual statistical and operational law enforcement data. A conversion to partial computerization is in progress. Statistics on arrests and clearances will be among the automated files.

DATA ACCESS: Law Enforcement Assistance reports that it grants all agencies unlimited access to its files since it maintains only statistical data. However, it earlier responded that it maintains operational admissions/identification records in the corrections area. It does not indicate whether any access restrictions are placed on these data.

Charities and Corrections and Criminal Investigation grant all agencies unlimited data access except local non-criminal justice agencies, the SPA, and LEAA. Both respondent agencies cite a state statute denying operational data access to non-criminal justice agencies.

SAC PROFILE: The SAC was disbanded in 1978.

AUTHORIZATION FOR STATISTICAL REPORTING: Only Law Enforcement Assistance is formally authorized to report on criminal justice information and statistics. The source of this authorization is legislation and executive order.

CAPABILITIES TO USE AND PROCESS DATA: Criminal Investigation maintains its own computer system and programmers. It uses this system for operational purposes only. In addition, it also has access to the facilities of Central Data Processing.

Criminal Investigation reports that the facilities and support staff of Central Data Processing are inadequate to meet its needs. Among the problems cited are poor management, a system that is often inoperable, and the inflexibility of the system to fulfill law enforcement-specific requirements. As a result, it is attempting to lessen reliance on this system and add additional disc drives to its own system.

Charities and Corrections utilizes both the computer facilities and programming support of Central Data Processing.

Law Enforcement Assistance does not use a computer in its data processing activities.

Only Criminal Investigation has statisticians or data analysts in house.

No respondent agency reports that it produces statistical summaries or analytical reports on a regular basis.

GENERAL CHARACTERISTICS: The primary data users are listed below.

- Law Enforcement Planning Agency (juvenile justice)
- Bureau of Investigation (corrections, law enforcement)
- Supreme Court - Office of the Executive Secretary (courts)
- Corrections Institute (corrections, courts, juvenile justice)
- Department of Corrections (has not yet responded to questionnaire)

DATA AVAILABILITY: The level of computerization appears low from present survey returns. The Supreme Court reports maintaining computerized courts data, but only on a statistical level. The only automated information maintained by Investigation is UCR data. Corrections maintains computerized records on corrections and juvenile justice, but only on personnel and training. All other data are maintained in manual form. Corrections is apparently the principal repository for corrections and juvenile justice data. Therefore, the actual overall level of automation may change when its responses are received.

There are no OBSCIS or OBTS information systems in the state.

The Corrections Institute is a training facility that maintains data on personnel and training only.

Investigation has files on various statistical corrections data types including admissions records, offender records, probation, and parole. These data are no longer being received, however.

Except for the personnel and training records kept by Corrections, no respondent agency maintains any operational courts data.

The Planning Agency maintains some statistical juvenile justice data. Only Corrections (personnel and training) maintains any additional juvenile data. Most juvenile information is apparently kept at the county level.

Investigation did not report on the types of law enforcement data it maintains.

DATA ACCESS: The data that are available are widely accessible according to respondent agencies. However, very little data sharing is reported.

The Planning Agency allows all agencies unlimited access to its files.

Corrections makes its data available to all agencies on an unlimited basis except for local non-criminal justice where access is limited to selected files at the discretion of the Director.

Investigation is the only agency to cite security and privacy considerations as a reason for limiting data access. The state statute affects only local non-criminal justice agencies, the SPA, and LEAA, none of which has data access. All other agencies have unlimited information access.

Severe access limitations are instituted only by the Supreme Court. It limits the access of all agencies to published data only. No reasons for the limitations are cited.

SAC PROFILE: There has not been a SAC in the state since 1978.

AUTHORIZATION FOR STATISTICAL REPORTING: Investigation, the Supreme Court, and Corrections are all legislated to report on criminal justice statistics. The Planning Agency responded "don't know" to this inquiry.

CAPABILITIES TO USE AND PROCESS DATA: Only the Planning Agency does not use a computer.

Corrections performs operational and statistical functions on its own computer system. It carries out additional statistical work on Corrections' system. It reports, however, that these computer services and staff are still not adequate because it has special needs which are difficult to meet.

The Supreme Court uses the computer facilities of the Information Systems Services Division within the Department of Finance Administration for statistical purposes. It has additional access at the University of Tennessee.

Investigation also uses the Information Systems Services Division computer. It finds computer support staff inadequate to meet its needs due to low salaries which result in the loss of capable personnel.

No respondent agencies maintain their own programming staff. Corrections has three data analysts on staff and the Supreme Court has two statisticians. The Planning Agency and Investigation maintain neither analysts nor statisticians.

All respondents, except the Planning Agency, report that their agencies produce both statistical summaries and analytical reports. The Planning Agency did not respond to this question.

TEXAS

GENERAL CHARACTERISTICS: The primary data users are listed below.

- Governor's Office of General Counsel and Criminal Justice (corrections, courts, juvenile justice, law enforcement)
- Youth Council (corrections, juvenile justice, law enforcement)
- Commission on Jail Standards (corrections, law enforcement)
- Board of Pardons and Paroles (corrections, law enforcement)
- Judicial Council - Office of Court Administration (courts, juvenile justice)
- Department of Corrections (corrections)
- Department of Public Safety (law enforcement)
- Adult Probation Commission (corrections, courts)

DATA AVAILABILITY: Corrections, courts, juvenile justice, and law enforcement data are all computerized.

A CCH system has been implemented but there is no OBTS system.

The only operational-level courts information available in the state is maintained by the Governor's Office. These data consist of management and administration (personnel and budget) information.

Pardons and Paroles only maintains operational-level criminal history records in its law enforcement data base.

DATA ACCESS: Respondents from the Governor's Office, Corrections, Youth Council, and Public Safety indicate that the access of other agencies to their data bases is limited for security and privacy reasons.

All agencies are granted unlimited access to the corrections data maintained by the Governor's Office. Juvenile justice and law enforcement data are more restricted. All agencies except local non-criminal justice agencies, plus LEAA in the law enforcement area, are restricted to selected operational data files in these areas.

Local non-criminal justice agencies and LEAA are restricted by Public Safety to edited data files from its law enforcement data base. Other agencies are permitted access to selected operational data files.

Probations reports agencies may only use published corrections data since no system has been created to allow outside access to its computerized data bases.

Jail Standards allows unlimited access to its corrections data for all agencies.

Agencies are granted limited access by the Youth Council to its juvenile justice data on an as-needed basis. However, the requests of non-criminal justice agencies, Federal agencies, and the SPA are given lower priority.

Pardons and Paroles permits no access to its corrections and law enforcement data under state law.

Access to information retained by Corrections is limited but varies according to agency.

The Judicial Council did not respond to the data access questions.

SAC PROFILE: There is no SAC in the state.

AUTHORIZATION FOR STATISTICAL REPORTING: All agencies except Adult Probation and Pardons and Paroles are formally authorized to report on criminal justice information.

The Governor's Office is formally authorized under executive order. All other agencies cite legislation as the basis for their formal authority.

CAPABILITIES TO USE AND PROCESS DATA: Only Jail Standards reports that it does not use a computer in its data processing activities.

Public Safety, Youth Council, Pardons and Paroles, Corrections, and the Judicial Council all maintain their own computing systems. Of these agencies, only Pardons and Paroles and the Judicial Council do not use the system for both operational and statistical data processing purposes. Pardons and Paroles uses its system for operational uses while the Judicial Council utilizes its system for statistical applications.

Four agencies (the Governor's Office, Adult Probation, the Youth Council, and the Judicial Council) use the computer facilities of another agency. The Judicial Council uses these additional facilities for statistical purposes only.

The Governor's Office reports that computer support services are not adequate to meet its needs. It cites limitations in staffing that restrict the use of the system for research purposes.

Neither the Governor's Office nor Jail Standards utilize a staff of programmers, statisticians, or analysts.

Statistical/analytical reports are disseminated by all agencies but Pardons and Paroles.

