Table 4. Reoffense Rates by Evaluation Group and Offense Type

Group Reoffense Rates (# of cases)	"Incarceration" Groups			"Probation" groups		
	AI (37)	AIR (29)	INCAR (10)	AP (144)	APR (133)	PROB (142)
# of subsequent offenses for group	101	62	10	207	180	246
Months of risk time for group	1,351	966	414	4,635	4,166	4,569
Average risk time per youth (in months)	36	33	41	32	31	32
Average # of offenses per youth	2.73	2.14	1.00	1.44	1.35	1.73
Overall reoffense rate, per 100 youths, per year	91	78	29*	54	52	65
<u>Reoffense Rates for major offense types (per 100 youths, per year)</u>						
Violent	22	14	3*	13	15	12
Burglary and Arson	6	28	6*	10	7	12
Other Felony Property	20	10	0*	4	9	9
Minor personal	7	3	0*	3	2	2
Minor property	22	16	18*	19	15	22
Trivial	14	8	3*	5	4	8

*These rates are highly unstable due to the small number of cases (N = 10) on which they are based. They are included only for descriptive purposes.

Table 5. Pre/Post Comparisons of Offense Rates for Youths in Each of the Six Evaluation Groups

	"Incarceration" Groups						"Probation" groups					
	AI		AIR		INCAR		AP		APR		PROB	
	B	A	B	A	B	A	B	A	B	A	B	A
Total Offense Rate, per year, per 100	119	91	105	78	85	29*	61	54	62	52	61	65
Violent rate	22	22	22	14	15	3*	12	13	14	15	11	12
Burglary/arson rate	26	6	33	28	35	6*	17	10	12	7	13	12
Other property rate	22	20	12	10	0	0*	4	4	7	9	6	9
Minor personal rate	5	7	0	3	10	0*	3	3	4	2	6	2
Minor property rate	38	22	33	16	20	18*	21	19	23	15	23	22
Trivial rate	7	14	5	8	5	3*	3	5	3	4	2	8
Number of cases	(37)		(29)		(10)		(144)		(133)		(142)	

Figures in the cells for the "before" period (B) show the rate of offenses per year committed by each 100 youths during the pre-intervention time period. This "before" period examined two years of data for these youth. For the "after" period (A), similarly computed yearly rates are displayed based on three years of post-intervention data.

*The before and after rates for the incarceration group (INCAR) are highly unstable due to the small number of cases (N = 10) on which they are based. They are included only for descriptive purposes.

Table 6. Multiple Regression Analysis of Recidivism Rates of Youth Randomly Assigned Restitution or Probation

Recidivism Measure	RELATIONSHIPS BETWEEN RANDOMLY ASSIGNED TREATMENT AND RECIDIVISM					
	Zero-Order r	Sig.	Partial b	SE b	Beta Weight	Multiple R Squared
OVERALL RECIDIVISM						
Frequency	.08	.06	.43*	.21	.10	.10
Rate	.07	.07	.16*	.08	.10	.09
VIOLENT OFFENSES						
Frequency	-.02	.37	.02	.11	.01	.06
Rate	-.02	.38	.01	.04	.01	.05

Frequency	.08	.06	.13*	.07	.10	.05
Rate	.06	.11	.04	.03	.08	.05
OTHER FELONY PROPERTY						
Frequency	.05	.17	.06	.06	.04	.03
Rate	.04	.21	.02	.02	.04	.03
MINOR PERSONAL OFFENSES						
Frequency	-.04	.21	-.02	.03	-.03	.01
Rate	-.04	.20	-.01	.01	-.03	.01
MINOR PROPERTY OFFENSES						
Frequency	.07	.06	.17	.10	.08	.06
Rate	.08	.05	.07*	.04	.09	.04
TRIVIAL OFFENSES						
Frequency	.07	.07	.07	.05	.07	.01
Rate	.06	.10	.02	.02	.06	.02
SERIOUSNESS INDICES						
Most serious reoffense	.07	.08	.53*	.25	.10	.10
Seriousness score	.03	.27	.79	.65	.06	.09
Seriousness rate	.02	.33	.27	.25	.05	.08

The zero-order correlations (r) are the simple relationships between the randomly assigned treatment (1 = restitution; 2 = probation) and the recidivism measure. The partial b is the partial unstandardized regression coefficient showing the independent effect of the treatment on recidivism after controlling for prior offenses, age, race, school status, and sex; partial b's that are statistically significant at the .05 level are marked with an asterisk (*). The beta weight is the partial standardized regression coefficient and is useful for assessing the relative independent effect of treatment across different recidivism measures. For the frequency variables (including most serious reoffense and seriousness score), the amount of time at risk was also controlled in the multiple regression analyses. For the simple correlations and the regression coefficients, positive values indicate the restitution group tended to recidivate less; negative values, the probation group.

