All manuscripts utilizing data made available through the Consortium should acknowledge that fact as well as identify the original collector of the data.

The ICPSR Council urges all users of the ICPSR data facilities to follow some adaptation of this statement with the parentheses indicating items to be filled appropriately or deleted by the individual user.

The data (and tabulations) utilized in this (publication) were made available (in part) by the Inter-university Consortium for Political and Social Research. The data for the NATIONAL MANPOWER SURVEY, 1973-1976 were originally collected by the Bureau of Social Science Research, Inc. with funding provided by the Law Enforcement Assistance Administration. Neither the collector of the original data nor the Consortium bear any responsibility for the analyses or interpretations presented here.

In order to provide funding agencies with essential information about the use of archival resources and to facilitate the exchange of information about ICPSR participants' research activities, each user of the ICPSR data facilities is expected to send two copies of each completed manuscript or thesis abstract to the Consortium. Please indicate in the cover letter which data were used.

STUDY DESCRIPTION

The National Manpower Survey was conducted by the Bureau of Social Science Research, Inc. in 1974 through 1976. The survey was funded by the Law Enforcement Assistance Administration (LEAA). The goals of the study were to assess the adequacy of current criminal justice and law enforcement training programs, to project future training needs, and to establish need priorities for future LEAA-funded training and assistance programs.

The study consists of eleven separate surveys that cover all state and local governmental agencies which are a part of the law enforcement and criminal justice system. The surveys were administered to persons within three sectors of the criminal justice system which includes eleven different populations: large and small police departments, large and small sheriff departments (the law enforcement sector); adult and juvenile correctional institutions, probation and parole agencies (the correctional sector); courts and court administrators, prosecutors' offices and defenders' offices (the judicial process sector). A distinct questionnaire was designed for each survey.

Questionnaires for ten of the surveys were mailed to the chief executive officers of the agencies with the respective populations. Topics covered in these questionnaires include assessment of manpower problems, employee shortages and requirements, entry level and inservice training requirements, demographic information on the executive respondent, respondent attitudes on topical issues, and an agency fact sheet. The eleventh survey was a census of general and appellate jurisdiction courts designed to yield basic statistics on the court without attitudinal or subjective responses. The survey described in this codebook is the Administrative Official of the Court Survey.

The Administrative Official of the Court Survey, the agency questionnaire, consisted of a census of all general and appellate jurisdiction courts and was an attempt to elicit agency characteristics. The Administrative Official of the Court file includes 1,644 cases which is 46.5% of the census.

ICPSR PROCESSING INFORMATION

This study has been checked and formatted to ICPSR standards for Class II data. All amps, dashes, embedded blanks and alphabetic characters have been removed from the data. Wild codes have been coded to missing data. Inconsistencies in the data have not been corrected.

Please note that a number of variables with undocumented codes are included in this data file and codebook. Extensive search efforts failed to recover these code values. As much information as is known about these variables has been included in this documentation.

CODEBOOK INFORMATION

The codebook for each of the different surveys is divided into two parts: description of the variables, including the original questionnaire, and description of the data format.

The variable description section is intended to present five basic pieces of information about each variable in the dataset. The five are: (1) the variable number; (2) the question number; (3) a description or explanation of the variables, or, in many cases, the exact wording of the question which was asked; (4) the code values associated with this variable; (5) the interpretation of each code value. The use of this information can be illustrated by the following examples which refer to variables in this dataset:

| <u>Variable Number</u> | <u>Description</u> |
|------------------------|---|
| 33 | 8. In your opinion, how serious a problem is case delay in the trial court(s) for which you are administratively responsible? Extremely serious 1 Very serious 2 Moderately serious 3 Is a problem, but is not serious . . . 4 Is not a problem at all 5 |

(1) This variable is number 33 in the dataset; users would often reference it in most statistical programs as "V33".

(2) This variable is derived from question number 8 on the original questionnaire.

(3) The actual wording of the question which each respondent was asked or the full description of the variable is shown just across from the variable number: "In your opinion...". If the variable has been recoded from its original form or if it represents a "derived" index of several questions, that fact will be reported here.

(4) This variable has data values which range between 1 and 5.

(5) Codes 1 through 5 correspond to the choices offered the respondent from "Extremely Serious" (1) through "Is not a problem at all" (5). Some statistical programs will include these labels as part of their output.