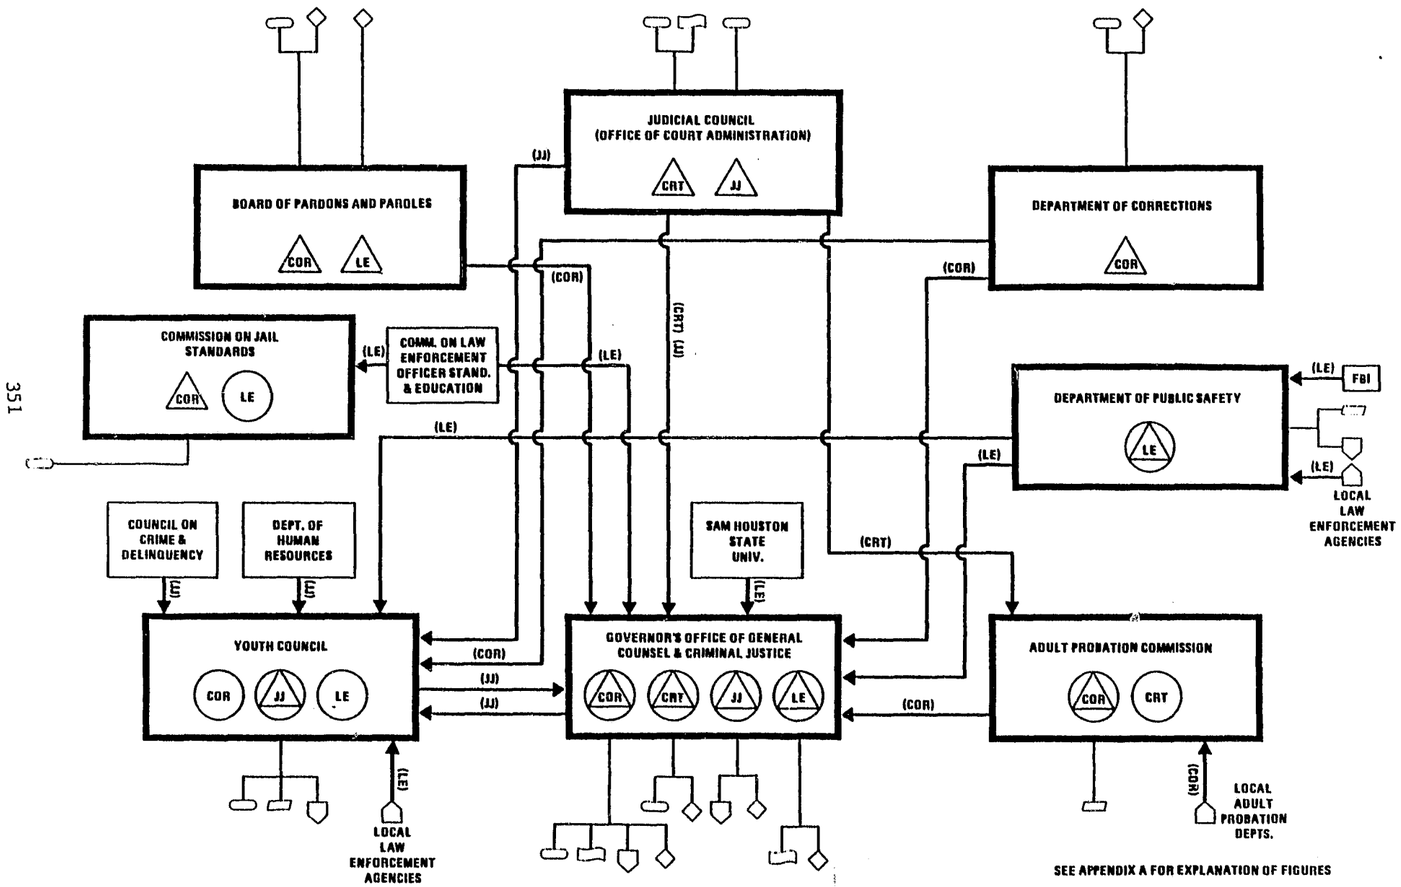
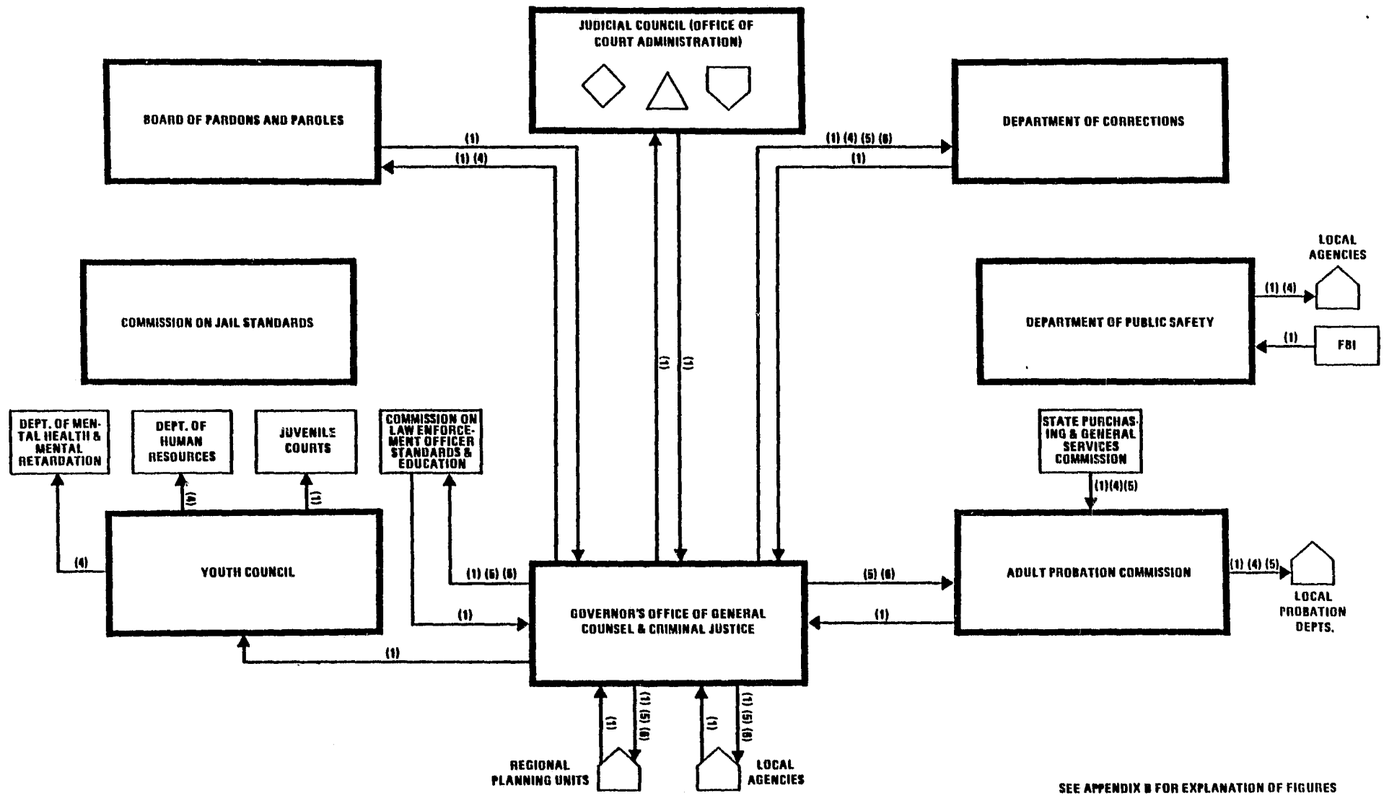
DATA TRANSFERS AMONG AGENCIES



SEE APPENDIX A FOR EXPLANATION OF FIGURES

TEXAS

SERVICE TRANSFERS AMONG AGENCIES



SEE APPENDIX B FOR EXPLANATION OF FIGURES

UTAH

GENERAL CHARACTERISTICS: The primary data users are listed below.

- Council on Criminal Justice Administration - SAC (corrections, courts, juvenile justice, law enforcement)
- Department of Public Safety - Bureau of Criminal Identification (corrections, courts, law enforcement)
- Department of Social Services - Division of Family Services (corrections, juvenile justice, law enforcement)
- Division of Corrections (corrections, courts)
- Statewide Association of Prosecutors (courts, law enforcement)
- Juvenile Court (juvenile justice)
- State Court Administrator (courts)

The State Information System Center supports various agencies with data processing services.

One agency reports that the orientation of state and local agencies is toward single-agency needs. For instance, computer systems being implemented by various agencies are not compatible with state systems.

The SPA is being phased out.

DATA AVAILABILITY: All areas of data are automated.

There is a statewide OBTS system which is operated by Criminal Identification. The Bureau is also the exchange agency for criminal history information.

SJIS and OBSCIS have been developed but not yet implemented.

No data are maintained by the SAC or the Association of Prosecutors.

Comprehensive operational and statistical data are available for corrections, courts, juvenile justice, and law enforcement.

DATA ACCESS: Social Services and the Juvenile Court indicate security and privacy reasons restrict the availability of their data. Access varies according to the requesting agency.

Under state law, any agency is permitted unlimited access to Criminal Identification data if the agency appears on a list of authorized users or receives approval of the Commissioner. For these reasons, local non-criminal justice agencies are not permitted to use its data.

Agencies are allowed use of Corrections' operational data files only. Tradition is cited as the reason.

Only the courts are allowed unlimited access to the Court Administrator's files. No reasons are given for restricting the access of other agencies.

The SAC and the Association of Prosecutors maintain no data files.

SAC PROFILE: For over 7 years there has been a functioning SAC authorized under legislation specific to the Criminal Justice Council.

The SAC is expected to be moved to Criminal Identification. It is anticipated that the SAC will be supported by the budget of Public Safety once LEAA funding is terminated.

Only the Juvenile Court and Corrections indicate receiving SAC services. However, the SAC reports providing technical assistance to local agencies and to other state agencies on request.

AUTHORIZATION FOR STATISTICAL REPORTING: The SAC, the Court Administrator, and the Juvenile Court are authorized under legislation to report on statistics.

SAC responsibilities are outlined under a statute pertinent to Public Safety.

CAPABILITIES TO USE AND PROCESS DATA: The Association of Prosecutors and the Court Administrator do not use a computer to process data.

Only Corrections maintains its own system and uses it for statistical and operational purposes.

On-line access to the State Information System Center and programming support is available to Criminal Identification, Social Services, and the Juvenile Court. The type of SAC access to the same system is not specified. All agencies but the SAC use the computer operationally and statistically.

Corrections utilizes the services of several universities for statistical functions. The State Information System Center provides them with programming staff.

The SAC, Corrections, and Social Services each have one statistician/ analyst on staff.