Trivial rate	26	30	11	17	13	27	10	24
Number of cases	(73)		(74)		(55)		(56)	

Figures in the cells for the "before" period (B) show the rate of offenses per year committed by each 100 youths during the pre-intervention time period. This "before" period examined two years of data for these youth. For the "after" period (A), similarly computed yearly rates are displayed based on approximately three years (36 months average subsequent risk time) of post-intervention data.

Table 6. Multiple Regression Analysis of Recidivism Rates of Youth Randomly Assigned Restitution or Nonrestitution

Recidivism Measure	RELATIONSHIPS BETWEEN RANDOMLY ASSIGNED TREATMENT AND RECIDIVISM					
	Zero-Order r	Sig.	Partial b	SE b	Beta Weight	Multiple R Squared
OVERALL RECIDIVISM						
Frequency	.11	.05	.83	.45	.11	.14
Rate	.11	.04	.29*	.14	.13	.11
VIOLENT OFFENSES						
Frequency	-.03	.31	-.01	.03	-.02	.05
Rate	-.03	.31	-.00	.01	-.02	.05
SERIOUS PROPERTY OFFENSES						
Frequency	.07	.13	.14	.14	.06	.04
Rate	.06	.15	.05	.05	.06	.03
OTHER FELONY PROPERTY						
Frequency	.23	.01	.13*	.03	.24	.12
Rate	.23	.01	.04*	.01	.24	.12
MINOR PERSONAL OFFENSES						
Frequency	-.01	.44	-.02	.07	-.02	.04
Rate	-.01	.47	-.01	.02	-.01	.03
MINOR PROPERTY OFFENSES						
Frequency	.10	.05	.47	.26	.11	.12
Rate	.11	.04	.16*	.08	.13	.12
TRIVIAL OFFENSES						
Frequency	.03	.32	.11	.18	.04	.09
Rate	.03	.34	.04	.06	.04	.05
SERIOUSNESS INDICES						
Most serious reoffense	.09	.08	.29	.24	.07	.12
Seriousness score	.09	.08	.93	.71	.08	.09
Seriousness rate	.08	.09	.32	.23	.09	.07

The zero-order correlations (r) are the simple relationships between the randomly assigned treatment (1 = restitution; 2 = nonrestitution) and the recidivism measure. The partial b is the partial unstandardized regression coefficient showing the independent effect of the treatment on recidivism after controlling for prior offenses, age, race, school status, and sex; partial b 's that are statistically significant at the .05 level are marked with an asterisk (*). The beta weight is the partial standardized regression coefficient and is useful for assessing the relative independent effect of treatment across different recidivism measures. For the frequency variables (including most serious reoffense and seriousness score), the amount of time at risk was also controlled in the multiple regression analyses. For the simple correlations and the regression coefficients, positive values indicate the restitution group tended to recidivate less; negative values, the nonrestitution group.

Table 7. Multiple Regression Analysis of Recidivism Rates of Youth Randomly Assigned Counseling or Noncounseling

Recidivism Measure	RELATIONSHIPS BETWEEN RANDOMLY ASSIGNED TREATMENT AND RECIDIVISM					
	Zero-Order r	Sig.	Partial b	SE b	Beta Weight	Multiple R Squared

Criminal Mischief	1	0
Property Damage	1	0
Traffic/Property damage	1	2
Driving Without License	1	0
Subtotal	9 (5%)	2 (2%)

TABLE 3. COMPARISON OF SUCCESSFUL COMPLETION RATES FOR Programmatic and "Ad Hoc" Approaches to Restitution

	Programmatic Restitution	"Ad Hoc" Restitution
No. of Cases	165	86
SUCCESSFUL COMPLETION		
% Completing Successfully (Program/Court Determination)	91 %	45 %
% Paying All of the Restitution Ordered	88 %	40 %
% of Cases in Which Full Victim Loss was Repaid in Restitution	27 %	7 %
% of Cases Paying No Restitution	2 %	37 %
% of Cases in Which Judge Ordered Full Restitution (100 % of Loss)	35 %	23 %
CHARACTERISTICS OF THE CASES		
Median Amount of Victim Loss	\$192	\$157
Median Amount Ordered in Restn.	\$125	\$ 67
Median Amount Paid in Restitution	\$100	\$ 20
Average Amount of Victim Loss	\$1,119	\$1,350
Average Amount Ordered in Restn.	\$215	\$225
Average Amount Paid in Restn.	\$197	\$152

All of the differences shown, with the exception of the amount of vic loss (median or average) and the average amount of the restitution or are highly significant, at or beyond the .05 level.

The average amount of victim loss is seriously distorted due to the presence of three youths involved in a case with a loss of \$30,000 (two were in the programmatic group and one was in the ad hoc group). The average amount of restitution ordered is also distorted by one very large order (\$5,667) in the ad hoc group.

