ACKNOWLEDGEMENT OF ASSISTANCE

All manuscripts utilizing data made available through the Consortium should acknowledge that fact as well as identify the original collector of the data. The ICPSR Council urges all users of the ICPSR data facilities to follow some adaptation of this statement with the parentheses indicating items to be filled in appropriately or deleted by the individual user.

The data (and tabulations) utilized in this (publication) were made available (in part) by the Inter-university Consortium for Political and Social Research. The data for the OPERATION HARDCORE EVALUATION: ARCHIVE DATA BASE DOCUMENTATION were originally collected by the Los Angeles District Attorney's Office. Neither the collector of the original data nor the Consortium bear any responsibility for the analyses or interpretations presented here.

In order to provide funding agencies with essential information about the use of archival resources and to facilitate the exchange of information about ICPSR participants' research activities, each user of the ICPSR data facilities is expected to send two copies of each completed manuscript or thesis abstract to the Consortium. Please indicate in the cover letter which data were used.

INTRODUCTION

DATA COLLECTION DESCRIPTION

The OPERATION HARDCORE EVALUATION was a special prosecutorial program developed and implemented by the Los Angeles District Attorney's Office. The program provided the opportunity for systematic examination of the effectiveness of specialized prosecutorial activities in dealing with the local problem of rising gang violence.

One part of the evaluation, the system performance analysis involved a quantitative assessment of criminal justice handling of criminal incidents involving gang violence. This included the analysis of data describing actions taken by several criminal justice agencies (police, prosecution, and courts) in the identification and investigation of criminal incidents, the apprehension and arrest of suspects, the evaluation of arrest charges, the filing and disposition of court cases, and the sentencing of criminal defendants.

The purposes of this system performance analysis were: to describe the problems of gang violence in Los Angeles and the ways that incidents of gang violence have been handled by the Los Angeles criminal justice system; to document the activities of the special gang prosecution unit, Operation Hardcore, and the criminal justice handling of the cases prosecuted by that unit; and to evaluate the extent to which Operation Hardcore has affected criminal justice handling of gang violence.

DATA COLLECTION PROCEDURES

The five year period, 1976 to 1980, was selected as the focus of analysis, with all incidents occurring within this period included in the data collection. The pool of gang-related homicides was selected because the majority of the cases handled by Operation Hardcore involve such incidents and that it is in the prosecution of this type of crime that the unit is expected to have an impact. The Hardcore unit became operational January of 1979. Data covering two years of program operations and three years preceding program implementation have been included to allow for a sufficient number of incidents for an analysis of both baseline processes and program activities.

These data were collected from three primary sources, police

II

records of gang homicide activity, prosecution listings of case acceptances and rejections, and prosecutor case files. The Los Angeles Police Department has a specialized gang detective unit with the responsibility of record keeping on gang activities in the city of Los Angeles. A log of homicide incidents involving street gangs is maintained by this unit. Incidents included which involve a known gang member, either as victim or offender. This listing was used to identify a pool of incidents which formed the basis of the data collection process. Inclusion of an incident or a suspect in the data set is dependent on the time the incident occurred, and is independent of the disposition of any cases derived of that incident. Hence, cases open at the time data collection was completed (December 1981) are included in the set, with the case disposition reported as pending.

SAMPLING

The Los Angeles District Attorney's Office systematically screens all referrals from local police agencies. Computer generated listings of all individuals referred for prosecution are maintained by the office. These listings (one for acceptances and one for rejections) are kept for each year, alphabetically by suspect's name. They include information on the date of referral and most serious charge. These listings were used to identify those individuals identified by the police who were subsequently prosecuted by the District Attorney. Finally, the District Attorney maintains working files on all cases prosecuted by deputies in his office. These case files include copies of police, court, and criminal history records, as well as information on case prosecution. These case files were used as the primary source of data describing criminal justice handling. Several additional sources of data were used to supplement the data collection where gaps existed in the primary information sources. These supplementary sources included the automated Prosecutors Management Information System (PROMIS) maintained by the District Attorney's Office and court records in the Superior Court of California in Los Angeles County, the local felony court.

Step one involved the identification of the pool of incidents of interest in the research. Because the majority of the cases prosecuted by Operation Hardcore involve gang-related murder incident, this pool of incidents was selected as the focus for the analysis. These incidents were identified using police records. At step two, individuals suspected by the police as involved in selected incidents were identified, again using police records. The names of these individuals served as the

III

linking element between police and prosecutor records. At step three, the District Attorney's listings of individuals against whom criminal charges had been accepted or rejected for prosecution were used. These records were reviewed for the names of suspects identified by police and suspects were classified as accepted, rejected, or not referred (i.e., not present in the listings). At each step, data were gathered from the police and prosecutor records concerning characteristics of incidents, suspects and victims, and criminal justice handling.