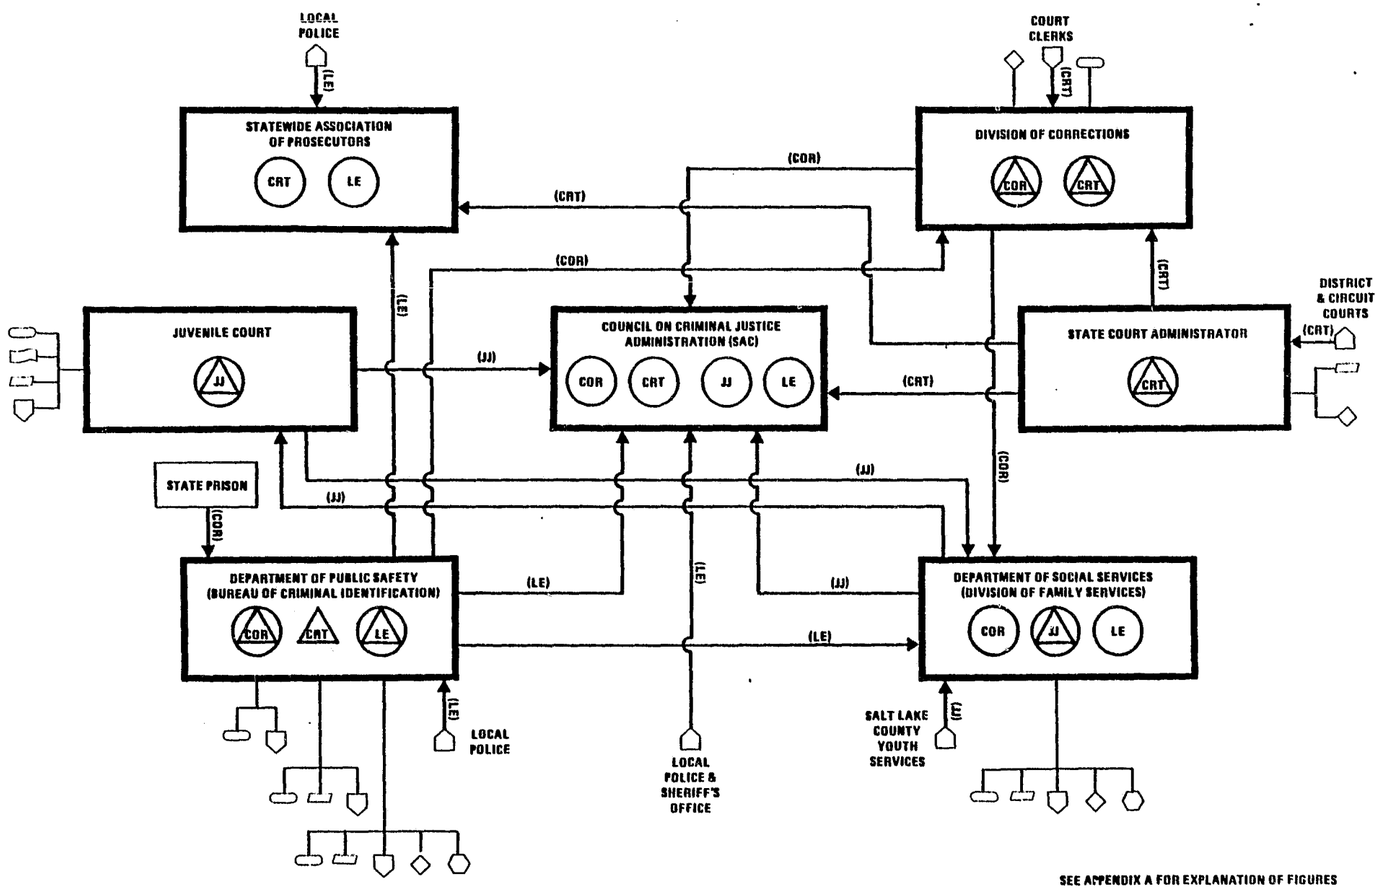
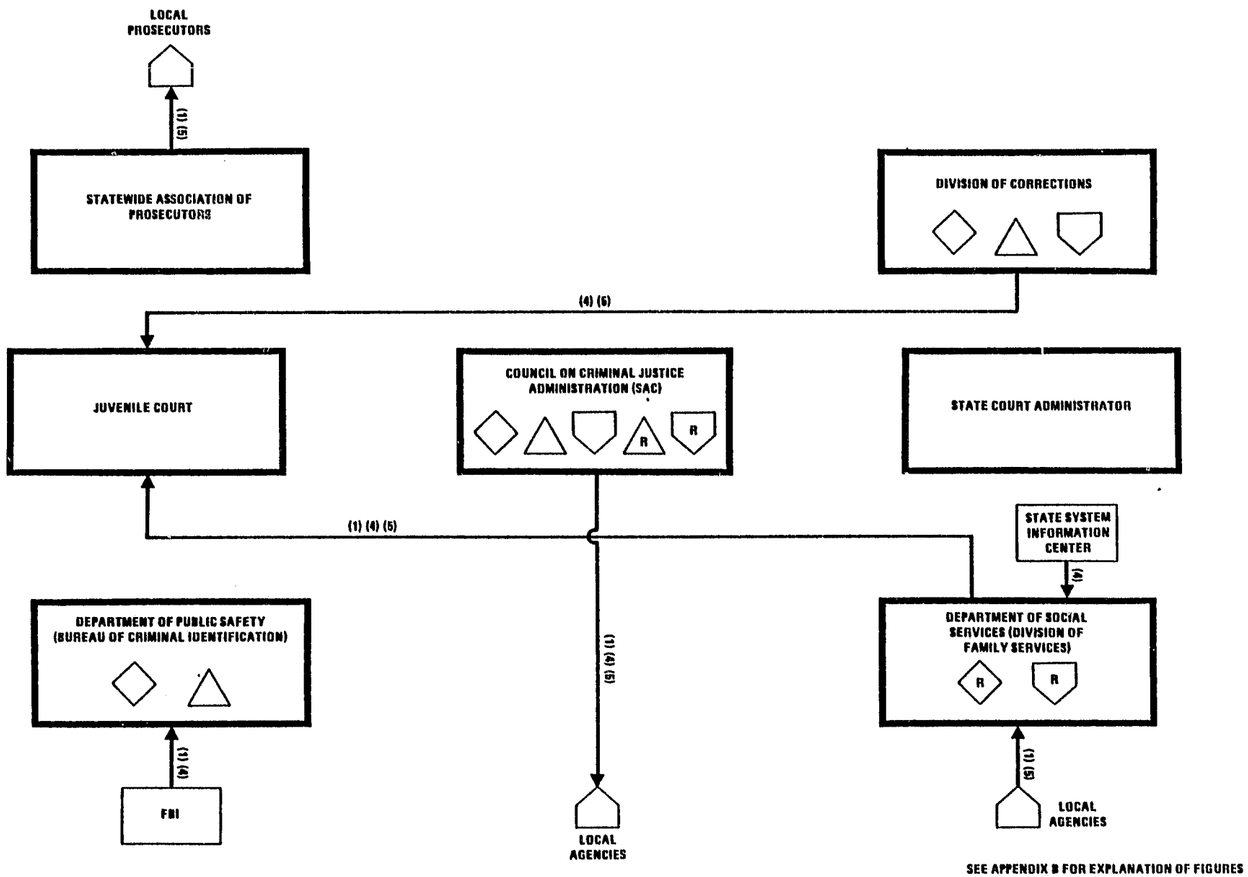
DATA TRANSFERS AMONG AGENCIES



SEE APPENDIX A FOR EXPLANATION OF FIGURES

UTAH

SERVICE TRANSFERS AMONG AGENCIES



SEE APPENDIX B FOR EXPLANATION OF FIGURES

VERMONT

GENERAL CHARACTERISTICS: The primary data users are listed below.

- Department of Public Safety - Crime Information Center (corrections, courts, juvenile justice, law enforcement)
- Office of the Court Administrator (courts, juvenile justice)
- Office of the Defender (courts, juvenile justice)
- State Attorney's and Sheriff's Department (corrections, juvenile justice, law enforcement)
- Agency of Human Services - Department of Social and Rehabilitative Services (juvenile justice), Department of Corrections (has not yet responded to questionnaire)

Computer support services are provided through the State Information System within the Department of Administration. It also has statutory control over all dollars spent on data analysis.

There is practically no cooperative exchange of technical assistance services between justice agencies.

DATA AVAILABILITY: Computerized information is maintained on courts and juvenile justice. The Crime Information Center is the only responding agency keeping corrections and law enforcement data. All its records are manual. (Corrections has not yet responded to the questionnaire.)

There is no OBTS system. OBSCIS is being planned.

The Crime Information Center is the principal source of operational courts data. The Court maintains only operational appellate court records. There is some duplication of the statistical courts data types held by the Crime Information Center, the Court, and the Defender.

Social and Rehabilitative Services and the Defender maintain operational and statistical juvenile justice data. A Juvenile Outcome Evaluation (JOE) record system is managed by Social and Rehabilitative Services. This is a self-reporting juvenile history system which is administered at 4-month intervals. It includes information on deviancy, family interaction, and school and occupational history. Social and Rehabilitative Services is also designing a MIS for juvenile services. This system will be operational in late June 1981.

The Crime Information Center is the central repository for all criminal history records.

An additional repository of law enforcement data is the State Police Chiefs' Association. This is a non-profit organization funded by LEAA and membership dues. An attempt is being made to merge these files with those of the Crime Information Center.

DATA ACCESS: All juvenile records are closed by a state security and privacy law. Corrections agencies have access to selected operational files of Social and Rehabilitative Services but only if a child becomes an adult offender.