Missing data values in this dataset are not listed in the variable description section but are listed in the data format section of each codebook. These values cannot be used in the same fashion as other code categories for most analytic purposes. The missing data value is customarily used to indicate the responses of individuals who refused to answer the question, or those for whom the

interviewer neglected to note the responses given. In some cases questions are asked of only a limited group of respondents (for example, respondents who had no children would not be asked the year of birth of their oldest child). In such cases the question is deemed "inappropriate" and the missing data value is recorded. Most statistical programs contain an option to treat missing data values as special categories. In some cases a variable may have more than one missing data code.

The data format section lists the variables by name and number and supplies for each the starting tape location of the variable in the OSIRIS dataset, the width of the variable, the number of responses, and the missing data value, if any. To access this information, the user need only locate the variable number in the left margin of the codebook and then refer to the corresponding number in the OSIRIS dictionary. The information about the card-image includes the card and column location, the width of the variable, and the number of decimal places. The data format section contains an introduction which explains how to use the information in that section.

Below are two other types of variables used in this codebook which require further explanation.

Variable
Number Description

11. Which of the following improvements in court facilities and equipment do you think would contribute most to reducing unnecessary delay and achieving the goal of "speedy trials" in the court(s) you administer? Please select three, and then rank the three, starting with "1" for the improvement which you think would contribute most.

Rank Three
Choices Only

- 43 a. Increase in available court(room) space _____
- 44 b. Modernization of current court(room) space _____
- 45 c. Increase in staff or office space _____
- 46 d. Increase in/institution of computerization _____
- 47 e. Improvement in facilities for jurors,
witnesses, attorneys, and so on _____
- 48 f. Increased use of modernized audio-visual equipment
(such as video-tapes, tape recorders, and so on) _____
- 49 g. Improvement in court reporting services _____
- 50 h. Other improvement

(In instances where the item was not ranked, the missing data code was entered.)

The variables in this example are numbers 43 through 50 in the dataset and are derived from question number 11 on the original questionnaire. The letters "a" through "h" are all parts of question 11. As explained in the question text, these variables would possibly have values ranging between 1 and 3. For those variables that the respondent did not rank, the missing data value which can be found in the data format section was entered.

Variable
Number Description

- 37. Have you ever worked in any of the following types of organizations?
(Please circle all that apply.)
- 177 a. Prosecutor's office 1
- 178 b. Criminal defense office 1
- 179 c. Probation or parole office 1
- 180 d. Law enforcement agency 1
- 181 e. Correctional department 1
- 182 f. NONE OF THE ABOVE 1

(In instances where the item did not apply, the missing data code was entered.)

This example is similar to the one listed above except for the code values. In this example a 1 was entered if the respondent circled the variable in the original questionnaire. The missing data value was entered for those variables that did not apply to the respondent.

Data Format Information

The following pages contain information concerning the format, location, and other characteristics of the variables described in this codebook. The format information is intended for both OSIRIS and non-OSIRIS users. The example below is a reproduction of information appearing for a typical variable in the data format. The numbers in brackets do not appear in the codebook but are references to the description which follows this example.

[1] VAR 0060 [2] WEAPONS TRAINING [3] MD=GE 2
REF 0060 [4] LOC 97 WIDTH 1 [5] DK 2 COL 32

1. Indicates the variable and reference numbers. A variable and a reference number are assigned to each item in the study. In the data format information these numbers are identical. Should the data be formed into a fixed length record file, new variable numbers may be assigned or created. The reference number would remain unchanged and correspond to those in the data format information.
2. Indicates the abbreviated (24 character maximum) variable label used within OSIRIS to identify each variable.
3. Indicates the designation of missing data. In this example code values greater than or equal to 2 are missing data (MD=GE 2). Alternative statements for other variables are "MD=0 OR GE=9", "MD=9", or "NO MISSING DATA CODES". Some analysis software packages (including the ICPSR-supported package) require that certain types of data which the user desires to be excluded from analysis be designated as "missing data", e.g., inappropriate, unascertained, unascertainable, or ambiguous data categories. Although this value is defined as within the missing data category, this does not mean that users should not or cannot use this code value in a substantive role if they so desire.
4. Indicates the sequential location and width of this variable within the record when the data are stored on magnetic tape. In this example the variable named "WEAPONS TRAINING" is one column wide and located in the 97th column within the dataset.
5. Indicates the location by deck and column of this variable when the data are on cards or in card image form (either 80 or 84 column format).