#7 Prior Criminal Record Data	Defendant	X	X	X

FILE STRUCTURE

OPERATION HARDCORE [CRIME] EVALUATION: LOS ANGELES, 1976-1980 is available from the ICPSR in two formats: card image and OSIRIS. The card image file contains several decks per case in a format based on 80 column punched cards. The data are sorted by case with all decks for a case together in ascending order.

IV

The OSIRIS dictionary gives the format and other information for each variable in the OSIRIS data file. The dictionary or dictionary-codebook file is used in conjunction with the OSIRIS software package. The OSIRIS data file is constructed with a single logical record for each case.

FILE NAME	NUMBER OF VARIABLES	NUMBER OF CASES
LA.INC	14	526
LA.CASE	16	223
LA.VICTIM	14	659
LA.SUSPECT	17	1016
LA.DEF	17	319
LA.CHARGE	19	722

The OSIRIS data file can be accessed directly through software packages or programs which do not use the OSIRIS dictionary by specifying the tape locations of the desired variables. These tape locations are given in the OSIRIS dictionary-codebook.

CODEBOOK INFORMATION

The example below is a reproduction of information appearing in the machine-readable codebook for a typical variable. The numbers in brackets do not appear but are references to the descriptions which follow this example.

.....
 [1] VAR 15 [2] SENTTYPE SENTENCE TYPE [3] MD=0
 REF 15 [4] LOC 54 WIDTH 1 [5] DK COL
 [6] IMP DEC= d

[7] SENTTYPE The type of sentence

[8] -----

[9] SEE NOTE(S) n

[10] Actual number is coded.

[11] [12] [13]

1. Incarceration
2. Probation

[14] Valid=n=n Min=m Max=M Mean=X.x St.Dev=S.s

-
- [1] Indicates the variable and reference numbers. A variable number and a reference number are assigned to each variable in the data collection. In the present codebook which documents the archived data collection these numbers are identical. Should the data be subsetted or rearranged by an OSIRIS program (e.g., MMP to intersperse data from another source, or TCOT to produce an analysis deck), the variable numbers would change to reflect the order of the new data collection, while the reference number would remain unchanged to reflect the variable number in the codebook describing the archived data collection.
 - [2] Indicates the abbreviated variable name (maximum of 24 characters) used in the OSIRIS system to identify the variable for the user. An expanded version of the variable name can be found in the variable description list.
 - [3] Indicates the code values of missing data. In this example, code values equal to 0 are missing data (MD=0). Alternative statements for other variables are "MD GE 9," or "NO MISSING DATA CODES." Some analysis software packages (including the OSIRIS software package) require that certain types of data which the user desires to be excluded from analysis be designated as "MISSING DATA," e.g., inappropriate, unascertained, unascertainable, or ambiguous data categories. Although these codes are defined as missing data categories, this does mean that the user should not or cannot use them in a substantive role if so desired.
 - [4] Indicates the starting location and width of this variable when the data are stored on a magnetic tape in the OSIRIS format. If the variable is of a multiple-response type, the width referenced is that of a single response. In this example the variable named "SENTTYPE SENTENCE TYPE" is 2 column(s) wide and is located in the 34th column within the record.
 - [5] Indicates the location by deck and column(s) of

VI

- this variable when the data are stored on cards or in card-image format (80-column format)
- [6] A variable containing data with implied decimals is denoted by the message "IMP DEC= d," where d is the number of decimal places implied in the variable.
 - [7] This is the full text (question) supplied by the investigator to describe the variable. The question text and the numbers and letters that may appear at the beginning reflect the original wording of the questionnaire item.
 - [8] Indicates an additional comment or explanation appended to the variable description.
 - [9] A variable which has a footnote associated with it is denoted by the message, "SEE NOTE(S) n" where n is the number of the footnote referenced.
 - [10] Indicates the variable is continuous in which case the phrase "Actual number is coded." appears.
 - [11] Indicates the frequency of occurrence of each code value for this variable. Frequencies inserted in this codebook are not weighted. ??
 - [12] Indicates the code values occurring in the data for this variable.
 - [13] Indicates the textual definitions of the codes. Abbreviations commonly used in the code definitions are "DK" (Do Not Know), "NA" (Not Ascertained), and "INAP" (Inappropriate).
 - [14] Indicates the number of valid responses, the lowest coded response, the largest coded response, the mean, and the standard deviation.

ICPSR PROCESSING INFORMATION

The data collection was processed according to the standard ICPSR processing procedures. The data were checked for illegal or inconsistent code values which, when found, were recoded to OSIRIS missing data values. No consistency checks were performed. Statements bracketed in "[" and "]" signs in the body of the codebook were added by the processors for explanatory purposes.