Except for its juvenile files, all data maintained by the Crime Information Center are accessible on an unlimited basis by all agencies.

Data holdings of the Defender are limited to published data only.

The Court did not indicate whether it restricts access to its data base.

The Attorney's and Sheriff's Department maintains no data.

SAC PROFILE: There is no SAC in the state.

AUTHORIZATION FOR STATISTICAL REPORTING: Social and Rehabilitative Services, the Defender, and the Crime Information Center are legislatively authorized for statistical reporting. The Court derives its mandate from state constitution and Supreme Court Administrative Order. The Attorney's and Sheriff's Department is not authorized to report on justice statistics.

CAPABILITIES TO USE AND PROCESS DATA: The apparent ability of respondent agencies to use and process data is quite limited. Only Social and Rehabilitative Services and the Defender use a computer. Both utilize the facilities and program staff of the State Information System. Only statistical work is performed on this system by both agencies.

Social and Rehabilitative Services and the Defender are also the only agencies to employ statisticians or data analysts. The former has eight statisticians on staff. The latter has just one person part time.

In spite of these analysis limitations, all agencies except the Crime Information Center report producing statistical or analytical reports for use by other agencies. Some respondent agencies report doing so on a very limited basis, however.

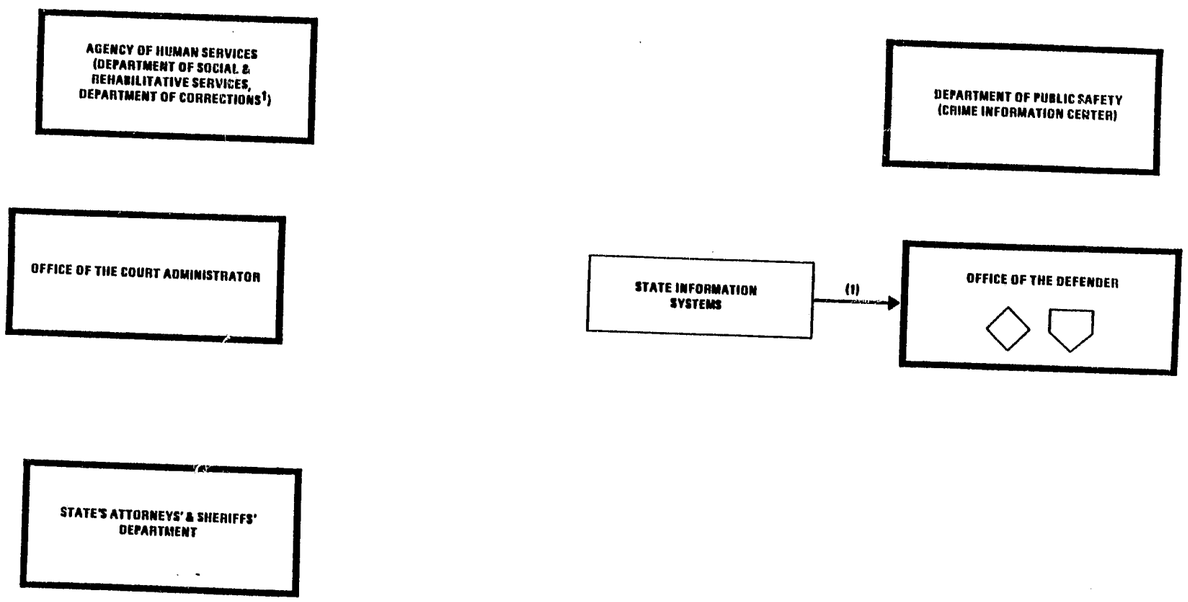
SEE APPENDIX A FOR EXPLANATION OF FIGURES

VERMONT

SERVICE TRANSFERS AMONG AGENCIES



[1] DEPARTMENT OF CORRECTIONS HAS NOT YET RESPONDED TO QUESTIONNAIRE

SEE APPENDIX B FOR EXPLANATION OF FIGURES

VIRGINIA

GENERAL CHARACTERISTICS: The primary data users are listed below.

- Division of Justice and Crime Prevention - SAC (corrections, courts, juvenile justice, law enforcement)
- State Police (corrections, courts, law enforcement)
- Department of Corrections (corrections, juvenile justice)
- Supreme Court (courts, juvenile justice)
- Division for Children (juvenile justice)
- Department of Welfare (juvenile justice)

DATA AVAILABILITY: Data in all areas are computerized, but individual agency files are limited.

Various information systems are operational. OBSCIS and an OBTS/CCH system have been implemented. SJIS and PROMIS are being planned.

DATA ACCESS: Security and privacy considerations are listed by Corrections, the State Police, and Welfare for limiting the access of other agencies to their data.

Access to Corrections' (corrections) data is limited, but varies by requesting agency. Use of its juvenile justice data is even more restricted. All agencies except the state courts and the SPA are not granted access without judicial authority. The SPA and state courts may use published data.

The State Police permits generally unlimited use of its corrections and courts data. However, non-criminal justice agencies are permitted no access to corrections data and limited access to edited court files because of security and privacy regulations. Access to the State Police's law enforcement data is restricted to edited or selected operational files.

Since no identifying information may be released, Welfare restricts all agencies to the use of edited juvenile justice files only.

Both the SAC and Children permit unlimited use of their data to most agencies. Local criminal and non-criminal justice agencies are the exceptions. They are restricted by the SAC to selected operational files only.

All the Supreme Court's data are available as published information.

SAC PROFILE: There has been a SAC in the state for 4 years. It is completely Federally supported, principally by CDS program funds and in part through other grants.

Its present location in the CJC is not expected to change. The SAC is authorized under legislation specific to the CJC.

Other agencies provide the SAC with the data it uses. Only courts files are maintained by the SAC.

Technical assistance services are provided to Corrections and various local agencies.

AUTHORIZATION FOR STATISTICAL REPORTING: Only the SAC, Children, and the State Police are formally authorized for statistical reporting. Under a mandate, Children is required to direct studies on children and families. The other two agencies are legislatively authorized.

CAPABILITIES TO USE AND PROCESS DATA: All respondent agencies use computer facilities to process information. The Courts, the State Police, and Welfare maintain their own computers.

All agencies use supplemental computer facilities, and Children uses the programming staff of Virginia Commonwealth University.

All responding agencies report that computer facilities and support staff are adequate to meet their needs.

Neither the State Police nor Children employ statisticians/analysts, but all agencies report the capability to prepare statistical or analytical reports.