TABLE 4. REOFFENSE PATTERNS FOR YOUTHS WHO WERE SUCCESSFUL AND UNSUCCESSFUL IN COMPLETING RESTITUTION

	Unsuccessful	Successful
No. of Juveniles	61	190
PROPORTION REOFFENDING

SERIOUSNESS INDICES					
SSERR (Seriousness Score)	-.14	.03	-.11	.03	.13
S1SERR (Adjusted Rate)	-.17	.03	-.11	.03	.13
MOST (Most Serious)	-.15	.01	-.12	.03	.16
VIOLENT OFFENSES					
SVIOLENT (Frequency)	.08	.10	.08	.10	.00
SVRATE (Rate)	.06	.16	.06	.16	.00
S1VRATE (Adjusted Rate)	.06	.16	.06	.16	.00
BURGLARIES					
SSERPROP (Frequency)	-.09	.08	-.07	.12	.04
SSERPR (Rate)	-.12	.03	-.10	.06	.03
S1SERPR (Adjusted Rate)	-.12	.03	-.10	.06	.04
OTHER FELONY PROPERTY					
SPROPFEL (Frequency)	-.14	.02	-.17	.01	.03
SFELPR (Rate)	-.18	.01	-.17	.01	.03
S1FELPR (Adjusted Rate)	-.18	.01	-.18	.01	.03
MINOR OFFENSES					
SMINOR (Frequency)	-.07	.15	-.04	.24	.12
SMINR (Rate)	-.12	.03	-.09	.07	.08
S1MINR (Adjusted Rate)	-.12	.03	-.09	.07	.08
TRIVIAL OFFENSES					
STRIV (Frequency)	-.13	.02	-.10	.06	.09
STRIVR (Rate)	-.19	.01	-.16	.01	.11
S1TRIV (Adjusted Rate)	-.19	.01	-.16	.01	.11

The significance levels are based on one-tailed t tests. Variables controlled in the equation were the total number of prior offenses, the number of prior violent offenses, and the age of the youth. In addition, the amount of time at risk was controlled for the frequency variables (TSUBS, SVIOLENT, SSERPROP, SPROPFEL, SMINOR, STRIV).

TABLE† 7. MULTIPLE REGRESSION MODELS FOR SELECTED MEASURES OF RECIDIV.

	Total Subsequents		MEASURE OF Subsequent Rate		RECIDIVISM Adjusted Seriousness Rate		Most Serious Reoffense	
	b	(p)t	b	(p)t	b	(p)t	b	(p)t
Successful Completion	-.08	.08	-.10	.05	-.11	.03	-.12	.02
Number of Priors	.23	.00	.22	.00	.16	.01	.28	.00
Age	-.30	.00	-.27	.00	-.25	.00	-.20	.00
Sex (1=male 2=female)	-.05	.34	-.05	.34	-.02	.74	-.12	.02
Number of Violent Priors	.13	.03	.10	.08	.12	.02	.11	.03
Multiple R ²	.19		.16		.16		.16	

The probability of t is based on a one-tailed test. Variables which had a (p)t below .05 were not in the equation for the calculation of the multiple R square nor for the calculation of the other partial regression coefficients. Risk time was controlled for the TSUBS variable but it did not enter the equation (b=.08; (p)t = .19).

Trivial rate	18	21	28	26	11	22	24	23
Number of cases	(291)		(82)		(131)		(39)	

Figures in the cells for the "before" period (B) show the rate of offenses per year committed by each 100 youths during the pre-intervention time period. This "before" period examined two years of data for these youth. For the "after" period (A), similarly computed yearly rates are displayed based on approximately three years (36 months average subsequent risk time) of post-intervention data.

Table 6. Multiple Regression Analysis of Recidivism Rates of Youth Randomly Assigned Restitution or Nonrestitution

Recidivism Measure	RELATIONSHIPS BETWEEN RANDOMLY ASSIGNED TREATMENT AND RECIDIVISM					
	Zero-Order r	Sig.	Partial b	SE b	Beta Weight	Multiple R Squared

Seriousness score	.01	.40	.22	.38	.02	.19
Seriousness rate	-.00	.49	.04	.13	.01	.18

The zero-order correlations (r) are the simple relationships between the randomly assigned treatment (1 = restitution; 2 = nonrestitution) and the recidivism measure. The partial b is the partial unstandardized regression coefficient showing the independent effect of the treatment on recidivism after controlling for prior offenses, age, race, school status, and sex; none of the partial b's are statistically significant at the .05 level. The beta weight is the partial standardized regression coefficient and is useful for assessing the relative independent effect of treatment across different recidivism measures. For the frequency variables (including most serious reoffense and seriousness score), the amount of time at risk was also controlled in the multiple regression analyses. For the simple correlations and the regression coefficients, positive values indicate the restitution group tended to recidivate less; negative values, the nonrestitution group.

Table 7. Multiple Regression Analysis of Recidivism Rates of Youth Randomly Assigned Placement or Nonplacement

Recidivism Measure	RELATIONSHIPS BETWEEN RANDOMLY ASSIGNED TREATMENT AND RECIDIVISM					
	Zero-Order r	Sig.	Partial b	SE b	Beta Weight	Multiple R Squared