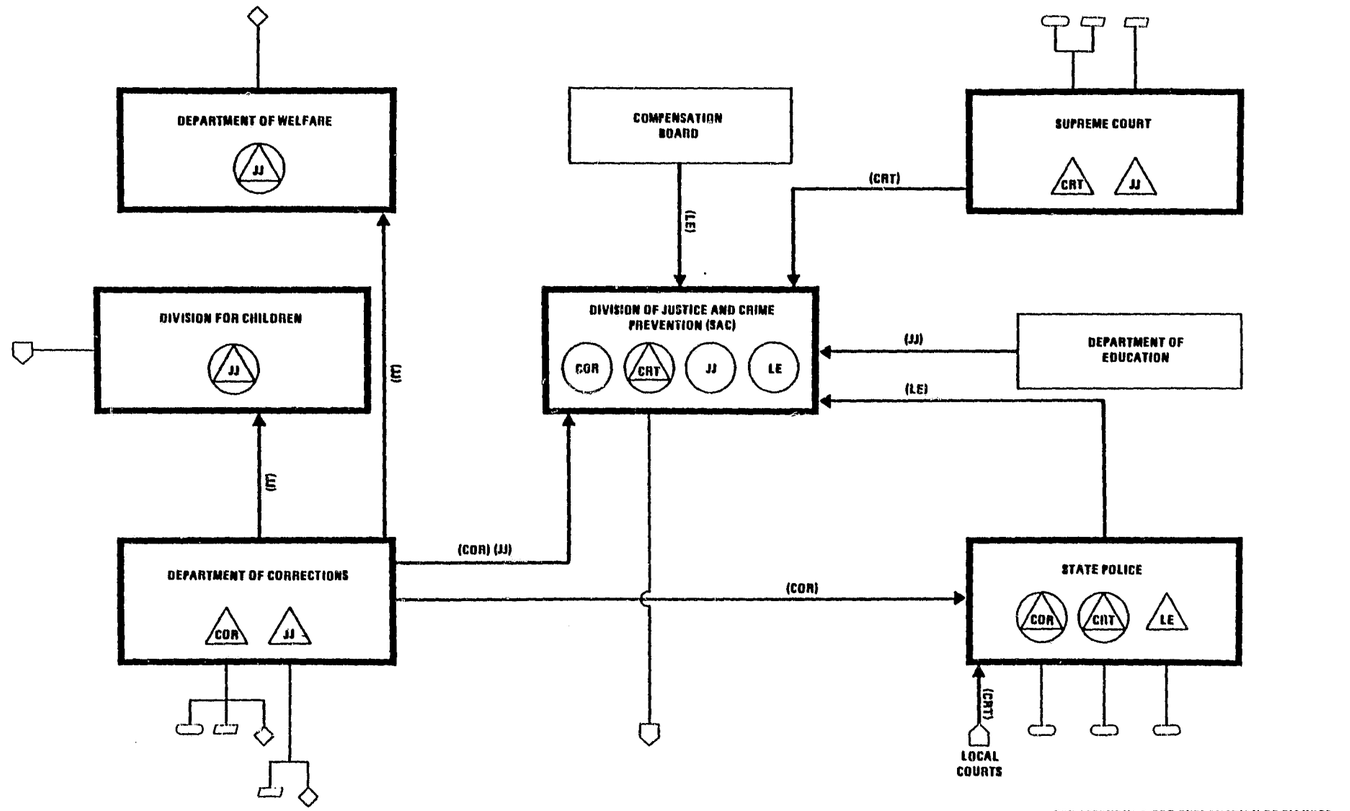
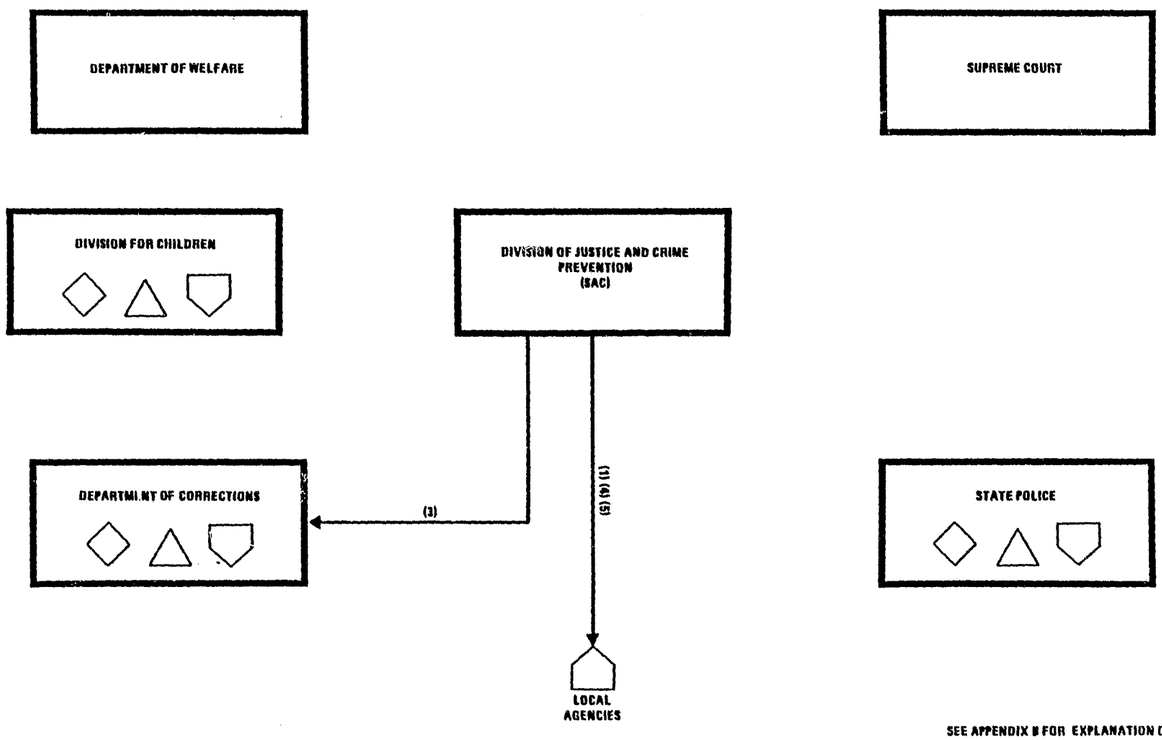
DATA TRANSFERS AMONG AGENCIES



SEE APPENDIX A FOR EXPLANATION OF FIGURES

VIRGINIA

SERVICE TRANSFERS AMONG AGENCIES



SEE APPENDIX B FOR EXPLANATION OF FIGURES

WASHINGTON

GENERAL CHARACTERISTICS: The primary data users are listed below.

- Division of Criminal Justice - SAC (corrections, courts, juvenile justice, law enforcement)
- Department of Social and Health Services - Adult Corrections Division (corrections, courts, juvenile justice, law enforcement), Division of Juvenile Rehabilitation (has not yet responded to questionnaire)
- State Patrol (corrections, courts, law enforcement)
- Jail Commission (corrections, courts, law enforcement)
- Office of the Administrator for the Courts (courts, juvenile justice)
- Board of Prison Terms and Parole (has not yet responded to questionnaire)

DATA AVAILABILITY: Corrections, courts, juvenile justice, and law enforcement data are computerized.

An OBTS system, OBSCIS, and SJIS are all in the planning stages.

The availability of data varies by area. For example, four agencies maintain corrections information while only one agency retains law enforcement files.

Corrections and courts data are comprehensive.

The availability of juvenile justice information is limited pending a response from Juvenile Rehabilitation.

No statistical-level law enforcement data are maintained by the State Patrol. Only operational data on fingerprints, criminal histories, and wants/warrants are retained in its files.

DATA ACCESS: Security and privacy are cited by Adult Corrections, the State Patrol, and the Courts for limiting the use of their data.

Most agencies are granted use of selected files by Adult Corrections. The SPA and LEAA may use published data only while local criminal justice agencies have unlimited use of its data.

Since requesting agencies have only asked for published data, precedent defines the release of published data by the SAC.

CONTINUED

8 OF 9

Release of data by the Courts is affected in part by the lack of computer facilities of other agencies to access data. Data are released by the courts, but they vary according to requesting agency.

The SPA and LEAA are prohibited from receiving the State Patrol's data under security and privacy regulations. All other agencies have unlimited use of the data.

No reason is listed for the restriction of agencies to the use of published data only by the Jail Commission.

SAC PROFILE: The SAC has been in operation for over 2 years. It is funded under the CDS program and by state matching funds.

The SAC is located in the CJC, but consideration is being given to relocation. The SAC is authorized under legislation specific to the CJC.

Although the SAC describes its role as "laissez-faire," it is dependent on other agencies for the receipt of data.

AUTHORIZATION FOR STATISTICAL REPORTING: All respondent agencies except the State Patrol are authorized to report on statistics. Executive order provides guidelines for Adult Corrections. The SAC and the Jail Commission are authorized under legislation. By its own rule, the Courts must develop and maintain a statewide computerized judicial information system.

CAPABILITIES TO USE AND PROCESS DATA: All agencies use a computer to process data. The Courts is the only agency to use its system operationally and statistically.

The SAC and the Jail Commission use the computer facilities and programmers of the State Data Center. No service problems are cited.

Statisticians/analysts are available on staff in the SAC (3), Jail Commission (1), and the Courts (1).

Only the State Patrol prepares neither statistical nor analytical summaries.

WASHINGTON

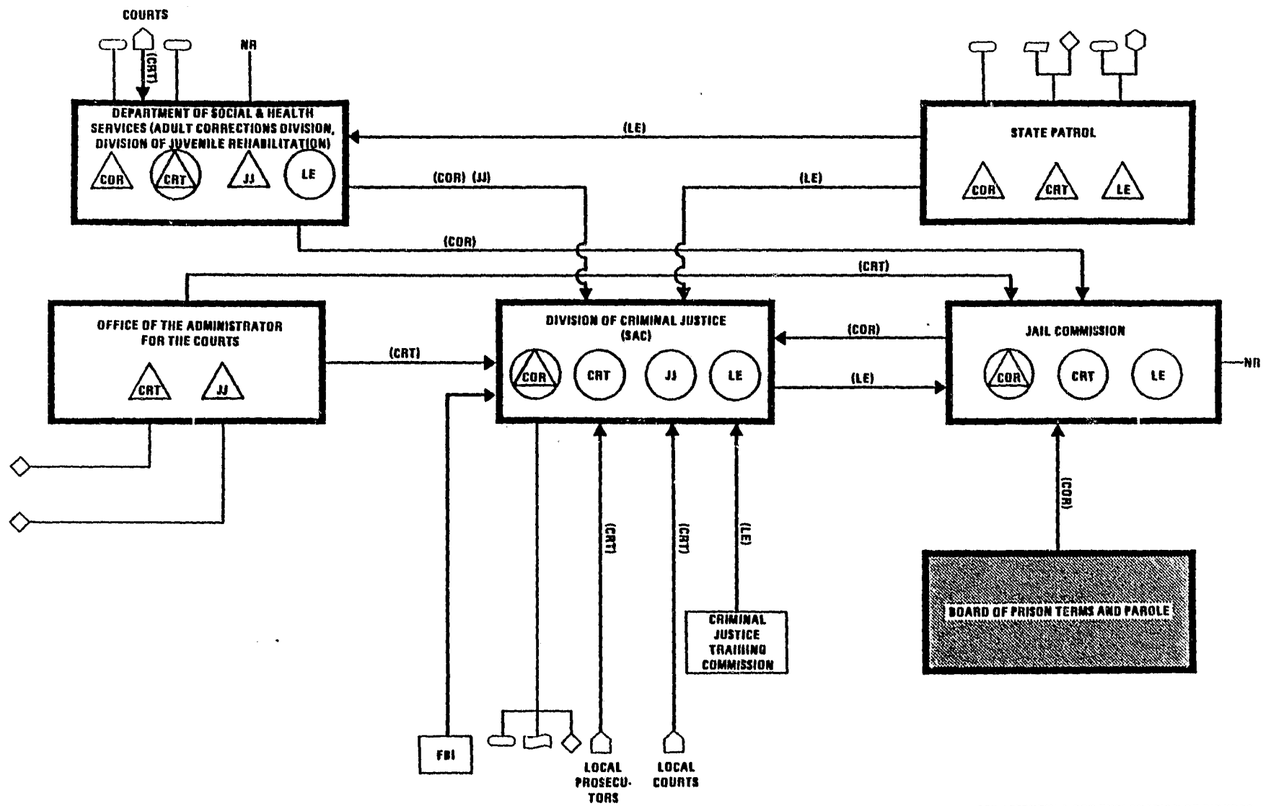
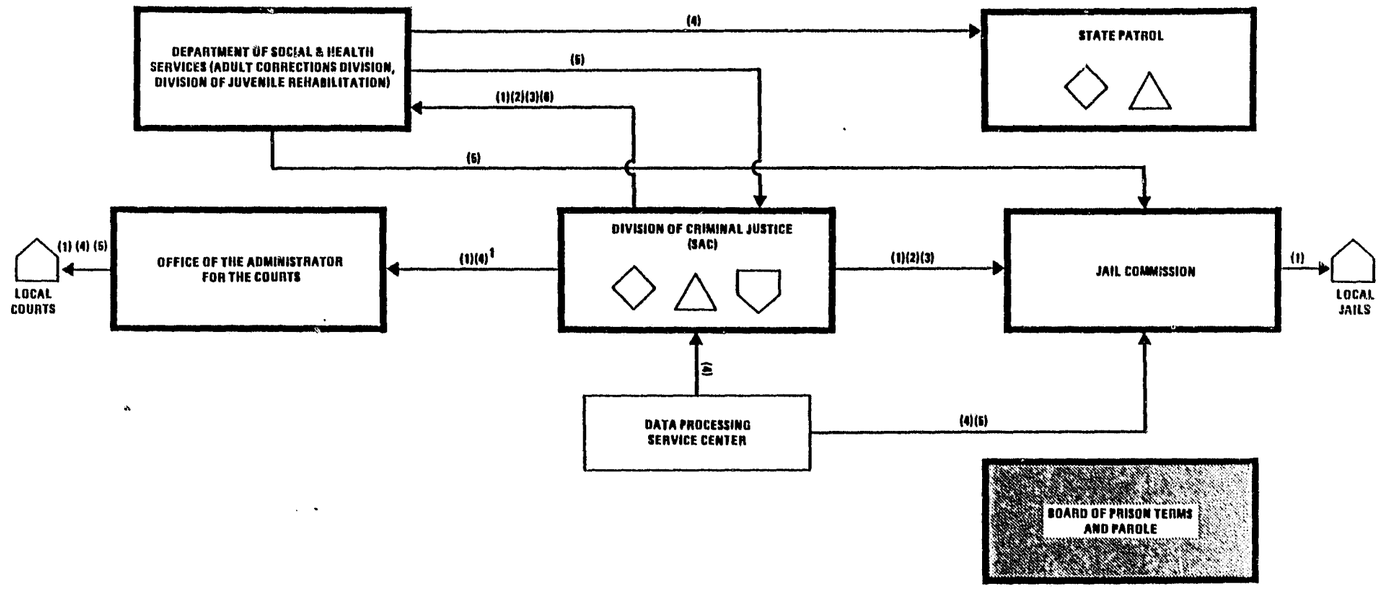
DATA TRANSFERS AMONG AGENCIES



SEE APPENDIX A FOR EXPLANATION OF FIGURES

WASHINGTON

SERVICE TRANSFERS AMONG AGENCIES



[1]SERVICES ARE PROVIDED BY THE SPA, WITHIN THE DIVISION OF CRIMINAL JUSTICE, NOT THE SAC.

SEE APPENDIX B FOR EXPLANATION OF FIGURES

WEST VIRGINIA

GENERAL CHARACTERISTICS: The primary data users are listed below.

- Governor's Committee on Crime, Delinquency, and Corrections (corrections, courts, juvenile justice, law enforcement)
- Department of Corrections (corrections, juvenile justice)
- Department of Public Safety - State Police (law enforcement)
- Department of Welfare (juvenile justice)
- Supreme Court of Appeals (courts, juvenile justice)
- Parole Board (corrections, law enforcement)

The Information Systems Services Division is statutorily responsible for providing data processing assistance to other state agencies.

There is very little exchange of technical assistance and other services among agencies.

DATA AVAILABILITY: Computerized information is only maintained on courts (by the Court of Appeals) and juvenile justice (by the Court of Appeals and Welfare).

A CCH system is in operation and an OBTS system is planned. There is no OBSCIS.

Corrections and Parole both maintain a thorough list of operational data types in corrections but only minimal statistical data.

The range of data types available on courts is narrow. The Court of Appeals is the only respondent agency maintaining courts data. It holds limited statistical data on appellate and civil proceedings, criminal transactions, and budget management. The only operational data on file are management and administrative information.

The major centers for juvenile justice data are Welfare (statistical data only) and Corrections (operational data only).

Police maintains a diversity of law enforcement information including UCR data submitted by local police departments.

DATA ACCESS: Four of the five agencies that maintain data cite security and privacy reasons for limiting agency access.

Access to all data held by Parole is restricted to selected operational files due to security and privacy.

Data maintained by the Court of Appeals are available in published form only. In the courts area this is due to security and privacy and in juvenile justice to administrative procedures.

Security and privacy considerations deny non-criminal justice agencies access to the law enforcement data maintained by the State Police. Other agencies are limited to edited data files only.

The FBI and the State Police have somewhat more access to Corrections' data than other agencies. All data limitations are a result of security and privacy regulations.

Welfare limits all agencies to published data only, because of organizational factors.

The Governor's Committee maintains no data.

SAC PROFILE: There is no SAC in the state.

AUTHORIZATION FOR STATISTICAL REPORTING: All respondent agencies except Parole are formally authorized to report on criminal justice information and statistics.

CAPABILITIES TO USE AND PROCESS DATA: The State Police and Welfare maintain their own computer systems. The Governor's Committee and the Court of Appeals utilize the state computer at the Information Systems Service Division for statistical purposes. The State Police supplements its own system by using the state computer for additional operational work. This is necessary because its own system was designed as a message switcher and has very limited capabilities. Parole and Corrections do not utilize a computer.

The Governor's Committee and Welfare have one and eight statisticians on staff respectively. No other respondent agency maintains statisticians or data analysts. Nevertheless, all agencies have produced periodic statistical summaries or analytical reports.

WEST VIRGINIA

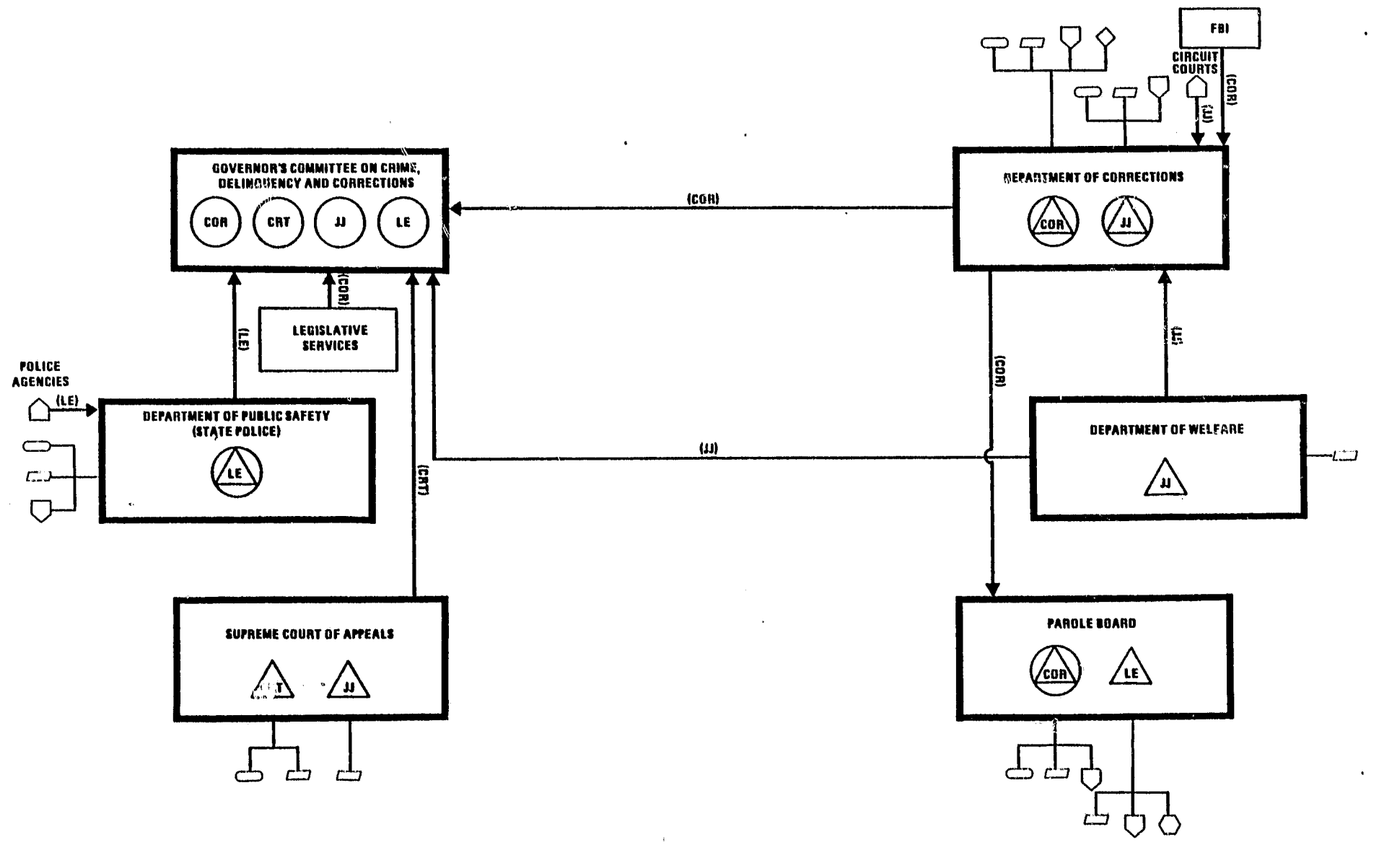
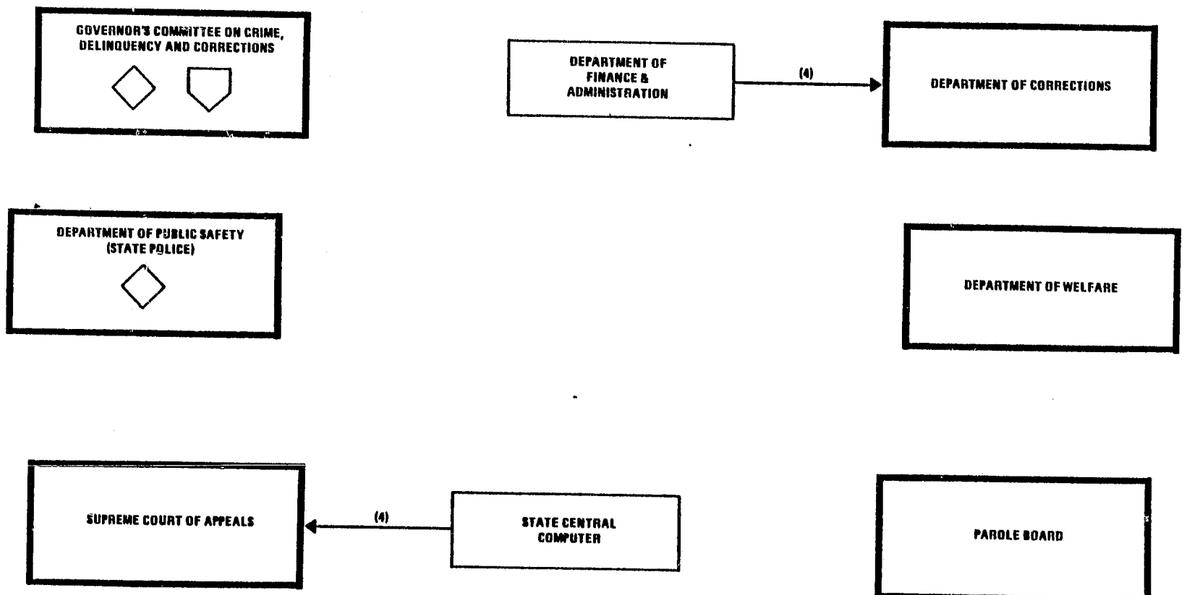
DATA TRANSFERS AMONG AGENCIES



SEE APPENDIX A FOR EXPLANATION OF FIGURES

WEST VIRGINIA

SERVICE TRANSFERS AMONG AGENCIES



SEE APPENDIX B FOR EXPLANATION OF FIGURES

WISCONSIN

GENERAL CHARACTERISTICS: The primary data users are listed below.

- Division of Corrections (corrections, courts, juvenile justice)
- Department of Justice - Division of Law Enforcement Services (corrections, courts, juvenile justice, law enforcement)
- Court Information System (courts, juvenile justice)
- Council on Criminal Justice (corrections, courts, juvenile justice, law enforcement)
- Department of Health and Social Services (juvenile justice)

The exchange of technical assistance and other services among agencies is quite limited.

DATA AVAILABILITY: Computerized information is maintained on corrections, courts, juvenile justice, and law enforcement.

CCH and OBTS systems and OBSCIS are non-operational but in the planning stage.

There does not appear to be single repositories for distinct areas of criminal justice data. Rather, the majority of responding agencies maintain information on a cross section of criminal justice areas. Three responding agencies maintain corrections data, three maintain courts data, and all five maintain juvenile justice data. There are also numerous data-sharing relationships between these agencies.

The law enforcement area is an exception to the situation described above. Only Justice maintains law enforcement data.

DATA ACCESS: The accessibility of data is relatively high. Most agencies have unlimited access or access to selected operational files of the respondent agencies. The major exceptions are local non-criminal justice agencies. In corrections, these agencies have access to published data only from the Council on Criminal Justice and no access to Justice's data. They are limited to edited courts data files from the Court Information System and denied all access to Justice's courts data. In juvenile justice, local non-criminal justice agencies are denied access to the data maintained by Health and Social Services and are given access only to published data by corrections and the Council on Criminal Justice.

A state security and privacy statute limits the release of juvenile justice data to agencies that provide services to juveniles. Under such conditions, a professional exchange of data may take place.

Corrections, Health and Social Services, Justice, and the Council on Criminal Justice all list security and privacy as a factor in denying certain agencies data access in at least one area.

SAC PROFILE: There is no SAC in the state.

AUTHORIZATION FOR STATISTICAL REPORTING: Justice and the Council on Criminal Justice are authorized by legislation to report on information and statistics. Justice's mandate includes maintaining criminal history data and making them available to all justice agencies. Health and Social Services is authorized through legislation and executive order and Corrections through legislation, executive order, and Federal mandate. Only the Court Information System is not authorized for statistical reporting.

CAPABILITIES TO USE AND PROCESS DATA: Overall, criminal justice agencies are highly capable of using and processing data. This is partially evidenced by the diversity of information maintained by each agency and the minimum amount of technical assistance services exchanged between agencies. Further, all agencies utilize a computer in their data processing activities, all but the Court Information System have statisticians and data analysts on staff, all produce statistical summaries, and all but the Court Information System provide analytical reports.

Corrections and Justice maintain their own computer systems. The latter performs operational and statistical tasks on its system and the former only statistical work.

Health and Social Services and the Court Information System use the facilities of another agency for operational and statistical data processing while Corrections and the Council on Criminal Justice use an outside system for statistical work only.

Health and Social Services reports that computer services and support staff are inadequate to meet its needs. It responds that data are not always timely and that staff levels are inadequate. It also indicates that the operational uses of its system limit statistical applications.

WYOMING

GENERAL CHARACTERISTICS: The primary data users are listed below.

- Attorney General's Office - Division of Criminal Identification - SAC (corrections, courts, juvenile justice, law enforcement)
- Board of Charities and Reform (corrections, juvenile justice)
- Supreme Court - Court Administrator's Office (courts, juvenile justice)
- Department of Probation and Parole (has not yet responded to questionnaire)

DATA AVAILABILITY: The level of computerization is quite low. Although computerized data is maintained on corrections, courts, juvenile justice, and law enforcement, computerized operational data is reported only on corrections and law enforcement. All of these automated operational and statistical records are kept by the SAC.

An OBTS/CCH system is being implemented.

Charities and Reform maintains manual statistical and operational records on corrections and operational data on juvenile justice.

The Court maintains data on appellate courts and management and administration, but no information on criminal courts or prosecutors. It also keeps very limited records on juvenile justice. A study is now being conducted of juvenile justice data use across the state.

The SAC maintains statistical information on corrections, courts, juvenile justice, and law enforcement, and operational records on case tracking, offender tracking, criminal histories, probation, parole, and identification.

DATA ACCESS: Access to all data maintained by Charities and Reform is determined on a case-by-case basis based on need and confidentiality.

Courts data maintained by the Court are available only to the local courts that submit the data. The Court reports that this arrangement facilitates cooperation with contributing agencies. All agencies have unlimited access to the Courts' juvenile justice data because it is so limited.

The SAC provides corrections, courts, and law enforcement data without identifiers to all agencies on request. Specific criminal history data are only available to law enforcement agencies by state statute. Juvenile justice data maintained by the SAC are available only by court order.

SAC PROFILE: The SAC role is a coordinative one. It works with other agencies in the state, but is the primary data user and maintainer. Its role in service provision is a growing one with all respondents planning to increase the use of SAC services in the future.

The SAC has been in operation for almost 5 years. It is fully state funded, and reports through the Division of Criminal Identification to the Office of the Attorney General. This organization is not expected to change.

AUTHORIZATION FOR STATISTICAL REPORTING: Charities and Reform is formally authorized to report on information and statistics based on legislation and state constitution. The SAC derives its formal authorization from legislation and executive order. The Court's authorization is based on Department rule.

CAPABILITIES TO USE AND PROCESS DATA: The capabilities for most agencies to process data are quite low. The SAC is the only agency with computer access. It utilizes the facilities and programming staff of Central Data Services. The SAC uses the system for both operational and statistical data processing purposes.

The SAC is also the only respondent agency with statisticians and data analysts on staff. It provides a variety of statistical summaries and analytical reports. Charities and Reform and the Court also prepare some statistical summaries and analytical reports.

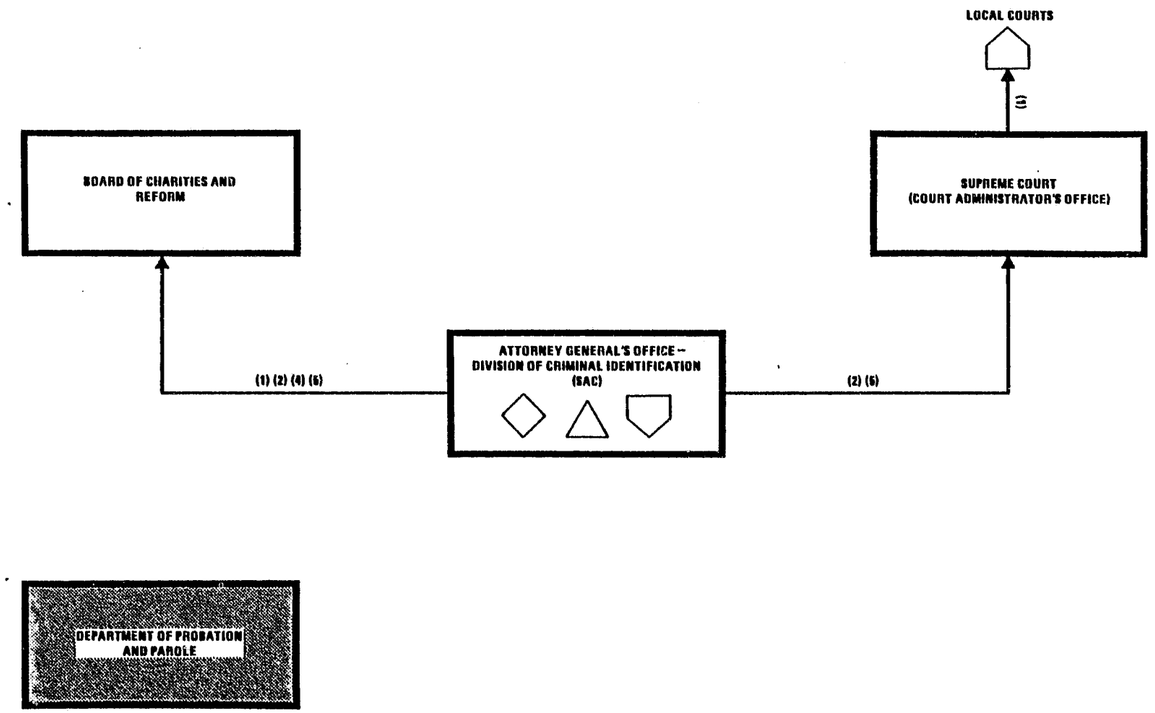
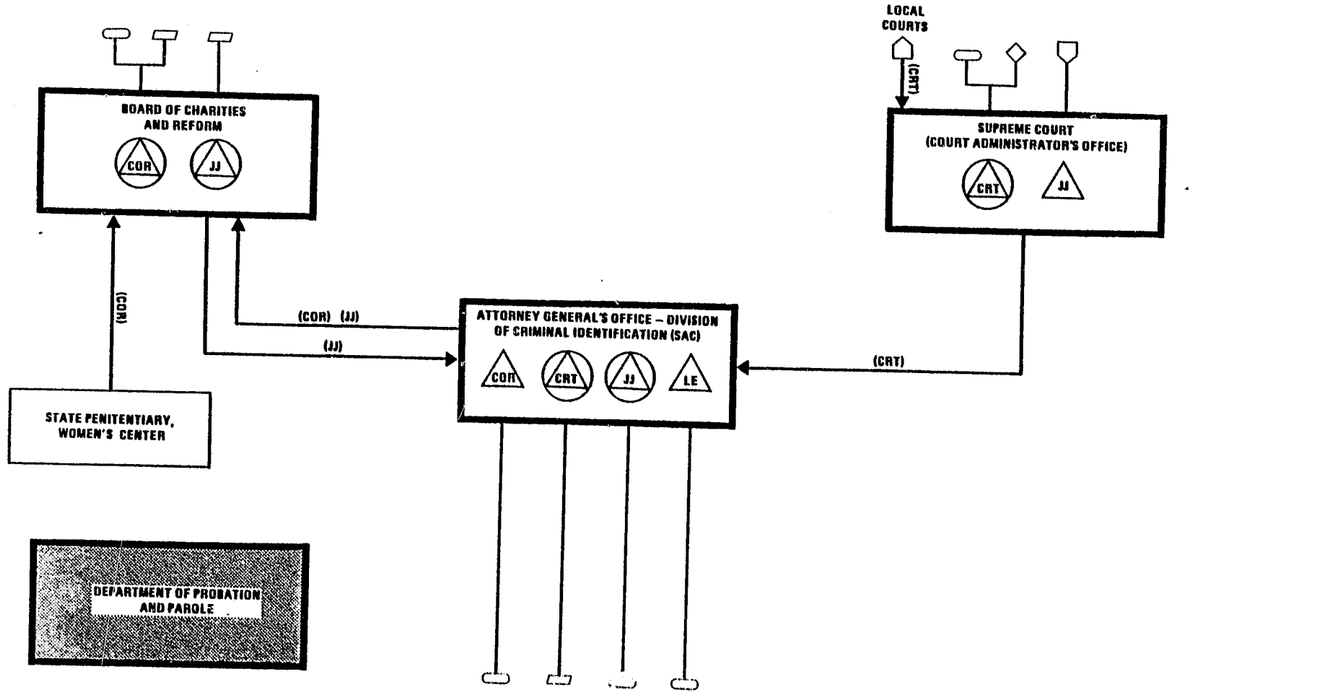
SERVICE TRANSFERS AMONG AGENCIES



SEE APPENDIX B FOR EXPLANATION OF FIGURES

WYOMING

DATA TRANSFERS AMONG AGENCIES



SEE APPENDIX A FOR EXPLANATION OF FIGURES

APPENDIX A
EXPLANATION OF DATA FLOW FIGURES

APPENDIX A

EXPLANATION OF DATA FLOW FIGURES

TYPES OF AGENCIES IN DATA TRANSFERS:

- STATE-LEVEL AGENCY THAT RESPONDED TO QUESTIONNAIRE
- STATE-LEVEL AGENCY NOT INCLUDED IN SURVEY POPULATION OR FEDERAL AGENCY
- STATE-LEVEL AGENCY THAT REFUSED TO RESPOND TO QUESTIONNAIRE OR HAS NOT RESPONDED TO DATE
- LOCAL AGENCY

DATA USE/MAINTENANCE:

- AGENCY MAINTAINS DATA
- AGENCY USES DATA MAINTAINED BY ANOTHER AGENCY
- AGENCY MAINTAINS SOME DATA AND USES SOME DATA MAINTAINED BY ANOTHER AGENCY

TYPES OF CRIMINAL JUSTICE DATA USED/MAINTAINED:

- COR CORRECTIONS DATA
- CRT COURTS DATA
- JJ JUVENILE JUSTICE DATA
- LE LAW ENFORCEMENT DATA

ORIGINAL SOURCES OF DATA MAINTAINED BY STATE-LEVEL AGENCIES:

- DATA IS OBTAINED FROM THE AGENCY'S OWN OPERATIONAL FILES
- DATA IS OBTAINED FROM PERIODIC SURVEYS
- DATA IS OBTAINED FROM UNPROCESSED SOURCE DATA SUBMITTED BY LOCAL AGENCIES
- DATA IS OBTAINED FROM UNPROCESSED SOURCE DATA SUBMITTED BY OTHER STATE AGENCIES
- DATA IS OBTAINED FROM COMPUTER PROCESSED DATA SUBMITTED BY LOCAL OR STATE AGENCIES
- DATA IS OBTAINED FROM OTHER SOURCES

DATA TRANSFERS:

- TRANSFER OF DATA BETWEEN TWO AGENCIES
- TRANSFER OF DATA BETWEEN THE ORIGINAL SOURCE OF THE DATA AND THE DATA MAINTAINING AGENCY

IN STATES WITH A STATISTICAL ANALYSIS CENTER (SAC), THE SAC IS SHOWN IN THE CENTER BOX.

APPENDIX B
EXPLANATION OF SERVICE FLOW FIGURES

APPENDIX B

EXPLANATION OF SERVICE FLOW FIGURES

TYPES OF AGENCIES IN SERVICE TRANSFERS:

- STATE-LEVEL AGENCY THAT RESPONDED TO QUESTIONNAIRE
- STATE-LEVEL AGENCY NOT INCLUDED IN SURVEY POPULATION OR FEDERAL AGENCY
- STATE-LEVEL AGENCY THAT REFUSED TO RESPOND TO QUESTIONNAIRE OR HAS NOT RESPONDED TO DATE
- LOCAL AGENCY

SERVICE TRANSFERS:

- TRANSFER OF SERVICES BETWEEN TWO AGENCIES

TYPES OF SERVICES TRANSFERRED:

1. TECHNICAL ASSISTANCE IN DATA COLLECTION IS PROVIDED TO ANOTHER AGENCY
2. TECHNICAL ASSISTANCE IN DATA PROCESSING IS PROVIDED TO ANOTHER AGENCY
3. GENERAL TECHNICAL ASSISTANCE IS PROVIDED (TYPE IS UNSPECIFIED)
4. TECHNICAL ASSISTANCE IN DATA ACCESS IS PROVIDED TO ANOTHER AGENCY
5. TECHNICAL ASSISTANCE IN DATA ANALYSIS IS PROVIDED TO ANOTHER AGENCY
6. OTHER SERVICE IS PROVIDED

◇ TECHNICAL ASSISTANCE IN DATA COLLECTION IS PROVIDED TO OTHER AGENCIES ON REQUEST

△ TECHNICAL ASSISTANCE IN DATA ACCESS IS PROVIDED TO OTHER AGENCIES ON REQUEST

⬠ TECHNICAL ASSISTANCE IN DATA ANALYSIS IS PROVIDED TO OTHER AGENCIES ON REQUEST

◈ TECHNICAL ASSISTANCE IN DATA COLLECTION IS RECEIVED FROM OTHER AGENCIES ON REQUEST
